BEFORE these lines reach the eye of the reader of the FOREST AND STREAM the open season for game birds in the most of the New England States will have begun. In Maine, New Hampshire and Vermont the open season on grouse, the principal game bird of those States, begins Sept. 1, while in Massachusetts, by act of the last Legislature, it was put off to Sept. 15. This was done chiefly through the influence of the Fish and Game Protective Association of this State, because its best informed members believed that under the existing laws the ruffed grouse was tending toward extinction. It was deemed best to extend the close season, if possible, and since the market influence was not brought to bear very strongly in that direction, the bill passed. It will tend to keep ruffed grouse out of the Boston market fifteen days longer, and thus give a longer respite to the gradually disappearing partridge. The non-transportation laws of both Maine and New Hampshire make it difficult for these marketmen to become possessed of grouse to sell from those States during close time, or, in fact, any other time, and last season it was a curious fact that might be heard mentioned almost any day of the open season in the market: "Partridges were never so plenty in this State before." Well, there is a question there. Had the grouse suddenly increased in Massachusetts, or is there too much of a border between that State and New Hampshire? Perhaps it is easy to bring game over from Maine by some underground railroad, without troubling the regular transportation companies, which will not take it—bring it over to where it becomes "killed in Massachusetts." But now until fifteen days later than ever before, the Boston marketmen will not care to openly have partridges in stock.

But in spite of all that protection has done, I fear that grouse shooting is to be very poor in both Maine and New Hampshire this season, while in Massachusetts it can amount to but little at the best, since the strain of persistent hunting by such a multitude of sportsmen, with the best trained dogs, has rendered the birds so scarce and so exceedingly wild as to make their capture something of a rarity in most parts of the State. All the reports I have from Maine indicate that partridges are scarce. This is doubtless the case in the section noted for the greatest abundance of grouse, viz., the sparsely settled portions, where the birds have the advantages of cleared land, on the borders of which they delight to feed. But in the dense woods, further north, it may be hoped that grouse are rather more plenty than usual. It is a singular fact that a plenty of partridges in the neighborhood of the settlements can never be taken as an indication that they are plenty in the unsettled portions of that State. The reverse is apt to be true. A plenty of partridges in the remote and unsettled portions of the State would rather convey the idea to one familiar with shooting in all parts of Maine that his favorite game birds were not plenty nearer the settlements. The reason for this I have never heard explained, beyond the actual fact that an abundance of berries, naturally found near the habitations of man, and which abundance of berries is not a part of every season, draws the birds out of the thick woods and nearer to the settlements.

From fishing parties and others who have penetrated the thick woods late this season, comes the report that a good many grouse have been seen. This is particularly true of the Tim and Seven ponds region. The same story also comes from the Parmacheene region, while in the further Aroostook and Penobscot counties grouse are reported plenty by the few who have been there. But at the best reports from sections so remote are meagre and unreliable inasmuch as they can cover only a small tract, seen with but a few pairs of eyes, and perhaps not under favorable conditions.

In Maine and New Hampshire a pretty general obedience to the grouse protection law is being lived up to in all sections of those States where any degree of loyalty and good sense prevails. In fact, so far as shooting too early is concerned, the boys watch one another. They make good detectives, where any poaching is attempted by outsiders, from the fact that they know and have guarded the flocks, almost from the day they were hatched, with the full intention of "having a pull at them as soon as the law is off;" and woe betide the fellow who dares to attack the birds too soon.

As has before been mentioned in the FOREST AND STREAM, deer at least of the larger game is remarkably plenty in Maine, but since the open season for these animals does not begin till Oct. 1, it looks as though the September shooting in that State might be poor. As for duck shooting there, though the open season begins Sept. 1, it is confined to the seashore, or entirely dependent upon the time when the birds stop for a season in the inland waters on their migration south, which rarely begins before Oct. 1. Yet in some seasons the black or dusky duck is sometimes found in good numbers in the lakes and ponds in the northern and eastern part of Maine late in September, but the larger flocks, on their way south, do not come in till nearly a month later. Here they will sometimes remain, especially if feed be plenty and the weather pleasant, for three or four weeks. As for the noble wood duck, hunting has driven him almost to extinction, except in the very remote waters of Maine. For the first time for several years, I saw last June a wood duck entering its nest in a hollow tree on the border of one of the Richardson Ponds, in the Androscoggin Lake region. This beautiful game bird needs greater protection. SPECIAL.

MUSKRATS IN A FLOOD.

[Complementary to the account of Sam Lovel's muskrat shooting, as described in our last issue.]

ONE afternoon during the heavy rainstorm in February last, by which the most of New England suffered by floods and washouts, Jack came tearing in with, "Just look at this telegram I have received from Uncle John," and he handed me the following message: "Water highest for thirty years. Come." "Yes, sir," continued Jack, beginning to warm up on the subject, "it is pouring now, but the morning paper says clearing weather tonight, and to-morrow will be the time to shoot muskrats by the hundred." In one hour from that time we had our traps and duffle ready, and a ride of fifty miles from Boston took us to Bluestone River. Jack carried a Winchester .32 repeater, while I had a .32 home-made rifle. This arm has a heavy 26in. barrel, made from the best gun steel (carbon 5 per cent.), the bore is .312in., with 8 grooves .08in. wide and .005in. deep in the forward or loading part of the ratchet cut. The twist is increased from one turn in 72in. to a 15in. twist at the muzzle. It is chambered for the .32 Smith & Wesson revolving rifle shell, and carries a home-made bullet of 110grs. with 3 grooves. As this rifle has done such extremely fine work at hunting distances, I give the readers of FOREST AND STREAM these points, hoping that some of them may receive some benefit from it. The twist is to the left instead of right, as in most of our modern rifles. This, in a measure, counteracts the "drift" of the bullet in off-hand work, as, unless the trigger-pull is very light indeed, many marksmen are continually pulling the muzzle around to the right, and if the bullet is drifting to the right it makes quite a perceptible difference in 150 or 200yds.

Jack had made all arrangements with Uncle John to have a boat ready to launch at daylight the next morning, and at the call of "Come, boys, breakfast is ready and there is not a drop of rain falling," we hastily tumbled out. After a hasty breakfast, we loaded the boat into the wagon and started for the river with the assurance that Uncle John would meet us at noon at the first dam on the stream five miles below. Jack generously offered to use the paddle and give me the bow to do the most of the shooting, but I would not accept it. So after some argument I consented to try a few shots and then give him the place. We had not more than fifty rods to go before we came to a meadow well overflowed, and soon I discovered a fine fellow with the tip of his nose just out of the water. I raised the rifle carefully and through the large hole in the Lyman sight I quickly caught the ivory bead of the front sight, but I soon found that shooting off-hand from a moving boat is rather difficult, and as the report rings out over the water, the rat makes a very low bow and bids me good-day. He soon comes to the surface 40yds. away, and again I miss him. Jack says he will keep the boat as still as possible for the next one, and just as I am about to pull he coolly "wipes my eye" from the stern and our first rat is bagged. I insist at once that we change places, and Jack reluctantly gives up the paddle.

We are now coming to good hunting ground, and Jack shoots four rats from the boat when his rifle becomes disabled, the spring catch or extractor is broken, and although he tries to pass the circumstance lightly by, I can see that he feels his disappointment keenly. I immediately offer him my rifle and cartridges, but he declines, and it is evident at once that the pleasure of the trip has received a wet blanket. "No," said he, "you do the shooting; I will paddle as carefully as I can, and perhaps you may kill one before we get to the dam." As Jack was out of sorts I forgave him for the slight tinge of sarcasm which accompanied his remark, and soon we were at work again. I resolved to shoot carefully and try to redeem my poor shooting. Soon we find a place where four rat houses are nearly submerged, and the occupants are roosting around in the alders as best they can. There goes one across the bow 50yds. away swimming for dear life. The rifle cracks and he gives up the race, and is soon gathered in. Another one shows himself on the bank full size, and his head is split. The rats are seen thicker and faster, and the sport begins in good earnest. As I happen to think of a small watchmaker's screwdriver that I have in my pocket, Jack takes it and finds that he can extract his shell, so he opens fire once more, and the sport would have made him happy again had it not been for an incident, which, although comical enough for any one else, put the finishing touch upon Jack's spirits for the rest of the trip.

We had passed the meadow and were going down between the high river banks where the water was a boiling, seething mass of foam, which looked wicked enough to swamp anything in the shape of a boat. We both knew the channel perfectly well, and in order to keep in it must pass close to some large rocks in the middle of the stream. Just as we were opposite the rocks the boat struck a snag or something under water, and Jack, thinking that we were going to be swamped, gave a leap from the boat and landed on the rocks first on his feet and then sat down with a whack which, he afterward affirmed, shook every joint in his spinal column; and as he sat down in about two inches of water it did not make it any more agreeable. The impetus that Jack gave the boat when he jumped cleared it from the snag, and as it righted I swept down the river rapidly away from Jack on the rocks. As soon as possible I landed, and working the boat back up the bank, threw Jack a stout line, and making my end fast to the boat he hauled it to him and made out to get into it from the lower side of the rocks. When he came down where I could get in I plainly saw that he was somewhat agitated. Once more we started down stream and coming to another large meadow we had sport in earnest. Crack, crack went the rifles, and although we would occasionally miss one we had all the booty we wished for, and when we arrived at the dam Uncle John was there waiting for us, and loading the boat and duffle into the wagon we were soon home with Uncle John, and after a dinner relished with an appetite which only outdoor exercise and recreation can give, we boarded the 3 P. M. express and were soon back home again after an absence of less than twenty-four hours.

SOMERVILLE, Mass. IRON RAMROD.

TARGET TESTS AND SHOT.

Editor Forest and Stream:

To a person less familiar than myself with the manufacture and use of shot, it might seem difficult to reply to the implied queries contained in two communications in your last issue, of Aug. 26, under the head of "Target Tests."

While it may be barely possible that the manufacturer of shot should have made a mistake in bagging up the wrong size, I think it more reasonable to infer that "Dixons' measure" and the manner of filling it is at fault.

"The American standard" for shot is based upon avoirdupois weight, 437½ Troy grains to the ounce, not upon any measure of capacity.

There are two ways by which shot may be tested as to size; by weighing it accurately and counting the pellets, or by measuring the diameters of the pellets. The sizes are scaled by $\frac{1}{10}$ of an inch between every size, trap numbers being half sizes. Shot that measures correctly will always be found correct in count.

With these few suggestions I will leave the gentlemen interested to work out the puzzle to their satisfaction, and advise them to hang on to any gun that will put more pellets into a target than are contained in the load, and always to buy the shot that gives them more than they pay for or expect. CHAS. RICHARDS.

NEW YORK, Aug. 27.

Editor Forest and Stream:

Mr. C. M. Stark thinks there is something wonderful in the target record of August 19. I made the following offer, and now make it once more: If any one will send me a gun that with 1¼oz. No. 8 Tatham's Standard shot, 399 pellets to the ounce, that will average 400 in a 30in. circle at 40 measured yards, 20 consecutive shots, I will give $25 to shoot such a gun twenty shots and guarantee to return the gun in as good order as when received. I say there is nothing very remarkable that a gun should put in the circle more shot than there ought to be in the entire charge, as I have had a good many patterns sent me that counted more, and even better than this, have had a target over 3ft. square sent me and every shot in the 30in. circle, not one outside. This is without doubt a wonderful pattern and looks well, but the distance was less than 40yds. and how any man can have the audacity to send such a pattern to any one who ought to know what a gun will do is, to say the least, a little surprising. A good many want to know why I make the above offer and answer that is my affair. I also state that every target made by all gunmakers in this country and by all or nearly all others is simply guess work, poor at that. Cannot agree with Mr. Stark when he tells us it is only necessary to count one charge, as I know from experience if you want to know what a gun will do it is necessary to count every charge of shot used. No one can measure shot and have them correct. These patterns published are all wrong, and not one of them was ever made under the above conditions. Each gunmaker is anxious to outdo his neighbor in gun patterns, and targets his guns with a heaping measure of shot, some at 35yds., some at 40yds., (so they say) and publish results that cannot be obtained. Let us be more honest, count our shot and tell things as they are. Who will be the first gunmaker to do this? Alas, I fear none of them dare do it.

CAZENOVIA, N. Y. WILL H. CRUTTENDEN.

SHORE BIRDS AND WILDFOWL.—Nantucket, Mass., Aug. 28.—Plover shooting has been fine here for the past week. We had a southeast storm on Aug. 24 and 25, which landed thousands of the birds and afforded sport for all. One of our sportsmen shot 135 in a few hours, others shooting from 40 to 100. Duck shooting promises to be fine when the season opens Sept. 1. I rode by a pond yesterday where hundreds of ducks were feeding, and they never attempted to leave the pond. I saw in your last a query from "Z.," asking "Were they brant?" I suppose I saw the same flock about 5:30 P. M. the same day, and I pronounced them geese, although as "Z." says it was an unusual thing for geese to be flying at this time of the year. I afterward found out that quite a number saw them and they also called them geese. I remember it caused a considerable talk around here, for we do not look for them until November.—W. N. F.

RED BANK, N. J., Aug. 30.—Bluewings are making their appearance, but too warm for good shooting. This duck has not been disturbed on the flats for ten or twelve years, but a new law gives permission to shoot from Aug. 15 to Oct. 1.—GEO. WILD.

BARNEGAT SNIPE SHOOTING is reported good.

ADIRONDACK DEER.—The season for hunting Adirondack deer opened Aug. 15. Hounding season opened yesterday and will last until Oct. 5. Among the deer killed in Hamilton county this year was a doe whose udder was full of milk; her two unweaned fawns were heard bleating after the mother's death, but were not captured. We have learned of a number of observations of wet does with their fawns in the Adirondacks in the last part of August this year.

HALSTEAD, Pa., Aug. 28.—Indications are good for fine pheasant shooting this fall, owing to the birds being so wild that but few were shot last fall by the pot-hunters or by your humble servant.—F. E. S.

MUZZLE VS. BREECH.

Editor Forest and Stream:

In your issue of July 1, I notice an article by Mr. Nap. Merrill under the above caption, in answer to my article of April 22,,and, judging from its tenor, I assume that Mr. Merrill is a little prejudiced against the popular breechloader. Now, I ask him to lay aside all prejudice and accept the statements, susceptible of proof, offered by the breechloading fraternity, as we are willing to accept such statements from him and others who advocate the muzzleloader.

Mr. Merrill refers to the FOREST AND STREAM trajectory test, and states, "the question was, which of these two types of rifles make the flattest curve or lowest trajectory?" Examine his question carefully. Will any experienced rifleman accept it without qualification? What! compare the Merrill muzzleloader .42-100-218 with such guns as the Maynard .40-70-242? Such a comparison is not of rifles but of ammunition. We all admit the greater velocity and flatter curve with the greater powder charge and lighter bullet. Exchange ammunition and the breechloader makes the flatter curve, and with a rifling adapted to the heavier charge there is no reason why accuracy is or should be sacrificed. Then why, I ask, was not the great trajectory test more a test of ammunition than of rifles? I will refer Mr. Merrill to clauses published in your paper at the time the test was being made. In your issue of Nov. 5, 1885, page 293, you state: "Of course a test of this sort is not alone of rifles, it is rather of ammunition." Also the Massachusetts Arms Co. is made to say: "Our experience is that the flattest trajectory rifles are not the closest shooters, but that a good deal of accuracy is sacrificed for flat trajectory."

In your issue of Dec. 10, 1885, it is stated in regard to the Merrill rifle: "Of course it was able to make a very close group of shots on the target, but it will be understood that an accuracy test and a trajectory test are two utterly distinct matters, and that they ought to be carried on under different conditions. Sand bags and a good marksman come into play when accuracy is needed. Any attempt to unite the two in the same round must, of course, be futile. In such a case as the present the inch broad black patch might easily have been hit with each shot. Almost any rifle in the trial would have done that, but there, in other cases, the arm was purposely held off in order that clear and separate punctures in the screens might be made and readily noted and easily measured." Further on it is stated in regard to the Ballard .40-70: "This arm is of the fine, close-shooting patched bullet weapons, and so far as compact bunching of the shots in the target seemed to be *fully equal* to the *high charged* muzzleloaders in the test." The italics are mine. I will not impute to the trajectory test an iota of unfairness or a particle of prejudice.

Since Mr. M. and I agree that accuracy is "excellent doctrine," and I propose to show it by the rifles we carry, it is not unreasonable for us to quote freely from the trajectory test, and obtain therefrom what we can in support of our arguments. It is seen that it was not considered an accuracy test and is so stated, yet it was just as fair for one make of rifles as another.

A writer from Jamestown, who has kindly sent me his figures, calls Mr. M.'s attention to some interesting facts, viz.: "That there were no muzzleloading hunting rifles in the trajectory test, and the nearest one to it being the one fired at the 100-yard range, and that one was beaten in regularity of bullet flight, *i. e.*, in accuracy, by twenty-seven of the thirty-three breechloaders in competition. At 200yds. the muzzleloading target rifle, with all the appliances of a target rifle, beat all of the breechloading hunting rifles in the regularity of shooting, the nearest one to it being the Maynard .40-cal., which was just .001 of an inch behind the Remer muzzleloader."

This is a sad commentary on the boasted accuracy of the muzzleloading rifles, and further defense and comment seems unnecessary; yet, I am anxious to state a few more facts in favor of the breechloader and give Mr. M. a more correct idea of what they are able to do.

He ridicules the idea of shooting chickens at 80 rods with the breechloading guns, and suggests shooting at the egg as being more humane. Now, as a matter of fact, I reiterate my former statement, that in a country town not far from here, where breechloaders are shot and admired for long-range accuracy, they do shoot chickens at 80 and even 100 rods, and kill them oftener than four out of twenty shots. My proof that those rifles do not give their bullets a gyratory motion is the above fact and the targets they are capable of making.

A gentleman from Syracuse with a homemade breechloader recently made a target of 10 consecutive shots, 40 rods, of 8 1-16in., string measure. A few days later he reduced the measure to 7in. and a fraction.

A .32-cal. Maynard recently made 10 consecutive shots, 10 rods, which measured only 13-16in. across the cluster, measuring from center to center of bullet holes. It is no great feat of the breechloader rifles of to-day to shoot 10 consecutive shots in 1in. ring, 10 or 20 rods; 8 out of 10 shots in 1½in. ring, 31 rods; or in an 8in. ring, 80 rods. Such shooting has been done in this country with Sharps and Maynard rifles the past summer, while at 40 rods a Syracuse breechloader has made the fine string above noticed.

We of the breechloader fraternity can duplicate such targets under favorable conditions, and if Mr. M. can do better with his "Old Betsy," he is invited to do so and send well authenticated targets to FOREST AND STREAM and we will do the same.

We, the tyros of rifle shooting, are advised to remain silent and learn one lesson well, and then write "The trajectory test has forever settled all" (except accuracy). I again refer Mr. M. to the trajectory test for proof that we know what we are writing about and just how accurate are the guns we carry. We will also "bow to great merit" when that merit is shown, but at present we are obliged to bow to the merit of simplicity, convenience, symmetry and accuracy, of the best hunting and sporting rifles of the breechloader patterns.

Now may I ask Mr. M. why on all the ranges of the country do we never see a muzzleloader rifle used for off-hand shooting? Why at Vernon, Vt., did no one make a string of 9in. or less with the most celebrated muzzleloader heavy rifles, and allow a homemade breechloader at Syracuse to make a string of less than 8in., same distance and same number of shots? This is a question of great interest to Mr. M. The tables may turn upon him, and in the hour of his greatest need for "a few bold and disinterested leaders" to again adopt the muzzleloader rifles and the masses to follow them in high glee, may find him alone glorying in trajectory and gaining nothing in accuracy.

I assure Mr. M. that I have owned a good muzzleloader rifle and shot many fine ones, but never have shot one that would compare with a good Sharps or Maynard in long-range accuracy. I have never shot one that would equal the Maynard .32 or .35-cal. in short-range accuracy. Is Mr. M. acquainted with these close-shooting breechloader rifles? I presume he is not. Let him read the reports from the ranges throughout the country and try to equal the shooting of these and other first-class rifles, and when he excels the world will desire full information.

Mr. M. suggests, that if the trajectory test had been made for accuracy, the muzzleloaders might have beaten the average of all the thirty-one breechloaders, 500 per cent. at 200yds. and 250 per cent. at 100yds. Your readers are probably familiar with the article of Mr. Burns in the FOREST AND STREAM of July 8 quoted above, and can then learn from his figures that the breechloaders came within .004 of an inch of equaling the accuracy of the closest-shooting muzzleloader rifle of the trajectory test. In the face of those figures, in the face of such well authenticated targets as can be shown and proven by thousands of witnesses, does not Mr. M. show an unusual amount of ignorance of the qualities of the breechloaders? If the tyros of to-day remain silent and allow such foolish and absurd statements to go forth unchallenged, it is because they consider them beneath their notice. I openly invite Mr. M. to beat the targets mentioned above 25 per cent., and trust he will lose no time in making the attempt and publishing the same.

JNO. T. CLAPP.

SPORTSMEN in need of a thoroughly waterproof paper shot shell in target cartridges, will note what is thought of the ammunition made by the U. S. Cartridge Co., of Lowell, Mass., by William F. Cody, "Buffalo Bill," who writes: "Your paper shells have given entire satisfaction. Wet weather makes no difference, as they are certainly, as you claim, waterproof. We use your paper and metallic cartridges in all our exhibitions."—*Adv.*

Sea and River Fishing.

Address all communications to the Forest and Stream Pub. Co.

THE SALMO SUNAPEE.

Editor Forest and Stream:

In his communication to your issue of August 5, Col. Hodge makes the statement that the new Sunapee Lake trout brought by him to the notice of ichthyologists last fall, are claimed by Col. Webber, Livingston Stone and myself, to be "the result of a small plant of Rangeley blue-back trout fry made in 1881." Col. Webber and I make no such claim. We urge a strong and reasonable probability that they are the descendants of blue-backs introduced by Col. Webber himself and A. H. Powers in 1879 (not 1881), and on these grounds: The new trout are pronounced by ichthyologists to be of the *oquassa* type; no such trout were ever known to be taken in the lake before this plant, or a plant antecedng it a few years, of which we shall presently speak; no such trout are natives of any other waters in this State or region; whereas certain specimens have been proved to weigh five or six times as much as the heaviest weights among their congeners of Maine, the limit of growth of the *Salmo oquassa* in Sunapee may be very different from what it is in the Rangeleys, limit of growth being governed entirely by locality, especially in cases where fish have been transferred from native to foreign waters.

After calling attention to a number of mis-statements carelessly made by the Commissioner in his letter, and exposing the sophistry lurking in his argument, I shall endeavor to prove, as far as human testimony can establish the truth, that until recently no such fish were caught or known in Sunapee Lake.

Col. Hodge asserts that "previous to 1870 no one thought of fishing for trout in deep water," entirely ignoring the fact that fishing in deep water through the ice has been practiced on this lake for fifty years or more, and has only recently been checked by law, and that tons of *fontinales* have been taken in this way, but not an *oquassa*. Now he will, of course, claim that the so-called "pie-eaters" did not perceive any difference between the *fontinales* and the *oquassa*; and this would be the best of arguments if the same observing sportsman who directed the Colonel's attention to the new trout last fall had not been one of the most persistent and successful of these fishermen. The schooled eyes that instantly detected a difference of species in 1885 could never have been deceived in 1875, when they were younger and sharper. The statement that *oquassa* trout can be taken only in water 50 to 70ft. deep I must again contradict, being myself the captor of a 3½lbs. specimen in water 4ft. deep.

Col. Hodge states that blue-backs are not caught with fly or bait in the Rangeleys; they are taken by the barrelful when spawning near the shores in October, and numbers of 6 to 10in. fish of this species have been caught in Sunapee this season in 50 to 70ft. of water. They are fished for with minute hooks baited with worm, their mouths being very small. In this letter the Colonel says the blue-backs of Maine "always seek the brooks and rivers for spawning;" in a communication last winter he proclaimed them to be lake spawners. Does he really know which they are? The Rangeley fish are essentially lake spawners; and so are all the trout and salmon in Sunapee, for the simple reason that there are no inflowing streams appropriate to extensive spawning operations.

I am the "party that raised the question in regard to weight," and I still stand obstinately on the same ground. The largest fish caught and weighed registered 6lbs. Reader, you may accept as evidence the guesses of three or four excited gentlemen floating in a flat-bottom over an acre of spawning trout, and believe the water was alive with 10-pounders—I decline to. Ten-pound trout have always been noted for their propensity to "swim about the boat," "break the leader," etc.; they very seldom come in out of the wet. The coolness with which my friend, the Commissioner, subtracts two years from the growing time and adds four pounds to his fish, is sublime from one point of view; from another, laughable. Once more, in the interest of science, I declare the greatest recorded weight of an *oquassa* trout taken in Sunapee Lake to be only 6lbs.

Col. Hodge has endeavored to prove that the *Salmo oquassa* is native to Sunapee by testimony; he cannot do it by analogy or induction; the testimony he cites is questionable in the extreme. Does our worthy Commissioner for a moment imagine that when, as he states in the same letter, the most accomplished ichthyologists in the country, with fresh specimens before them, hesitate to classify the new trout, persons endowed with average intellect will accept the fourteen-year-old recollections of Moses Gould, or any other Moses, as evidence in the settlement of so important a scientific controversy? But, fortunately, Moses Gould was not the only person who saw the two trout "had" by him in 1872, "weighing about 3lbs. each." A common acquaintance who inspected the trout, and who entertained the witness and recollects distinctly his remarks on that occasion, declares that Mr. Gould was entirely unaware in 1872 that the fish he "had" were of an unusual species; they were simply "trout," that was all; but, after the lapse of fourteen years, Mr. Gould suddenly remembers that they were *oquassæ!* He did not know it at the time; he knows it now. The reader may draw his own inference—the trout were *fontinales!* And Moses Gould remarked to my friend that "he had been fishing thirty years for those two trout," and in deep water, too (for Col. Hodge says *oquassæ* can be caught only in deep water). Assuredly, if they were *oquassæ*, fishing for *oquassa* trout must have been remunerative in those days. Thirty years for two trout, according to Mr. Gould, who, if he had recognized a new species after his most commendable exercise of patience and skill, would have made himself as immortal as Moses of old by proclaiming it to the scientific world. For once Mr. Gould is right when he says he never knew of *oquassæ* being caught in places where it was customary to fish for brook trout—nor anywhere else, he might truthfully have added. Strange to relate, the two species now feed side by side, and are daily taken on the same grounds.

Mark the effrontery of the following:

"Question: Previous to my showing you the spawning bed last November, had you any knowledge of one in that part of the lake? Answer: No. Question: Would persons crossing the lake be likely to pass over the place or avoid it? Answer: They would generally avoid it."

The spawning bed referred to lies on the regular water highway between New London and Newport, the shire town. Thousands cross it every year in boats and sleighs, and if Moses Gould had no knowledge of it, as he declares, his professed ignorance simply demonstrates the utter worthlessness of his testimony. To cap the climax of his absurd position, a neighborhood farmer told the Fish Commissioner the trout were on that shoal, and he went there and found them. Almost the very day these stranger *oquassæ* began spawning there the fact was known to the watchful poachers whose meat was the alternative of fresh trout or salted sucker. Moreover, I can give the names of anglers who have fished that same shoal in years past, winter and summer, and whose testimony is unimpeachable. In his letter of last winter, he it remembered, Col. Hodge adduced the testimony of James M. Pike, an old resident upward of seventy, to prove that this shoal was known as a spawning bed to the farmers about the lake "thirty years ago," and quoted Mr. Pike as using the expression, "trout by the cartload," in reference to it. Now he endeavors to establish from Mr. Gould's testimony that nobody knew anything about it until last November. In other words, he is trying to prove that the people both did and did not recognize a difference between *oquassa* and *fontinalis* in the old days when any farmer could spear of a morning his half dozen 5lbs. fish in the estuaries of our brooks. Verily, *Quos Deus vult perdere, prius dementat.*

I herewith present the answers made to a series of leading questions by a number of sportsmen and anglers whom I have carefully interviewed on the subject. Those who are residents in, or acquainted with this locality, will cheerfully testify that the men whose names follow, know infinitely more of Sunapee Lake and its fishes, its mysterious depths and secluded shoals than Mr. Gould—surely, than the Fish Commissioner of another State, who downs with his "believes," his "thinks," and his "am not certains," the cause he has been induced to espouse.

Question: How long have you been acquainted with Sunapee Lake? Answers: Mr. Jacob C. Stickney, of George's Mills, 85 years; Knowlton Hastings, of New London, 60 years; Amos Hastings and Beldin Morgan, of New London, 50 years; Ransom Sargent, of New London; Alonzo Cheney, of Wilmot; Claude and Austin Goings, of New London, about 30 years.

Question: Before 1872 did you ever see or hear of a trout like this (exhibiting a newly caught *oquassa*)? Answer of all the above parties: Never. The Hastings, who are fishing constantly in deep water and shallow, took their first *oquassa* trout three years ago.

Question: How many species of trout have been known or reported to be native to this lake? Answer, by all of the above parties, and many others: One only, the common spotted trout.

State the weight of the largest spotted trout known to you: 12lbs., George Farmer of Newbury, in a net, 30 years ago; 10lbs., J. C. Stickney, at North Point; 9lbs., Frank Jewett, at Pike's Shore; 7lbs. 14oz., Alvin Hastings, in Pike' Brook. The heaviest couplet I have on record, by Amos Hastings, 13lbs.; the best sweep by the same fisherman in 1837, in Newbury, 40 brook trout, from 1 to 5lbs. each, in 15 minutes.

Mr. Jacob C. Stickney, 92 years of age, a veteran of the war of 1812, moved to a farm on the borders of Sunapee in 1801. He has always been an enthusiastic fisherman, and his experience is worthy of the highest place in this category of evidence. Mr. Stickney carefully examined the *oquassa*, and unhesitatingly declared he had never seen such a fish before; and yet he had described large schools of spotted trout, and in his day took many thousand. The reader is further referred to Geo. Farmer, of Newbury, and to Jacob Hutchison and Mr. Woodbury, of Newport.

From the views of the gentlemen just named, as well as of others equally qualified to testify—views based on a record of at least one hundred tons of trout, and on an experience at the lake extending through eighty years—I can find no dissenting voice except that of Mr. Moses Gould, who made occasional visits to Sunapee during those thirty years before alluded to. The ready detection by all the witnesses of a difference between the trout exhibited and the native spotted trout, confirms me in my opinion that such difference could never have been overlooked in years gone by; while it is palpably impossible that these great schools of giant *oquassæ* could have escaped the notice of white trappers and hunters, and subsequently of setters, for a century and a half. They are either the blue-backs phenomenally developed, or the descendants of lower St. Lawrence *oquassa* fry brought here within a dozen years by the late Dr. Fletcher, who imported the fish from the Dominion under the impression that they were landlocked salmon, but subsequently admitted, as the fry which he retained at the hatchery developed, that he could not distinguish the yearlings from yearling *fontinales*. It has long been settled that they were not the *Salmo sebago*; what were they?

We positively know that plants of foreign fish were made in this lake long before Col. Hodge became connected with the Commission. From some of these are sprung the so-called "hawkbills," or "St. Johns' River trout," the little blue-backs, and the monster *Salmo sunapee*, pronounced by the authorities of the country to be a true *Salmo oquassa*, which, if it were but furnished with the mouth and teeth, would be a worthy rival of the *ferox* of Scotland.

JOHN D. QUACKENBOS.

BRANDRETH LAKE.—Mr. W. Holberton, of this city, has just returned from a visit to Brandreth Lake in the Adirondacks. Leaving New York at 6:30 P. M., the tourist is put down at Blue Mountain Lake (Holland's) at 1:30 P. M. the following day. The trip by boat from Holland's to North Bay of Raquette Lake, a distance of seventeen miles, including a half mile carry, was made in just 4h. 5m. and Will Leprairie was the man at the oars who did it. At Brandreth Lake, which is in the 2,500 acre preserve of Messrs. F. and R. Brandreth and E. A. McAlpine, Mr. Holberton reports good fishing earlier in the season. Among the incidents of his stay were the capture of two brook trout (2lbs. 6oz. and 2lbs. 4oz.) at once on a gang used in trolling for lake trout, and the taking of a 7½lbs. lake trout with a light fly-rod, the trout playing the angler 35m., and the unusual capture in mid-day of nine lake trout, the lure being minnows, this being done in the middle of August. There are deer in good supply on the Brandeth preserve, and once in a while a bear is seen; Mr. Holberton had the good luck to secure a 350lbs. old he bear, whose steaks proved most outrageously tough.

HALSTEAD, Pa., Aug. 27.—Bass are very plentiful in the Susquehanna here, but few are caught. In a short row on the river you can see "old big ones," but they refuse all bait. Spearing at night is practiced by numerous parties here. I saw a large pickerel caught the other day that had the marks of the spear on him.—F. E. S.

HOW TO CATCH SPECKLED FROGS.

IN FOREST AND STREAM of July 1, "Hoosier" asks how I catch frogs, which would have been answered long ago, only at the time I was busy winding up the "Carp Lake letters" and getting ready at the same time to go to the "bresh."

Now that the annual summer camp of the Kingfishers is a thing of the past a few "amphibious remarks" may be devoted to the art of "rounding up," as old Ben would say, the speckled frog with neatness and dispatch, which may serve "Hoosier" and others of the brethren in procuring the best all-around natural bait I know of for bass, pickerel and maskalonge when fishing the waters of northern Michigan.

Old "Snake Root's" process of putting salt on their tails (see FOREST AND STREAM of a late date) is like the Irishman trying to get drunk on claret, a little too taydious, as too much time is wasted in the endeavor to locate the tail. This "chloride of sodium method" may do for Kentucky, but I am convinced it will never be generally adopted for the capture of the Michigan frog. He is like "Hoosier's" Indian frog, "too soon." I have witnessed a good many frantic attempts of "Snake Root" in the past two years to catch a frog, which always resulted in a brilliant failure, and it is safe to say that the only way he will ever get one, unaided, will be to sprinkle the *Sod. chlorid.* on one while in its infancy, stand over it till it grows up and sheds its caudal appendage and then clap a landing net over it, or knock it out with a club before it makes the first jump.

But to the serious business of catching frogs. First find the frogs; and the best places to find them (I speak of northern Michigan more particularly) are in marshy and grassy spots along the lakes, in meadows, and best of all, in newly mown hay and grain fields, sometimes a quarter of a mile or more from water. Walk slowly along, looking sharply ahead and on either side till one is disturbed in his meditations, which is always followed by a leap of from four to ten feet. Keep your eye on the place where he struck the ground; go stealthily forward, and if he has not crept under a tuft of grass or other place of concealment, you will discover him squatted as motionless as a cockroach and looking straight at you, no matter whether you catch sight of him from the side, front or rear. When within a couple of feet (they will not move even an eyelid if you are quiet about it) kneel or squat down softly, dart your open hand out like a shot and grasp earth, grass, mud, frog and all at one motion, and the thing is done. When on your knees or squatted down within reach of his frogship, never reach the hand out slowly till it is nearly over him, for just then he is getting his bearings for a jump that will astonish you, and about the time you are counting how many you will have if you get that one he will be ten feet away, and after the second leap they are apt to keep it up till they find a place to hide where you can't get at them. Keep your hand near the side and you will not usually alarm the frog till ready for the final "scoop," then launch it out like a flash and you will rarely miss. By careful work I usually miss not more than two in twenty; but the true secret of the whole performance is to be just a trifle quicker than the frog. Bungling and slow work catch no speckled frogs.

Another way is to carry a light stick 4 or 5ft. long, and when you see one light slip up and give him a tap with it, and a very light stroke stuns him so he is easily transferred to the bucket in a somewhat dazed condition, but he will soon revive and be as lively as ever. Still another, and probably the easier way for "amateurs" is to use a net, as "Jason" advises. I have a small one somewhere among the "calamities" that has been the death of many a too credulous frog in the past 6 or 7 years. The hoop is No. 8 wire, 8 or 9in. in diameter, to which is attached a short handle. On the hoop is fastened a piece of minnow seine webbing with a "bag" of about 9in.—a miniature landing net in fact. With this in hand, slip up on your frog, clap it suddenly over him and grasp him through the meshes with the other hand, when it is little trouble to "extract" him and steer him under the lid of your bucket. Where the grass grows rank, or the weeds are over a few inches high it is not as certain as the "hand method," for in cases of this kind you can rarely get it close enough to the ground to keep the frog from crawling under the net and escaping, but it is doubtless the better method for beginners and those lacking in extreme celerity of movement.

But after all, "Old Knots's" method will probably meet with more favor from the brethren as a sure thing—he hires a small boy to catch them for him—and "Hoosier" can take his choice from the divers and various ways as above set forth. KINGFISHER.

CINCINNATI, O., Aug. 26.

A CATCH IN THE DARK.

A PARTY of five of us were camping on the shores of a small lake in New Hampshire, to my mind one of the most beautiful of the many beautiful sheets of water in the Granite State. For many seasons we have pitched our tent each summer in the pine woods that grow nearly to the water's edge on one side. A pure white sand beach and waters clear as crystal and sweet as any mountain spring are some of the attractions that annually draw us to the old camping ground. It was our last day in camp, and those whose love for camp life has ever been gratified by a season of its pleasures in a spot that seems the one spot of spots for camping, with a chosen few congenial spirits, know full well the feelings of a last day in camp, when thoughts of the pleasures now almost over are dulled by the feeling that to-morrow will bring back the almost forgotten world; and one feels that he must take one more sail over the lake and make one more cast in some favorite spot, and perhaps be able to strike and kill the big fish that has been so patiently angled for every season since he was a boy with his first alder pole and cotton line.

So on that last afternoon one of the party (a well known pedagogue in New Hampshire's spindle city) and the writer took our rods, and with helgramites and minnows, frogs and grasshopper, crickets and worms for bait, rowed to our favorite bass fishing ground late in the afternoon. Quietly the boat was anchored over a sand bar and hooks baited and the cast made. We waited for the supreme moment when the hoped for giant bass should be struck, and soon the sport commenced. Scarcely was one fish landed before the second and third and fourth were fastened, the latter the king of the lot, and how he fought. What mighty leaps and cunning efforts to double in air, and with a stroke of tail fin, broke from the fastening of the sprout; but the schoolmaster was too well accustomed to managing refractory pupils and kept cool, while his bass-ship grew more and more excited, until finally coolness and skill, assisted by the well tested lancewood, the battle was won, and the four-pound small-mouth lay quivering with bloodshot eye on the bottom of the boat, and beside him three others nearly as large.

The sport seemed to be over, still we sat there reluctant to move and disturb the quiet of the closing day. We saw the sun disappear behind the western hills, and watched the last beams climbing the mountains in the east, while the twilight of New England came stealing over us. Suddenly the bass commenced biting again and until dark we were kept busy attending to them, and a dozen more dusky beauties were added to the score, though none as large as the first four that were caught; but the best sport must have an end, and as it grew too dark to see the lines and to bait our hooks, the bass suddenly left us, and we prepared to wind up our lines for the last time, well satisfied with the result of our parting cast. My friend was slowly reeling in his line, allowing the still baited hook to remain in the water, when with a jerk the tip of his rod was pulled under water, the handle of the reel was pulled from his grasp, and with a whir-r-r the line rushed out, and a greatly excited fisherman was on his feet trying to check the rushes of a monster fish. It was already so dark that it was difficult to manage the fish, as nothing could be seen of his actions, and the fight had to be carried on by sense of feeling; the excitement of my friend was as manifest as had been his coolness on former occasions, and such expressions as, "'Tis the ancestor of all the bass, I know!" "I never hooked so big a fish before!" "Great Scott! it must be the grandfather of the race," etc., etc., filled the air. Then a groan from the man at the butt as a fresh spurt of the fish snapped the tip, the line by some means having fouled and got fast to the ring of the tip. "There goes my tip and the bass with it," said my friend, with a howl of despair, and threw down his rod. The broken tip and line attached dropped near me, and I began to pull it in, when I felt the fish still on the hook. Slowly and carefully I pulled it toward the boat, and, as well as I could manage in the dark, slipped the landing net under it, and the fish was saved. Once more my friend roused up, and, striking matches, eagerly inspected his catch, and he saw—what? A bass? Oh, no! an eel of perhaps a pound weight.

Our sport was over; slowly the anchor was lifted and we rowed back to camp. Our last cast had been made, the last fish had been saved, but there was no rejoicing by the one who had caught it; but we had beaten the record and were satisfied, and many a laugh has been enjoyed at the expense of the one who hooked the "ancestor of the bass family," but which failed to materialize as such.

NOINOE.

SPANISH MACKEREL OFF MOREHEAD.

MOREHEAD CITY, North Carolina, August.—I thank you for the very accurate appearance of my crabbedly written communication, which appeared in your issue of July 15, and which was sent you from the home of the speckled trout in Western North Carolina—Banner Elk. I am just concluding a few weeks visit to this charming seaside, Morehead City, N. C., and believing a few notes on the deep-sea fishing enjoyed by our party will be of interest to the craft I send them to the FOREST AND STREAM.

The records of the national weather bureau show that the three windiest points within the limits of the United States are Mount Washington, Pike's Peak and Cape Lookout, the latter a few miles north of where I am writing. Because of that windiness the days, as well as the nights, are always cool and bracing at this summer resort, no matter what may be the heat of the direct rays; I can therefore conscientiously recommend it to those who not only seek sea bathing and coolness but the most exhilarating sport known to fishermen. And I may add, *entre nous*, there can also be found there delightful, unselfish and genial social intercourse.

I had trolled for bluefish in the ocean, for muskallonge in the lakes and for jack salmon in our rivers, and was thrilled by their fierce resistance, but I never experienced delirium until I saw a 15lbs. Spanish mackerel leap into the air in a struggle to shake himself free of the well-hooked artificial squid at the end of 200ft. of stout line. Try to imagine the sight of four of these slender, green and pearly gray, maroon-spotted darlings being hauled in at the same moment by four shouting and dancing fishermen. Don't speak of dignity at such a time. Life is too short. To be sure they were bespattered by the spray, almost strangled, and the landing of the struggling *Scomber vulgaris* required the full exercise of the muscle, but therein lies the sport. One who has not participated in it cannot realize the delights which exceed, dashing hither and thither through schools of these cavaliers of the ocean, and the landing of hundreds of them in the three hours of the morning expedition.

The sun came down out of a cloudless sky one breezy morning early in July, while four of us lounged under an awning on the cushioned seats of a two-masted sharpie sailing up Bogue Sound, by ancient and historic Beaufort, and under the guns of Fort Macon, bound for the wide ocean and the dining halls of the Spanish mackerel. Before reaching the bar we came into the haunt of the bluefish, and the artificial squids were cast into the sea. How viciously the voracious rascals did strike and pull, but there was little enthusiasm among my companions who had been fishing for weeks, though this was my first adventure. "Pshaw! they are only vulgar plebs," cried an old-timer, while he sarcastically pitched a five-pounder away up toward the bow of the yacht, "Wait till we sail the wide ocean." I waited and was repaid.

"Hi, hi," cried out Capt. Willis, managing the tiller with his feet and slacking nervously the sheet in his left hand. "There's a school over yonder, and rare sport, too, gentlemen." He was anxiously looking seaward where a cloud of birds were flying and diving. Around went the flying beauty, down came the awning, and each braced himself for the expected assault upon the compact ranks of the Spanish mackerel. Bim, bim, bim, bim. Good heavens, such shouting and dashing of spray as the sharpie fairly flew through the leaping school. Out of the tide sprang the hooked beauties, or darted off with our squids toward the Pillars of Hercules. Shout after shout rent the air, and the fish piled up in the bottom of our boat. For an hour the excitement was consuming, while the boat flew backward and forward on every possible tack.

A monster swallowed the hook of a bank cashier from Tennessee, and it was almost too much for his feeble strength. Off dashed the mackerel with a hundred feet of suddenly released line for the Bermudas, then being as suddenly checked leaped into the air, shaking himself fiercely. Suddenly he came toward the sharpie, tugging with might and main at the inhauling white line, cleaving the brine like the prow of a launch, and leaving behind a mighty wake. With savage ferocity he leaped forward, but was too securely hooked to profit by the slackened line. Closer he came until his olive green back, pearly gray and maroon dotted sides and silvery belly glistened in the garish sunshine. He was lifted by boy Dick into the boat, conquered but not subjugated—to die with an execration.

The sport was indescribable. Scarcely would the squid strike the wave before it was swallowed by a voracious mackerel. Bluefish and shiners were absent. In and out of the flocks of birds and the school of mackerel dashed our boat on short tacks, every fisherman wet as a rat and chock-full of enthusiasm. At last the wind fell off, and the speed of the sharpie became too slow for brilliant results. Slowly it went about on a tack for another school, and the Tennessee cashier began hauling in his line to prevent it fouling with the others. All had sat down for a breathing spell, when there was a leap and a shout, and a 16lbs. mackerel sprang over the rail and into the lap of the fisherman whose squid he had swallowed without being hooked. The sudden jerk of the line by Capt. Willis excited the hungry cavalier, and his leap is without parallel in ocean fishing at Morehead.

Bluefish and Spanish mackerel furnish the preferred sport of the ocean. They are always present off this bar during the summer months. There is scarcely a becalmed day from June to mid August; hence ocean fishing is always possible. The beautiful and fleet sharpies are especially adapted to such fishing, and the expense is only 50 cents for each person per day, the boat furnishing squids, lines and ice-water. I need scarcely add that the true fisherman goes every morning (except Sabbath of course) to the ocean during his stay.

Morehead City is reached by direct rail from Washington, via Richmond and Raleigh. Indeed there are easy communications from all points, low railway rates and very low hotel charges. Those interested in this letter may find a very pleasant resort for their families at this seaside, while reveling in ocean fishing themselves. And I may add in conclusion that some of the very largest mackerel caught this season were hooked by ladies who are as devoted to the sport as the men. G. C. CONNOR.

SUSQUEHANNA BASS.

Editor Forest and Stream:

More bass have been caught on the Susquehanna this year than any previous years. Many large ones are taken by trolling with lamprey eels. Fishermen going down the river catch the Susquehanna salmon in this way, and some of those fish have been caught weighing as high as 10lbs. and 12lbs., but most of them average 2lbs. apiece.

Something curious happened with two of our fishermen the other day. They were out together after bass and while floating along with the current enjoying a smoke. Each felt a bite and hooked a bass at the same time. After playing the fish a few minutes they discovered that they both had on the same bass. It had swallowed each of their hooks. Another fisherman while fishing at the old dam had two hooks on his line and on landing a bass was surprised to find it had both hooks in its mouth. This bass was determined to make a square meal or be caught.

I returned last week from a four day fishing and camping trip down the Susquehanna with a party of others. We traveled in canvas canoes and went as far as Wyalusing and caught bass enough for our meals every day, sent some of the largest ones home, gave some to farmers along the river and some even spoiled so they were thrown away. The largest bass was caught by James Carroll and weighed 4lbs. 2oz., while his brother John took one weighing 3¾lbs., the rest averaged about 1lb. apiece. We caught the most on the last part of our trip and the bait used were small bullheads, such as are found under the loose stones in riffles. It is the principal bait along this part of the river. They were hooked through the lips and kept alive for a long time, and we caught ten bass on these to one on dobsons. Lamprey eels are splendid bait but are very scarce and hard to find. P.

ATHENS, Pa., Aug. 23.

THE CARP AS A GAME FISH.

Editor Forest and Stream:

In your issue of Aug. 19, "Big Sandy" requests me to try catching German carp with the fly. I, too, have had some experience. While fishing in Mr. Buckner's pond, three miles from this place, this spring for croppies and bream, I struck a large fish. My tackle being very light and fine, it required delicate handling. The pond is large and deep with but few obstructions, and this made the battle much in my favor. A number of times my fifty yards of line was so reduced on the reel that the axle of the spool was visible, and once I thought I would lose my fish at the expense of my rod. At the expiration of three-quarters of an hour my friend Doug. Thomas landed the fish for me, which proved to be a carp weighing 4lbs. 13oz.

In justice to the fish and myself I may add that, while the stretcher had a good hold on him, in nautical parlance, he was hooked on the starboard side aft of the dorsal fin, and when landing hove to tail foremost. But with all that he was indeed very gamy.

LITTLE SANDY.

NORTH MIDDLETOWN, Ky.

Editor Forest and Stream:

Your reply to "A. F. O.," in Aug. 12 issue induces me to give my experience with carp. Mr. Samuel Read, of Mt. Hermon, N. J., constructed a pond by a simple dam across a brook, flowing from limestone hills. The water is from 2in. to 6ft. in depth. About the middle of last May he put in 500 scale carp 3 to 6in. long, and 13 carp (some of them leather) 2yrs. old, in spawn. At the date of my visit, Aug. 17, we were much interested in seeing the fish fed with bread and much astonished at the size to which

they had grown. The 3in. to 6in. fish seemed 12in. to 14in. long, while we would occasionally see one which my friend supposed belonged to the thirteen that seemed 16in. to 20in. long. To make sure of it I rigged up my rod, and with a bass fly very readily took out two carp of the scale variety. One weighed 1lb. 9oz., the other 1lb. 2oz. When we consider that these fish when put in, in May, were 3in. to 6in. long, their growth has surely been wonderful. Mrs. Read, who is a capital cook, had the fish done to a turn for breakfast next morning. We had been told so much by what ought to have been authority of the poor quality of carp as a table fish, that it was with some misgivings that we commenced our meal. But we found them good, perhaps not so good as shad or trout, but certainly as good as perch and better than the thick-skinned black bass. These carp grew in clear spring water and this may have helped their quality. In the largest fish, not over a year old, was well developed spawn, and from the thirteen large fish the pond (over one acre in extent) is now swarming with little fish from 1in. to 1½in. long.

Now, as the carp grow fast, readily take the hook, and with light tackle make considerable sport, are a good table fish, why not admit it and recommend them? C. D. L.

SWEDESBORO, N. J., Aug. 23.

[We should be glad to have reports of any experience with carp as fish to be taken with the fly, and also as to their edibility, compared with native fishes. Such notes will be given a place in the FOREST AND STREAM.]

OUR SALMON RIVERS.

A FISHING CHRONICLE.

[From the French of J. M. Le Moine, in *Le Journal des Campagnes*, Quebec.]

(Concluded from page 90.)

III.

IN 1873, Harper Brothers, of New York, printed in one illustrated octavo volume the numerous articles upon the trout and salmon lakes which the author, Charles Hallock, had scattered through the magazines and periodicals of the United States. This ardent sportsman, for a number of years editor-in-chief of the weekly journal FOREST AND STREAM, a paper of wide circulation in the United States and Canada, had cast his fly over most of the northern rivers of the continent; no one, therefore, seems better authorized than he to treat of angling *ex cathedra*.

By his "Fishing Tourist" Mr. Hallock has done an inexpressible service to the disciples of Izaak Walton. His Guide Book embraces: 1. Long Island. 2. The Adirondacks. 3. The Alleghanies. 4. New England. 5. The Schoodics. 6. Nova Scotia. 7. Cape Breton. 8. New Brunswick. 9. Baie des Chaleurs. 10. The Lower St. Lawrence. 11. The Saguenay. 12. Labrador and Newfoundland. 13. Anticosti. 14. The Ottawa District. 15. The Superior Region. 16. The Michigan Peninsula. 17. The "Big Woods." 18. The Pacific Slope. 19. Blooming Grove Park. 20. "Natural and Artificial Propagation," without taking into account a quite extended study of the natural and artificial propagation of fish in the United States and among us. The programme is a large one, is it not? and Canada comes in for a large part of it.

True salmon, trout, red, white, gray, pike, Barr dorés, whitefish, black bass, maskinonge, everything which breathes, moves, frisks in the liquid element, finds its place in his admirable list.

Charles Hallock, the indefatigable Secretary of the Angling Club—the Blooming [Grove] Park Association—will tell you in what month, at what date, at what hour of the day, be the weather clear or cloudy, the fish ought to bite; what lure, what fly will tempt it, fixing beforehand and with precision the fly to be used, the kind of canoe, the guide whom you should choose, not omitting the provisions for the trip, the usefulness of canned provisions: lobster, sardines, ham, chicken; specifics against the bites of mosquitoes, even to the necessary stimulants, tea, coffee, prohibiting strictly the use of spirits in camp, and extolling as a beverage the fresh water of the neighboring spring to him who desires to retain the stout arm, the strong leg, the quick wits for a successful struggle with *Salmo salar*, the valiant king of the rivers, rushing all fresh from the depths of the ocean.

Charles Hallock, one might imagine, found his vocation as an angler, a little while after he had escaped from the arms of his nurse. This is how he paints the memorable days of his youth, the happy time when all within us sings:

"It is now twenty-six years since I cast my first fly among the green hills of Hampshire county, Massachusetts. I was a stripling then, tall and active, with my young blood bounding through every vein, and reveling in the full promise of a hardy manhood. My whole time was passed out of doors. I scorned a bed in the summer months. My home was a tree-embowered shanty apart from the farm house, and crowning a knoll around whose base wound and tumbled a most delectable trout brook. Here was the primary school where I learned the first rudiments of a sportsman's education. In time I came to know every woodchuck hole in the township, and almost every red squirrel and chipmunk by sight; every log where an old cock partridge drummed; every crow's nest, and every hollow tree where a coon hid away. I heard Bob White whistle to his mate in June, and knew where to find his family when the young brood hatched out. I had pets of all kinds; tame squirrels and crows, hawks, owls and coons. All the live stock on the farm were my friends. I rode the cows from pasture, drove a cosset four-in-hand, jumped the donkey off the bridge to the detriment of both our necks, and even trained a heifer so that I could fire my shotgun at rest between her budding horns. I learned where to gather all the berries, roots, barks and 'yarbs' that grew in the woods; and so unconsciously became a naturalist and an earnest student of botany. As to fishing, it was my passion. There were great lakes that reposed in the solitude of the woods, at whose outlets the hum and buzz of busy saw-mills were heard, and whose waters were filled with pickerel; and, most glorious of all, there were mountain streams, foaming, purling, eddying and rippling with a life and a dash and a joyousness that made our lives merry, and filled our hearts to overflowing with pleasure."

We need not be surprised if for this *enfant terrible* a suitable field was needed for his devouring energy, nor that he found it in the stirring scenes of angling.

IV.

Fishing with the line brings back to the child his sports; to ripe age its leisure hours; to old age its pleasures; to the sensitive heart the brook near to the paternal roof; to the traveler the busy repose of the people whose sweet quiet he has envied; to the philosopher the origin of the art.

"The Pleasures of Angling." By George Dawson. Sheldon & Co., New York, 1876. This is a charming volume, artistically illustrated, which the historiographer of a famous fishing party on the Cascapedia—Mr. George Dawson, of Albany—gave to the public ten years ago. Mr. Dawson describes the rudiments of the art, fishing with a worm, etc., which is, in his eyes, the prosaic part of his subject; then he serves us up a dish in his own style—ambrosia—the poetic side of this incomparable amusement.

Angling has more than one smiling aspect. Let us not forget that.

Here is one of the delicious chromos of angling as he understands it: It would be a great mistake, he says, to believe that fishing consists only in catching fish. The taking of the inhabitants of the streams and the rivers is indeed the basis of the art; but the soul, the spirit of the recreation, is found elsewhere—

"They are greatly in error who suppose that all there is of fishing is to fish, that is but the body of the art. Its soul and spirit is in what the angler sees and feels, in the murmur of the brook; in the music of the birds; in the simple beauty of the wild flowers which peer at him from every nook in the valley and from every sunny spot on the hillside; in the moss-covered rock; in the ever-shifting sunshine and shadow which give ever-varying beauty to the sides and summits of the mountains; in the bracing atmosphere which environs him; in the odor of the pine and hemlock and spruce and cedar forests, which is sweeter to the senses of the true woodsman than all the artificially compounded odors which impregnate the boudoirs of artificial life; in the spray of the waterfall; in the grace and curve and dash of the swift-rushing torrent; in the whirl of the foaming eddy; in the transparent depths of the shady pool where, in mid-summer, the speckled trout and silver salmon 'most do congregate;' in the revived appetite; in the repose which comes to him while reclining upon his sweet-smelling couch of hemsock boughs, in the hush of the woods where moon and stars shine in upon him through his open tent or bark-covered shanty; in the morning song of the robin; in the rapid-coursing blood, quickened by the pure, unstinted mountain air which imparts to the lungs the freshness and vigor of its own vitality; in the crackling of the newly kindled camp-fire; in the restored health and in the one thousand other indescribable and delightful realities and recollections of the angler's camp life on lake or river during the season when it is right to go a-fishing. It is these, and not alone or chiefly the mere art of catching fish, which render the gentle act a source of constant and ever growing pleasure."

For a lover of nature, for a skilled angler like Mr. Dawson, existence in the valley of the great Cascapedia must have been very sweet, very full, surrounded as he was during this first and memorable excursion by chosen spirits and sympathetic fellow travelers. The morning call brought together in the same camp the eminent President of our Supreme Court, Chief Justice Ritchie; the learned Chief Justice of the Superior Court of Massachusetts, Judge Gray, the friend of Francis Parkman, a profound jurist, of magnificent presence, endowed with social qualities which made him the idol of a numerous circle of friends, as Mr. Dawson likes to repeat; of Col. D. Archie Pell, of Staten Island, the bard of the trip; of Mr. R. G. Dunn, of New York, and finally of General Arthur, who later was called to fill the functions of President of the United States.

These men of science, study and business had their rendezvous on the sweetly flowing banks of the Cascapedia, whose fishing privileges they had leased that year. This is only a small part of the distinguished men, State officers, who have passed their vacations in this angler's paradise. Our Viceroys, Sir Edmund Walker Head, Lords Dufferin, Lorne, Lansdowne, were not slow to discover its charms.

Quite recently, His Excellency, the Marquis of Lansdowne, sent to His Eminence, Cardinal Tachereau, a present of a superb salmon captured in the basin of the Cascapedia.

The journey from Quebec to the salmon streams in the Bay of Chaleurs is made with a speed and an amount of comfort which leaves nothing to be desired. One journeys from Levis to Dalhousie by the Pullman cars of the Intercolonial R. R.; from Dalhousie to Caspebiac, New Richmond, Gaspé, etc., in the large steamer Admiral, commanded by the excellent Captain Dugal, a thorough seaman.

If salmon and trout angling in Canada gives unutterable delight to amateurs, it has also its utilitarian aspect for the economist. Our salmon rivers must number more than sixty; our lakes and trout streams—especially since the opening of the new railway leading toward Lake St. John—are counted by hundreds. Our rich neighbors of the United States have nothing like it. A kindly Providence seems to have almost given us a monopoly. It is for us to use it to the best advantage. Let us protect and make known far and wide our salmon rivers, which are such rich sources of revenue for the public domain.

In 1863 we pointed out to amateur anglers in the little treatise, "Pêcheries du Canada," our salmon streams as follows:

Esquimau.—A stream which formerly furnished 52,000 salmon annually.

Corkewetpeeche.—Near the preceding, good number of salmon.

St. Augustine.—Equally full of fish.

Sheeps Bay.—Good salmon station.

Little Meccatina.—Fine salmon river.

Netagami.—Deep stream with falls; trout in abundance; salmon go up as far as the falls.

Napetiteepe.—Empties into a large bay; salmon abound there.

Etamami.—Celebrated for its salmon.

Coacoacho.—Empties into a fine basin; good for salmon.

La Romaine.—Large river, but not deep; filled with silver trout of an exquisite flavor.

Musquarro.—Rapid stream, steep; good for fly or nets.

Kegashka.—Salmon abound in the bay; the rapids prevent their ascent.

Grand Natashquan.—Famous stream, filled with the finest kind of salmon.

Agwanish.—Northeast boundary of the Seignory of Mingan; large stream, full of fish.

Pashashieboo.—Of moderate size, and contains some fish.

Mingan.—Good for nets and fly; the basin always contains large salmon.

Le Manitou.—Branch of the river Mingan, equally well known and full of fish.

St. John.—Large river, excellent for salmon.

Le Ruisseau à la Pie.—Small rapid stream well stocked with salmon.

Sawbill.—Large stream. Nets are set there.

Le Manitou.—A perpendicular fall obstructs its entrance. Trout and salmon collect at its mouth.

Moisie.—Renowned for its large salmon. Good for fishing with nets or fly.

Lower St. Marguerite.—Swarming with salmon and trout.

Pentecoste.—Deep, rapid brook. Its mouth is full of set nets.

Bay of Trinity.—A favorite station for those who fish with fly or net.

Godbout.—A stream whose fame has extended far and wide. The net fisheries in this stream are very profitable.

English River.—Empties into a deep bay. Salmon and trout abound there.

Bersimis.—A large river with many branches. The scenery is fine. Filled with large trout. They rise to the fly only on the branches.

Nipimewecawnan.—A tributary of the Bersimis. A fairy-like brook with cascades. An earthly paradise for those who fish with the fly.

La Jeremie.—Small trout are caught here; fur trading post.

Colombier, as far as Plover and White Rivers.—Are good for salmon.

Laval.—Very picturesque water course, interrupted by little rapids and narrow and deep basins.

Portneuf.—Nice fly-fishing for trout as far as the first fall; the salmon go higher; nets are set as far up as the tide is felt.

Le Sault au Cochon.—The falls are so high that they prevent the ascent of the salmon. Filled with trout.

Le Grand Escoumain.—Celebrated in the past for its salmon. The milldam has a fishway. The bay is filled with salmon, which are taken with nets.

Les Grandes Bergeronnes.—Pretty good for salmon and trout. The two rivers are but a few miles from Saguenay and Tadousac.

RIVERS WHICH EMPTY INTO THE SAGUENAY.

Ste. Marguerite (Upper).—Principal branch of the Saguenay. Trout and salmon in abundance. They are taken with fly and nets.

Little Saguenay.—Quite a considerable river. Fishing with line and nets.

St. John (Upper).—The same as last.

RIVERS WHICH EMPTY INTO THE ST. LAWRENCE.

Black, or Salmon River.—Formerly full of fish.

Murray.—Waters a superb valley. Salmon are taken.

Du Gouffre.—Much deteriorated.

Ste. Anne.—A pretty stream. Recently the salmon fishing has been below the fall.

Montmorenci.—Has a cataract at its mouth. Toward its source it affords good trout fishing.

Jacques Cartier.—Celebrated salmon river.

SOUTH SIDE.

Riviere du Sud.—Montmagny. Promises to become restocked with salmon.

Riviere Ouelle.—Abundance of salmon. The dam is broken down (1863).

Grand Metis.—A large river with a dam.

Matane.—Beautiful salmon stream.

Ste. Anne.—Formerly abounded in fish.

Mont Louis.—Important stream. Better thought of recently for its sea trout than for its salmon.

Madeleine.—Clear; good for salmon.

Dartmouth.—A large river which empties into the Basin of Gaspé. Salmon swarm there.

York.—The same as above.

St. John (of the South).—Same.

Grand River.—Filled with salmon. Turns a mill.

Grand Pabos.—Salmon stream.

RIVERS THAT EMPTY INTO THE BAIE DES CHALERUS.

Grande Bonaventure.—A great river with several important tributaries. Salmon abound there.

Cascapedia.—The Great and Little Cascapedia supply a quantity of salmon.

New River.—The bay is good for salmon fishing.

Matapedia.—Quite large, swarming with salmon.

Restigouche.—A noble stream, with magnificent tributaries, situated at the head of the Baie des Chaleurs. Frequented by thousands of salmon.

Matapedia.—Branch of the Restigouche. The salmon go up it nearly forty miles.

Mistouche.—Branch of the Restigouche. Salmon river.

Tide is felt in nearly all of these rivers. Those on the north side of the stream (Restigouche) flow through grand and picturesque rocks. Nearly all are fed by lakes.

We take from the *Morning Chronicle*, of June 22, 1886, the list of those who went salmon fishing this season. They exceed in number those of previous years. Dudley Olcott, J. M. Lansing, Albany, of Camp Albany, on the river Restigouche; J. H. DeMott, Alfred de Cordova, Jas. Welch, Wm. Robbins, Mr. Stard, all of New York, of Camp Reckless, on the Restigouche, all bankers.

HIGHLAND LAKE, Me.—The black bass fishing in Highland and Long Lake, Cumberland county, Maine, for the past two weeks has been excellent. The most taking flies have been Montreal, grizzly-king, white-miller, Cheney and silver-doctor. Two New York gentlemen, who recently spent a fortnight with the bass in Long Lake, returned well pleased with their success and expressed a determination to try it again next year. A party from Providence, R. I., who are just completing their second summer of cottage life on the shores of Highland Lake, have recently purchased several acres of land near the best fishing grounds on which they will soon erect a nice camp. We are glad to welcome them for they are always good fellows.—J. C. M. (North Bridgton, Me.).

SILKWORM GUT.

Editor Forest and Stream:

We are in receipt of so many inquiries from anglers in regard to the prospects of the present crop of Spanish silkworm gut, that we believe the following will prove interesting to many of your readers:

The advance of 25 per cent. in the price of gut, which we advised you of last year, was fully maintained in Murcia. The unusually large quantities bought at low figures and held by dealers throughout the world, in connection with the very depressed state of trade last season, combined to check any material advance of price in this country and England. Nearly all of the small manufacturers in Murcia, and several of the largest, seeing that they could not sell their production at cost, shut down to await better times. In addition to this, the season last spring (the most critical period) was very unfavorable. Consequently, almost none but the healthiest and most carefully tended worms survived.

The present situation then is this. The stocks throughout the world are almost entirely exhausted. Trade is improving and there will be a demand for more than the usual supply, while the supply is fully 33⅓ per cent. below the average. The quality of the present crop (except in the very heaviest and the very lightest sizes) is better than usual. The improvement in quality will be equal to an increase of the crop, so that the supply will not probably fall more than 30 per cent. below the average. The demand will be at least 25 per cent. below the average. The knowledge of this has already driven the price 25 per cent. above last year's prices in Spain, with no stock here or in Europe to check the advance. There is no room to doubt the correctness of the opinion that prices will advance far beyond present quotations and that before January, 1887, silkworm gut will be worth about double what it was last January. ABBEY & IMBRIE.

NEW YORK, August 25, 1886.

TROUTING ON CANADA CREEK.—Rome, N. Y., Aug. 20. At 5 A. M., Aug. 13, I slung my basket over my shoulder and started for my favorite pools of Canada Creek. At about 6:30 I opened fire on them with all the line I could safely handle. At 7:15 I had not had a strike, and I concluded it was not late enough in the day for a fly, and took off my coat and lay down under the large elm tree by the creek. In less than ten minutes I was asleep. When I awoke and looked at my watch it was half past ten and the sun was shining, the clouds had nearly all cleared away and I began whipping the creek with flies again. At noon I had twelve small ones. Then I came to a pond where, on one side, a tree hung over the water, and made a cast directly under the boughs. The flies had scarcely touched the water than—what a splash!—a trout a foot long was seen in the air. However, he soon discovered that he had been deceived, and now and again for about ten minutes he would make breaks, and six times jumped full length out of the water. The banks were at least five feet high everywhere, and there was a question as to how to get the landing net under him. Soon he stopped breathing and I took the line and lifted him out. It was a ¾lb. trout and as broad as a black bass of equal weight. I soon found he was not entirely alone. In less than an hour my basket contained four more that weighed a half pound apiece, besides some smaller ones. At 3:30 I hooked another half-pounder. Although fly-fishing is considered the highest branch of the art of taking trout, yet I think casting the grasshopper is equally hard. I have had trout raise to grasshoppers when there would be plenty of live ones on the surface of the water. After I caught one more I cleaned my fish and started for home. My six largest weighed exactly 3¼lbs. My catch for that day, I think, was between twenty-eight and thirty-two.—WILL WASP.

BLACK BASS IN MAINE.—I think a majority of the bass fishermen in this State will say a hearty amen to your remarks on the proposition for ending the close time on black bass May 20, notwithstanding the Augusta *Journal* says, "Every wielder of the rod and line is in favor of the change. July 1 is early enough to commence the fishing, for even then they have not all finished spawning. The quotation, "Every wielder of the rod and line," contains the keynote to much of the prejudice against the black bass. It is the "rod and line," minus the reel, which robs the sport of its chief fascination, and so many times sends the would-be angler home empty-handed. Should close time end May 20, then would the pot-fisherman be in his glory, for with his "stick and string" he could meet the bass on their spawning beds, and should they not be in a biting mood he would still have left that resort so dear to a fish hog's heart, viz., "grapneling," and after he had "derricked" his boat full of fish he might be happy; but can we afford to give up our future fishing for his depraved taste?—BLACK SPOT.

RED BANK, N. J., Aug. 30.—The rock bass of the Chesapeake Bay are coming down the Susquehanna River. I took 48 Wednesday and Thursday, Aug. 25 and 26, average weight, 5lbs. Fished four hours on the 25th and five hours on the 26th. Shedder bait. Two to four miles from Havre de Grace, on the flats or near by. The bass fishing was the finest I ever had, because no small fish bothered. Strong current, and lost but one fish, this on account of forgetting the landing net. No bait at the head of Chesapeake Bay; water too fresh; take your own bait.—GEO. WILD.

SEBAGO LAKE, Me., Aug. 20—The Maine Fish Commissioners are pushing forward their scheme for taking landlocked salmon eggs this fall from Crooked River, the principal spawning ground of Sebago waters. One of the best results to be obtained through these operations will be better protection to the fish than can be afforded in any other way. The spawning beds lying in shelter of heavy woods have afforded the poachers many opportunities.—BLAK SPOT.

THE GUADALOUPE WRECK.—Toms River, Ocean County, N. J., Aug. 27.—The sunken steamer Guadaloupe off Barnegat Inlet, was blown up by a charge of dynamite a few days ago. Forty-three dead sheepshead floated in the water after the discharge.—SKIPPER.

Fisheculture.

LIST OF FISH COMMISSIONERS AND OFFICERS.

FOREST AND STREAM presents its annual list of the Commissioners of Fisheries and Fishery Officers of the different Provinces, States and Territories of North America, revised and corrected to Sept. 1:

THE UNITED STATES—
Prof. Spencer F. Baird, Washington, D. C.

ALABAMA—
Col. D. R. Hundley, Madison.
Hon. Charles S. G. Doster, Prattville.

ARIZONA—
J. J. Gosper, Prescott.
Richard Rule, Tombstone.
J. H. Taggart, Business Manager, Yuma.

ARKANSAS—
James H. Hornibrook, Little Rock.
H. H. Rottaken, Little Rock.
[These were the officers last year; we have not been able to get replies from them.]

CALIFORNIA—
R. H. Buckingham, President, Sacramento.
Hon. A. B. Dibble, Secretary and Treasurer, Grass Valley.
Thos. J. Sherwood, Marysville.

CANADA—
Hon. John Tilton, Deputy Minister of Fisheries, Ottawa, Ont.

PROVINCE OF NEW BRUNSWICK—
W. H. Venning, Inspector of Fisheries, St. John.

PROVINCE OF NOVA SCOTIA—
W. H. Rogers, Inspector, Amherst.
A. C. Bertram, Assistant Inspector, North Sydney.

PROVINCE OF PRINCE EDWARD'S ISLAND—
J. H. Duvar, Inspector, Alberton.

PROVINCE OF QUEBEC—
W. Wakeham, Inspector, Lower St. Lawrence and Gulf Division, Gaspé Basin.

PROVINCE OF BRITISH COLUMBIA—
Thos. Mowat, Acting Inspector, New Westminster.

PROVINCE OF MANITOBA AND NORTHWEST TERRITORIES—
Alex. McQueen, Inspector, Winnipeg, Man.
S. Wilmot, Supt. of Fishculture, Newcastle, Ont.

COLORADO—
John Pierce, Denver.

CONNECTICUT—
Dr. Wm. M. Hudson, Hartford. (Term expires Aug. 26, 1889.)
Robert G. Pike, Middletown. (Term expires March 8, 1889.)
James A. Bill, Lyme. (Term expires Aug. 26, 1887.)

DELAWARE—
Enoch Moore, Wilmington. (Term expires April 23, 1887.)

GEORGIA—
Hon. J. T. Henderson, Commissioner of Agriculture, Atlanta.
Dr. H. H. Cary, Supt. of Fisheries, LaGrange.
(Under the laws of the State these constitute the Board of Fish Commissioners.)

ILLINOIS—
N. K. Fairbank, President, Chicago.
S. P. Bartlett, Secretary, Quincy.
Maj. Geo. Breuning, Centralia.

INDIANA—
Enos B. Reed, Indianapolis. (Term expires in 1887.)

IOWA—
E. D. Carlton, Spirit Lake.

KANSAS—
S. Fee, Wamego, Pottawatomie county.

KENTUCKY—
Wm. Griffith, President, Louisville.
P. H. Darby, Princeton.
John B. Walker, Madisonville.
Hon. C. J. Walton, Munfordville.
Hon. John A. Steele, Midway.
W. C. Price, Danville.
Dr. W. Van Antwerp, Mt. Sterling.
Hon. J. M. Chambers, Independence, Kenton county.
A. H. Goble, Catlettsburg.
J. H. Mallory, Bowling Green.

MAINE—
E. M. Stilwell, Bangor. } Commissioners of Fish
Henry O. Stanley, Dixfield. } and Game.
B. W. Counce, Thomaston, Commissioner of Sea and Shore Fisheries.

MARYLAND—
G. W. Delawder, Oakland.
Dr. E. W. Humphries, Salisbury.

MASSACHUSETTS—
E. A. Brackett, Winchester.
F. W. Putnam, Cambridge.
E. H. Lathrop, Springfield.

MICHIGAN—
Dr. J. C. Parker, Grand Rapids.
John H. Bissell, Detroit.
Herschel Whitaker, Detroit.
(W. D. Marks, Supt., Paris).
(A. J. Kellogg, Secretary, Detroit).

MINNESOTA—
1st District—Daniel Cameron, La Crescent.
2d District—Wm. M. Sweney, M.D., Red Wing.
3d District—Robt. Ormsby Sweeny, President, St. Paul.
(S. S. Watkins, Supt., Red Wing).

MISSOURI—
J. G. W. Steedman, M.D., 2,803 Pine street, St. Louis.
Gen. J. L. Smith, Jefferson City.
H. M. Garliech, St. Joseph.

NEBRASKA—
W. L. May, Fremont.
R. R. Livingston, Plattsmouth.
B. E. B. Kennedy, Omaha.

NEVADA—
W. M. Cary, Carson City.

NEW HAMPSHIRE—
George W. Riddle, Manchester.
E. B. Hodge, Plymouth.
John H. Kimball, Marlboro.
(E. B. Hodge, Superintendent.)

NEW JERSEY—
Richard S. Jenkins, Camden.
William Wright, Newark.
F. M. Ward, Newton.

NEW YORK—
Hon. R. Barnwell Roosevelt, President, 17 Nassau street, New York.
Gen. Richard U. Sherman, Secretary, New Hartford, Oneida county.
Eugene G. Blackford, Fulton Market, New York.
William H. Bowman, Rochester.
(Superintendents: Seth Green, Rochester; Fred Mather, Cold Spring Harbor; Monroe A. Green, Mumford, Monroe county; F. A. Walters, Bloomingdale, Essex county.)
Secretary: H. H. Thompson, P. O. Box 25, New York city.

NORTH CAROLINA—
(A note from Col. M. McGehee, Raleigh, the former Commissioner, under date of Aug. 9, says: "There is no Fish Commissioner in the service of this State.")

OHIO—
Col. L. A. Harris; President, Cincinnati.
George Daniels, Sandusky.
James Dority, Toledo.
(Henry Douglass, Supt., Sandusky.)
[No information furnished, the names are those of last year.]

PENNSYLVANIA—
John Gay, President, Greensburg.
H. H. Derr, Secretary, Wilkesbarre.
Arthur Maginnis, Swift Water, Monroe county.
A. M. Spangler, Cor. Sec., 512 Commerce street, Philadelphia.
Aug. Duncan, Treasurer, Chambersburg.
Chas. Porter, Corry.

RHODE ISLAND—
John H. Barden, Rockland.
Henry T. Root, Providence.
Wm. P. Morton, Providence.

SOUTH CAROLINA—
Hon. A. P. Butler, Columbia, Commissioner of Agriculture.

TENNESSEE—
W. W. McDowell, Memphis.
H. H. Sneed, Chattanooga.
Edward D. Hicks, Nashville.

VERMONT—
Hiram A. Cutting, Lunenburgh.
Herbert Brainerd, St. Albans.

VIRGINIA—
Col. Marshall McDonald, Berryville.

WASHINGTON TERRITORY—
Albert T. Stream, North Cove, Pacific county

WEST VIRGINIA—
C. S. White, President, Romney.
W. A. Manning, Secretary, Talcott.
F. J. Baxter, Treasurer, Braxton Court House.
(Terms expire June 1, 1889.)

WISCONSIN—
The Governor, *ex officio*.
Philo Dunning, President, Madison.
C. L. Valentine, Secretary and Treasurer, Janesville.
J. V. Jones, Oshkosh.
A. V. H. Carpenter, Milwaukee.
Mark Douglass, Melrose.
Calvert Spensley, Mineral Point.
(James Nevin, Superintendent, Madison.)

WYOMING TERRITORY—
Otto Gramm, Laramie.
[Dr. W. N. Hemt, Cheyenne, is Commissioner for Laramie county, and B. F. Northington, Rawlins, is Commissioner for Carbon county.]

THE MAINE COMMISSION.—The Fish and Game Commissioners of Maine are doing good work. Deer have increased wonderfully, notwithstanding the last winter was the most favorable one for crust-hunting in many years. The fish are also increasing, and angling has been good in many parts. They have 35,000 square miles of territory under their care, and an appropriation of only $7,500 to pay wardens and hatch fish with, or about twenty-one cents per square mile per annum.

NO MEDICAL EXAMINATION is required to take out an accident policy in the Travelers, of Hartford, Conn., guaranteeing a sum of money weekly while disabled from accidental injury, and principal sum in case of death resulting therefrom.—*Adv.*

The Kennel.

Address all communications to the Forest and Stream Pub. Co.

FIXTURES.

DOG SHOWS.

Sept. 1 and 2.—First Show of the American Fox-Terrier Club, at Newport, R. I. For fox-terriers exclusively. Fred Hoey, Secretary Box 2017 New York. Entries close Aug. 21.

Sept. 7 to 10.—First Annual Dog Show of the Tri-State Fair Association. Chas. Reed, Secretary, Toledo, O. Entries close Sept. 1.

Sept. 8 to 10.—Hornellsville, N. Y., Dog Show, Farmers' Club Fair. J. O. Fellows, Superintendent, Hornellsville. Entries close Sept. 1.

Sept. 14 to 16.—Bench Show of Attleboro Farmers' and Mechanics' Association. A. H. Wakeman, Secretary. P. O. Box 1433, Providence, R. I.

Sept. 14 to 17.—First Fall Dog Show of the New Jersey Kennel Club, Waverley. A. P. Vredenburg, Secretary, 14 Murray street, New York. Entries close Sept. 1.

Sept. 27 to Oct. 2.—Bench Show of Indiana State Fair Association. J. M. Freeman, Secretary, Bicknell, Ind.

Oct. 5 to 9.—Annual Dog Show of the Danbury Agricultural Society. B. C. Lynes, Secretary, Danbury, Conn.

Oct. 13 and 14.—Third Annual Dog Show of the Stafford Kennel Club. R. S. Hicks, Secretary, Stafford Springs, Conn.

Oct. 19 to 22.—Fifth Annual Dog Show of the New Brunswick Kennel Club. H. W. Wilson, Secretary, St. Johns, N. B.

FIELD TRIALS.

Sept. 21.—Field Trials of the Manitoba Field Trials Club. Chas. A. Boxer, Secretary, Box 282, Winnipeg.

Nov. 8.—Second Annual Field Trials of the Western Field Trials Association, at Abilene, Kan. R. C. Van Horn, Secretary, Kansas City, Mo.

Nov. 8.—Third Annual Field Trials of the Fisher's Island Club, at Fisher's Island, N. Y. Max Wenzel, Secretary, Hoboken, N. J.

Nov. 22.—Eighth Annual Field Trials of the Eastern Field Trials Club, at High Point, N. C. W. A. Coster, Secretary, Flatbush, Kings county, N. Y.

Dec. 6.—Eighth Annual Field Trials of the National Field Trials Club, at Grand Junction, Tenn.

Dec. 14.—Inaugural Field Trials of the Texas Field Trials Club. For members only. John F. Sharp, Secretary, Marshall, Tex.

A. K. R.—SPECIAL NOTICE.

THE AMERICAN KENNEL REGISTER, for the registration of pedigrees, etc. (with prize lists of all shows and trials), is published every month. Entries close on the 1st. Should be in early. Entry blanks sent on receipt of stamped and addressed envelope. Registration fee (50 cents) must accompany each entry. No entries inserted unless paid in advance. Yearly subscription $1.50. Address "American Kennel Register," P. O. Box 2832, New York. Number of entries already printed **4006.**

THE EASTERN FIELD TRIALS.

THE eighth annual meeting of the Eastern Field Trials Club, to be held at High Point, N. C., Nov. 18, promises to be the most brilliant one yet held. Many young dogs as well as some that have already made their mark are now at work and the entries will undoubtedly be in excess of those of any year. All who intend running their dogs should bear in mind that the entries close Oct. 1. Quail are reported fairly plenty on the preserve although some of them are quite small. We hope to see this year a largely increased entry for the Members' stake. Every member who owns a good dog should enter and run him and lend his influence to make this stake the most important event of the meeting.

SPRATT'S BISCUIT.

Editor Forest and Stream:

Shortly after the New Haven show I wrote you in support of your statement that the dogs at New Haven were scoured by the food supplied by Spratts Patent. I think I made it clear enough in that letter that I had used them in England and found them all that could be desired and my bad experience was confined to what had been turned out immediately prior to and during the show named. With your permission I will relate my experience since then. At New York I showed a St. Bernard, Margery. She was due to whelp on Saturday of the New York week, but showing no signs of being in pup I sent her over. While there she increased so rapidly in size that I thought there must surely be one pup. This was on Wednesday and on Thursday I had Mr. Glover examine her so that I might have her removed. I told him that she could not have eaten very much and was off her feed, not even caring about her favorite milk and egg. He said she was not in whelp and left her at the show. Mr. Glover's statement was correct and I thought no more about the matter till I had the pleasure of meeting Mr. G. G. Cleather, manager of Spratts Patent (America) Limited, about a month later.

Very naturally we referred to the old correspondence, and Mr. Cleather asked me to try the biscuits again, giving at the same time a reason for the trouble at New Haven. My experience with Margery then occurred to me, and I replied that I would willingly do so, and he sent me 25lbs. each of two kinds of biscuits marked "A" and "B." I at once placed four dogs on the diet, two being puppies of ten weeks old. Looseness of the bowels was noticeable for two days, but it was not anything like purging. After that their passages became speedily more natural, and continued so until the first bag was finished. On changing to "B," there was a repetition of the experience with bag "A," and I am inclined to think the looseness lasted a little longer, but as I was away from home at that time I cannot speak positively.

I communicated the results to Mr. Cleather and asked for some more of the "A" quality, in order to see whether the change back had any effect. The change was made without any preliminary mixing of the two qualities, and no laxative results were noticeable. To further test this make of the biscuits, I got home one of my collies which had been recruiting on a farm after whelping, and let her feed with the rest. The third day she ate heartily of the biscuits and showed hardly any signs of looseness, even after her first meal or two. Next I tried the St. Bernard, which had also been out on the farm preliminary to being bred to Mr. Hopf's Otho. I had with her a little different experience from any of the others. All of these preferred the biscuits soaked with a little soup and chopped meat mixed with them. Margery, on the contrary, would leave the soaked biscuits and feed out of the sack of dry broken ones. She came back to me on Friday last and has had nothing else but biscuits since then, and her passages to-day (Monday) are perfectly natural. She is a zealous feeder, and soon took to her evening meal of soaked biscuits with the rest, supplementing that by visits to the sack during the day whenever she feels like it.

I have now had nearly two months experience with the biscuits and I am perfectly satisfied to continue feeding them. Compared with the necessary work of cooking food it is a pleasure to have them about. At my request Mr. Cleather kindly had the last lot broken by their machine, so that all I have to do is fill the measure of biscuits and run water on them until level with the surface. I use cold water and let them stand an hour or two as the case may be. Then strain off any water that may be left unabsorbed and pour over them the soup which is made usually from the table scraps mixed occasionally with a good deal of vegetables. The biscuits being thoroughly cold to begin with it takes very little time to cool off the feed, which according to the instructions sent me, must be fed cold. This I found difficult to do always if the biscuits were soaked in hot soup and instituted the cold water, soak instead, which seems to answer every purpose.

JAMES WATSON.

THE DISAPPOINTMENTS OF DOG BREEDING.

HOW constantly does a whole litter, by a really good sire, and out of a good bitch, both having the best of pedigrees, turn out a thorough disappointment; and instead of one or two members of the litter turning out, as might reasonably be expected, even fair medium specimens, how constantly has the breeder to acknowledge "the whole of the litter were worthless"—in fact, weeds and outsiders, departing from the type desired, and that of the parents. Yet the breeder very possibly studied the subject of mating the dam with the utmost care, and the value of the sire is not unfrequently amply proved by his begetting some superb offspring partaking strikingly after himself, and out of very mediocre dams of no very fashionable blood or appearance.

Whence the cause? and what is the best thing to be done? are questions that breeders would often wish to have elucidated, for they are frequently not only disappointed and mystified by the results, but so thoroughly disgusted as well that they throw up breeding in despair, regarding it as a sort of lottery, which it is not their luck to be fortunate in; still, when they see the continued success that attends some breeders, they are forced to admit that breeding cannot exactly be lottery, for some men will command successful results.

How is this brought about? The reply is, by good judgment and perseverance, sticking to one's judgment as long as the breeder has reason to believe that judgment is correct.

I have constantly seen worthless specimens with the best of pedigrees and have often been asked to go with parties to inspect a well-bred dog, offered for a reasonable figure, which my friend thought, from the excellence of the pedigree, might suit him for stud purposes. When, however, the animal has been produced, my friend has needed little or no persuasion on my part not to purchase the outsider.

Not long ago I went by appointment to look at a young dog at the kennel of one of the most noted and most successful fox-terrier breeders. The dog was offered at a moderate price. When we got there we were shown a specimen nearly as large as a pointer and looking more like a cross between a greyhound and a pointer than a fox-terrier. My friend remarked: "I fear he won't do; yet would he not perhaps throw one or two good puppies like his sire?" I replied, "That is a question that with our present knowledge of breeding the most experienced cannot answer with any certainty." But it is certain that the type such outsiders (*i. e.*, departures from the required type) have taken after is the type or sort which they will for the most part have the tendency to beget. Have nothing to do with breeding from sires of inferior form, however good their pedigree, is my advice. Breeders may see that the clever and successful breeders are anxious enough to draft such wastrels out of their own kennels and that should guide smaller breeders. But another fact should be a very significant warning, which is, that if the Stud Book is looked through very few notedly good specimens will be found by unknown and indifferent sires.

But how is it that with such pedigrees such worthless outsiders and decided departures from the required type, come?

The answer is, that all domestic animals altered by circumstances and their cultivation, will throw offspring with a tendency more or less to revert to a more normal type. The change produced in improved breeds by culture and selection will frequently show signs of deterioration, unless the selection of such animals which approach nearest to the required type is carefully preserved, and all male specimens departing from the ideal standard are studiously avoided. This explains how it is at times that from parents of the highest pedigree a valueless litter may be brought forth. What is to be done when this happens? Destroy or get rid of the lot as well as the breeder can is the best advice, and if there is reason to think that the alliance should suit, mate the same parents again, however disappointing the former litter, and by so doing I have frequently known a very fine litter to be produced—in fact, some of our most noted champions have been the result of a second litter by the same sire and dam. It has been remarked in breeding dogs and other domestic animals, that if the sire is not changed the offspring of subsequent alliances take more and more after him in appearance than those of the earlier births, which would seem to show that the sire exercises an increasing or stronger influence over the progeny every alliance. This is well worthy of remembrance, and breeder sshould not lose heart, but try again if the whole litter turn out a departure from the required and expected type. It should also be borne in mind that the merits of some of our best sires have not been fully recognized until after they have passed away, showing, seemingly, that sires improve with age, many having begot their best offspring when they were growing old. But, it may be asked, how is it we see our best sires so constantly begetting their best offspring from mediocre bitches of no very fashionable pedigree? The answer for this is the higher bred (*i. e.*, the more closely bred) the parent, the more power it has to influence the form of its offspring; therefore, when highly-bred bitches are mated with a good sire, they exert a greater influence over the external form of their progeny than less highly bred ones do. Hence we see far more offspring taking after the sire in external form from mediocre dams of no very close breeding than their offspring from more highly-bred bitches. At the same time it must be remembered that the offspring from indifferent dams, however good themselves, will not in their turn prove as valuable and prepotent sires as those who are the offspring of a sire and dam already related and taking after the same, the required family type. At the same time, it will readily be seen that all departures from the desired form, however well bred, should be avoided for sire purposes, for the tendency, both in the male and female, is to exert an influence over the offspring toward taking after the same stirp as the parent has itself, at the same time more or less modified by the various ancestral strains in both parents.—*Aper, in the Stock-Keeper.*

MASTIFF CHARACTER.

(Concluded from page 91).

I AM not the only one who has discovered some striking traits of moral and even sometimes physical likeness between the fancier and the breed of his predilection. Study the mastiff man and the mastiff fancy, and I leave you to your own conclusions. It has been said and written that more members of the gentle sex have proportionately become successful breeders of mastiffs than of any other division of the canine race.

I do not think that in any other fancy one finds that general good fellowship and friendly intercourse which exists between gentlemen (I do not say dealers or professional buyers and sellers) lovers of the mastiff. Some three months ago I wrote to a mastiff man and had occasion to give expression to the following sentiment: "I love the breed for itself and its inherent and intrinsic qualities, but I also love it for the many valuable and valued friends and friendships it has procured me." His reply to me was: "I too owe the breed a high degree of gratitude; for I also have gained many friends through it." And what about all this? Well, it illustrates the link of connection toward the faithfulness and gentleness of the class which can produce such results. I have often thought that it would be a most interesting study to gather up old catalogues, sayings and traditions, old lore containing names, deeds and character of the old mastiff breeders working out the idea of connection between the fancier and the fancy! I think that it would throw a very favorable light on our favorites.

"It's all very fine to talk of gentleness, but look at the iron and wirework cages they are shut up in at the shows. If they were not dangerous their owners would not secure them like that." True, but how many mastiffs did you ever find thus severely isolated from the crowd? I remember some half dozen within the long period of the last twenty years. What is that small proportion compared to that of the other large breeds? Another consideration must be kept in view, that caging is not always caused by fierceness. Valuable dogs are often isolated to prevent people from pulling them about or feeding them, or for other reasons well understood by breeders. Then if we always knew of causes and origins in the savage ones, how did these ferocious ones get ferocious? Were they not spurred on to it by improper treatment in youth? The other day I was glancing through the *American Kennel Register*, the July number, 1885, where I came across an article on the mastiff signed M. B. Wynn, where the following occurs: "Strangely enough the last mastiff he owned was one I bred and gave to I. W. Thompson, at whose death it was purchased by Sir George Armytage, and the last time I visited Kirklees (in 1882) old John was dead and the old dog was the only remaining link to remind me of my two old friends. He was chained up under a splendid oak tree, close to the hall. The housekeeper who kindly came out in answer to our ring at the bell, begged me not to go near him lest he should bite, but being anxious to examine his mouth, and relying on the generous disposition of the breed, I fearlessly went up and patted him, although he could not have recollected me, being a mere puppy of some two months old when he left my kennels." Just notice the confidence in the mastiff's character of one who ought to know them, being a practical breeder of, I believe, thirty years standing.

I once bought a mastiff bitch off a dealer's bench, and she proved a demon. In less than a year after that I could take her out to friends' houses, and children could play with her. The secret of her conversion was kindness. Another time I was rearing a young bitch, and she showed dangerous dispositions. I watched her, and found that, in their play, children involuntarily teased her. I stopped all games, made the children simply go in and pass through the yard walking, warning them not to run or to be afraid, and preventing all sudden or quick movements. Her nerves got quiet, and she is perfectly gentle now. Incautious rearing would have made her ferocious. The mother of this puppy, Winna, is my favorite at the present moment, and is so faithful and intelligent that I refrain from saying much about her, for fear of people thinking that I draw the long bow.

People believe that the pure-bred mastiff which is kept and fed for exhibition purposes loses all his characteristics. This is a mistake. Have you ever, when at the Palace shows, noticed a slender-built but distinguished-looking gentleman with dark-blue spectacles? He rambles about, assisted at times by an attendant, and at times he wanders perfectly by himself. He goes from dog to dog, takes their skulls between the palms of his hands, walks his fingers in all directions over muzzle, skull, ears and eyes, and at last feels the animal all over. "This is a good one, I see," he will say, or "This I perceive to be a poor one." That gentleman is absolutely blind. He does not see but feels the dog. He loves the mastiff, and owns, among other fair specimens the well-known brindle champion mastiff bitch Lilly II. Lilly is a favorite with him and not without good reason. He almost universally takes her out with him when he takes his walks about the grounds of his residence, and she is most faithful to him. Not long ago he had to absent himself from home for several days. On his return he repairs to his kennels and gives Lilly her usual recreation. She flies away and he follows the beaten path. But he had not walked many steps when he runs against his dog. Lilly was standing full against him across the road, preventing him from advancing any further. He strokes her and urges her on, but she does not go. He speaks abruptly, but she budges not. He orders, he commands, but all to no use; she keeps barring him the way. Surprised at this most extraordinary behavior, he retraces his steps. On the way back he meets his manager, who was just running after him. The mystery is explained, and Lilly is, more than ever before, her master's beloved pet. During the master's absence, some draining works had been pushed on, and a trench had been dug across the gravel walk. It was open when the blind man took his walk in that direction, and he had just arrived at it when Lilly, comprehending her master's position, saved him from falling. Had not she stood as firm as a rock on the border of that trench, our friend must have fallen in it and perhaps been killed. HENRY VAN DOORNE.

THE FOX-TERRIER SHOW.

[Special to Forest and Stream.]

NEWPORT, R. I., Sept. 1.—The first specialty show ever held in this country promises to be a grand success. The dogs are admirably benched, and the members of the club are working with a will. A more suitable building than the one selected could not be found. It is in every way well adapted for a small show. Mr. John Read is Superintendent, and Mr. Belmont is the busiest of managers. Taken as a whole the show is a good one; but we are rather disappointed with the open class for bitches, the puppy classes, and also with the entries in the classes for wire-haired specimens.

Splauger and Belgrave Primrose are entered in the class for champion dogs. Neither are first-class, and the battle will be fierce and long. Primrose will probably win. In the bitch class Richmond Olive should win over Diana and Lyra. The open dog class is a good one. Twenty entries. Bachanal and Valet will most likely be first and second. Diadem and Marguerite are in such wretched condition that neither should receive notice. Mr. Morrell's Special and Mr. White's Queen will come near winning. In the class for veterans, Royal should win. Dawson has him in capital condition. The weather is delightful and success is insured.

TEXAS FIELD TRIALS.

Editor Forest and Stream:

The Texas Field Trials club will hold its inaugural meeting for members only, near Marshall, Texas, beginning on Dec. 14, 1886. There will be an all-aged stake and a stake for puppies whelped on or after the first day of January, 1885. The prizes will be of nominal value. In January or February next we hope to be able to hold a meeting open to all, and offer prizes that will bring the best dogs in the country. JOHN F. SHARP, Secretary.

MARSHALL, Texas, Aug. 24, 1886.

JUDGES AT THE WAVERLY DOG SHOW.—Following is a complete list of judges for the Waverly dog show: Mr. John Davidson, Monroe, Mich., pointers, English, Irish and black and tan setters. Mr. James Mortimer, Babylon, L. I., St. Bernards, foxhounds, basset hounds, bulldogs. Dandie Dinmont, Bedlington, Skye, Irish and rough-haired terriers, black and tan, Yorkshire, King Charles and Blenheim spaniels and toys. Mr. Chas. H. Mason, Brooklyn, N. Y., mastiffs, Newfoundland, deerhounds, greyhounds, Great Danes, collies, bull-terriers, fox-terriers, dachshunde, pugs and selling class. Mr. A. C. Wilmerding, New York, Clumber, field and cocker spaniels. Mr. N. Elmore, Granby, Conn., beagles. Dogs entered in the selling class at a price not to exceed $25, can be claimed at catalogue prices except by the owner.

THE COLLIE CLUB OF AMERICA.—At a meeting held in New York Aug. 26 a club with the above name was formed. Officers: President, Jenkins Van Schaick; Vice-Presidents, W. Gilmer Hoffman, Allen L. Apgar; Executive Committee—Jenkins Van Schaick, W. Gilmer Hoffman, Allen L. Apgar, Mitchell Harrison, Roland Worthington, Jr., Martin Dennis, George A. Smith, James A. Lindsay, John A. Long, John D. McKennan; Secretary and Treasurer, Geo. A. Smith, 520 Walnut street, Philadelphia, Pa. A meeting will be held at the Waverly show, Sept. 14, to elect officers permanently. Applications for membership should be sent to the secretary.

THE OLD ENGLISH MASTIFF CLUB'S SPECIAL.—NEW YORK, Aug. 25, 1886.—*Editor Forest and Stream:* We have just received the following: "New Jersey Kennel Club —Gentlemen: By direction of the sub committee of the O. E. Mastiff Club, I notify you that the Old English Mastiff Club, of England, offer a prize of 10 guineas for the best mastiff, dog or bitch, at your coming show. Very respectfully, WM. WADE, Secretary Sub Committee."—A. P. VREDENBURGH, Secretary.

THE STAFFORD DOG SHOW.—The third annual dog show of the Stafford Kennel Club will be held at Stafford Springs, Conn., Oct. 13 and 14.

THE DANBURY DOG SHOW.—The annual dog show of the Danbury Agricultural Society will be held at Danbury, Conn., Oct. 5 to 9.

KENNEL NOTES.

KENNEL NOTE BLANKS.—For the convenience of breeders we have prepared a series of blanks for "Names Claimed," "Whelps," "Bred" and "Sales." All Kennel Notes must be sent to us on these blanks, which will be forwarded to any address on receipt of stamped and directed envelope. Send for a set of them Sets of 200 of any one form, bound, for retaining duplicates, sent postpaid, 30 cents.

NAMES CLAIMED.

☞ **Notes must be sent on the Prepared Blanks.**

Forest. By C. P. Rogers, Huntington, N. Y., for black and tan Gordon setter dog, whelped April 13, 1886, by Bramble (Dr. Aten's Glen—Gypsy) out of Bess (Grant—Nellie).

And. By C. P. Rogers, Huntington, N. Y., for black and tan Gordon setter dog, whelped April 13, 1886, by Bramble (Dr. Aten's Glen—Gypsy) out of Bess (Grant—Nellie).

Stream. By C. P. Rogers, Huntington, N. Y., for black and tan Gordon setter dog, whelped April 13, 1886, by Bramble (Dr. Aten's Glen—Gypsy) out of Bess (Grant—Nellie).

Camilla and Minnie. By C. P. Rogers, Huntington, N. Y., for black and tan Gordon setter dog and bitch, whelped April 13, 1886, by Bramble (Dr. Aten's Glen—Gypsy) out of Bess (Grant—Nellie).

Judy II. By W. G. Young, Ottawa, Ont., for lemon and white Clumber spaniel bitch, whelped March 17, 1886, by Johnny (Ben—Joan) out of Jill (Flash—Eagan's Judy).

Maida. By Joseph E. Travis, Brooklyn, N.Y., for mouse-colored greyhound bitch, whelped March 23, 1886, by imported Don out of Wanda (Dash—Flora).

Bulah. By H. A. Trash, White Cloud, Mich., for black cocker spaniel bitch, whelped Jan. 24, 1886, by Ober (Obo II.—Critic) out of Belva (Obo, Jr.—Queen Bee).

Fanchon. By Henry Muss, Champaign, Ill., for black and tan bitch, whelped June 6, 1886, by Mahomet (Wallace—Gaff) out of Lady (Vortigern—Lilly II.).

Vim. By Oakdale Kennels, Westbrook, Conn., for liver and white cocker spaniel dog, whelped May 16, 1885, by Hornell Silk out of Wanda T. (Don—Belle).

Vaeger. By Dr. W. Thornton Parker, Newport, R. I., for liver and white pointer dog, whelped May 23, 1886, by Dash (Sensation—Grace) out of Zoo (A.K.R. 1442).

Zulu Chief, Lufra and Lady Favorita. By Progressive Kennels, Flatbush, L. I., for fawn and black mastiffs, one dog and two bitches, whelped June 22, 1886, by Zulu I. (A.K.R. 2403) out of Queen Bess.

Joe Bunker. By A. M. Tucker, Charlestown, Mass., for black and white English setter dog, whelped May 28, 1886, by Gus Bondhu (Dashing Bondhu—Novel) out of Countess Lasca (Drake—Countess Vista).

Budd Noble. By A. M. Tucker, Charlestown, Mass., for black, white and tan English setter dog, whelped May 28, 1886, by Gus Bondhu (Dashing Bondhu—Novel) out of Countess Lasca (Drake—Countess Vista).

Mont Royal Kennels. By Thomas W. Mills, Montreal, Can., for his kennel of bulldogs.

Editor Forest and Stream: The pointer dog Master Bracket is lemon and white instead of liver and white, as given last week.—JAS. L. ANTHONY.

BRED.

☞ **Notes must be sent on the Prepared Blanks.**

Zoe—Bradford Ruby. Chas. Huncker's (Philadelphia, Pa.) pug bitch Zoe (Bradford Ruby—Daisy II.) to City View Kennels' Bradford Ruby (Lovat—Jenny), Aug. 10.

Lady Cloudy—Bradford Ruby. City View Kennels' (New Haven, Conn.) pug bitch Lady Cloudy (Max—Lady Flora) to their Bradford Ruby (Lovat—Jenny), Aug. 24.

Ruby III.—Gowrie. L. K. Mason's (Hastings, Ia.) Chesapeake Bay bitch Ruby III. (A.K.R. 1918) to Geo. E. Poyneer's Gowrie (Sunday—Nellie), Aug. 10.

Frost—Gloster. W. A. Steether's (Lynchburg, Va.) Llewellin setter bitch Frost (Leicester—Victress) to McMonde's Gloster (Dashing Rover—Trinket), July 12.

Leah—Dashing Rover. W. A. Steether's (Lynchburg, Va.) Llewellin setter bitch Leah (Gladstone—Frost) to E. Dexter's Dashing Rover, July 20.

Nellie—Young Faust. Oakdale Kennels' (Westbrook, Conn.) pointer bitch Nellie (Sensation—Flirt) to their Young Faust (A.K.R. 779), Aug. 16.

Cremorne—Bang Bang. R. G. Westlake's (Olyphant, Pa.) pointer bitch Cremorne to Westminster Kennel Club's Bang Bang, Aug. 21.

Ferry—Bang Bang. T. F. Rivers's (Bridgeport, Conn.) pointer bitch Ferry (Tammany—Erie) to Westminster Kennel Club's Bang Bang, Aug. 13.

Rue—Bang Bang. Bayard Thayer's (Lancaster, Mass.) pointer bitch Rue to Westminster Kennel Club's Bang Bang, Aug. 12.

Hildegarde—Otho. Progressive Kennels' (Flatbush, L. I.) rough-coated St. Bernard bitch Hildegarde (A.K.R. 3761) to Hospice Kennels' Otho, Aug. 23.

Mollie Lever—The O'Donoghue. Excelsior Irish Water Spaniel Kenuels' (Milwaukee, Wis.) Irish water spaniel bitch Mollie Lever to their The O'Donoghue (Mickey Free—Eily O'Connor), Aug. 14.

Jipsey—Storm. Excelsior Irish Water Spaniel Kennels' (Milwaukee, Wis.) Irish water spaniel bitch Jipsey (Dan O'Connor—Queenstown) to their Storm, Aug. 6.

Winifred—Baby. R. T. Asten's (Orlanda, Fla.) mastiff bitch Winifred (Mungo—Penultima) to his Baby, Aug. 23.

Ilford Cambria—Baby. R. T. Asten's (Orlando, Fla.) mastiff bitch Ilford Cambria (Crown Prince—Claudia) to his Baby, Aug. 13.

Chippewa Bell—The O'Donoghue. Excelsior Irish Water Spaniel Kennels' (Milwaukee, Wis.) Irish water spaniel bitch Chippewa Bell (Dan—Irish Queen) to their The O'Donoghue (Mickey Free—Eily O'Connor), Aug. 6.

Juda—The O'Donoghue. Excelsior Irish Water Spaniel Kennels' (Milwaukee, Wis.) Irish water spaniel bitch Juda (Barney—Juda) to their The O'Donoghue (Mickey Free—Eily O'Connor), Aug. 3.

Fairy—Black Prince. Wm. Hepsley's (Jersey City, N. J.) spaniel bitch Fairy to A. C. Wilmerding's Black Prince (A.K.R. 62), Aug. 1.

WHELPS.

☞ **Notes must be sent on the Prepared Blanks.**

Wanda. F. D. Gadsby's (Mansfield, O.) pug bitch Wanda (Bradford Ruby—Bess), Aug. 15, one dog, by City View Kennels' Bradford Ruby (Lovat—Jenny).

Pug. L. W. Chase's (Haverhill, Mass.) pug bitch Pug, July 3, nine (four dogs), by City View Kennels' Bradford Ruby (Lovat—Jenny).

Beauty. Geo. D. W. Hallett's (Bridgeport, Conn.) pug bitch Beauty, Aug. 5, two (one dog), by City View Kennels' Bradford Ruby (Lovat—Jenny).

Tantrums. Chequasset Kennels' (Lancaster, Mass.) pug bitch Tantrums, July 29, four (two dogs), by City View Kennels' Bradford Ruby (Lovat—Jenny).

Vic. Oakdale Kennels' (Westbrook, Conn.) English setter bitch Vic (Ted Llewellin—Blanche Lewis), May 16, five (two dogs), by their Duke (Dan Purcell—Rake's Bess).

Peggy. S. G. Gardner's (Ansonia, Conn.) pug bitch Peggy, June 24, four (two dogs), by City View Kennels' Bradford Ruby (Lovat—Jenny).

Scottish Queen. N. V. Ketchum's (Savannah, Ga.) Skye terrier bitch Scottish Queen (A.K.R. 3616), Aug. 10, two (one dog), by his Teddie (A.K.R. 3332); both since dead.

Red Magg. W. W. Sweeney's (Chardon, O.) Irish setter bitch Red Magg (Duncan—Red Maud), Aug. 27, nine (five dogs), by W. H. Pierce's Glencho (Elcho—Noreen).

Noreena. Freestone Kennels' (Portland, Conn.) Irish setter bitch Noreena (Elcho—Noreen), Aug. 26, eleven (six dogs), by Dr. Wm. Jarvis's Sarsfield (Garryowen—Curer Bell II.).

Patti. Thomas W. Mills's (Montreal, Can.) bulldog bitch Patti (Toreador—Betsy), July 31, nine (two dogs), by his Guillermo (A.K.R. 671).

SALES.

☞ **Notes must be sent on the Prepared Blanks.**

Don. Liver and white cocker spaniel dog, whelped April 12, 1886, by Sam out of Daisy II., by Oakdale Kennels, Westbrook, Conn., to Geo. Wright, Hartford, Conn.

Doctor. Liver and white pointer dog, whelped 1881, by Oakdale Kennels, Westbrook, Conn., to Dan C. Reed, Oneida Valley, N. Y.

Prince. Lemon and white English setter dog, whelped May 11, 1885, by Dan Purcell out of Rake's Bess, by Oakdale Kennels, Westbrook, Conn., to C. E. Joslin, Keene, N. H.

Tony. Liver and white cocker spaniel dog, whelped April 12, 1886, by Sam out of Daisy II., by Oakdale Kennels, Westbrook, Conn., to Chas. Dibble, same place.

Kaeger. Liver and white pointer dog, whelped May 23, 1886, by Dash out of Zoe (A.K.R. 1444), by A. J. Lee, Southington, Conn., to Dr. W. Thornton Parker, Newport, R. I.

Duchess. Silver fawn pug bitch, whelped March 16, 1886, by Little Duke out of Lady Cloudy, by City View Kennels, New Haven, Conn., to Chas. Huncker, Philadelphia, Pa.

Andy. Fawn, black points, mastiff dog, whelped June 8, 1886 (A.K.R. 3922), by Victor M. Haldeman, General Wayne, Pa., to E. H. Parfrey, Richland Center, Wis.

Alice. Fawn, black points, mastiff bitch, whelped June 8, 1886 (A.K.R. 3920), by Victor M. Haldeman, General Wayne, Pa., to Dr. W. C. Browning, same place.

Actress. Fawn, black points, mastiff bitch, whelped June 8, 1886 (A.K.R. 3915), by Victor M. Haldeman, General Wayne, Pa., to N. J. Morris, Oak Lane, Pa.

Beatrice. Fawn, black points, mastiff bitch, whelped Jan. 21, 1886 (A.K.R. 3642), by Victor M. Haldeman, General Wayne, Pa., to Dr. W. R. Martin, Minneapolis, Minn.

Ajax. Fawn, black points, mastiff dog, whelped June 8, 1886 (A.K.R. 3919), by Victor M. Haldeman, General Wayne, Pa., to Dr. G. E. Abbot, same place.

Adele. Fawn, black points, mastiff bitch, whelped June 8, 1886 (A.K.R. 3916), by Victor M. Haldeman, General Wayne, Pa., to W. H. Fendrich, Columbia, Pa.

Adonis. Fawn, black points, mastiff dog, whelped June 8, 1886 (A.K.R. 3917), by Victor M. Haldeman, General Wayne, Pa., to W. H. Fendrich, Columbia, Pa.

Mahomet—Lady whelps. Black and tan dogs, whelped June 6, 1886, by Henry Muss, Champaign, Ill., one each to Geo. W. Gere and Col. E. P. Niles, same place; one to Clayton R. Woods, Savannah, Ga., and one to Wm. Meyer, Milwaukee, Wis.

Obo-crit. Black spaniel dog, whelped Jan. 17, 1886, by Obo II. out of Critic, by W. O. Partridge, Boston, Mass., to N. Y. Ketchum, Savannah, Ga.

Dot. White and black beagle dog, age not given, by Ringwood out of Maida, by Geo. Laick, Tarrytown, N. Y., to R. DeWardener, New York.

Little Rock. Black, white and tan beagle dog, whelped Nov. 14, 1885, by Lewis's Bugler out of Laick's Rye, by Geo. Laick, Tarrytown, N. Y., to R. DeWardener, New York.

Rattler—Rye whelps. Black, white and tan beagle dogs, whelped June 7, 1886, by Geo. Laick, Tarrytown, N. Y., one to F. E. Lewis, same place, and one to Coffin, Zimmer & Co., Glens Falls, N. Y.

Bang Bang—Zanetta (A.K.R. 1261) whelps. Lemon and white pointers, whelped April 10, 1886, by W. F. Todd, Portland, Me., a dog each to Joseph N. Martin and John F. Randall, same place; a bitch to G. A. Vickery, Boston, Mass., and a bitch to F. Charles Hume, Galveston, Tex.

DEATHS.

Loftie. Mastiff bitch (A.K.R. 2831), owned by Black Thorn Kennels, St. George's, Del., Aug. 1, accidental hanging.

Rifle and Trap Shooting.

Address all communications to the Forest and Stream Pub. Co.

RANGE AND GALLERY.

WILMINGTON, Del., Aug. 20.—Regular weekly matches of the Wilmington Rifle Club, Standard American target, individual possible 100 points and team possible 500:

THE TRAP.

Scores for publication should be made out on the printed blanks prepared by the Forest and Stream, and furnished gratis to club secretaries. Correspondents who favor us with club scores are particularly requested to write on one side of the paper only.

TRAP-SHOOTING REFORM.

Editor Forest and Stream:

In Mr. C. M. Stark's letter published in issue of Aug. 26, he takes exceptions, apparently, to my statements in a previous letter as to the "meager attendance" at the N. E. Association tournaments, saying there were some thirty or forty entries in the different events on each of the two days of the tournament he speaks of. I think that there was a "meager attendance" at that shoot, held in the second city in the State of Massachusetts, which has more than that number of men who like to shoot over the trap, without mentioning those present from all New England. If Mr. Stark and I should meet, we would doubtless agree perfectly on all points save one, I am led to believe from his letters, and that is this: The classing of those contending. His position in compelling a man to shoot this year in the same class his last year's shooting would place him is correct, as his own performance at present would indicate. He is also correct about barring any one, whether professional or not, in my way of thinking. I would give something to-morrow just to see a dozen or so of those experts contend, and if I were present at a meeting where such men were taking part, should not hesitate, though a poor shot, to enter in one shoot at least with them, for the enjoyment of seeing them do what I cannot. In all contests, of whatever sort, all people, whether it may be a contest of racing, running, shooting or what not, like to see a battle between giants. And in handicapping, I do not believe that any system now in vogue is right. If handicaps are to be used in trap-shooting, it should be in dead birds, and not in distance, in particular if clay-pigeons or similar targets are used.

AUBURN, Me., Aug. 31. NOR'EAST.

Editor Forest and Stream:

I am glad to see that you are agitating the question of reform in trap-shooting, and that it is meeting with favorable response from the amateurs who are so largely in the majority. The present management of the National Gun Association has always been in favor of this much needed reform, and if we expect to succeed in accomplishing this greatly desired object, the host of amateurs must come to the front in plain and unmistakable language, and in a united effort. Otherwise professionals will continue to "bank" upon the amateurs, and eventually destroy the spirit of gentlemanly rivalry, and remove all sentiment from our tournaments.

Where there is no sentiment there is no life, and our action becomes cold and formal. There is more or less sentiment in every action or motive leading to our amusement or enjoyment, and the further we can remove gambling from it the more sentiment we have, and the more we may enjoy it.

There is a remedy, and the plan suggested by "Nor'east" in your issue of Aug. 19, I think is the most practicable, *i. e.*, give every man a record and put the shooters in five classes from 90 per cent. highest to 50 per cent. lowest, and let the secretary of every club, association and tournament, furnish the National Gun Association immediately after each tournament the name, residence and class of each contestant who makes a record of 50 per cent. or over in any contest at any shoot.

If this is done the National Association will keep an official register of such records, subject to inspection and use, by means of reports, to all such clubs or associations who furnish the National Association with reports for record or who otherwise officially assist the National Association in perfecting and keeping up such a register of records.

It may be said, Good as far as it goes; but how are you to prevent a designing person from traveling from place to place under assumed names? I answer that such a person might succeed for a time, but would finally come to grief, when he should be photographed for future use. Again, gentlemen would not do so, and a knave should be published. Perfection in anything is only obtained after persistent effort.

"Nemo's" idea of handicapping champions I do not think would be necessary under the record rule or system, and I very much question whether or not 5yds. or 10yds. handicap with the modern guns would make any material difference between the champion and the poor shot. The only equitable handicap, in my judgment, is on guns. Give every shooter a record, and he will not only keep up his record, but try and improve it. The record system will also place the experts or professionals in a class to themselves, where they cannot form combinations to "bank" on the amateurs.

If the clubs will help us, we will remedy the evil.

MATT R. FREEMAN, V. P. and Gen. Man. N. G. A.
NATIONAL GUN ASSOCIATION, Macon, Ga., August.

Editor Forest and Stream:

There appears to me to be but one positive solution to this professional vs. amateur question. That is for tournaments to offer the most valuable prizes free for all. Amateurs can enter if they think they have a show for a piece if divided. No professional to enter for any of the lesser prizes unless he receives consent of the majority of the amateurs contesting for said prizes.

C. M. Stark says he was high gun for six months, he certainly should be barred in contesting with amateurs. We have all heard of the wonderful trotting of Maud S. Would she be allowed to enter any three minute class because she was not in good condition to enter the free for all, not much.

Come, speak out old trap-shooters, let us have your views. I don't want any controversy, the weather is too hot. Life is too uncertain and I am too busy fishing. GEO. WILD.

RED BANK, N. J.

Will "Pull," of Philadelphia, please send address, being in receipt of which we will take pleasure in publishing his communication.

GEORGIA TOURNAMENT.

AUGUSTA, Ga., Aug. 20.—The gun tournament held here yesterday was the best ever held in Georgia. A large number of spectators visited the park during the day, and the sport was very much enjoyed and the brilliant shots applauded. Nine teams of five each entered—two from Savannah, two from Millen, two from Augusta, two from Aiken and one from Summerville. All were from Georgia except the Aiken team, which was from South Carolina, near this city. These gentlemen are fine shots, but it was their first experience in clay-pigeon shooting. There were 900 birds shot at, 100 by each team. The possible score was 900, with an actual score of 507. About 100 birds were picked up not broken, but plainly shot-marked. This is considered very good shooting. The scores:

Millen—Team No. 1.

Lumpkin	1101111111—	9	00	11	00	10	11	—5

Commenting on the meeting, the Augusta *News* says: "Gun clubs, we are happy to state, have replaced baseball clubs, and clay-pigeon shooting has supplanted the national game as a popular sport in this community. This agreeable change brings home talent to the front, and permits skill to unite itself to fair play, and not only amuse the public, but further a most commendable organization. For the gun clubs have more than sport as their object, and the protection of birds and the enactment of a better game law, and also the breeding of fine hunting dogs are already far advanced by the recent organization of the Augusta Gun Club."

BARBECUE AND SHOOT.

COLUMBUS, Ga., Aug. 26.—*Editor Forest and Stream:* Inclosed I hand you an account of a barbecue and contest between several of our local gun clubs at glass and composition balls. I will remark, however, by way of comment, that the barbecue was much better than the shooting. The account is from the Columbus, Ga., *Inquirer-Sun.* The fun was at Seale, Ala., the shooters coming from that State and Georgia.—O. C. J.

At an early hour this morning the people began to pour into the town. They came from every section of the county, in carriages, buggies, wagons and on horseback. This large assembly was augmented on the arrival of the up passenger train at 8:30 o'clock, bringing the Union Springs Gun Club and many of their friends, besides many others from points along the road. An hour later a special train brought in two Columbus gun clubs, accompanied by about 100 Columbusites, the Oswichee club and the Jernigan club, which made the crowd about 800 or 1,000. And never did guests receive a warmer welcome. They were invited to the court house, and as many as could do so went up into the court chamber. Maj. J. F. Waddell was introduced by President Benjamin Jennings, and words of warmer welcome could not have been given. The major was in his element, as it recalled the memories of nearly fifty years ago, when he took up arms for his country in the Mexican war.

Mr. Canty, of the Oswichee Gun Club, responded in an elegant and eloquent speech of ten minutes, in which Seale was made the recipient of many flattering compliments, all of which were richly deserved. He was followed by Mr. Powell, of Union Springs, whose remarks were quite appropriate to the occasion. From the court house the great concourse of people adjourned to the shooting park, and then the fun began. Soon after the shooting began dinner was announced, and just such another barbecue has never been seen in this country. There were about 30 mutton, 25 pigs and several beeves that were cooked to the very highest perfection of the culinary art. We knew these gentlemen were farmers of the first water, but that they were such cooks it is probable that they hardly knew themselves. On the evening before Col. J. M. Brannon, Messrs. Dave Ingram, John Ware and W. H. Washington took charge of the barbecue pit, and through all the silent hours of the night they watched the toasting pig and mutton until this morning, when they had as delightful brown roast as ever graced a table. It was the universal comment that barbecued meat had never been cooked better. And it was in as much abundance as it was in quality—many hams and quarters being left over

and sent to friends who could not be present to enjoy it. Seale began the contest after dinner the lowest of the list, Columbus, Union Springs and Oswichee leading in the order named. But Seale soon sprang up, and the stock was at a premium. Cheer after cheer rang out when a good shot was made, and enthusiasm ran high among the friends of the different clubs. Mr. P. A. Green kept the score board, and it was recorded in plain view of all the spectators as a shot was made. The unequal number of the clubs made it somewhat difficult to tell which club was in the lead. Below is appended the official score of the clubs as they came on the grounds.

Columbus Club.

16 Ben Perry	0010000010011	— 5
17 Robert Pitts	0000111110110	—8—101
18 J P Cheney	1101101010010	— 8
19 John Ingram	0111111010011	—10
20 John Long	1011110010011	— 9
21 D W Ingram	1111101100010	— 9—137

It will thus be seen that Columbus won the laurels, making the best club and the best individual record. In the contest between the 17 men, Union Springs is second and Seale third, while Seale defeats Union Springs in the contest between 21 men. In the contest for 12 Columbus Southside defeats Oswichee, Jernigan and Seale. Capt. C. E. Hochstrasser made a record of 11 out of a possible 14, the best individual score. Union Springs had two men to make 10, Columbus Southside one 10 and Seale one 10, out of a possible 14.

Thus ends one of the grandest shooting matches that has taken place in Alabama in several years, and one that culminated in the highest success in each and every particular. We have never seen people enjoy themselves better, and a harsh or discordant word has not been uttered here to-day. The people of Seale and the immediate vicinity have worked hard for the enjoyment of their friends; and as they looked upon the happy, joyous throng, their compensation was complete. Nearly one-third of the guests were ladies, and they lent a charm to the occasion.

FREMONT, O., Aug. 24.—Fremont shooting club's sixth weekly shoot:

POUGHKEEPSIE TOURNAMENT at clay-pigeons and glass bass, Sept. 16. Open to any amateur shot in the Hudson River Valley, residing in Albany, Rensselaer, Greene, Putnam, Columbia, Westchester, Orange, Rockland, Ulster or Ducthess counties. Ligowsky and Poughkeepsie Gun Club rules to govern.—L. B. STANTON, 277 Main St.

THE U. S. Cartridge Co., of Lowell, Mass., who makes the Climax and other brands of waterproof paper shot shells have received the following from Geo. T. Farmer, Secretary of South End Shooting Club, of Chicago: "I gave the U. S. shells a good test on the 5th inst. I was capsized in 5ft. of water, my open shell box lying nearly half an hour on bottom, filled with U. S. shells and shells of others' make. The U. S. shells I relied upon for the balance of the day. They were not swollen at all, although somewhat soaked where paper was bruised in turning the shells. They chambered as well as ever."—*Adv.*

Canoeing.

Secretaries of canoe clubs are requested to send to FOREST AND STREAM their addresses, with name, membership, signal, etc., of their clubs, and also notices in advance of meetings and races, and report of the same. Canoeists and all interested in canoeing are requested to forward to FOREST AND STREAM their addresses, with logs of cruises, maps, and information concerning their local waters, drawings or descriptions of boats and fittings, and all items relating to the sport.

FIXTURES.

11. New York, Sailing Trophy.
18. Brooklyn, Sailing Races.
25. Brooklyn, Challenge Cup.
25. New York, Sailing Trophy.

OCTOBER.

2. New York, Fall Regatta.

THE MEET OF 1886.

RACE WEEK.

EVERY year the interest in the races is increasing, as both boats and men improve and are more nearly matched, while their fame has extended far beyond mere local circles, and men in California or Florida look eagerly for the result of a race in which Vesper, Lassie, Venture and others as well known are entered. It is no light undertaking to manage a series of 20 races in three days, in which the entries aggregate no less than 358, with the necessary measuring, setting buoys and other matters which devolve on the Regatta Committee. This year the work was greater than ever before; but it was carried through successfully by the Regatta Committee, Messrs. McMurrich, Bailey and Fairtlough, the programme being carried out very closely, while no accidents marred the affair. Mr. McMurrich, as chairman, was everywhere; and to him personally is due much of the credit, as his work was long and trying. The clerical work was done very efficiently by Mr. Wm. M. Carter, Crescent C. C., of Trenton, N. J., who kept the entry book and record. Such work is no small task on a pleasure vacation, but Mr. Carter performed it in a manner which satisfied every one and gained him a hearty vote of thanks at the general meeting. Col. Cotton, of the R. M. C. C., was timekeeper, with W. P. Stephens starter and W. H. Barnett judge at finish. The races of Monday appeared in our last issue.

After dinner Event No. 6, paddling tandem, Classes III. and IV., open canoes, 1 mile, was called. The starters were:

Rapid	M. F. Johnson, H. F. McKendrick	Galt	10 11
Merle	G. B. Wilkinson, F. M. Turner	Brockville	10 16
Minnehaha	J. H. Bagg, J. E. Brouse	Brockville	10 46

Minnehaha led at the start, but was passed by the others, Rapid finally winning by 3 lengths.

Events No. 7 and 8 were next started 15m. apart. Classes B and A, sailing, limited area 75 and 50ft., 3 miles. The wind was light from N.W., making a run on first leg, a reach on second and beat home. 2 rounds of the regular course. The starters were Pecowsic, St. Hubert, "570," Mona, Delight, Cheemaun, Venture, Phyllis, Edith Adele, Pearl, Blanche, Guenn, Wraith, Lassie, Wanda, Elf, Nellie, Nautilus, Una, Mac, Verena, Palmer, Sofronia, Vixen, Marie, Fleta, Vesper, Turtle, Annie O., Surprise, Ello, Stag, Alouette, Vindente, Cora, Gertie and Wa Wa. At the start a rain squall wetted the sailors, but soon cleared away, leaving a calm for a time. Pecowsic led Class B easily with Venture second and Turtle third.

Class B.

Pecowsic	E. H. Barney	Springfield	1 10 30
Venture	L. Q. Jones	Hartford	1 17 10
Turtle	P. M. Wackerhagen	Mohican	1 18 10
Vesper	R. W. Gibson	Mohican	....
Cheemaun	C. H. Murphy	Salem	....
Sofronia	F. F. Andrews	Rochester	....

Class A.

Peggy	G. E. Edgar, Jr.	Newburgh	1 53 35
Regina	C. J. Bousfield	Bay City	....
Magog	E. O. Finel	Lake George	....

The last race of the day was an upset, in which J. E. Mellen, of Rochester, won. A tie for second between A. E. Heighway, F. F. Andrews and J. L. Weller was then sailed off, the former winning. In the evening a meeting of the Nominating Committee was held, the proceedings of which were not made public.

Tuesday was clear and warm, though the weather for most of the meet was not oppressively hot and the nights were quite cool. The first race as per programme was for Class IV. paddling, canoe and load to weigh at least 200lbs., 1 mile. The summary was:

Lena	H. F. McKendrick	Galt	12 55
Olive	F. M. Turner	Brockville	13 04
Nellie	W. F. Kipp	St. Lawrence	13 25
"570"	M. V. Brokaw	Brooklyn	....
Mac	W. G. McKendrick	Toronto	....
Alouette	W. A. Leys	Toronto	....

Nellie led at the start, but was passed by Lena and Olive.

As there was a good breeze now, the next race, No. 11, was postponed, and No. 12, paddling and sailing combined, 3 mile course, paddling and sailing alternately each half mile leg was called with 17 starters, and the wind was N. E. moderate. The first leg was covered under paddle, all hoisting sail at the first mark and going on port tack. Mac was first to stow sail at second mark, followed by Venture, Lassie and Surprise. Venture was aided on third leg by a mainsail only half stowed, the wind being free. Mac was ahead at the end of first round, while Lassie ran into second place, with Venture third, Surprise fourth and Blanche fifth. There was now a good breeze for the reach to first mark, and Venture overhauled Lassie, with Surprise still in fourth place. Again Mac was first over the second leg, and set sail for the run home with wind well aft on starboard quarter. This run was the most exciting part of the race, as Lassie, well steered, came straight for the finish and passed first Venture and then Mac, winning in good style.

Lassie	C. B. Vaux	New York	0 45 00
Mac	W. G. McKendrick	Toronto	0 45 06
Venture	L. Q. Jones	Hartford	0 45 12
Surprise	J. E. Mellen	Rochester	....
"570"	M. V. Brokaw	Brooklyn	....
Peggy	G. E. Edgar, Jr.	Newburgh	....

As the wind still held Nos. 13 and 14 were postponed in favor of Nos. 15 and 16. Classes B and A, unlimited, 3 miles, with 43 starters in the first and 8 in the second. Pearl and Nautilus, both well sailed, were at the line first and away on the reach to first mark. The sight was a beautiful one as the 43 boats went away from the spectators on the hill in a compact mass, then drew out into a long line and finally at the buoy scattered in all directions on the beat to second mark. Class A was sent away 15m. later than Class B. Vesper led at first on second leg, but was passed by Pecowsic which turned the weather mark ahead.

They jibed neatly around the buoy at the end of first round as follows: Pecowsic, Vesper, Pearl, Venture, Delight, Blanche, Nautilus. Pearl was leaking so badly that she was partly waterlogged, and Nautilus had her brass rudder badly damaged previous to the race by a canoe striking it and bending it out of shape. Though repaired it was still in bad condition and steered the boat unevenly on different tacks. The next round was a repetition of the first, finishing nearly the same:

Pecowsic	E. H. Barney	Springfield	45 38
Vesper	R. W. Gibson	Mohican	47 53
Blanche	Paul Butler	Vesper	49 05
Delight	R. W. Bailey	Pittsburgh	....
Venture	L. Q. Jones	Hartford	....
Pearl	Walter Stewart	Royal C. C.	....
Turtle	P. M. Wackerhagen	Mohican	....
Sofronia	F. F. Andrews	Rochester	....
Nautilus	W. Baden-Powell	Royal C. C.	....

In Class A the times were:

Peggy	G. E. Edgar, Jr.	Newburg	51 20
Zulu	J. L. Weller	R. M. C.	57 00
Magog	E. O. Finel	Lake George	59 00
Regina	C. J. Bousfield	Bay City	....

No entries were made for No. 17, unclassified canoes, though Mr. Clapham was ready to sail, so No. 11, postponed from Monday, was called for Class III., paddling, 1 mile, canoe and load not under 160lbs.

The starters and times were:

Rapid	M. F. Johnson	Toronto	11 55
Merle	G. B. Wilkinson	Brockville	12 10
Flora	G. B. McLean	Brockville	12 12
Peggy	Grant E. Edgar, Jr.	Newburg	....
Magog	E. Finel	Lake George	Withdrew

Rapid led at the turn, with Flora second. The finish was very close, Rapid being astern of Flora and Merle, but Johnson brought his boat up with a splendid spurt and won the race. The next event was a very amusing harry-scurry race, down the hill along the wharf, a dive and swim, and a paddle home, the boats being anchored off. Zulu, J. L. Weller, won, with Merle, G. B. Wilkinson, Nina, A. E. Heighway, Jr., and Flora, G. B. McLean, in order. The finish was a tournament, with two men in a canoe, one with a paddle and one standing forward armed with a bamboo lance, well padded on the end. They were ranged in two lines, 50ft. apart, three boats on each side, and at the word each charged the opposite boat. After some sparring all were upset from their craft but Heighway and McKendrick, who fought stubbornly for some time, the latter being finally the victor. Some canoe gymnastics were also given, the competitors exhibiting great skill in balancing in their canoes.

Tuesday evening was spent about a camp-fire, and on Wednesday morning the sailors were up early and hard at work polishing their canoes with pumice stone and oiling them for the great race for the A. C. A. Challenge Cup. It was decided to select the first thirteen on the average list of sailing races, and as this was first made up, the records of Pearl and Nautilus being included Mr. Bousfield had a place which he kindly resigned in favor of one lower on the list. A revision of the list, taking only the American canoeists, alters the first results, as will be seen on inspection. It was decided by some of the canoeists present that in the event of the defeat of both the English canoes, a subscription cup should be offered for a match to windward between them and the two leading American canoes. The full summary was as follows:

			Rounds.					
			1st	2d	3d	4th	5th	Time.
Vesper	R. W. Gibson	Mohican	1	2	1	1	1	1 39 15
Pecowsic	E. H. Barney	Springfield	2	1	2	2	2	1 39 23
Lassie	C. B. Vaux	New York	4	4	3	3	3	1 41 47
Blanche	Paul Butler	Vesper	6	6	7	7	4	1 42 56
Venture	L. Q. Jones	Hartford	5	5	5	4	5	1 43 01
Delight	R. W. Bailey	Pittsburgh	7	7	4	6	6	1 43 28
Turtle	P. M. Wackerhagen	Mohican	3	3	6	5	7	1 44 22
Nautilus	W. Baden-Powell	Royal	9	9	8	8	8	1 48 50
Pearl	Walter Stewart	Royal	10	10	10	9	9	1 49 18
"570"	M. V. Brokaw	Brooklyn	12	11	11	11	10	1 51 30
Cheemaun	C. Murphy	Salem	11	12	12	12	11	1 58 19
Mona	B. W. Richards	Brockville	Broke tiller.					
Sofronia	F. F. Andrews	Rochester	Lost rudder.					
Wraith	Wm. Whitlock	Brooklyn	Collided and lost masts					
Peggy	G. E. Edgar, Jr.	Newburgh						

The course was 7½ miles, five rounds of the 1½-mile triangle, the wind being E.N.E. At 10:45 a flag was set as a preparatory signal. A minute later Wraith collided with Peggy, carrying away the mainmast of each boat. Wraith gave up, but Peggy went ashore, stepped a new mast, and started on when half the first round had been covered by the leaders. Her time was taken as a matter of courtesy by the committee and puts her ahead of the fifth boat on the list above. Pearl was away first at the start and Nautilus fourth, the crews of both on deck. Lassie was second at the start and Turtle third. Sofronia had her rudder unshipped by a collision, and lost much time while it was being replaced. Mona broke her deck yoke, a piece of treacherous black walnut, and was practically out of the race. On the reach to first mark Delight led for a time, but Vesper was first at the turn. Beating over to second Pecowsic passed her, Lassie being third, Turtle fourth and Blanche fifth. The order at the end of each round is shown in the table. Pecowsic sailed very fast with her two sails, but lost each time at the end of the round, her mizzen sheet going adrift. After a very pretty finish the times were taken as above. Pearl was handicapped by her leakage and Nautilus by a damaged rudder, but in spite of these mishaps it was very evident in all the races that they could not sail with the American canoes, and their crews freely admitted the fact. Vesper's victory was very largely due to her skipper's excellent sailing, as Pecowsic at times traveled faster, but lost at the turns. At 3:50 Event No. XIII., Class II., paddling, weight 190lbs., was called, the times being:

Irene	R. W. Baldwin	Ottawa	11 18
Regina	C. J. Bousfield	Bay City	....
Lalage	T. S. Westcott	Philadelphia	....

Next came No. XIV., classes 3 and 4, tandem paddling, decked canoes:

Olive	F. M. Turner, G. Wilkinson	Brockville	11 01
Mac	W. G. McKendrick, D. B. Jacques	Toronto	11 19
Gertie	J. E. Mellen	Rochester	....
	J. R. Robertson	Lawrence	....

This finished the regular programme, but the special cup race was set for Thursday morning. Prior to the race a meeting of all canoeists present from States west of New England was held on the hillside, Com. Oliver presiding. It was moved that an application be made to the A. C. A. for the formation of a division composed of all canoeists in the A. C. A. outside of New England, which motion was carried; and it was also resolved that the name of this division be the Central Division of the A. C. A.

The officers nominated for the new division by the committee were then announced as follows: Vice-Commodore, R. W. Gibson, of Albany; Rear-Commodore, B. W. Richards, of Brockville, and Purser, E. W. Brown, New York. Executive Committee—Messrs. J. W. Higgins, of Oswego, N. Y.; C. J. Bousfield, Bay City, Mich.; R. W. Bailey, Pittsburgh, Pa.; Colin Fraser, Toronto, Can.; Wm. Whitlock, New York, and S. T. Fairtlough, Kingston, Can. Over 180 members being present, the division was entitled to six representatives.

The cup race was called at 11:40 A. M., a good S. W. wind then blowing so that Nautilus, Pearl and Vesper were reefed. The course was two miles to leeward, and the little Rushton launch was sent out to mark the turn. At 11:41:10 the start was made, Pearl crossing first. Nautilus set a small spinnaker at masthead and held to the north while the others laid a course together further south. Nautilus was first at the leeward mark, with Pearl and Pecowsic abreast and Vesper a little astern. On the long beat home the two American boats badly distanced their competitors. The two former were sailed without ballast and with very light boards, while the English boats had boards of 56lbs. and over 100lbs. of shot. Over a part of the course the water was pretty rough, but the light and buoyant boats went through it with dry decks. The times at the finish were: Pecowsic 1.55.39, Vesper 1.56.50, Nautilus 2.00.57.

On Friday morning a general meeting was held, at which the prizes were presented and some minor business transacted. Com. Fowler, of the K. C. C. addressed the visitors in behalf of the A. C. A., to which Messrs. Stewart and Powell replied. After the adjournment of the meeting all turned to work at packing, and by afternoon only half a dozen tents were left. A small party still remain at Squaw Point and will spend the week there.

GALT CANOE AND BOATING CLUB.—The Galt (Ont.) Canoe and Boating Club lately held a night parade on the river, 25 canoes and boats turning out, each decorated with Chinese lanterns. The band of the 29th Battalion was on hand and provided the music. The officers of the club for 1886 are: H. S. Howell, Commodore; J. E. Warnock, Vice-Commodore; H. F. McKendrick, Secretary and Treasurer; G. H. Smith, W. Heinhold, J. H. Kelman, Committee.

THE N. Y. C. C. CUP RACES.

THE races for the possession of the cup offered by the New York C. C. for International competition will be sailed on Friday next (Sept. 3) at 3 P. M., and on Saturday at 11 A. M. and 3 P. M. The course will be from buoy off club house at Tompkinsville, Staten Island, leaving it on starboard hand, to buoy off Clifton, leaving it on port hand; thence to buoy midway between Clifton and Bay Ridge, leaving it on port hand; thence to start, the course being 4 miles, to be sailed twice, or 8 miles in all. A tug will follow the races, tickets for which may be had of C. J. Stevens, No. 7 Bowling Green, at $1 for the series of two or three races as may be necessary.

Mr. Stewart's new Pearl arrived on Monday, and is now at West Brighton. She is very lightly constructed, but still stronger than the one first brought out.

TIPPY C. C. FIRST ANNUAL REGATTA.

THE first annual regatta of the Tippy C. C., of Chicago, was held Saturday, the 21st inst., off the boat house, foot of Thirty-ninth street. The various races proved very interesting, and were witnessed by thousands of people on the shore, which enlivened the scene and gave much encouragement to the contestants. The wind was blowing a half gale and very puffy, which proved to be a Jonah to some of the boys, as it kept them climbing all over their canoes. The open boats from Hyde Park were having a race between themselves before the start, when a puff caught the Hypatia and turned her over, throwing her crew into the water; but they were rescued by the fleet.

At 3:40 the start was given for classes A and B, sailing. Spray took the lead and maintained it to the finish. Much credit is due to her skipper, J. B. Keogh, for the way he handled his canoe. The Chestnuts was over next. She is a 14×28, and much praise must be given to Mr. C. F. Sage for going around the course. Also Wood, who sailed the Zeal; only a novice in sailing a canoe, he handled his canoe like a veteran, and will prove a dangerous man in another year. The Shaw Shaw, G. K. Sage, had gone one-third way over the course when she was swamped.

At 3:47 the start was given for the open and decked boats. The Pastime crossed first and made a splendid race in the wind, carrying a large racing spritsail and flying jib. Mr. Crane, her skipper, handled her very well, and it was just surprising to see him go around, as everybody said he would capsize. The Pastime was designed by Mr. Crane and has won three races this season; she is a marvel of beauty, nothing of her size can come anywhere near her. Mr. Harry Crane, of Cincinnati, was out in her and says he never saw anything go so in his life.

The Nokomis, a large canoe, sailed a good race with Mr. H. A. Perkins as her skipper. The Guenn carried too much canvas and was capsized. The Clam seeing he had no chance in the race came back, as it was too squally.

The Ellen Terry, Edward Rosing, sailed a good race and won in her class, but a foul was claimed by the Elinor, D. Flood, who says the Ellen Terry capsized her. The Cathie went to the rescue of the Eliuor.

The next event was the paddling race of Class I. This race was looked for with much interest, as there were some good men with good canoes.

Tippy, A. W. Kitchin, got the start and maintained it to the finish, crossing the line an easy winner. The Psyche, H. B. Cook, gave a hard race for it, but Kitchin proved too much for him.

In Class B, paddling, the Pretzel, R. P. McCune, got the start and finished first, although the Triton and Snipe gave him a hard race. Mr. J. B. Keogh, Spray, broke his paddle at the start. Keogh and McCune have been practicing very hard for this race, and much sympathy is felt for Keogh; but they will race next Saturday, the 28th inst.

The tandem race was a very exciting one. A. W. Kitchin and W. M. Dunham in the Tippy won, but were so hard pushed by Cook and Keogh and Wood and Lavinia that it looked like nobody's race, but Kitchin and Dunham commenced pulling hard and strong and won by 1½ lengths ahead of Cook and Keogh who were ½ of a length ahead of the Snipe. Messrs. Cook and Keogh have been practicing a long time for this race and everybody thought they would have a walk-away with it, but the Tippy's crew came to the front.

When the upset race was announced the crowd commenced to get closer so they could get a better view. There were 12 starters. Kitchin in the Tippy was the first in his canoe in just 5½s., but Dunham in the Zeal sneaked between him and the pier and won the race. Following are the times:

CLASS A SAILING.

	Start.	Finish.	Time.
Zeal, W. M. Dunham	3 45 03¾	4 49 38¾	1 04 35
Shaw Shaw, G. K. Sage	3 45 55	Swamped.	
Chestnuts, C. F. Sage	3 41 27	4 42 51¼	1 01 24¼

CLASS B SAILING.

Spray, J. B. Keogh	3 41 00	4 25 45	0 44 45
Triton, G. Hesser	3 41 31	4 54 02	1 12 31
Neptune, Chas. Lee	Capsized.		

DECKED BOATS.

Neptune, Chas. Lee	5 32 00	Not timed.	
Ray, F. S. Waters	5 32 00	Not timed.	

TANDEM.

A. W. Kitchin and W. M. Dunham	Tippy 6 08 30	6 18 17	0 09 47
H. B. Cook and J. B. Keogh	Psyche 6 08 30	6 18 23¼	0 09 53¼
B. W. Wood and W. B. Lavinia	Swordfish 6 08 30	6 18 24½	0 09 54½
R. P. McCune and C. Hessert	Pretzel 6 08 30	6 19 00	0 10 30
Chas. Lee and J. H. Ware	Neptune 6 08 30	Broken paddle.	
H. A. Perkins and W. G. Sage	Æolus 6 08 30	Not timed.	

UPSET—Zeal, W. M. Dunham, first; Tippy, A. W. Kitchin, second; Glide, D. H. Crane, third, Pretzel, R. P. McCune, fourth; Spray, Psyche, Swordfish, Æolus, Belle T., Triton, Shaw Shaw and Chestnuts not timed.

A CRUISE OF THE OAKLAND C. C.—On Aug. 14 the Oakland C. C. started on a short cruise, the boats being the Shadow, Undine, Zoe Mou and skiff Yum Yum. After beating out of the creek with an ebb tide the fleet ran under reefed canvas to the drawbridge at San Leandro Bay, landing about 6 P. M. At 10 A. M. next day the fleet were under way for home, with a foul tide and head wind with some sea. At 2 P. M. Oakland Creek was reached and Flirt, Mystic and Zephyr joined the fleet. Up the creek the Undine and Shadow ran so close that their mizzen booms interlocked and both capsized. Their crews were rescued by the Yum Yum and the Undine was taken in tow by the latter, while the Flirt picked up the Shadow and the club house was reached in safety.

Three woodcock were known to be on Staten Island last Monday when the season opened. They sucked their mud juleps in a small thicket back of Sailors' Snug Harbor. Among those who hunted and shot at them and missed them were Ed Burfield, the champion seal capturer; Prof. Harry Jones, the Stapleton snap shot; Jack Purdy, who has the best pointer in Tompkinsville; C. M. Dodge, who owns the Panama fox-terrier; President Endicott of the Protection for Game Association, Baron Feidler, John Wood, the old trap shot; and Mr. Bostwick who gets up early to hunt. The birds would be sure to afford fun in the future had they not been shot on Thursday by little thirteen-year-old Stewart Ogilby. He took two home and they were eaten by Pop Ogilby. The boy says he killed the other bird, but could not find it.—*New York Sun, Aug. 8.*

FIXTURES.

SEPTEMBER.

2. Boston, Cup, City Point.
3. Quincy, Club.
3, 7, 9. Cup Races.
4. Beverly, Open, Marblehead.
4. Corinthian, Champion, Marblehead.
6. Newark, Open.
6. Quaker City Cup, 2d, Class.
8. Great Head, Club, Winthrop.
11. Hull, Cham., Hull.
11. Corinthian, Sweepstake, Marblehead.
11. Sandy Bay, Sweep., Gloucester.
17. Toledo, Pen., Toledo.
18. Sandy Bay, Club, Rockport.
18. Great Head, Club, Winthrop.
19. Quaker City, Review, Cruise.
25. Buffalo, Club, Lake Erie.
23. Beverly, Club, Nahant.

THE TRIAL OF THE SLOOPS.

THE match to windward and return having failed for lack of wind, Monday, Aug. 22, the same course had to be resailed on Wednesday, Aug. 24. To insure an early finish the distance was shortened to fifteen miles instead of twenty. The difficulty experienced in closing the outside races in time for people to reach the city and their little beds by 7 o'clock is charged to Providence instead of the procrastination of racing yachts and committee. For such an important event one might suppose the four big sloops would have towed down to the Hook the day previous, so that crews could have taken matters easy next morning and been on the proper ground in proper shape for a start at 8 or 9 A. M. The committee, by seeking their downy couches at about sundown might for once in the year have roused themselves out at about 7 A. M., an unearthly hour at which it is still pitch dark and graveyards yawn in the belief of leisurely gentlemen. Outside yachts did lay over in the Horseback on hand, and the racers might have done the same. But a prompt start before the wind had died away would be turning yacht racing into an earnest pursuit instead of horseplay, and that is still a little foreign to our custom on this side of the Atlantic. Having wasted the last minute possible, the cortege of racers and the comfortable committee appeared upon the scene at high noon. The twenty-five mile "gale" which had held high carnival during the forenoon had gone asleep and left nothing but a fag end ten miles strong and that rapidly petering out. Arithmetic will demonstrate that a start at noon and seven hours for the race plus two hours more for the steamers to reach the city piers, is bound to keep worthy burghers out of their shore bunks after dark, which is a terrible responsibility to take and sure to encourage anarchy in the home circle. The committee lived up to the idea by being late in the morning so as to be early in the evening, and to make matters fit their philosophy, struck ten miles off the course. Had it not been for a cant in the wind reducing it to a single lay and short hitch home, even philosophy could not have saved them from roaming through the city streets at 8 P. M. in the night, exposed to all the temptations of such reckless debauchery. The committee, however, redeemed itself fully in the thorough manner in which they lived up to their arduous task consisting of pulling a whistle and counting ten before pulling it, thus making a mistake for the other pull, so they are entitled to praise and congratulations showered on them.

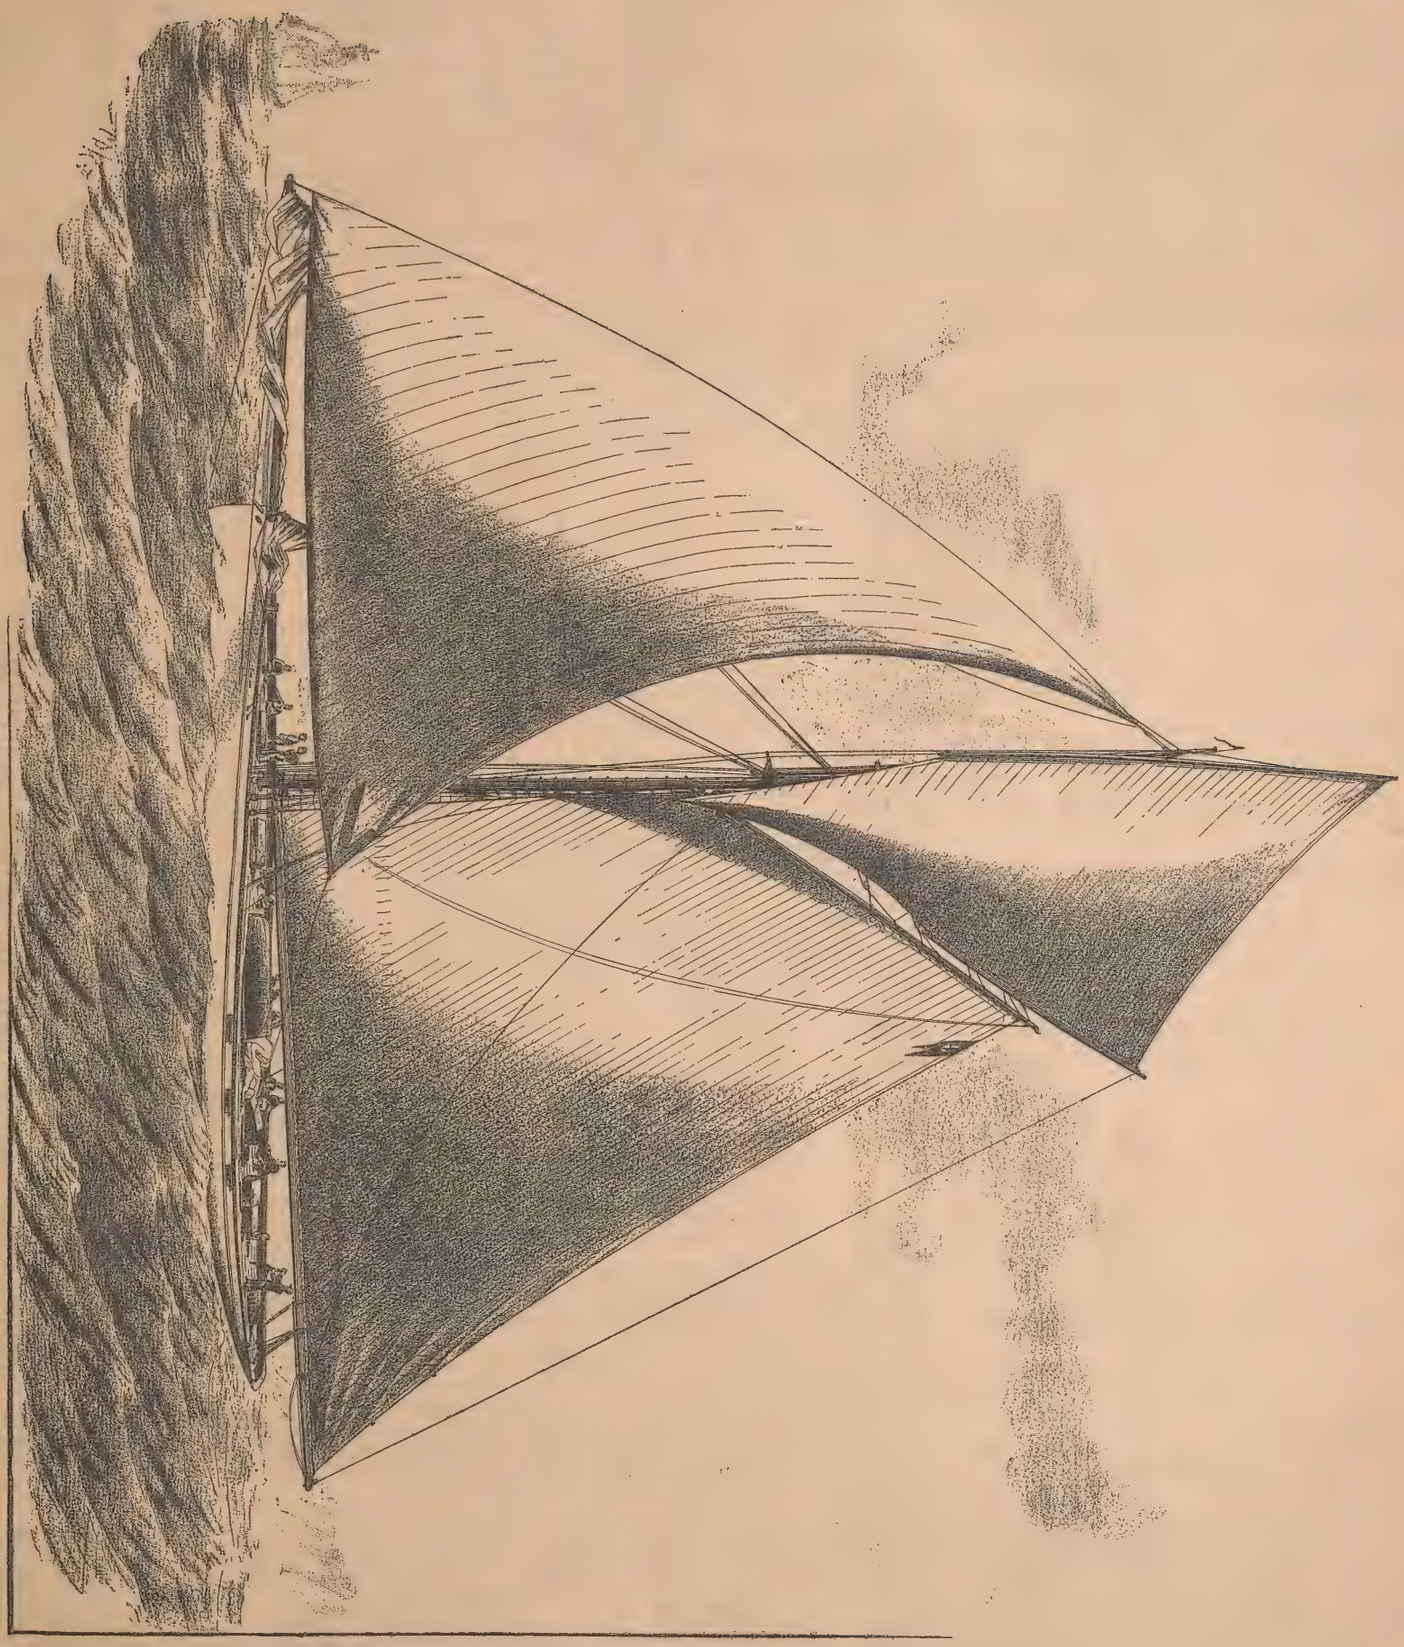
Of course some could not get away within time, for the sufficient reason that they stood miles away from the line, intent upon some occult mission which some persons thought to be fishing for porgies, which were just then running in great schools. Had a whole day been given, some of the sloops would have dawdled up to Albany by sundown. Yacht skippers have not yet learned that a race commences from the time they arrive on the ground; they do not seem to shake their wits together till after the preparatory whistle, and tumble across the line haphazard without previously laid plan and no clear notion of the value of a good start. That "Joe" Elsworth is not included in these remarks without saying. "Joe" is the only skipper who is wide awake from the time he turns out. His vessel is maneuvered to some purpose. He puts her across highest up and first away whenever he likes. Other skippers are unable to prevent it. He goes over with a full head of steam and everything trimmed to suit, lays his course and sticks to it, let the rest do as they please. To the superior skill of "Joe," Atlantic owes what little repute she has at any time won. But for "Joe," Atlantic would long ago have been warped into Rotten Row, an expensive monument to the folly of building "both wide and deep," the last of the short-lived "gas-tank" style of yacht architecture. The day will come when the worthy Joe Elsworth will acknowledge as much out of his own mouth.

As in the first of the trial races, Atlantic, with a new topmast in the caps, was sent away the smartest of the lot and ran out a little lead at once, which she managed to maintain till spinnakers came in, owing to the very light wind and heavy swell which made the run down to the turn little more than a meaningless drift. Even in this paltry business her lead was directly due to the set of sails, to misfortune to Puritan and the regulation amount of blundering on the part of the other contestants. The so-called lead was moreover only apparent, for Mayflower made the run in less time, Puritan being out through loss of spinnaker. Had skippers and spinnakers been reduced all round, Puritan would no doubt have come in for the barren honor of being first in the procession over any portion of the course. We are moved to plain expression in this matter, because the tendency among the public is, very naturally, to seek "the combination of the sloop's beam with the depth of the cutter." No greater fallacy could exist and so prominent an attempt to disregard sound counsel as the Atlantic represents, supplies a conspicuous peg upon which to hang the sign "Beware." It has been well determined through the competition between all types of yachts in America, that a certain relation between beam and displacement exists, and that for most favorable performance, one must be increased as the other is decreased. The Atlantic has either too much beam for her displacement, or too much displacement for her beam. A false reputation woven about this craft through "sympathetic" critics would be misleading and unfortunate in its influence. To counteract the evil of misplaced "sympathy" is the only object of the references to the Atlantic.

The moment spinnakers came in to the easterly cant of the wind when nearing the turn, Atlantic was picked up by all hands and her apparent lead of a quarter mile cut down to a few lengths at the turn. Once on the wind, five minutes sufficed to give Boston the victory, so poorly did Atlantic point and so fast did she sag away by comparison. Half an hour later the only honor which Atlantic was disputing was the issue between herself and Priscilla as to who should be last in at finish. Joe Elsworth coaxed Atlantic for all she was worth. The manner in which she was tooled was simply superb, offset by the much ruder skill of the Bostonians. But all to no good. Priscilla outpointed the other so much that Atlantic's better footing was not equal to the difference in fetching, and the iron boat had the satisfaction of figuring third in the judges' calculations. Still later, in the reach from the finish into the Hook, the official match having ended, Priscilla drove by Atlantic and left her well in her wake.

Concerning Priscilla, the day must be deemed one full of promise for the future. After a dilatory start she held her place on the drift southward, closing slowly but steadily upon Atlantic at times and accomplishing the distance in practically the same time. This means little one way or the other, the wind being so light, still it is enough to show that Priscilla is not worse than Atlantic at that sort of business with present rig. With more sail area better comparison can be anticipated. In the leg and hitch home, Priscilla astonished all hands by the smart way she looked up and fetched, finding no difficulty in following the wake of the redoubtable "ghoster" Puritan, and occasionally looking better than Mayflower. Priscilla failed, however, in footing with the rest, which is simply a matter of canvas and the ability to carry it. Now put the iron boat on an equality with the others in her ballasting, supply the additional rig that would permit, and her future career may yet entitle her to rank with the "ravishing blonde" from around the Cod. This is, to be sure, only speculation, as no competent critic will venture an absolute prediction in premises where the slightest deviation or imperfection in other respects would be quite sufficient to undo the advantages gained from the proceeding here counseled.

Coming now to the two vessels which really made the race, there is no room for cavilling with the boats, but the crews again failed to do them justice. It was mainly the superior excellence of Mr. Burgess's design which carried the day. Both Boston yachts seem good enough to shoulder all the sins loaded upon them by deficiency in smart handling, which is very fortunate for all concerned. There is not much chance of blundering down wind, but the Boston crews can be trusted to make the most of their opportunities. There is a working wind, light, but enough to maneuver the vessels in full control. There is no head tide to stem and there is ample time for all preparations with ten minutes notice from first whistle and five more to get across. Fifteen minutes is about half an age under the circumstances. But Mayflower goes north on a foolish hunt after nothing, standing so far as to make a start on time a plain impossibility, and when too late, suddenly recollects that there is business on hand urgently demanding attention. She then comes round, forgets about her canvas in the consternation begot of a whistle miles away, and slowly shambles over the line heavily handicapped and not even showing her spinnaker. For a quarter of an hour the boom has been lowered and guyed, and not till she is across does it occur to those in charge that it would be a good thing to run out and break stops on the ballooner. Thus she goes away under half speed, while smarter fellows have come to the line with everything drawing in full. Beating home, Mayflower tacks before she can fetch the Lightship, and takes the ebb flowing down the coast on her weather bow instead of keeping her northerly leg long enough to lee bow the ebb coming out of the South Channel, a game which Elsworth is, of course, astute enough to play much to Atlantic's advantage.



Puritan does better in getting away within the prescribed limit, but is likewise slow with her spinnaker, not getting the sail on her till well away on her course, and then in such fashion that she would have been left hopelessly astern but for inconsiderating Providence, which kindly canted the wind into N. E. by E. For Puritan's spinnaker was so long on the leach that with boom topped up in the rolling sea, the sail hung slack in the bunt and was continually collapsing, doing little service; while Atlantic, with a taut leach, was making the sail pull without intermission. A little forethought would have suggested an Irish reef, an overhand knot in the head of the spinnaker to shorten up the luff and enable the boom to be topped clear of the sea and stretch the leach to advantage. The crew had seen the spinnaker before and were familiar enough with its size, but no precautions were taken to keep the sail full or to save the boom from constant dipping, one of the consequences of getting on the ground too late to try things experimentally in advance. Half an hour after crossing, Puritan's spinnaker boom went with a crash in the slings, whereupon the wreck was got aboard smartly enough, the boat at once dropping from a good second into third place, Priscilla running her lee and Mayflower driving up abreast. Puritan would have dropped sadly to rear after this "accident" had not Providence come to her rescue with a dispensation of "Puritan luck" and enabled the clipper to show up well again at the turn. Later she followed Mayflower round against a head sea, weather-bowing tide as above mentioned, for all this, Mr. Burgess was too much for his opponents, and Boston scored in strict accord with merit.

From Sandy Hook the wind was reported 25 miles at 8 A. M., 18 miles at 10 o'clock and 15 at noon. Clear of the land it was less by several miles, and when the committee hove in sight it softened to 10 miles. The Commodore's screw steamer Electra took up her station off Sandy Hook Lightship with the America's Cup committee on board, and sent forth the warning signal at 11:45. The racers had cast off their tows and made sail piecemeal. All were above the line boxing about under club topsails and spinnaker booms on a cockbill, Mayflower going off to Coney Island out of reach. There was a long ground swell on, but nothing which could be dignified as a sea. The clouds broke away and occasional glimpses of the sun guaranteed that the threatening northeaster was off the scene and did not propose to interfere with sloop weather. Sundry 50ft. yachts cruising about under reefs and bobbed jibs in weather in which a 3-ton cutter with less than 5ft. beam would have swung No. 1 topsail and cried for more, did not probably raise Lieut. Henn's estimate of the staying qualities of the American style of build. Miranda, the most beautiful of the famous Harvey conceptions, was on hand disporting her faultless mould to the admiring spectators who could not say enough in her praise. Likewise had a dozen steam yachts and a few excursions.

As the wind picked up a little a smart time was expected, and the public gave it out that this was sure to be Mayflower's day. It was blowing about N.E. and spotty. Course, 15 miles S.S.W. and return. Both Atlantic and Puritan were well placed a quarter of a mile above the line. Down came spinnaker booms as they eased away for the line to hit off next whistle. Puritan, fearing she was too soon, hauled east again, while Atlantic crossed her bows and went for the line boldly, running spinnaker in stops to boom end and breaking away so as to cross at full speed. The sail filled, and being short enough on the leach could be kept from collapsing by the weight of the boom. Half a dozen lengths in her wake the Boston boat followed, but her narrow sail with spinnaker, said sail being so baggy as to be in a permanent state of collapse, spilling and becoming a back sail at each plunge into the slow-rolling sea. Priscilla followed under balloon jiptopsail, both lower headsails stowed. She was lively with spinnaker and got off in good shape, although handicapped 20sec. Mayflower came along half prepared two minutes after the limiting whistle had blown, and was slow in getting more sail to draw. Once away, all hands were showing same sail, jibs on the bowsprit and foresails snugged up. In the following times we give actual start, with a view to just comparison of performance:

Atlantic	12 06 38	Priscilla	12 09 20
Puritan	12 07 36	Mayflower	12 11 06

For 10 minutes Mayflower had all hands forward and out on the bowsprit stopping up jibs, sending her down by the nose to do good. With sails drawing better than the rest Atlantic jumped out a lead of scant quarter mile with the rest astern in the order of starting, Priscilla nearly up with Puritan and Mayflower very slowly reducing her loss at the start. There was not enough wind to strain out mainsheets and the roll set sails to slatting, spinnaker boom dipping aboard the Puritan in an alarming way. The natural consequence followed when off Long Branch. Suddenly the boom carried away in the center and spinnaker fell limp from the masthead. The wreck was very quickly cleared, but her chances received a death blow. Rapidly Priscilla went through and out on to bowsprit, stopping up jibs, sending her down by the nose to

MAYFLOWER.

THE AMERICA CUP MATCHES.

NEXT week will see again the competition for this old trophy, this time with sister ships to the vessels of 1885, longer, more powerful, and each presumably better than her younger sister. How much better can as yet only be guessed, but the indications are that the races will be more even than last year.

The Regatta Committee of the New York Yacht Club, under date of the 26th inst., have issued the following circular regarding the international contests for the America's Cup:

The Regatta Committee have this day been notified by the America's Cup Committee that the yacht Mayflower has been selected by them to defend the America's Cup, and that they have also agreed with Lieutenant Henn that the races with the Galatea shall take place, barring unavoidable accidents to either yachts, as follows:

September 7—At ten A. M. over the New York Yacht Club course.

September 9—At half-past ten A. M., twenty miles to windward or to leeward and back from Scotland Lightship or from Sandy Hook Lightship, as will be determined on the morning of the race, and, if necessary,

September 11—At half-past ten A. M., triangular course of forty miles outside, starting from the Scotland Lightship.

In compliance with the arrangement the Regatta Committee gave notice that the races will be sailed as above.

SAILING DIRECTIONS.

The rules of the New York Yacht Club, except as otherwise hereinafter provided, will govern the sailing of the races. Yachts while sailing the races must carry their own private signal at the main peak. The signals for starting will be given from the committee's steamer as follows, viz.:

PREPARATORY SIGNAL.—One long blast of the steam whistle and at the same time the United States ensign will be lowered from the bow staff and a blue peter set in its place.

THE START.—Ten minutes later there will be a second blast of the whistle, the blue peter will be lowered and the yacht club signal set in its place, when the time of each yacht will be taken as it crosses the line. Five minutes later there will be a third blast of the whistle, and this time will be recorded as the time of either yacht starting in the race thereafter.

NOTE.—That before any signal is given the United States ensign will be flying at the bow staff; during the preparatory period a blue peter, and after the starting whistle the yacht club signal. If practicable a short blast of the steamer's whistle will be given when each yacht crosses the starting line.

COURSES.

In the races over the club course the yachts in starting will cross an imaginary line drawn from the judge's steamboat to buoy 18, opposite Owl's Head, L. I.; thence (keeping outside of Fort Lafayette) to and around buoy No. 10, passing to the west and south of it; thence to buoy No. 8½, passing west and south of it and north of buoy No. 5, off the point of Sandy Hook, to and around Sandy Hook Lightship, turning it from north and east, and then returning over the same course to the westward of the home stakeboat, which will be anchored abreast of and to the eastward of buoy No. 15. The yachts must pass to the eastward of West Bank buoys Nos. 9, 11, 13 and 15, and to the westward of red buoys Nos. 10½, 12, 14 and 16, both going and returning, and must keep to the southward of buoys 8 and 8½ on Flynn's knoll and of a mark boat anchored between the two, and to the eastward of buoys 1 and 3 on the False Hook outside, going and returning.

In the outside races at the start and finish the yachts will pass between the judge's boat and the Lightship, and in the triangular race, in rounding, will keep on the outside of the stakeboats or buoys used to mark the course. In the windward or leeward race the yachts will keep the outer mark on the starboard hand. Buoys displaying red flags will be used to mark the turning points on the outside course, and the buoys (and not the tugboat) are to be turned. The tug running off a course will display no flags until she has reached the mark, when she will display the New York Yacht Club flag alone and keep it flying so long as she remains at the mark. Further necessary instructions will be given on the morning of each race.

Each race must be made in seven hours.

The steamer Taurus has been chartered for the use of the members of the club and their friends. She will start from the Iron Steamboat Company's pier, No. 1 North River, at nine o'clock on the morning of the 7th for the race over the New York Yacht Club course, calling at Stapleton, S. I., at half-past nine.

For the races over outside courses the time of starting will be half-past eight A. M., from pier No. 1 North River, New York, and nine A. M. from Stapleton.

A steamer has been engaged by the Seawanhaka Y. C. for the America Cup races and members' tickets will be issued upon application to the Treasurer, Mr. William B. Simonds, No. 18 South William street, New York, on payment of $2 for each race. A luncheon will be provided on the steamer without extra charge. First race, Tuesday, Sept. 7. Over the New York Yacht Club course. The steamer will leave the Barge Office Pier punctually at 8:30 A. M., calling at Tompkinsville, Staten Island, at 9 A. M. Second race, Thursday, Sept. 9. Twenty miles to windward or leeward and return outside of Sandy Hook. The steamer will leave the same places at 8 and 8:30 A. M. respectively. Third race, Saturday, Sept. 11. If this race becomes necessary by the terms of the match, it will be over a triangular course outside of Sandy Hook, and the steamer will leave the same places at 8 and 8:30 A. M. respectively. Each day on returning the steamer will stop at the same places. Members are requested to send in their applications as soon as possible, as only a limited number can be accommodated, and are further requested to state for which race they desire tickets to be issued. The Atlantic Y. C. will also have a steamer for its members.

BEVERLY Y. C. REGATTAS.

THE 112th race, the third for championship of Buzzard's Bay, was sailed Aug. 21, at Monument Beach, in a light, puffy N.E. wind, veering to E. by N. In the first class Surprise had a walkover, securing both prize and pennant. In second class Lestris and Flirt had each scored a leg for pennant, which Flirt secured together with first prize, crossing line first, closely followed by Grimalkin, a new boat designed by Edward Burgess, and sister of Sprite, who made her first appearance at Nahant the same day. Grimalkin did very well in the light weather; she was measured in rough water, and on this measurement loses second prize to last year's champion Lestris. She will, however, be remeasured at once in smooth water, and second prize will not be awarded till this is done. In third class Fannie and Petrel, as usual, had a close race. Petrel did well in the windward work and at the last buoy was inside her allowance; but Fannie beat her on the home stretch and won by 56s. The times are as follows:

FIRST CLASS.

	Length.	Elapsed.	Corrected.
Surprise, Jas. M. Codman, cat.	27.03	1 56 33	1 46 00

SECOND CLASS.

Flirt, Geo. H. Lyman, Jr., cat.	25.02	1 05 02	1 52 09
Grimalkin, Ellerton L. Dorr, Jr., cat.	24.09	2 07 05	1 53 41
Lestris, Joshua Crane, cat.	24.02	2 07 42	1 53 35
Beatrice, C. E. Curry, cat.	24.10	2 11 20	1 58 02
Tantrum, C. W. Amory, cat.	25.00	2 17 10	2 04 05

THIRD CLASS.

Fannie, F. W. Sargent, cat.	23.10	1 40 30	1 30 35
Petrel, Geo. H. Richards, cat.	20.07	1 44 30	1 31 27
Secret, T. M. Weld, cat.	22.09	1 45 05	1 34 11
Scud, N. H. Emmons, cat.	22.07	1 51 14	1 40 11

Course for first and second class, 11 miles, for third class, 7½ miles. Judge, C. H. Hardy. Judge's yacht, Maude, B. Y. C. Surprise, Flirt and Fannie take first; Petrel and either Lestris or Grimalkin, second; Flirt and Surprise won and hold pennants.

The 113th regatta.—The third championship was sailed at Nahant in a strong wholesail breeze and a very heavy sea. All classes had a dead beat to the Graves Buoy, the first class then going round Winthrop Bar and home, while the little fellows went directly back. In first class the new Sprite, modeled by Ed. Burgess, sailed her second race and made a very good showing, although beaten a minute by Bessie. The latter's size told greatly in the sea way, and Sprite's topsail was a very bad fit. In second class the Commodore carried off the mug with ease; it was just Hoiden's day and she seems to be sailing better than ever; Rita and Corsair withdrew. In third class Dolphin did best, though Psyche made a pretty good fight of it; Bluebell was too lightly ballasted, and finding herself beaten broke tacks for luck with the usual result, being beaten worse than before.

FIRST CLASS.

Bessie, C. P. Curtis, sloop	27.07	2 31 00	2 21 17
Sprite, C. P. Wilson, sloop	24.05	2 35 45	2 22 34

SECOND CLASS SLOOPS.

Witch, B. B. Crowninshield, cutter	22.06	2 14 15	2 03 51

SECOND CLASS CATS.

Hoiden, Com. Dexter	23.00	2 13 15	2 03 18
Spider, Walter Abbott	20.00	2 26 00	2 13 13
Rita, H. B. Richardson	20.06	Withdrawn.	
Corsair, H. S. Blake	20.03	Withdrawn.	

THIRD CLASS.

Dolphin, Royal Robbins	18.08	2 30 30	2 16 17
Psyche, H. M. Sears	19.04	2 33 33	2 20 01
Bluebell, W. Lloyd Jeffries	18.07	2 49 45	2 35 27

Bessie, Witch, Hoiden and Dolphin take firsts, Spider and Psyche seconds. Dolphin takes and holds pennant; Bessie takes pennant, tieing Atalanta. BLUE WITH A GOLD CASTLE.

HULL Y. C. SECOND CHAMPIONSHIP.—On Aug. 28 the Hull Y. C. sailed its second championship of the season over an 11-mile course for first and second class, and a 6-mile course for the others. The wind was very light, dying at times to a calm, and varying from E. S. E. to S. The summary was:

FIRST CLASS—CENTERBOARDS.

	Length.	Elapsed.	Corrected.
Nimbus, J. J. Souther	34.05	2 19 47	1 53 38
Wave Crest, E. B. Rogers	33.00	Withdrew.	

FIRST CLASS—KEELS.

Carmen, B. L. M. Tower	30.08	3 04 03	2 35 40

SECOND CLASS—CENTERBOARDS.

Folly, J. F. Shepard	26.09	2 27 59	1 54 35
Rambler, J. J. Henry	27.00	2 37 26	2 04 26
Erin, J. Cavanaugh	26.08	Withdrew.	

SECOND CLASS—KEELS.

BUNKER HILL Y. C. 18TH ANNUAL REGATTA.—On Aug. 28 the 18th annual regatta of the Bunker Hill Y. C. was sailed over the following courses: First class—From judges' boat, leaving Sculpin ledge buoy on starboard, Spectacle Island buoy No. 7 and buoy No. 6 on starboard, to flagboat moored off Sound Point beacon, leaving it on starboard, to judges' boat, twice around. Second class, the course was the same, once around. Third class—From judges' boat, leaving Spectacle Island on port, buoy No. 7 on Castle rocks on port, Spectacle Island and Sculpin ledge buoy on port to judges' boat. As the wind was very light S.E. the start was postponed from 10 A. M. to 12 M. The times were:

FIRST CLASS.

Florence	2 01 09	2 00 16

The judges were George B. Thomas, Randall Gould and H. W. B. Cotton.

SHREWSBURY RIVER REGATTAS.—This season there has been a great deal of racing among the open boats of the Shrewsbury River, in which a number of fast craft have competed. To still further encourage racing in this locality, Mr. W. E. Connor has offered a prize for a series of three races on the South Shrewsbury, the first of which was sailed on Aug. 28, over the following course: From off the club stand on Monmouth Beach, passing stake No. 1, keeping it on starboard hand, passing between stakes Nos. 2 and 8, to and around stake No. 3, keeping it on port hand, to and around stake No. 4, keeping it on port hand, passing stake No. 5, keeping it on starboard hand, to and around stake No. 6, keeping it on port hand, passing stake No. 5, keeping it on port hand, to and around stake No. 7, keeping it on port hand, passing between stakes Nos. 2 and 8, passing stake No. 1, keeping it on port hand to starting point, turning stake No. 9, keeping it on port hand and going over the same course a second time, finishing at starting point. Distance, about 15 miles. Stakeboat No. 1 was on Gardiner's Flat; No. 2 at the head of channel, north side; No. 3 near Navarro's dock; No. 4 at Little Silver Point; No. 5 at Shallow Point; No. 6 at mouth of Branch Creek; No. 7 at Dallen's, a Phœnix cottage; No. 8 at the head of channel, south side, and No. 9 at the starter's point. There were 13 starters divided into two classes, 19ft. and over and under 19ft. The first whistle was blown at 11:35 A. M., and the start at 11:40. The wind was light S. E., and the tide on the ebb. The end of the first round was timed as follows:

Nahli	12 50 40	Mascotte	12 56 00	
Etelka	12 53 07	Maud I.	12 55 25	
Zephyrus	12 54 20	Fern	1 00 15	
Armenia	12 55 00	Little Spot	1 05 05	
Florence	12 55 30			

The full times were:

FIRST CLASS—19FT. AND OVER.

	Length.	Actual.	Corrected.
Nahli	24.04	2 07 39	2 07 39
Florence	21.11½	2 23 07	2 19 35
Etelka	21.11½	2 12 18	2 08 44
Maud I.	21.03¾	2 18 14	2 11 59
Armenia	20.07	2 24 20	2 18 42½
Zephyrus	20.02	2 18 14	2 11 59
Mascotte	19.10½	2 23 33	2 15 51¾

SECOND CLASS—19FT. AND UNDER.

Widow	18.10	Disabled.	
Fern	18.05½	2 30 28	2 30 28
Little Spot	17.00	2 25 52	2 33 39½
Pink	16.09	Not timed.	
Spray	14.11¾	Not timed.	
Alpha	12.05½	Not timed.	

Widow carried away her throat halliards. The winners were Nahli and Etelka in first class and Fern and Little Spot in second.

JEFFRIES Y. C. OPEN SWEEPSTAKES.—On Aug. 28 the Jeffries Y. C. of East Boston sailed an open sweepstakes regatta over the following courses: First class, from club house, leaving black buoy No. 5 on starboard, red buoy No. 10 on port, Governor's rock, Glades and Governor's Island buoys on starboard, Apple Island buoy on port, Sculpin Ledge and Thompson's Island red buoys on starboard, Castle rocks on port, Glades rock on starboard, No. 10 and No. 5 buoys on port to starting line, 8½ miles. Second class, the same as first class, leaving out Sculpin Ledge, 6 miles. The four classes were as follows: First class centerboards, 20ft. and under 30ft. sailing length; second class centerboards, all under 20ft. sailing length; first class keels, 23ft. and under 30ft. sailing length; second class keels, all under 23ft. sailing length. The wind was very light from S. E. The summary was:

FIRST CLASS CENTERBOARDS.

	Length.	Elapsed.	Corrected.
Black Cloud, Brown & Wheeler	22.11	2 00 42	1 54 32
Fancy, C. P. Flagg	20.01	2 04 57	1 55 33
Sea Bird, C. L. Joy	23.00	2 02 36	1 56 31
Silver Cloud, J. McLoughlin	21.00	2 09 16	2 00 49
Pearl, J. F. Lee	22.10	2 11 01	2 04 46
Wanderer, J. Turner	21 00	2 13 35	2 05 18
Adder, Scott & Stark	24.01	2 11 19	2 16 20

FIRST CLASS KEELS.

Æolus, J. Rood	27.07	2 09 45	2 19 27
Breeze, D. Murdock	23.01	2 27 20	2 21 29
Emily, J. H. Porter	26.04	2 27 55	2 25 00
Quimpec, Harry Wheeler	26.00	2 30 45	2 27 24

SECOND CLASS CENTERBOARDS.

Zoe, A. A. Martin	18.04	1 35 53	1 34 19
Em Ell Eye, P. W. Bond	19.03	1 38 34	1 33 02
Topsy, J. McGlinn	19.03	1 43 31	1 42 50
Lark, Bishop & Murphy	18.06	1 45 31	1 44 07
Crusader, A. Wilson	19.01	1 47 03	1 46 13

SECOND CLASS KEELS.

Zetta, G. E. Fowle, Jeff	19.11	1 46 30	1 44 01
Vesper, R. Benner, Lynn	19.07	1 49 03	1 46 16
Lillie, A. Leslie, B. H.	18.06	1 54 09	1 50 20

Prizes were, for first class $20, $12 and $8, for second class $15, $9 and $6. Judges, Peleg Aborn, G. A. Palmer, H. B. Tindall and John Maino, Swey and Harding. The schooner yacht Ada was used as judges' boat. Em Ell Eye protests against Zoe for carrying her jib as a spinnaker, and Sea Bird enters protests against Black Cloud and Fancy for incorrect measurement. An unknown catboat followed the Vesper over the course, interfering with her as far as possible, evidently with the idea of spoiling her chances.

CORINTHIAN Y. C., 8TH REGATTA.—On Aug. 28 the calm weather spoiled the race of the Corinthian Y. C. for the third championship, as it could not be finished within the time limit. A fine fleet of yachts competed, including the Louette, Kitty, Witch, Tyro and Atalanta. At 6 P. M. the race was postponed to Sept. 3. A race for dories under 18ft. and club boats under 16ft. had been started over a course from the judge's boat to Gray's Rock, leaving it on starboard, leaving buoy off Archer's rock on starboard, to judges' line, three miles. Only 4 of the 18 starters finished, all being dories.

SUMMARY.

Wonder, W. A. Bell	1 34 30	Lone Star, J. G. Stacy	2 01 15
Don, H. Vickery	1 59 10	Expert, H. Martin	2 38 25

The judges were A. S. Brown, E. W. Hodgkins, George A. Stewart, Chas. W. Richardson and Isaac B. Mills, Jr.

"THE PILGRIM CHALLENGED."—*Editor Forest and Stream:* Under the above heading in your issue of July 1, I noticed Dr. Winslow claiming for his little cutter a race she never won, and being a friend of Capt. Staples, the owner of his competitor, so claimed, and being there at the time and knowing the particulars of the race, if such it could be called, I will take the liberty of giving my version. Capt. Staples and his two boys on this particular occasion went for a sail in their sloop the Lillian, dimensions as follows: Length, waterline, 22ft.; beam, 9½ft.; draft 4½ft., so you can see she is hardly the "skimming dish" the doctor's article would imply. With the wind northwest and under jib and mainsail and tender in tow, and not with jibtopsail and without tender, they stood across Sabbath Day Harbor and tacked. Running out the harbor they noticed the Pilgrim's crew getting the anchor, which being secured they hoisted their jib and filled away about 100yds. ahead of the Lillian and stood off in the same direction toward Hewes Point, but running about a point more to windward than the Lillian. The Pilgrim was soon come up with and passed to leeward, and when down about two miles and right abreast the Narrows the Pilgrim was seen to tack and stand up the bay close-hauled. At the request of the boys, Capt. Staples hauled his boat on the wind, and standing in shore about two minutes, tacked and bore up after the Pilgrim, who was brought by this maneuver half a mile ahead and about two points to windward of the Lillian. Running along up shore the little cutter had about all she could stagger under, tailing up at one time till everything was slatting, but although the Lillian lay over pretty badly she was not luffed an inch. When off Dico's Head the Lillian had come up with and passed the Pilgrim, and standing on till the land ranged by the Pilgrim's bow over the Lillian's quarter and less than a quarter of a mile to leeward, she came about and stood for home. The Doctor is right, "this was a square race between two types of boats, and the result proved their best and worst points." The Lillian beat the cutter over a quarter of a mile in a two mile run, running free, and over half a mile in an eight mile run, close-hauled, both boats having tenders in tow. If the Doctor will look at his chart, if he has one, he will see that it is but two and a quarter miles from the mouth of Sabbath Day Harbor to Hewes Point, and from there to Dico's Head six miles, and not four miles to Hewes Point and ten to Dico's Head as he claims. The Lillian had the disadvantage of not being properly ballasted, whereas the Pilgrim was complete in this line. The Pilgrim was also beaten by a small yacht owned by Capt. Sam Hoyt, of Belfast, in a race in that harbor, and the general report in the bay is that she was beaten by every craft she had anything to do with, and if the Doctor wants to win laurels and pocket shekels he can be accommodated down here at most any time.—W. L. BRAGG (Bangor, Me., Aug. 21, 1886).

REGATTA AT ERIE, PA.—Preparations are being made for a grand regatta at Erie, Pa., on Sept. 7, 8 and 9, to include rowing and sailing races. The citizens' committee of Erie have raised $1,200 toward expenses and prizes. The programme is as follows: First day, 3 P. M.—Single clinker boat race, 3 miles, open to all, for a purse of $75 divided, $40 to first, $25 to second, $10 to third. 4 P. M.—Four-oared shell race, 3 miles with turn, open to all, for a purse of $200 divided, $100 to first, $70 to second, $30 to third. Second day, 10 A. M.—Sailing yacht race over a 10 mile course, $5 entrance fee, open to all sailing yachts on Lake Erie, for a purse of $200, divided, $80 to first, $65 to second, $50 to third and entrance fee to fourth. 2 P. M.—Cat-rig race over the inside course, $3 entrance fee, for the Knobloch silver cup and a purse of $40, divided, $25 to first, $10 to second, $5 to third. 4 P. M.—Single shell race, 3 miles with a turn, open to all who have never beaten 22 minutes, for a purse of $250, divided, $125 to first, $85 to second, $40 to third. Third day, 10 A. M.—Fishing smack race, 10 miles, for a purse of $25, divided, $15 to first, $10 to second, 5 entries to fill. 3 P. M.—Double clinker race, 3 miles, for a purse of $25, undivided. 4 P. M.—Single shell race, 3 miles with a turn, open to all, for a purse of $300, divided, $200 to first, $100 to second. An opportunity will be given at any time during the progress of the regatta for arranging additional open sweepstake contests, in which the committee will make liberal additions to the stakes. Entries and communications should be addressed to F. E. Woods, Erie, Pa.

A SAILING YACHT IN COLLISION.—Boston Harbor was on Saturday last the scene of another mishap to a yacht which terminated fatally in the drowning of a young man. The sloop Edith was beating out of the Narrows with a very light S. E. wind, and off Lovell's Island the wind left her at the will of the flood tide, without steerage way. While lying dead and uncontrollable the steamer Chatham ran directly into her from astern, cutting in as far as the centerboard. On board the Edith were H. W. O'Hara, G. H. Ide, Joseph Burnside, C. S. Willis and Rufus Kendrick. Mr. O'Hara, who was in command, cried to the others to jump, and all did so except Kendrick. O'Hara carried a line to Galloupes Island. Two of the others were rescued by lobster boats, but Willis sunk and was not seen again, being probably struck by the steamer. The steam yacht Creedmoor came up and lent her aid in hauling the wrecked yacht ashore on Galloupes Island. The Chatham ran on some distance before stopping to lower a boat. Mr. O'Hara was all right, but the other three were completely exhausted. They were put to bed in the Grant House, where they were carefully attended. The collision has not yet been investigated, but it is to be hoped that the blame will be definitely located, and if, as seems to be the case, the steamer was in the wrong, her pilot will be severely punished.

YACHT RACE EXTRA.—We will publish, Sept. 4, a 16-page supplement, giving review of the international races, and full particulars of the conditions, etc., of the coming contests. Fifteen illustrations, map of course, etc. Sold by all newsdealers, or post-paid from this office, 10 cents.

LARCHMONT Y. C. FALL PENNANT REGATTA.—The Larchmont Y. C. will sail their fall pennant regatta on Sept. 4, starting at 10:45 A. M., the signals being as follows: First—A blue peter displayed on a staff near the easterly pagoda as a signal for all yachts to approach the starting line. This will remain hoisted for five minutes. Second—A large white ball substituted for the blue peter as a signal for all yachts to start. Third—The club flags substituted for the white ball as a signal that the time for crossing the line has elapsed. This will be left flying. Attention shall be called to each of these signals by a gun. All yachts must cross the starting line during the time the white ball is hoisted, and any yacht that does not do so within that time shall be timed from the lowering of the white ball. In case any gun should miss fire, the hoisting of the signal shall be deemed sufficient notice.

THE RACING RECORD—CORRECTIONS.—The second place in the Kingston regatta of the L. Y. R. A. should go to Gracie and not Molly, as printed, the official times being: First class—Atalanta 3.08.00, Aileen 3.57.00, Norah 4.09.05, White Wings 4.29.50, Garfield 4.33.05. Second class—Iolanthe 2.41.10, Laura 2.51.50, Gracie 3.11.12, Molly 3.37.30. Third class—Reckless 2.25.50, Puzzler B. 2.44.30, Nameless 2.56.40, Ispyx 3.33.40. . . . In the Goelet Cup race on Aug. 7 a private sweepstakes of $50 each was made up by Bedouin, Gracie, Fanny, Stranger, Hildegard and Cythera. Bedouin won the prize. Ulidia also won the sweepstakes in her class.

BEVERLY Y. C. OPEN REGATTA.—A very large fleet of small yachts will start on Saturday in the open regatta of the Beverly Y. C., to be sailed off Marblehead. The start will be as follows: 12:10, first or preparatory signal, three sharp whistles five minutes before the start, when a blue flag will be hoisted; 12:15, second signal, a long whistle, when blue flag will be lowered. Start for first class, centerboards and keels; 10 minutes allowed to cross the line; 12:25, third signal, a long whistle, second class, centerboards and keels to start; limit for first class; 12:35, fourth signal, a long whistle, third class, centerboards and keels to start; limit for second class; 12:45, fifth signal, a long whistle, fourth class, centerboards and keels to start; limit for third class; 12:55, sixth signal, a long whistle, fifth class to start; 10 minutes being allowed in which to cross the line; limit for fourth class.

DORCHESTER Y. C. CRUISE.—The following order has been issued concerning the cruise of the Dorchester Y. C.: On board flagship Viking, Friday, Aug. 27, 1886.—Yachts will rendezvous off Thompson's Island, Friday, Sept. 3, 1886, at 1:30 P. M. At 2:30 P. M. a gun from the flagship will be the signal to proceed to Marblehead. The fleet will remain at Marblehead on Saturday, giving those who desire an opportunity to participate in the open race of the Beverly Yacht Club on that day. The return will be made on Sunday. Yacht owners are earnestly requested to join in this cruise. Attention is called to the rules contained on pages 54, 55 and 56 of the club book for 1885. By order of the commodore, E. H. TARBELL, Fleet Captain.

BOATSAILING AT COHASSET.—A race of spritsail boats, sloop and cats, was sailed off Cohasset on Aug. 28, over the following course: From a point off Sandy Cove to and around Chittendon's Buoy, thence to and around Gravepasses Buoy, thence to and around Southeast Buoy, leaving each mark on the starboard, thence to the starting point. The winners were: First class catboats—Crocus, W. C. Appleton. Second class—Sculpin, Tower Brothers & Co. First class spritsails—First prize, Smuggler, Jos. Jason, Jr.; second prize, Dolphin, Jos. Bandura. Second class—Racer, Wm. E. Crocker. Judge, N. D. Silsbee. Referees—Capt. Geo. W. Crocker and F. P. Appleton.

DANGER SIGNALS from the Weather Bureau are not more significant of a storm than a cough is of consumption. Providentially, we can cure any cough with Hale's Honey of Horehound and Tar. Sold by all druggists and country storekeepers. Pike's Toothache Drops cure in one minute.—*Adv.*

Answers to Correspondents.

☞ **No Notice Taken of Anonymous Correspondents.**

R. V., Brooklyn.—Robins and meadow larks are protected at all seasons in New York State.

L. M.—You can reach Barnegat via Tuckerton R. R., or from New York via Central R. R. of New Jersey, or Pennsylvania R. R. You will find a variety of salt-water fishing, sheepshead, bluefish, etc. Snipe and ducks and other game.

K., Perth Amboy, N. J.—I have been asked whether it is correct, in writing of a vessel, to say under way or under weigh. What do you seigh? Ans. Under-weigh means being in the condition of having the anchor weighed or a-weigh, *i. e.*, lifted from the bottom preparatory to making sail. Under-way means having headway or being in motion. A vessel may be under-weigh yet not under way.

WOLVES IN WYOMING.—Information comes from northern Wyoming that the cattle herd in that section are suffering severely from the ravages of wolves and coyotes. It will be remembered that at the cow men's convention it was suggested by Mr. Heller, of the Conrad-Hurlbut company, that the shortage in the calf crop was due as much to these pests as to marauding Indians, and he urged a systematic and compulsory poisoning of the brutes by all the outfits in the infested country.—*Buffalo (Wyo.) Echo.*

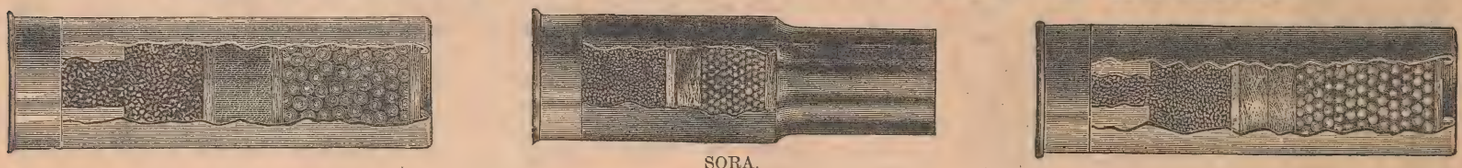
HARDER'S Patent Breech-Loading Rifle and Shotgun.

With Over and Under Barrels.

These Guns are unequalled for Accuracy, Range, Safety, Workmanship, Balance, Style and Material.

This gun can be used for any purpose that any other two guns are used for. For the farmer, the marksman and the hunter, for both small and large game. They are made of the finest materials, with steel rebounding locks, low hammers, set trigger to rifle barrel that may also be used as a single trigger. Weight, 9 to 12lbs., checkered pistol grip, oiled or varnished stock, line engraving. .32, .38 and .44-calibers kept in stock; using Winchester cartridges, 12, 16 and 20-gauge shot barrels. Price, $45 for any length barrels. If pistol grip and engraving are not wanted price will be $5 less.

Pat. June 9, 1885.



Send for Descriptive Circular.

J. E. HARDER,
CLEARFIELD, PA.

Why Sportsmen & Dealers Prefer CHAMBERLIN CARTRIDGES.

BECAUSE THEY ARE BETTER than can be loaded by hand.
CHEAPER THAN HAND LOADED when same quality material is used.

ALL DANGER FROM HANDLING POWDER IS AVOIDED.

SORA.

These cartridges are so safe that insurance rates are not increased by keeping them in stock. The thin paper shells offer no resistance, but tend to separate the bulk of powder into such minute proportions as to make them perfectly harmless. Powder requires confinement to produce force. This is therefore the safest form in which powder can be kept in stock or transported.

The convenience of FIXED AMMUNITION FOR SHOTGUNS is readily appreciated.

Dealers get rid of a great amount of fault-finding and worry by selling Chamberlin Cartridges, and sportsmen, knowing that the reputation and success of a large enterprise depends upon honest manufacture, feel perfectly safe in buying them.

TATHAM & BROS., Agents, 82 Beekman Street, New York.

SMALL YACHTS.

Their Design and Construction, Exemplified by the Ruling Types of Modern Practice.

By C. P. KUNHARDT.

THE FOREST AND STREAM PUBLISHING COMPANY takes pleasure in announcing the publication of a magnificent quarto volume, bearing the above title. This book covers the eld of Small Yachts, with special regard to their design, construction, equipment and keep. The opening chapters are devoted to a consideration of the model and the draft, their relations to one another, and the purposes which they subserve. Full directions are given for producing the plans of a yacht with reference to the chief points in design, and the method of taking off the lines of a boat already built is likewise described in detail.

All elements entering into design, such as Resistance, Stability, Balance of Rig, Handiness, Displacement, etc., are dealt with in separate chapters. The rules necessary for the mathematical computations, and a review of theory and practice close the first division of the book.

The second portion comprises the description of the Plates, covering the whole range of type in small yachts, from the shoal catboat and American centerboard sloop to examples of the narrowest and deepest British cutter yet built. These yachts have their lines, build and fittings depicted in the Plates, which are drawn to scale. With their aid and the specifications presented, the reader is placed in possession of accurate information concerning the mould, accommodations, rig and characteristics of all styles of yachts which have received favorable recognition. Sporting boats, combination row and sailboats, and various examples of special form are introduced.

The third division offers a comprehensive review of single-hand sailing, to which small yachts are especially adapted. Directions are given as a guide in selection of type and sail plan, and subsequent equipment and proper management.

The iron work of yachts, their gear, yawls, stearing apparatus, boat building and much other closely related matter is entered upon. The new International Rules of the Road, Signal Service, and a bibliography appear in the Appendix.

The work is profusely and handsomely illustrated with 150 illustrations inserted in the text, besides the sixty-three plates.

A folio volume (size of page 14½x12½ inches), printed on paper specially manufactured for it, and with great beauty of execution and finish in every detail, making a volume vastly superior to any other work of the kind ever published. Pages 370, with 136 plate pages additional, or a total of more than 500.

LIST OF PLATES.

CANOE HANDLING.

By C. B. VAUX ("DOT").

A complete manual for the management of a canoe. The author begins at the very beginning, describes and explains the rudiments in the simplest and plainest way possible. Everything is made intelligible for beginners: and besides this A B C teaching there are so many hints and wrinkles that the oldest canoeist afloat will find pleasure and profit in the study of these. The book is complete and concise—no useless duffle between its covers. The subjects treated are the choice of a canoe, paddling, sailing, care of the canoe, recipes and rules. The text is further elucidated by numerous practical drawings, and the beauty of the book is enhanced by the many ornamental vignettes. Pages 168; uniform with "Canoe Building." Price, postpaid, $1.00.

Pictures of the Field.

Phototypes of the Pictures by John M. Tracy.

MR. JOHN M. TRACY has won a reputation for his faithful portraits of dogs and his beautiful and sympathetic delineations of the incidents of the field. All the poetry and grace of a pointer or setter in the stubble have been caught with the eye of the artist and the enthusiasm of the sportsman, and transferred to the living canvas with a skill which has given Mr. Tracy a name above that of any other American artist in the same field.

We have for sale a series of admirable phototypes (photographs in printer's ink), of these paintings, which preserve with admirable fidelity the spirit of the originals. The phototypes are 15x20 inches. They are as follows:

Title of Picture.	*Name of Dog or Dogs.*
Quail Shooting in Tennessee,	Gladstone and Peep o' Day
On the Grouse Moor, -	- - Emperor Fred
Prairie Chicken Shooting in Minnesota, -	- Dash III. and Countess May

ANSWERS TO CORRESPONDENTS.

POLLUTING NEW YORK HARBOR.

IN another column will be found an account of the arrest and prosecution of the men who have been illegally dumping the city's refuse upon the oyster beds of Long Island Sound, and of the proceedings about to be instituted against those rich corporations which have been defiling the waters of the East River and the Bay with sludge acid and other refuse. This work, which has been vigorously entered upon by Commissioner Blackford, will receive the hearty support of the community. The laws forbidding the pollution of our waters have for a long time been ignored by the corporations referred to; and they have poured vile chemicals from their sewers until not only the oysters have been destroyed and the lobsters driven off, but even the transient shad, taken in Newark Bay, have been rendered unfit to eat. But a few years ago angling for striped bass was a favorite amusement at High Bridge and in the Kills, and New York Harbor abounded with fish, oysters and crustaceans, which have for some years deserted these localities. The bottom has been covered with a thick glutinous substance of the most vile odor, which has been discharged from the petroleum refineries, and perhaps from the sewers of other factories which should long ago have been compelled to take care of their refuse.

In Mr. Blackford's laboratory the other day we found sixteen bottles of water taken from the outlets of the different factories, and these samples needed no chemical analysis to show they contained substances too vile for fish to live in. In some of these bottles at least one-third of the contents was of the consistency of ordinary syrup, which on being agitated adhered to the sides of the glass.

In the matter of dumping the city's refuse on the oyster beds, it is interesting to note that some convictions have already been obtained by Protector Mersereau.

The enforcement of these laws will, we believe, prove to be among the most important work yet undertaken by any member of the New York Fish Commission. The waters of Long Island Sound and New York Harbor at one time produced an enormous quantity of food of various kinds which would compare favorably in value to that produced by all the other waters of the State. Whether the oyster beds are so covered with this vile, sticky sludge acid as to be rendered permanently barren or not, we cannot say; but it is possible that the waters of New York Harbor may again produce the vegetation and small animals which prove attractive to food and game fishes. It will take years to determine this point, but that a beginning has been made to correct this great evil will be a cause of rejoicing to anglers as well as to the commercial fishermen and to the oystermen.

INVITING GAME LAW VIOLATION.

THE French angling season opens on June 15. Last June Whitsuntide fell on June 13, and a number of anglers who wanted to go fishing on that Sunday wrote to the Paris *Lanterne* expressing a desire to have the season open on the 13th. The Minister of Public Works, M. Baïhaut, anxious to curry favor with that journal, made haste to write to the *Lanterne* that, though he was powerless to change the statutes, he had given orders to to the officers of the law not to molest persons who might be caught unlawfully fishing on Whitsuntide. By this maneuver M. Baïhaut gained the gratitude of the anglers, the approval of the *Lanterne* and the jeers of the rest of the world for his official winking at violation of the law. He now has an imitator on this side of the water in the person of the President of the New York Fishery Commission.

Among the laws enacted at the last session of the New York Legislature was one forbidding the netting, having in possession and sale of bobolinks (or reed birds), robins and meadow larks. The officials specially charged with the execution of this law are the State game protectors. These protectors are under the immediate supervision of the Commissioners of Fisheries. They are required to report to the Commissioners monthly; they look to them for instructions, and only upon the Commissioners' certification to the Governor that the protectors have faithfully performed their duty can the latter draw their salary. The protectors have evidently been consulting the Commissioners upon the enforcement of the bobolink, meadow lark and robin law. The president of the board published in the daily papers of this city last week a notification to this effect:

"I desire to inform market men and others that by a law passed by the last Legislature the sale of reed birds, robins and meadow larks is prohibited. The penalty for selling or having any of these birds or any part of them in possession is imprisonment in the county jail for not longer than 30 days and a fine of not less than $10 nor more than $50. While I shall not consider it my official duty to urge the game protector to enforce this law, I cannot prevent his doing so if he pleases, and although I suppose the Association for the Protection of Game, of which I am President, will ignore it, I cannot speak by authority, as no action has been taken. But any malicious or greedy person may proceed under the statute which gives to the plaintiff one-half of the penalty, so no one is safe in disregarding it. I give this notice now, as this is the season for reed birds, and heretofore no one has thought interference with their sale advisable or necessary.—ROBERT BARNWELL ROOSEVELT, President New York Fishery Commission."

This is in several respects an extraordinary statement. A State official declares that he does not consider it incumbent upon him to urge a subordinate to execute the law, but he cannot restrain that subordinate if the latter chooses to do his plain duty. The president of a game protective society, whose plethoric bank account is reputed to have been swelled by the fines accruing from the society's prosecution of game law offenders, dubs as "malicious or greedy" any one who may undertake to secure the lawful protection of bobolinks, meadow larks and robins.

The President of the New York Fishery Commission appears to have misconceived the functions of his office. He is not charged with the extraordinary powers of officially approving or disapproving fish and game laws enacted by the Legislature and determining whether or not they are suitable statutes and deserving of enforcement. He has no authority to say to the game protectors, this statute meets my fancy, you must enforce it, and that statute does not accord with my notions, you may wink at its violation. It is his duty to take the law as he finds it and see to its execution. The game protector cannot accept as an excuse for his failure to execute the law any such proclamation as this made by the President of the Fishery Commission; and in the event of his official dereliction the public will be interested to know if the Commissioners acquiescing in their president's view of the matter will transmit to the Governor the required certificate that the protector has "faithfully performed his official duty."

It is a subject of much regret that as an officer of the State, a citizen of the community, a president of a game protective club and a sportsman of wide fame, Mr. Roosevelt should have given such comfort to the individuals who arrogate to themselves license to abide by game laws or violate them, as best suits their individual tastes, conveniences and stomachs. In these days when United States Senators jack Adirondack deer out of season, when the wives and daughters of eminent doctors of divinity urge their guides to hound deer out of season, when hotel bills of fare are brazen with lists of game delicacies served contrary to the law, when poachers for pleasure and poachers for profit shoot and fish at will, the cause of game protection, of true sportsmanship and of good citizenship might surely be sustained by those whose official and private positions are presumed to attach importance to their acts and words.

THE CREEDMOOR MEETING.

WITH the next issue of FOREST AND STREAM the Fourteenth Annual Fall Meeting of the National Rifle Association will be well under way. Everything points to a successful shooting week. The programme prepared gives nearly a score of matches, and enough of them are open to all comers to insure a good gathering of the small-bore men. There are prizes enough to satisfy those who shoot for the love of the sport, while for those who shoot for the pelf there is never prize list big and heavy enough. The meeting will run through the entire week, opening on Monday morning next and closing on Saturday night. Secretary Shepherd in making up the match list has profited by the experience of previous meetings, and the various details really represent the result of much study. The range is brought into ready communication with the city, no less than eleven trains running from New York and Brooklyn to Queens, where stages give access to the shooting ground. There is every prospect of a good gathering of individual shots, while of the States, Massachusetts, Pennsylvania and New York will be represented in the State team matches. The Seventh and Twelfth Regiments of New York, the Thirteenth and Twenty-third of Brooklyn will appear in the regimental matches. The regulars will be there from Niagara and from the Fifth Artillery garrison about New York. With good weather there ought to be close competition and satisfactory scores. There have been many extra prizes added to the various matches and one entire match has been added, as announced in our rifle columns.

THE FISHERIES QUESTION.—After all the years of dispute between Canadian and American fishermen and the threats of war, etc., a new complication has arisen. For years the American fishermen have declared, with more or less correctness, that the fishing privileges in Canadian waters were worth nothing to them. This year the mackerel which have usually abounded on our shores are absent from them, and are swarming in the Gulf of St. Lawrence where the American fishermen must go for them if they want them. And now the trouble begins. The Canadians are enforcing the law regarding the limit within which Americans may fish, and have seized a vessel. It would seem from this that the American fishermen really think that a privelege to fish in Canadian waters is of some value, for this reason, at least.

THE NATIONAL PARK.—Advices from a member of the FOREST AND STREAM staff, dated at Mammoth Hot Springs, Yellowstone National Park, Sept. 1, say: Wm. McLennan, lately one of Col. Wear's assistant superintendents, brought in last night three prisoners whom he caught near Soda Butte. They had left a large camp fire in a very dangerous place. Since the civil assistants were removed and the troops put in charge, the lawless portion seem to think that it is no longer necessary to observe any rules or regulations, but imagine that they can do as they please. Large fires are raging in several places in the Park, and have got quite beyond human control.

AN UNUSUAL NUMBER OF GUNNING ACCIDENTS are reported from different parts of the country. Almost every one of these calamities is due to absolute carelessness. When will gunners learn the peril of carrying guns with muzzles aimed full at their own bodies?

THE SPORTSMAN'S PARADISE, where game is thick as hops—A few miles further on.

The Sportsman Tourist.

HUNTING IN THE HIMALAYAS.

Lights and Shades of an Indian Forester's Life.

VIII.

CAMP LOWER GURHWAL, Sewaliks, East India.—The chief turned up a fortnight ago, and, to use a native expression, "shed the light of his countenance" on my camp for the space of ten days, during which period we took grave counsel together on many things, started the fierce tiger in his reedy lair and slew the mighty boar upon the open plain, all of which doings you will find recorded in these chronicles.

A few days previous to his arrival, I heard that the plains below the forest had been fired; and the wind being favorable, I got Charley to clear and burn up all the refuse about the mouths of the fire lines he is clearing, and then fired the Ramgunga terraces. It was too early in the season for a perfectly clean sweep, but it is a most important measure in fire conservancy for the forests to burn the outside grass, while that in the tree shade and the forest floor generally is still too green and damp for ignition. This done, the danger from fire is restricted to fires generated within the forest, and this being divided into blocks by cleared fire lines, there is every prospect of confining a fire to the block in which it occurs. Besides this, a systematic firing of the open glades restricts the game cover to manageable limits, and not only facilitates the driving it out from the heavy green clumps, but gives a chance for a shot when it is out. We forest men do not generally touch on this matter in official correspondence, but between my chief and me there is a great deal of private correspondence on forest matters, and G. (the chief) had expressed a hope that the firing would be done against his arrival.

I went two days' march to the eastern boundary of my division to meet him, getting some very good practice with my shotgun among black partridge, peafowl and jungle cocks (bantams) by the way, and bowled over a four-horned antelope, the first I had ever seen. G. got into camp almost as soon as I, a big pair of horns protruding over the elephant's haunches, showing that he too had lingered by the way. It was a cheetul or spotted deer, which, together with some birds, he had bagged *en route*. We were soon at breakfast, G.'s man subscribing a ham, some *paté de fois gras* and other "Europe" dainties; but my fellow's hunter's round of spiced beef, and a cold game pie with birds set in the jelly from a haunch of venison, commanded a fair share of attention, and washed down with G.'s claret disposed us to be communicative, as soon as the business in hand should leave us at leisure for any more connected conversation than appreciative remarks on the viands between mouthfuls. Life has its lofty aims, and sooner or later the world regenerators may reap the reward of their labors, but the hunter who provides himself with a good cook, and comes home to a midday breakfast after six hours in the hunting field, experiences a measure of reward which marks him out as one endowed with the lofty capacity of adapting his means to his ends.

Charley's adventure* was the first discussed, and G. was pretty strong in his condemnation of Ram Buksh's cowardice, but G. was himself incapable of physical fear, and entertained the most supreme contempt for any man capable of showing the white feather. The man-eater next came on the tapis, and G. was unable to divest himself of the idea, that the tiger I had bagged was the one the Ghoorkas professed to have hit—in fact the man-eater. He argued that as the head of the last victim had not been eaten, the hair from his previous victims may have passed through, but I rested on the extreme slowness of the digestive process in tigers, and expressed my conviction that the man-eater was still at large, and probably suffering only from a flesh wound.

Later in the day a discussion arose as to whether we should march through the forest or take the plains. Now that the grass was burnt, all but the green clumps in damp hollows, there was much more chance of a tiger below the road, but the fact that the man-eater had never been heard of below the road determined us to take the forest. G. had two elephants with him, and the three would be ample to beat up any of the small nullahs in the forests. We were away soon after daylight and struck in about four miles from the road, going up the creek from the forester's hut, and beating all the grass clumps *en route*. We put out several hog deer and birds, but decided not to fire at anything but cats as long as we were where there was any chance of finding one. After striking west into the forest we kept the elephants about 100yds. apart, G. and I on either flank, the baggage elephant in the middle. We had gone about three miles, when I saw a panther glide away from the center elephant and head in G.'s direction. I gave a whistle and G. was instantly on the alert, rifle in hand. Diverging to my right to get a share in the fun if possible, I got sight of a narrow grass glade ahead and saw G. stop his elephant and stand prepared to shoot. I reached the edge of the glade before he fired, and at about fifty yards from him, and stood on the *qui vive* for him to spring the game. The sharp crack of a rifle rang out. I saw the panther wheel round, and the next moment he was on the elephant's head. My elephant was in motion immediately, but the motions of G.'s elephant were still more lively. Turning sharp round, he charged at a big tree that stood near him, and literally flattened the panther's hindquarters against it. The beast howled and relaxed his hold, and the elephant, drawing back, let him fall, only to drop on his knees on him, and crush the last breath out with his ponderous weight. G. had dropped his rifle, and was holding on to the howdah like grim death with both hands, the howdah swaying from side to side, like a small boat in a storm. He had barely escaped being thrown out headforemost when the elephant dropped on his knees. As to dying, the panther declined to die, although the elephant had one knee on his shoulder and the other on his ribs, and flattened him. He still spat and growled, but in a minnte or two the mahout persuaded the elephant that it was all over, and got him to rise, when G. took his rifle and finished the brute, which was laden on the baggage elephant.

Some two miles further on we came to a little rise and saw a gerao stag standing on the crest, something short of a hundred yards. G. motioned for me to fire, which I did, and the same instant he charged down on us, falling as he reached G.'s elephant. It required the united strength of the whole party to load him, and this accomplished we pushed on, crossing and beating up several nullahs with good cover, in one of which G. shot an old boar, which we left lying. Had we been close to a permanent camp I should have remonstrated, especially as we had a couple of Hindoo mountaineers with us to help load him, but the Mahomedans affect to despise pork eaters, and to think highly of a Sahib who keeps himself clean from the contamination: of course it would not have been right to load him on the same elephant with the gerao, as this would have prevented the mahouts from eating the latter, so I passed on without comment, although I know nothing more appetizing for breakfast than a well cured and smoked wild boar ham.

Getting near camp we put up quite a lot of peafowl, of which G. bagged three and I two. I shot a jungle cock, and we had quite a show of game. The gerao's flesh is a rather coarse venison, inferior to hog deer or spotted deer, but the round makes a very fair hunter's round, and my khansaman reserved one, boiling down the rest of the leg for jelly; the camp followers shared the balance.

The second day G. determined to take the lower route, as he knew of several likely spots for tiger, and argued that although the man-eater always killed above the road he might, nevertheless, go below for quiet between meals. We had gone about seven miles, beating up a great many likely spots when, approaching a large patch of perhaps twenty acres of high grass, a tiger walked out and surveyed us leisurely. He was about eighty yards off, and seeing G. stop and raise his rifle, I followed suit. We fired together and the tiger bounded into the cover somewhat more hurriedly than he came out. We hastened to the spot at which he had stood when we fired and saw no blood, but on coming to the cover we saw a good smear, and pushed in. Closing up the elephants to about ten yards apart, we beat up and down for an hour without springing our game, and then skirting the far side of it got on the blood trail again leading to another patch of grass about half a mile off. Reaching this we put in the elephants, and after a while I got a glimpse of the tiger's face on my left—just an instant's glimpse in passing. Whispering the mahout we backed the elephants a couple of yards, but the face was gone; so signaling G. to wheel round, I kept my stand until we got into line again, when we beat outward; but the tiger escaped us, and with a few words of explanation we formed line again.

This time we headed straight for Mr. Stripes, and heard him rush, but he declined to break on either side, and we pushed on to the end, about two hundred yards off. We saw nothing of him and concluded that he must have got round us. G. brought his elephant up to me to consult, and as we stood there my mahout looked up and pointed at the short grass; there was blood. There was a broad, open plain before us, black from the recent fire, but at 15yds. from where we stood was a small grass plot—perhaps 15 by 20ft.—the grass not more than 4ft. high. Advancing on this the tiger broke cover with a growl, and dashed away toward the first cover. G. and I got in a shot each, and as the beast sped away we gave him our second barrels, but he held on his course and we followed, tracking the blood all the way to the first cover. Judging from the blood lost he was evidently hard hit. Reaching the cover it was impossible to track the blood any further, so we pushed in and beat about blindly for another hour, going through and through it, but without result. At length G. suggested that one should skirt the off side and examine it for blood, while the other kept watch on the near side. This was done, and there being no trace, we determined to go down to the south end and fire the grass, one keeping guard on either side.

We marched down in line through the grass, still on the lookout, rifle in hand, when the baggage elephant gave a start, and backed round. There was no motion in the grass, anb G. and I converged on the spot, where I might have seen nothing had not the elephant opened out the grass with his trunk, and displayed the foe lying dead. Congratulating ourselves on not having fired the grass and spoiled the skin, we got the tiger on the pack elephant and commenced to investigate the holes in his skin; the important part was the right side which he had presented to our first fulisade, for if only one ball had hit, the ownership of the skin would have been decided at once, but both balls had gone home. G.'s express bullet high up the shoulder, and my No. 10 spherical behind the ribs. Neither of these could have been given later, for when the beast broke from the small patch, his quarters and left side were toward us. The ownership of the skin was consequently a draw, to be settled at parting. Three of the other shots had told, and on careful analysis it was found that when we put him up the second time my shot had entered the saddle and proved the death wound, and G.'s cut through the base of the ear, my second barrel was a miss and G.'s opened a great gash in the quarters.

We now determined to make straight for camp; we were at least three miles from Ramgunga, and another eight miles, thence to Boksar to which we had sent on our camels, and moving off at a brisk pace reached the river at about 11 o'clock. We staid about ten minutes talking to the forester, and then turned up stream, and had got about a mile on our way when the forester came dashing after us on his pony with the startling intelligence that the man-eater had bagged a man not two hours ago about five miles back and two miles in from the road. We looked at each other. Had we come through the forest above the road we should probably have been at or near the spot at the moment. And now what was to be done. It was not, as G. said, a question whether we should go after the tiger; that was settled, but what arrangements should be made. The first step was to recall the camels and pitch the camp at the station we had just left. Arrived there we sent the baggage elephant to fetch fodder for the others, and giving ours each a feed of raw sugar, and taking a supply for later in the day, we next thought of ourselves. It was hard to say when we would next sit down to a square meal, but plenty of unleavened cakes of coarse meal were forthcoming on demand, and of these we took one each; we took a tomahawk along too, in case we might decide on sitting up at night. Both G. and I had a good tracker with us, both men who might be relied on to behave pluckily in danger, and on their expressing their readiness to go with us on foot, we determined to leave the elephants at the scene of the raid, while we followed the trail, the mahouts being ordered to come up if they heard shooting.

We found the frightened bamboo cutters in the road, but encouraged by our presence they accompanied us back, pointed out the place of seizure and returned to their work, while we distributed cartridges to our native allies. They soon picked up the trail; blood was seen rarely and at long intervals, the men followed the trail slowly but unhesitatingly, not a word was spoken; sometimes the trail was invisible for a short distance, when one would recognize signs a few yards ahead, and pointing it out to the other, the trail was taken up again. We had gone about a mile and a half through a lightly timbered forest with heavy clumps of bamboo, when one of the natives dropped on one knee and advanced his gun ready for action. Pressing up we saw a man's foot just visible, the body being concealed by a clump of bamboos ten or twelve feet through. Leaving me and one native to watch the spot, G. crept back noiselessly to command the other side; but all was still, and touching the native on his knees before me, I beckoned him to back and edge sidewards so as to command a better view. A small clump of bamboo facilitated our object, and crawling round this, the native first and then I, commanded a full view of the body. The tiger was gone. Making signs to G. we rejoined and took a hasty look at the body, of which one thigh bone had been picked clean; and after a circuit of fifty yards, during which we passed two on each side of every bamboo clump, we concluded that our friend had probably gone to sleep or to drink; so while G. and I kept watch, the other two cut bamboos, and in a quarter of an hour two muchans were built in adjoining trees and we were in our perches. There we sat from 2 o'clock in the afternoon until the next dawn noiseless and watchful, but the tiger never appeared. He had seen or heard us coming and stolen away. As regards my own sensations, I was stiff, sore and hungry, and sadly in want of a smoke, and was not sorry when we once more sighted our tents on the Ramgunga.

SHIKAREE.

*See FOREST AND STREAM, Oct. 15, 1885.

SAM LOVEL'S CAMPS.—V.

SAM and Antoine were to embark in the log canoe, while Pelatiah, still mistrusting the treacherous deep, was to hunt along shore following the directions of the experienced Canadian. But first he pulled off his trousers and socks, which he wrung out and hung by the fire. Considering the chances of another bath he debated a little whether he would not better go forth bare-legged, but at last concluded for the sake of seemliness and convenience to put on a pair of trousers that he hauled out of the depths of the carpet-bag.

The sun shone with almost summer-like fervor on the flat, wooded shore and clear, still shallows, where every sodden leaf and weed and sunken stick upon the bottom was revealed. The first frogs were sunning themselves on the fringe of floating and stranded last year's rushes that bordered the water, and on every side their crackling pur arose, as continuous, if not as loud, as the thronging blackbirds' incessant clamor, a medley of sweet and harsh notes, like the gurgle of brooks and the slow drip of water into echoing pools, with the grating and clatter and sharp click of pebbles tossed upon rocks. As Pelatiah slowly walked along the shore, at almost every step a frog startled him, scurrying over the weeds with spasmodic leaps and splashing into the water. Then a shadow flitted before him, and looking up, he saw a great hawk wheeling in a wide circle overhead, his wings golden brown with the sunlight shining through them.

"A hen hawk 's better 'n nothin' to show," he said, cocking his gun, and taking a slow upright aim. He was standing almost in the water with his back toward it, and the hawk's course tending behind him, he was leaning backward to the utmost of his balance when he fired, and the recoil of the gun set him down with a sudden splash that awed all the neighboring frogs into silence. After scrambling to his feet he cast a quick glance about him while the returning pellets of shot were yet raining down, to see if any one had witnessed his mishap, then one in search of the hawk. The bird was still circling undisturbed in a great upward spiral, and becoming a fleck of brown against the blue. "Wet agin! an' not so much as a bow-fin to show for 't! I might ha' knowed better 'n to shoot. I couldn't hit a tew storey haouse a flyin'. But I kep' my gun dry, 'n' who cares? That 'ere hen hawk don't, sartin." So embracing the nearest tree, he emptied the water out of his boots, then reloaded his gun and went forward. The wetting of his nether parts being now accomplished and not to be dreaded, he was no longer "cat-footed" but waded slowly and cautiously to every likely looking place, resembling, as he craned his long neck and scanned the water near him, some enormous heron seeking his prey. A slight commotion of the surface attracted his attention, and warily approaching the spot, he saw the back fin and tail of some large fish gently moving. "Bow-fin or no bow-fin, I'll try ye," he whispered to himself, and remembering Antoine's last injunction to shoot at a fish "way under where he was," he blazed away. Before the boil of the water had subsided he saw the white bellies of two motionless fish shinning out of the bubbles and disturbed sediment, and splashing to them he plunged his arm in to the elbow and seized the largest, and tucking it under his left arm, grabbed the other. Just then he saw another that had been stunned by his shot, feebly writhing its fins and evidently gathering wits and strength for a speedy departure. How to secure it with one fish in his right hand, his gun in his left and another fish hugged under that arm was a question that he speedily solved by seizing his right-hand fish by the tail with his teeth. But the free fish, the largest of the three, had now recovered, and as he reached for it, slipped through his fingers, and with a great surge disappeared, leaving only its slime in his grasp. After one longing regretful look, he waded ashore with his prizes, and depositing them at a safe distance from the water, sat down upon a log and gloated over them, stretching them to their fullest length, arranging their fins, then turning them over, then "hefting" them separately and together. They were of about 5lbs. weight each, and most undeniably pickerel, the fish of all that the mountaineer prizes most, in spite of his intimate acquaintance with the clean, gamy, beautiful and toothsome trout of his native streams and ponds. His admiration of this shark of the lowland fresh waters has spoiled the trout fishing in many a mountain lakelet, where the survival, not of the fittest, but of the biggest, the hungriest and most fecund has been proved by the introduction of this alien.

In possession of the largest pickerel he had ever seen,

and that of his own taking, Pelatiah had never felt more completely happy. If the day had been cold, the glow of pride and happiness would have kept the wet clothes from chilling him; in the genial sunshine of this most perfect of early spring days, he scarcely felt that his boots were full of water, that he was soaked and sodden to the waist. He heard, but only noticed as a pleasant accompaniment to his inward song of thanksgiving, the frequent roll of the partridges' muffled drums far and near in the woods; hardly wondered what unseasonable game Drive had afoot where he was making the woods resound with lazy echoes of his sonorous voice. Guns were booming all along the shores—the thin report of rifles spitting out their light charges, the bellow of muskets belching out their four fingers of powder, tow wads and "double B's," and giving one's shoulder a sympathetic twinge as he thought how the shooter's must be aching—all proclaimed that it was a sad day for the pickerel that had come on to Little Otter's marshes to spawn. Probably not one man of the fifty who were hunting them there had a thought of what the fish were there for, or would have cared if he had. There were too many pickerel, and always would be. There could be no exhaustion of the supply of them nor of any other fish. Any proposition to protect fish and game of any kind, to prescribe any method of taking, to limit the season of killing, would have been thought an attempt to introduce hated Old World laws and customs. Hunting and fishing were the privileges of every free-born American; to use or abuse whenever, wherever and however he was disposed. And he could not live long enough to see the end of it, for why should there not always be fish and game as innumerable in all these unnumbered acres of water and marsh and woods? Alas! why not?

A nearer shot, that seemed the familiar voice of the "Ore Bed," caused Pelatiah to peer among the tree trunks in its direction, and he saw the log canoe not far away and one of its crew taking something from the water with a sheen of scales and drip of sparkling drops. At first he had a mind to hail them, learn their luck and proclaim his, but on second thought he felt that there would be more glory in surprising them on their return to camp with the actual, unimpeachable proof of his success. So after watching them out of sight, he cut the brightest blood-red ozier twig he could find and strung his fish upon it, though with the feeling that a silver cord would more befit their worth and beauty. Then he reloaded his gun with a most generous charge in consideration of its recent good service, and went on in search of new conquests, his boots chuckling at every step in their lining of water, as if they, too, were rejoicing in his triumph. He soon saw where a fish was "playing" at some little distance from the shore, and working carefully toward it under cover of an insular stump, he gained that coigne of vantage and stood with unstable footing on its roots when he saw the fish within short range and fired at it. The recoil of the heavy charge pushed him a step backward, his foot caught in a root, and over he toppled at full length with a gasping grunt and a splash that drove an upward shower of water drops into the lower branches of the trees. He hardly waited to regain his feet before he scrambled to the place where he had last seen the fish. And there it was, motionless, belly up and bigger than those he had on his string! He thought as he slipped the osier through the gills and viciously toothed great jaws that he had suffered none too much for such a reward, that he would rather have been put to soak in the Slang for an hour than to have lost it. When he became fully possessed with the sense of his exploit, he could not withhold a triumphant yell, so discordant and so unlike any voice that some of the distant shooters had ever heard that a report soon after became current of "a painter a-hengin' raound in the Slang woods."

His gun was wet now and he had only wet tow to swab it with, and though the powder was dry in his horn, the little paper box of caps with a lot of foreign lingo printed on the green cover around the prominent letters "G. D." (which some took to be abbreviated profanity), was saturated almost to pulpiness. But he must try once more, and so he wrung out a handful of tow and swabbed the gun from complete wetness to moderate dampness, poured in a handful of powder and rammed down upon it a wad that needed no chewing to moisten it, emptied in his last charge of shot, wadded that, and placed a forlorn hope of a cap that he had blown the water out of on the nipple, in which not a grain of powder showed. "Nothin' like tryin'," Pelatiah said hopefully, and, mooring his fish in a safe puddle, he went to where a great mossy log reached far out into inviting waters. He worked his way with careful steps along it, crouching under overhanging branches that he steadied himself by, and looking sharply on either side. A basking turtle slipped off the outer end, and the splash of his sudden immersion startled a fish, that came with a great arrowy wake a little out from and parallel with the log. Watching the point of it, Pelatiah saw in the amber shallows the great savage head and long blotched sides of one of the monster pickerel of the marshes, slowing up just against him. His heart almost stood still as he put his gun to his yet aching shoulder. Whispering to it inwardly, "You won't sarve me sech a dummed caper agin," he leaned far forward to counterbalance the expected recoil and pulled the trigger with might and main. The striker fell on the wet cap with a dull, flat click, and too late aware of a misfire to recover his balance, he went sprawling into the water, the gun slanting breech up with the muzzle stuck a foot deep in the soft bottom. The frightened fish made almost as great a commotion in getting out of the dangerous precinct, at the first dash nearly stranding itself on the weedy slope of the shore, then struggling well afloat again, making a wild dash through a tangle of bushes that made their tops shiver along his course, then surging into the open water and departing with a wake like a boat's. Pelatiah got upon his feet, and, pulling his gun out of the mud, waded ashore. "The' 's one goldarned comfort 'baout it," he said aloud, as he turned and sadly surveyed the yet troubled waters, "the' wa'n't nobuddy seen me a-kerwollopin' in there like a dum fool, 'n' I don't care!"

"Waal," said a nasal voice not three rods away, "that 'ere was a consid'able of a splotteration-ah!" There was a kind of grunt at the end of the speaker's sentence, as if his overcharge of words kicked.

Turning his astonished and abashed face the young fellow saw a tall raw-boned man regarding him with a grin, whether serious or mirthful, it was hard to decide. "That 'ere was an all-termutable big pick'ril-ah. I wish t' land o' massy I'd ha' got here fust-ah! I'd ha' got him, an' you'd ha' lost him-ah! But that's allus my pleggy dummed luck—somebody or 'nother a-gittin' in 'head on me an' a-takin' the bread right outen my mouth-ah!"

"Kinder seems 's 'ough we'd both on us lost him," Pelatiah said, picking up his string of fish and making ready to depart. The late comer strode to him and snatching the string from his hand and holding it close to his nose slowly turned the fish one way and another, as he critically examined them.

"Honh! waal," with a half contemptuous snort, "you've had sorter half way decent luck-ah. Them's middlin' decent sized fish-ah—wuth carr'in' hum 'f you ha'nt had no fish t' eat this year-ah." Pelatiah was beginning to hate him. "But-ah," returning the fish to the owner as if they were worth no further notice, "you've got a' orfle sozzlin' to pay for what you got an' ha'n't got-ah, an' you'd orter go right straight hum an' git some dry close on 'f you've got any-ah. It is driffle onhealthy a-gittin' wet so wi' you're close on-ah. Like's not you'll have the rheumatiz—er chills—mebby it'll set ye inter fev'n'aag'; shouldn't wonder a mite-ah. Naow, take it in summer, 'n' I luffter onstrip an' go in under the dam 't the Holler an' shaower off 'n' then take a head dive int' the pawnd-ah, 'n' turn the circ'lation o' the blood tother way-ah—it makes a feller feel so neat-ah! But this traipsin' raound in your wet close is tur'ble bad. I wouldn't git wet 's you be for four dollars 'n' seventy-five cents-ah! Where 'baouts du ye live when you're t' hum, anyway?"

"Up to Danvis," Pelatiah answered.

"Tu Dan-vis!" the man exclaimed, "you don't say so? It's as much as twenty mild off-ah! Waal, 'f you've got to go clearn away there 'ith yer wet close on, you'll hafter hoof it tarnal smart t' git hum 'fore you're sick-ah 'n' ye can't lug them fish 'n' yer gun. You'll wanter keep yer gun, I 'spose, though 't 'aint much to look at, but I'll take yer fish 'f you don't wanter heave 'em away-ah!"

Pelatiah would as cheerfully have given him his heart as those precious fish. "Bleeged tu ye; they're little bits o' fellers, 'n I guess I c'n kerry 'em," he said rather sarcastically, declining the generous offer, "fur 's I'm goin'. I got some folks a campin' up yonder," nodding in the direction of the "pallis."

"O-ah!" with a tone of disappointment. "Waal, you 'd better go an' dry off 's soon 's ye can-ah. I did n't come a huntin'," glancing at the ancient musket he held in his hand, "I come a lookin' arter some rhuts 't I want-ah. My womern she's a fee-male doctor, messmericle. My brother, Job, Junyer, he gives her the in-flew-ence 'n' puts her to sleep-ah. 'N' then she can look right inter yer insides an' read 'em just like a book-ah. Terms, half a dollar for examernation-ah, one dollar for proscription-ah, cash on delivery-ah. Sleepin' Sairy, probably you 've hearn tell on her-ah."

Pelatiah was obliged to confess that he had never heard of this supernaturally gifted woman, and turning away went toward camp as his new acquaintance muttered something about "onenlighted critters." Casting a look behind, he saw him walking carefully out along a log, with his gun at a ready, and wondered what kind of roots he could be in search of. Pelatiah's heart was not entirely regenerate, and perhaps just then nothing would have gladdened it more than to have seen the disparager of his luck make a "splotteration" such as he had suffered.

Arrived at camp he made a complete change of raiment, and was toasting himself in great contentment by the replenished fire when late in the afternoon his companions returned. He had thought of dressing his fish, but it seemed too bad to take even a scale from them before his friends had seen them in their entireness. How he wished that he might display them on the store steps at Danvis and tell the story of their capture, with judicious omissions, to the admiring audience of evening loungers. His pride was somewhat brought down when he saw the dozen or more big fellows that Sam and Antoine tossed out of the canoe, but still he felt that he had done well, for a boy, and his friends gave him generous praise.

Antoine dragged a slab to the water's edge, and seating himself a-straddle of it, slapped a large fish upon it in front of himself, which he forthwith set about cleaning, while Sam and Pelatiah squatted close by and watched the process. "You wan' scratch it, scratch it, dem peekrils great many," he instructed them out of the shower of scales he set flying, "Den w'en you'll pull off all hees shell off of it, you wan' wash heem plenty—wash an' scratch—so!" and he doused the scaled fish in the water, scraping it with his knife and washing it, over and over again, till the skin was quite white and free from a suspicion of slime. "Somebody he ant' more as half scratch off peekril clean 'nough, den he cook it, an' he ant tas' good of it, den he'll said, 'daam dat peekrils! he don't fit for be decent!' Bah gosh! Ah show you, me!" Then he split the fish down the back, cut off the head, took out what he called the "inroads," washed it again, and cut it into convenient pieces for the frying pan. When he had tried the fat out of a couple of slices of salt pork and set the fish to hissing in the pan with the bubbling accompaniment of the potatato kettle, an odor so savory pervaded the atmosphere of the camp that it made the mouths of the hungry men water, and the minutes of waiting for supper seem like slow hours of starvation. The fragrance of it was wafted to the nostrils of a wood chopper half a mile away, and so aroused the sacred rage of hunger within him, that he was forced to shoulder his axe and go home to an early supper.

Antoine set the potato kettle on the board and lifting the frying pan from the coals with his hat for a holder, placed it beside it and announced supper. "Goo'bye, M'sieu Cochon; goo'bye, M'sieu Mash Rabbit; how you was pooty well, M'sieu Peekril? A'll very glad for see you to-day, seh! Hoorah boys!" The bag of dry bread was brought out, and then the three fell to work in a silence that was broken only by grunts and sighs of satisfaction, the sputtering out of fish bones and the clatter of the few implements of onslaught. At the end of it Antoine said, as he prepared a charge for his pipe: "Wal seh, boy, 'f Ah always feel jis' Ah was naow, Ah ant never heat no more! He ant cos' much for mah boards den, don't it Sam?"

"I expeck," Sam answered, searching for a grass stalk to clear his pipestem, "'at it's some wi' you as 't was wi' Brother Foot to the prayer meetin', 'Brethren and sisters,' says he, 'as I feel naow, I wouldn't take the hull world for the feelin's 'at I feel! But, brethren and sisters, I don't allers feel jes' 's I feel naow!' "

The sky had become overcast with curdly clouds except a strip along the horizon, which at sunset was a broad belt of orange-red fire glowing between the dark gray clouds, and the blue-black bastions of the Adirondacks and the frayed fringe of somber woods; and nearer than the shadows of these, the brimming expanse of unruffled water glowed with the same intense color. When the trappers crept into their nest, the night was dark and starless; a chill breath of northerly air was sighing in the hemlocks, and the great owls were hooting a dolorous warning of coming storm. Listening to them, Sam remarked as he made his final yawn under the blankets, "Not much fun nor profit for us fellers to-morrer, so the aowls sez."

THE BIRDS OF MICHIGAN.

BY DR. MORRIS GIBBS.

62. *Geothlypis philadelphia* (Wils.) Baird—Mourning warbler.

A bird of peculiar distribution. In certain sections very abundant, while in many quarters it is never seen. Not the least singular are its lines or track in migration during which is very rarely observed south of 43°, while it is exceedingly abundant in many quarters less than ten miles north of that degree, and in many counties it is one of the most common species of the family.

It is a species which follows in the wake of civilization I think, as it evidently prefers the edges of clearings and evergreen tracts where once stood heavy forests. Sager, in 1839, did not embrace it in his list. Neither did Dr. Miles, 1860, or even Hughes in his list about 1870. Boies, 1875, "Birds of Southern Michigan," mentions it as transient. Covert, 1878, "Birds of Lower Peninsula," says, "Very scarce, two males taken." Dr. Atkins did not secure one until 1881, Ingham county.

I first met with it in Ottawa county in 1878, when three specimens were secured. The following year three of us shot over thirty specimens, all but four being males. We saw many others, but learned but little of their habits and did not find a nest although we searched diligently and were on the grounds at the proper season. The birds are very shy at all times and to secure a series of skins requires great patience. One might accidentally find a bird within easy range, but the chance would be unusual, and the most careful sneaking or perfect quiet, waiting till the birds reappear from the bush will succeed. The females are especially shy, and I do not think that I have ever seen more than four or five. The males from their habit of perching on limbs, nearly always of dead trees and bushes, are most noticeable and are attractive from the song by which I have generally been guided to them. In Montcalm county, 1880, I found them very abundant, and during my sojourn of four years in that new, partially cleared section, became quite well acquainted with the musical birds. I think it safe to say that with the exception of the prairie warbler, and perhaps without any exception, the mourning is the most abundant specie of the family in Montcalm county.

I have said that I thought this species influenced by civilization, and by it I meant, in this instance, that the birds followed in the wake of the forest destroyers. Particularly are the birds abundant along the edges of clearings where pine trees have stood. The pineries, as is well known, are nearly, if not all, north of 43° north latitude in this State, and very few, if any, birds summer south of this degree. No authenticated record of capture except during migration has reached me south of this parallel. However, to the north, where the forests are less disturbed, the mourning warbler is not found, or at least they are so scarce that they are not seen. Mr. Chapin does not embrace it in his manuscript list to me of the birds of Emmett, Antrim and Charlevoix counties. Neither is it recorded by Kneeland in his list of the birds of Keweenaw Point, 1857. I think it will eventually prove abundant in all of those northern counties as soon as the intermediate portions of the State are partially cleared so that the birds shall find their way over favorable territory and extend their range. On June 25, 1882, I found the birds quite plentiful at Cadillac, 44° 20′ north latitude and 85° 30′ west longitude, although I feel satisfied that fifteen years ago not one bird could have been secured there, when the forest of pine was unbroken.

The mourning warbler is a late arrival, usually, and although he may appear somewhat earlier in the extreme southern parts of the State, he is so rarely seen during migration that we get but few dates from such observations. Trombley, of Monroe county, the extreme southeast county of the State, has only recorded three specimens, which were observed in early May. My earliest recorded arrival is May 11, which occurred in 1882—an early season. This was in Montcalm county, and the same year Mr. Syke secured a fine male on the 21st of the month, which is the only instance of its capture in Kalamazoo county. It appears singular that his specimen was shot over eighty miles south of the first arrival in my locality, but not till ten days later. In 1883 the birds did not arrive until May 20, although I kept a careful watch for them. May 13 and 14 are other careful records of arrival north of 43° north latitude.

The mourning warbler evidently comes with full forces in its spring visits, and although occasionally a single bird is heard a few days in advance of the bulk of the migrants, usually a great many are heard the first day or so of their appearance. Never having observed the species south of its nesting haunts and during migration, I can not say that the birds do not appear silent at first. It may be that they remain a week with us before opening song. But as all the information one can get is taken while listening to the song, it is impossible to say. At all other times they remain concealed, and are only known by their notes. The song is not dissimilar to that of the gutteral notes of some of the house wrens' muttering. There are also a few of the chirps and scoldings similar to the Maryland yellow-throat. The song may be described by the notes *chree-dle-de, chree-dle-de, chree-dle-de, chree-dle-dah,* or only *chree-dle-de, chree-dle-de, chree-dle-dah.* The last notes, *chree-dle-da,* being much lower than the others. The song is very musical, pleasing and sounds quite mysterious as it is heard issuing from the brush. It is quite penetrating, and can be readily heard for a quarter of a mile on a still morning.

While singing, the males if possible, select a dead

limb of a tree, rarely a dead log or the roots of an overturned tree or even the low dead bushes. Sometimes the birds sing while clinging to the dead bark of a dead pine in a manner similar to that of the prairie warbler. From these situations it drops to a place of concealment on the slightest sign of alarm, where it remains concealed, or, if the underbrush is thick it can be heard again several rods away singing in mockery. It is a very suspicious, timid bird, and I do not know of any other species unless it be the winter wren which will cause one the trouble that this one will. The birds often perch all of 50ft. from the ground where they can be plainly seen and heard, a peculiarity which is not shared by the yellow-throat excepting in rare instances, when that handsome fellow conceals himself in the thickly foliaged branches near woods. In only two instances have I observed a mourning in live trees.

The Maryland yellow-throat is nearly always confined to moist tracts or in their immediate vicinity, while its cousin evidently prefers higher ground. Most of the specimens that I have taken were near pines and among stumps and bushes, and always, with few exceptions, on sandy or clay soil. I have as yet learned nothing of their breeding habits, but am positive that they conceal their nests among the rubbish of a newly cleared tract and undoubtedly on the ground.

63. *Geothlypis trichas* (Linn.) Caban—Maryland yellow-throat.

Arrives from April 20 in early seasons to May 9 in late springs. It appears musical on its arrival and is oftener heard in the brush the first time than it is seen, its habits being retired. After a few days it is less shy, and frequently perches in open sight while feeding. The yellow-throat prefers low ground, covered with rank grass, willows and brush, but is oftener observed on higher land in thickets of blackberry and raspberry bushes.

It breeds plentifully in bushy tracts, low sections covered with rank grass and on the edges of deep forests usually of heavy growth, and sometimes in the depth of deep woods. The nests are rarely found, considering the abundance of species. The nesting habits are, however, so well known that a description is not necessary. The nest is usually placed on the ground or near it, but I have found it quite four feet from the ground, placed in a small bush.

The birds are found abundant as far north as 44° north latitude, but further north become scarce in this State. I have no list from the upper peninsula which embrace it, but I saw one on Mount St. Marie, 46° 30′ north and 84° 30′ west. At Mackinaw City, 45° 40′ north, I found it not rare. In early October the birds move to the south, silently skipping from bush to bush, or sneaking through the grass and brush in the manner of the winter wren, and are rarely observed at that time.

64. *Icteria virens* (Linn.) Baird.—Yellow-breasted chat.

A rare species and only recorded by three observers in the State. Jerome Trombley writes me that it first appeared in Monroe county, the extreme southeast portion of Michigan, in the spring of 1875; rather commong in 1877, secured two sets of eggs, but none seen in 1878. Mr. A. H. Boies saw it in 1880, May 21. Later he says: "The yellow-breasted chat frequents this locality (Hudson, Mich.), the extreme southern tier of counties of the State." The late Dr. H. A. Atkins, of Ingham county, says: "Quite common till Oct. 2, 1876 and not seen since."

The nests are not difficult to find, according to Mr. Trombley, but to the general collectors of Michigan outside of the gentlemen mentioned, the species is not known.

BIRD NOTES.

CLEVELAND, O., August 31. Early this morning I heard the sharp *chink* of the bobolink. Looking out of the window I saw a flock passing off to the southwest; during the day I saw several more flying in the same direction, though I was not on the lookout. This is some two weeks earlier than their migration last year. I noticed it at that time because it is so unusual for this bird to migrate by day. We hear from various parts of the country that the bobolink is becoming quite scarce and from some localities where once abundant has now entirely disappeared. This seems to be the condition in our vicinity where a few years since his jolly jingling notes could be heard in the spring time over every meadow. A traveling huckster here, who deals in poultry, eggs and butter, and collects his merchandise from farmers for thirty miles around, inquired of me the other day to know what had become of all the bobolinks. Says he, "When I commenced driving around the country fifteen years ago collecting truck for market, they were in every meadow as soon as the timothy was well up. I often used to stop my horse to see them dance and sing, they were so amusing, but I don't see any of these to-day, not a one this season." Like the pigeon and wild turkey, must this harmless and most interesting of all our song birds go to? What is the market price of "reed birds and rice birds" dressed for the table? 9:30 P. M.—Just as I was about to close this letter we have had three distinct shocks of an earthquake—coming apparently from the southeast—so distinct as to count between the shocks of about ½ second each. The brick house cracked like the timbers of a ship in a slight lurch. It is a most complete specimen of the kind we have ever had here.—DR. E. STERLING.

AGAWAM, Mass., Aug. 30.—I wish to thank you for what the AUDUBON SOCIETY has done for the protection of the song birds. As there are several large trees near the house and directly in the line of their flight I have a good opportunity for observation, and I have been much gratified to note this increase. A pair of meadow larks have this summer nested undisturbed near the house and spent a part of each morning singing in the trees in the door yard, very much to my delectation. They were followed by the yellow-hammer, whose note, though not so sweet, yet is so free and joyous I always love to hear him, and now the trees are visited by everything in turn, from the crow to the wren. I think one reason for this is there has not been a gun discharged near the house this summer. I am not a member of the AUDUBON SOCIETY as I cannot keep my hands off of old crows. I can forgive the owls and bear with the hawks, and thought I could with the crow, but I saw him come three times one day after a nest of bluebirds that were too far into the hollow of a tree for him to reach; since then the lead finds him whenever I can make it. A small flock of wild geese passed over here southward, Aug. 3. Is that not early?—PINE TREE.

LOBSTER'S CLAWS.

Editor Forest and Stream:

Which is the lobster's larger claw, the right one or the left? I had seen thousands of lobsters, and could have answered that question off-hand, until I happened to notice the lobster plate in the United States Fish Commission's book on "Fishing Industries." The larger claw figured there is on the left. It struck me that it must be wrong, for the larger claw of my big 29½in. lobster is on the right. Upon investigation I find that the crustaceans are ambidextrous. Of a hundred specimens fifty may have a larger right claw, and the other fifty a larger left claw. And one funny thing about it is, that the oldest lobster dealers here in Boston, men who have handled their thousands and tens of thousands of the creatures, had never observed this idiosyncracy. The facts may be familiar to some of your readers, but I have found no one who had observed them. It occurred to me that sex might have something to do with it, but this proves not to be the case. F. R. SHATTUCK.

BOSTON, Mass.

THE TOLEDO EAGLETS.—East Toledo, O., Aug. 29. The young American eagle is a great pet. By constant care and attention my wife has taught the bird to eat bread and milk and potatoes, and nearly everything we have on the dining table. The old birds have never been known to eat anything but fish and fresh meats. We measured the young eagle to-day; it measures from tip to tip across the wings 7ft. 5in., being 5in. more than the mother bird. It was four months old on the 26th inst.—HENRY HULCE.

ENGLISH CURLEW IN CONNECTICUT.—The New Haven, Conn., *Register*, Aug. 27, reported: A very peculiar bird for these latitudes was shot by Capt. Ludington, of the watch house, on the beach in the harbor yesterday. It was a beautiful English curlew, 3ft. in length, 2ft. high and having a bill 9in. long. The bottom of its wings was fawn colored and its back a mottled gray.

Camp-Fire Flickerings.

"That reminds me."

187.

IN 188— I was engaged in clearing off and building a house upon a cattle range in northern California. The location was in the mountains of a northern county of the State, and my camp was upon a small stream in an obscure jungle of undergrowth and forest. Great mountain ridges rose on every side and sloped away and upward covered with dense thickets and evergreen timber. There were deep cañons and rocky ravines, and altogether it was a wild place indeed, and no one lived within miles of it. There were deer, bears, grouse, foxes, rattlesnakes, mosquitoes, scorpions and a large and miscellaneous assortment of other insects and animalcules in the region. I employed several men and among them was a burly individual with a very emphatic and conspicuous complexion whose name was Addison Madison Anderson; we only called him Add, however. Add was a good cook and a good darky generally, only he was afraid of everything in the woods, and was so very, very black that he was actually startling. He was wont to wonder himself at the brilliancy of his own complexion, and often remarked that he was blacker than "anything he ever see." He slept in a tent until he found a scorpion in his bedding, then he fixed up a bunk on some logs and poles, and slept there. One evening he found a rattlesnake under the logs and he moved back to the tent and quit sleeping.

But Add was more afraid of bears than anything else, and we could hardly convince him that there were none in the region. He wanted to believe us but he was always investigating from a careful distance all suspicious looking objects about camp. Some time passed, however, and he failed to detect a single bear, so he rested easier. One day he surprised the camp by announcing that he was going hunting. "Say, boss," said he, "I'se gwine over the hill foh some ven'zen. It am pos'ble I'll bring ole Uncle Cuffey inter camp, but I'se not huntin' for no b'ar; an' see heah, boss, ef yo' see two dark objeks cum inter camp a runnin' doan' yo' shoot the fust one case it will be this niggah." And he took a gun and was off.

He was out perhaps two hours and came in with a very solemn expression upon his face, and began to roll up his blankets without a word. I asked him what he was up to. "Haint up to nothin' only I'se gwine. It ain't no use in me stopping heah. I jus' went one mile an' seed fo' b'ars, un' cum 'bout ten mile ter get ter camp. It ain't no use, I doan' want no b'ar, an' I'se gwine. I doan't stop in no place like dis yer, with no house an' where rattles an' insex an' b'ar an' all such paraffernalia is roun'. Oh, I'se gwine from heah!" And Addison went. ESAU.

SHASTA, Cal.

188.

One of the "wards of the nation," full fledged, entered the gun store of Wm. Wagner on, Capitol Hill, yesterday, and asked to be shown some breechloading shotguns. Mr. W. showed him one of the lowest grade, price $10. After a hasty examination he fairly took away the breath of our genial "Billy" by exclaiming, "Look heah, boss, I's berry 'ticular what I shoots, I wants one of dese guns wat has lamented bar'ls and subordinate locks." It is needless to say that he was furnished with a gun having laminated steel barrels and rebounding locks. MARK RIGHT.

WASHINGTON, D. C., Sept. 1.

189.

Mr. Z. B. Brown, owner of the Union Trotting Park, of Simsbury, Conn., a couple of years ago, with James Kelley tried a practical joke upon the sportsmen there by making a wooden duck and anchoring it in a pond upon his premises. The duck, when shot, was so constructed that it would sink for a time and then reappear. Allerson Farnham, a crack shot near there, shot at it seven times in one day and did not bag the game. The duck was shot at about fifty times until it was so full of lead that it made its last dive and was found in mowing time. When weighed it proved 3lbs. heavier than at first. The pond was a mowing lot that was flowed during winter and early spring. The duck was placed in position in the night, the proprietor using one of his barn doors as a raft to sail out with. M.

GAME PRESERVING IN BRITAIN.

IV.—THE GAME OF THE WOODS.

IN our woods and coverts we have some excellent game birds, the pheasant holding premier place, woodcock and the capercaillzie being also included in this division.

The pheasant which we recognize as the common English bird of that name is *Phasianus colchicus* and its varieties, but besides these there are in covert throughout the length and breadth of the land many other breeds and cross breeds of *Phasianus*, few of them pure and most of them crosses between *colchicus* and other rarer breeds. The following list shows the true breeds of pheasants which, some in comparative plenty, others in equal scarcity, may at various times be shot in the woods and coverts of Britain, although perhaps in many instances the true-bred birds are only there as parent stock for future breeding and by no means for the edification of the gunner. The list is as follows:

1. Common pheasant (*Phasianus colchicus*).
2. Bohemian pheasant (*Phasianus colchicus*, var.).
3. Hybrid pheasant (Bohemian and Reeves's pheasant).
4. Chinese pheasant and varieties (*Phasianus torquatus*).
5. Reeves's pheasant (*P. reevesii*).
6. Japanese pheasant (*P. versicolor*).
7. Soemmering's pheasant (*P. soemmeringii*).

As will be seen, the variety is large, but of these only one or two, the first three chiefly, exist in numbers sufficiently large to warrant them being regarded as English game birds. In addition to these we breed and rear a further considerable number of allied species in aviaries, sometimes turning them down in the coverts as crosses for the common variety. Interesting as are all these different birds, I cannot in the limits of a newspaper article enter into detail concerning them all, and must content myself with the common pheasant in this respect. The habits all of them are much akin, the most extreme variances being of but little importance, so that in sketching the life history of *colchicus* I shall, to all intents and purposes, be doing the same for all of them.

The haunts and habits of the bird render it particularly suitable to the game preserves of modern Britain, more even than was the case in the past, and we now find it more or less plentifully established all throughout England and Wales, fairly distributed over Ireland, and irregularly plentiful in Scotland as far north as Sutherland's line, the northernmost county but one of the kingdom. In a wild, untrammeled state, it appears quite able to maintain itself in fair numbers in any moderately suitable district, while when submitted to a system of preservation there is scarcely any limit to the increase of its numbers.

The pheasant prefers a well-wooded, semi-agricultural country, where old woodland and new plantation, rough, broken upland and occasional cultivated fields alternate. It will, however, thrive anywhere, where reasonable cover offers for it, whether it be in the clearly wooded, boulder-strewn, inhospitable highland, or in the regular formed fields and plantations of a south country preserve.

The haunts of the pheasant, wild and unpreserved, in Britain are chosen in proximity to woods and plantations, those of the latter being most in request where the undergrowth is thick and small bushes, bramble, shrubs and brake provide a close-fitting cover to the earth beneath the elevated canopy of the forest trees. Besides these places the pheasant in its natural state will frequent small coppices and woods, also the copse resulting from the felling of larger woods, besides occasionally taking up its abode in gorse and heather and bracken clad brakes and downs such as we have many in England. In wide open expanses they are thickly clothed with fern, bramble and thorn, besides the gorse and heather aforesaid. Here and there small clumps of small bushy trees will break the monotony, and in parts open spaces of varying extent will provide bright, close green turf where the nimble rabbit may disport himself.

It will be seen, therefore, that the range of locality suitable to pheasants' wants is very extensive in Britain, and its exceeding abundance therefore is quite reasonable

Unlike many gaudy birds, the pheasant is of retiring nature, concealing itself, as a rule, somewhere among the covert it frequents during the day time, choosing for its feeding times the hours beginning and ending the day, and employing itself at odd times as its fancy may dictate in irregularly foraging in its particular haunts. Its feeding grounds are, however, well defined and at various distances from its place of roost. When proceeding to or leaving these feeding grounds, it invariably adopts a terrestial path, following the same course day after day until such becomes quite defined. It is a particularly quiet bird in districts agreeable to its tastes, and if the surroundings be considered desirable it will adhere to them with almost singular perseverance; while on the other hand, if they be not held in good esteem, nothing seems to be able to restrain the bird within such undesirable haunts.

In the intervals between its meals, it lies fairly close in the wood or covert, wandering around always in a well defined circumscribed area which, if undisturbed, it will but rarely pass from. It is a bird careful of its toilet and much given to sunning and dusting itself, and in wet weather keeps itself remarkably dry and trim for so large and so heavily feathered a bird.

When night comes on, it retires, during the larger portion of the year to roost upon some tree, choosing always as the actual spot where its night's rest is gained, a branch as nearly horizontal as possible. Chief among the trees favored by this game bird is the larch-fir, a tree, by the way, singularly ill-suited to the protection of the bird from weather or poachers. Spruce-fir comes next, and it is in the respects mentioned certainly more desirable, being so close and dark in growth that even in daytime it is almost impossible to discover a bird at roost among its branches. Ash, oak, holly, plane and other forest trees also come into request, holly trees always being chosen by the pheasants, and in coverts where they are merely occasional they furnish a sure find of a pheasant at night. These game birds do not, as a rule, roost side by side as do fowls; but they always sit up pretty close to one another, so that, if you find one bird roosting, it is almost certain

that there are more near at hand, although occasionally single birds will separate from the general horde and pursue a solitary course of life.

From April to September, during the nesting and rearing time, both male and female bird quit the tree boughs for *terra firma*. The latter because she is obliged to, the former because he must bear his mate company. At such times the spot chosen will generally be at the foot of the same tree or beneath some bush or shrub. Pheasants are polygamous, and each cock bird will have from three to five hens, according to circumstances. Courtship commences in March, when the plumage of the male increases in brilliancy. A large amount of promiscuous crowing is indulged in, jealousy between competing cavaliers is engendered and more or less prolonged battles result, the victor securing as his reward the favor of the hen bird in question. From the end of April to the end of May nesting is pursued. The nest is of rude character, a mere depression devised in any suitable spot; beneath a bush, at the foot of a tree, in a clump of grass, or beneath a group of bracken ferns; anywhere, in fact, where a slight protection from observation and weather is vouchsafed, and where a few dry leaves or pieces of grass may be scraped together as lining for the nest. To this the hen bird clings persistently, and it is only when concealment, possibly safety, is no longer possible that she leaves her nide, instinctively and hastily covering it with any leaves or such like material which may be at hand.

Hatching commences usually in the second half of May and will finish about the middle of July. From five to eighteen may be the number of the brood, and when from twelve to twenty-four hours old they leave the nest and under the guidance of the hen start out into the world. For some little period the neighborhood of the nest will be the locality where the brood will remain, later on being initiated into the mysteries of the hedgerows and stubbles, sometimes being taken to the covert for protection, usually affecting some spinney as their haunt until about the middle of September, when full grown and self-assertive they assume the airs and responsibilities of the full grown bird.

The food of the pheasant in its natural state is of curious variety, being mostly of a kind undesirable to the agriculturist, so that in the pheasant we have a bird of great use on the farm. Insects of every conceivable kind, the seeds of countless weeds, plants of succulent nature and roots of various description, corn, beech-mast, hazel nuts, acorns, the fruits of the wild rose and white-thorn and many other such form the food of the common pheasant.

From the foregoing outlines of the natural history of *Phasianus colchicus* you can judge that of nearly all our other varieties, most of them differ very immaterially, some hold slight divergence but none of them sufficiently so to warrant my detailing the points of divergence.

MOORMAN.

LONDON, Eng.

[TO BE CONTINUED.]

BRANTING AT MONOMOY, CAPE COD.

ONE of the most enjoyable gunning excursions that has fallen to my lot was in consequence of an invitation to spend a week in spring brant shooting at Monomoy, Cape Cod. We secured in all about thirty brant, besides two or three wing-tipped ones saved for decoys, and a fair number of sea-ducks (eiders), sheldrakes and old squaws, a total which hardly satisfied the "old hands," though we enjoyed ourselves most heartily.

The necessary arrangements made, our party of five met one pleasant April morning in season for the early Cape train, equipped with guns, ammunition, wading boots, oilskins and other baggage, and in due time arrived at the station of Harwich. Here we transferred our traps to a rickety old concern called (by courtesy only), a stage, for a ride of two hours through a sterile, sandy country, meeting when half way the party of the week before, and at last, after riding through the quaint village of Chatham, were welcomed by Alonzo and his wife.

Refreshed by a good fish dinner, we stow our luggage in the sailboat, and are soon heading for the island, which is reached after a pleasant sail, and arrive at our journey's end. The evening is spent looking over the records of the previous parties and discussing the merits of the different bars; but finally, after assigning each one his place for the morning tide we turn in, and despite the novelty of the situation are soon asleep.

Long before light we are roused up in order to take advantage of the morning tide, and while the stars are still shining faintly through the mist, are on our way to the "Gravel," one of the different sandbars on which the boxes are sunk. We put out our two live decoys, which, with the thirty wooden ones, make quite a show, and are ready for the brant. To the right, some two miles off, we see the shores of Chatham and Harwich, and on the left the island of Monomoy, a barren strip of sand stretching six or seven miles to the left. Just as the sun is rising behind us over Nauset beach, we hear the report of guns and see a bunch of brant swinging away from the box at the North bar, and soon the sight of some one out of the box tells us that the first brant is scored, and so occupied are we in watching that a flock of sea-ducks are within gunshot of us before they are seen. We manage, however, to put two barrels into them before they are away, and see a pair drop, but one only is retrieved, the other, diving, is seen no more. Soon, however, another bunch come sweeping along, and we prepare to give them a warm reception, but they swing by out of gunshot. Now a single old squaw comes along and is gathered in. Again we have a shot at a flock of sea-ducks, this time securing three, one of them a beautiful male. The water is now up to the boxes, and as it breaks over the edge we gather our things together and start for the shore. The gunners are driven out from the other boxes also, and we are soon all at the shanty comparing notes and ready for the breakfast which Seth had prepared. The North bar is ahead with three brant, and the Mudhole comes next with two and a sheldrake, while all we can offer are the seaduck and old squaw, not having had a shot at the brant.

We pass the time between the tides smoking, telling stories, asleep, or perhaps some go fishing and others for the succulent clam or scollop. There is plenty to do to occupy the time, but if any one is anxious for real work it is always at hand, for the tides are continually washing away the sand from around the boxes, and the fun of working for an hour wheeling sand to repair the damage usually satisfies the most industrious. Early in the afternoon we start again; this time for the North bar, to be in our box when the tide turns, since all the shooting is on the flood tide; and we have our decoys out and make ready for the birds just as the sand flats begin to be covered by the fast advancing waters. Behind us we can see the brant still feeding on the eel grass in the channel, where the water appears to be black with them for acres. Soon a couple of bunches rise and come toward us, but fly past without noticing the decoys, and settle half a mile away; and these are followed by another and another, but none of them come within gunshot. At last we see a flock of a dozen or so heading directly for us; and down we crouch below the edge of the box, motionless, waiting for the word. They see the decoys and wheel, but do not like the looks of things, so turn again to leave. It is a long shot, but the best we shall have. The signal is given. We discharge four barrels and have the satisfaction of seeing two brant come down with a splash into the water, while at the reports the birds for a mile around rise, circle, and finally settle in the water, as it seems, in thousands.

Half an hour goes by, when a flock of about twenty are seen sweeping down, and as they catch sight of the decoys wheel toward us as if to light. Motionless, hardly daring to breathe (for the brant is more wary than Canada goose or black duck) we wait while they circle round and round, and the decoys flap their wings and honk a welcome. Evidently everything is not satisfactory, for they turn again to leave; but we both give them our right and left, though they are 60yds. from us, if a foot. One—two—three—there goes another into the water with a splash a couple of hundred yards away; yes, and there is a fifth scaling down off there twice as far. "Don't shoot that wing-tipped one if you can help!" is shouted as we splash through the water in chase of a wounded brant, which is finally secured and brought in alive and kicking, and the dead ones retrieved. No other opportunity offers, though we wait patiently; so when the tide washes over the edge of our box we start back, and after a wade of over half an hour through the shallow water reach the shanty, tired and hungry, eat a hearty supper, pass a pleasant evening, and when we turn in are asleep almost before our heads touch the pillows.

So the time passes, each taking his turn at the different bars, and if any one shirks the long walk to the North bar some one from the Mudhole or Gravel is ready to change for the better chance of a good shot. Sunday is spent in the shanty reading or writing up the journal; taking a long walk on the outer beach and in various other ways; and much too soon Monday comes, when some of the party are obliged to return home. It must be, however, so the birds are divided, valises packed, goodbyes said to those remaining; and soon we are rowed in the dory by the stout arms of George and Virenus to Chatham, where we take the stage, and finally reach home with our trophies, vowing that if ever it is our good fortune to go again we will stay at least one week, business or no business.

BOSTON.

BOSTON, Mass.

PROPOSED MOOSE PRESERVE.

Editor Forest and Stream:

The moose is yet to be found in various parts of New Brunswick. Its great enemy is the lumberman, who often adds to his lumbering the business of hunting. Every lumber camp is provided with snow shoes, and when the deep snows of February and March have fallen and the crust has become stiff and hard, the moose falls an easy victim to the gun of the woodsman whose previous explorations during the autumn have made him acquainted with its usual resorts. When the moose is killed at a point near enough to the lumber camp the carcase is made use of, but when the distance happens to be great, only the hide and a small portion of the meat is removed, the rest being left to decay or to become the food of smaller animals. The Indians also frequently kill the moose for its skin alone, leaving the body in the woods. From long experience as a land surveyor, as well as having been for some time timber agent for the Province of New Brunswick, the writer is well aware that up to the present there is a large annual destruction of moose there during the time of deep snows. There are government regulations in New Brunswick restricting the time for killing moose, but they are not enforced and nobody regards them.

For the preservation of the moose and other game in New Brunswick, which is easily accessible by rail from any of the large centers in the United States, I recommend the formation of an association for the purpose of securing the freehold in some tract of forest-covered land in that Province, on which moose, caribou and other game are yet to be found, preferably on the Miramichi, where a tract of from 40,000 to 60,000 acres, which would answer these conditions, could, no doubt, be had at a probable cost of from $1.50 to $2 per acre, and that the lumberman be converted from the enemy of the moose to its protectors, which could be accomplished in the following manner.

After securing the land referred to, which has on it large quantities of spruce, cedar and other woods, and as the charge of $1.50 per thousand feet B. M. is made for stumpage, which is readily paid by the lumbermen, the lands could be leased to them, under the supervision of a foreman, who should, while ascertaining the quantity of logs cut by each party, report any infraction of game regulations during the three months of deep snow. At the time when the permit to cut was given, a clause could be inserted in it, that if the head lumberman or any of his crew should kill a moose on the reserve, that he or they shall forfeit $200 for such act, which sum should become a charge on the logs, to be collected with the stumpage, when they had arrived in the boom. The Miramichi is but forty-eight miles distant from Fredericton by rail, is easily ascended in canoes to its source, which is yet entirely forest-covered; it also has large tributaries on the north which discharge the coldest and clearest of waters, and on whose shores there are no settlers, as the stream runs through vast forests which cover land unfit for cultivation. The money derived from the sale of timber would not only, under proper management, pay the cost of purchase, but also yield a large profit, and at the same time the game could be preserved.

Such, it seems to me, would be an efficient way of preserving to future generations a noble animal, whose days are numbered unless some course be taken for its preservation.

EDWARD JACK.

FREDERICTON, New Brunswick.

NOTES FROM A RANCHERO'S SADDLE

Editor Forest and Stream:

A faithful reader of the "Game Bag and Gun" department of the ever welcome FOREST AND STREAM, I took special interest in the "Bullet vs. Buckshot" controversy some months ago. I will not presume to express an opinion upon the subject so ably discussed on both sides, but that the champions of each may see wherein their favorites might have been, or might not have the most available arm, I will relate some experience I had one October. Sportsmen will surely excuse my bad shooting when they know that the top has been attained, and I have started down the hill to the other side of life; and they may console themselves with the thought that had they been in my place their tables would have been well supplied with game. A ranchero by occupation, my saddle is my seat of observation, hence my opportunities for seeing game. The country is rolling with prairie, timber and brush.

The evening of Oct. 29, I happened upon a flock of wild turkeys just preparing to fly up to roost. My .38-cal. Winchester as usual was on my saddle. My first shot was at a gobbler on the ground, the second shot at another in a tree; both flew away untouched. On the 30th, with assistants, I went out to work cattle, and not wishing to be encumbered with a gun I left it at home. We passed within 150yds. of a nice bunch of deer; some of them stood gazing at us, others were lying down. I returned with my rifle two hours later, but the game had gone. In the evening of the same day I had occasion to ride over into a field, where the grass, being tall, I flushed a flock of turkeys. They got up just in front of me, and flew over and around the dwelling.

On the morning of the 31st, as I was passing through a woodland place, five or more does, just donning their blue dress, jumped up about thirty yards from me and soon disappeared. I dismounted, drew my gun out of its scabbard, and leading my horse, followed the trail. Again they discovered me first, and were on the run before I could get in a shot. I gave them up, and riding on, soon two other whitetails were seen bounding away. Rather indifferently I followed in the direction taken. The game stood broadside about 120yds. from me. Thought of the many fine shots read of in FOREST AND STREAM occurred to my mind as I dismounted and raised my rifle to the shoulder. I drew bead and pressed the trigger; my little .38 cracks prettily, but the timid doe, not appreciating the greeting, scampers away unharmed. Crestfallen and with misgivings I go home. Evening finds me on the hunt again. This time I spied the deer first, in a tolerably open place. My horse was quickly picketed to a grub, and I on hands and knees crawled to an oak. The evening was cloudy, besides it was getting late and the dense foliage of the oak made it difficult to see my sights, but I must take the shot as it was or get none, so I banged away—and score a miss. Again passing through a strip of brush I saw the deer, raised my gun and fired at just 165yds. I knew by the way the game got off it was badly hurt, but it got into a thicket, and night coming on, further pursuit was prevented. I was out of luck, and as I rode home I resolved to get a gun of larger caliber, perhaps a .45. Some may think any or no gun at all would answer the purpose of so poor a shot. Be charitable. I love the sport, and much game has fallen to my gun. To redeem the reputation of my bright little .38 I must say that this very morning I picked a hawk out of the top of a tree at 105 steps.

Deer, turkey, quail, rabbit, wolves, wildcat, "javalians," etc., are here in abundance.

J. S. H.

RANCH BEEBE, Texas.

TARGET TESTS AND SHOT.

Editor Forest and Stream:

I see by your last issue that I have gotten myself into trouble with my friends (I consider every sportsman in the country my friend), and that I must now call upon you to help me out.

I think my friend Stark is all right and means well, but he is laboring under a mistake. There are 495 pellets in 1oz. of Tatham's improved chilled shot, or Mr. Tatham is a ——, well, he at least stretches the truth. If he is correct, there would be 618 pellets in the load that I shot. Herewith find the identical sack from which I took the shot with which the targets were made. Will you publish the figures given at bottom of sack? I do not desire to enter into any controversy over this matter, but am prepared to prove my statement with the gun. So much for Mr. Stark.

Now I desire to say that I have just finished counting 1¼oz. No. 7 Tatham's chilled selected shot, and they count out just exactly 477. I have a Dixon 1,106 shot measure, and I think I can measure and count as well as any man of my size in this country. I would like to know how old "Analytical" gets but 291 pellets to an ounce of No. 7 shot. I think he must have a little shot tower of his own, and makes his sizes to suit himself. To tell the truth, I think instead of being mistaken myself, that both Stark and "Analytical" are off. As I said before, I am prepared to prove my statement with the gun itself, and will do so at any time I may be called upon. It may be that Tatham makes a special size of shot for this market, and they run smaller than those used in the East, but I doubt it.

Beg pardon for inflicting so long an article upon you, and if you will give it space this time I promise on my honor I won't do so some more.

C. S. BROWN.

MARION, Indiana.

[The number of pellets to the ounce, of Tatham's shot, American standard sizes, are as follows, for soft and chilled shot:

No.	Diam. In.	Soft. To oz.	Chilled. To oz.	No.	Diam. In.	Soft. To oz.	Chilled. To oz.
12	.05	2326	2385	7	Trap	338	345
11	.06	1346	1380	7	.10	291	299
10	Trap	1056	1130	6	.11	218	223
10	.07	848	868	5	.12	168	172
9	Trap	688	716	4	.13	132	136
9	.08	568	585	3	.14	103	109
8	Trap	472	495	2	.15	86	88
8	.09	399	409	1	.16	71	73

The bag sent by Mr. Brown contained, according to the label, No. 8 chilled trap shot.]

A ST. LOUIS, MO., CLUB, composed of Lawry Day, Fred Haganin, Fred Ziebig, Charlie January, Jim Darat and Wilson Hunt, are making arrangements to acquire a considerable tract of land and water for a new game and fish preserve at Lily Lake, Ill., near Murdock Lake.

DUCKING ON THE KANKAKEE.

BOUND for one duck hunt in the Kankakee Marsh, Stark county, Indiana, the "'Squire," Will, Cal and myself alighted from the train at Knox one afternoon in the latter part of last October. Mart L. had come in a spring wagon to convey us to his home, four miles north. After supper we adjourned to the large dining-room, which had been delivered up to our tender mercies, and told tales, loaded shells, and discussed the probabilities of game on the morrow. All but two of us were unacquainted with the marsh, so we agreed to keep within hearing distance until we got better acquainted with it. The marsh is dotted with "islands" of timber, and one looks just like another to a person not used to them, and one is liable to wander away in the wrong direction. About 3 o'clock A. M. Mart routed us out, and, after breakfast, hip boots were donned, and we started. The edge of the marsh was soon reached, and each one struck out in a different direction, taking as a landmark a large tree that grew near the edge. It was yet dark, with a faint tinge of light just touching the eastern horizon. Nothing was to be seen but the rushes, grass and water, and there was no sound save an occasional distant splash when some luckless one happened to step in a "rat hole," and had to scramble pretty lively to save himself from a ducking. I had waded out a distance and had a place trampled down among the reeds, water about knee deep, when away to the west I saw a spirt of flame shoot up ten or fifteen feet, and shortly heard the report of a gun. My teeth had been chattering, for the morning was chilly, and I was wishing for daylight and ducks; but I quickly came to a ready and strained my eyes to discover what was coming. I heard the whistling of wings but could see nothing until the birds came between me and the fast-brightening horizon. They were about a half dozen teal, but out of gunshot. While looking at them I heard a solitary quack upon my left, and turned in time to see a big mallard going over me. I quickly wheeled and brought him down with my right barrel. While hunting him up I heard two more gun shots, and shortly saw some more birds coming. I gave them both barrels and dropped two of them. From that time the fun waged fast and furious until 8 o'clock, when it gradually slackened until 10 o'clock, and I waded out to the big tree. The rest were soon there and we went to the house. The score for the party was 38 ducks, mostly mallards.

Shooting commenced again about 4 o'clock in the afternoon. Will, Warren and myself went in one direction and the rest of the party in another. We waded out into the marsh about a mile on to a low, flat island on which were a few haystacks. The day was warm and bright and we lay upon some hay a long time until we heard shooting from the other party, and a few ducks were to be seen, when we hurried to a location. The shooting was not very good, the ducks flying high. I only secured four. Before twilight I had marked my course by a haystack and a small Island, and when it was nearly dark I struck out for home. On the way out I whooped for the other boys. Pretty soon Warren came up and asked me where I was going. I told him to L.'s, southeast from here. "Why no, you are not," says he, "you are going north." "Which way is L.'s?" I asked him. "This way," and he pointed southwest. I could not convince him to the contrary, although I showed him the big dipper and the north star; but he followed me and we came out all right. He gave up beaten and said we would smoke a "tener" if I wouldn't say anything about it. We found the rest around the supper table. The total score for the day was 57, all mallards but 13.

The next day we were up bright and early, to try the prairie chickens a whirl. We started out with three dogs, two of them very fine Gordons. After going about a mile and seeing no game the most of the boys stopped and went to shooting clods thrown up into the air; but Will, Warren and myself kept on, although we had no dog with us. Half a mile further on we struck a bevy and secured five, but it was tedious work as they lay close and we had to do all the running ourselves. On our way home we came across a number of fox squirrels in a cornfield, and had great sport with them for half an hour.

About half past four we started for the evening shooting, Will and Warren going in one direction and the rest of us in another. The ducks flew fairly and we got twenty odd. About 7 o'clock we had supper, but Will and Warren had not put in an appearance. We waited awhile and then went outdoors and fired a few times, but there was no answer, though it was very still and a gun could be heard a long way. Three of us then started for the marsh with guns to signal with, having made up our minds that they were lost. When nearly to it we met them coming home. We asked them if they heard us and they said yes, but supposed we were shooting for fun. The truth leaked out, however, the next day. They had been lost and had started straight up the marsh, where they could have walked ten miles without finding dry land. They had gone a good way and thought they ought to come to something, so they fired their guns a number of times and a young fellow living near by had gone to the marsh and piloted them out in a direction they thought away from home. Warren swore by the great horn spoon that an island he had marked his course by had turned around to another point of the compass, but it was there all right the next morning. They were both wet almost to the neck.

Monday morning we were up with the lark. The tent and other paraphernalia were loaded into the boat, and that on to the wagon, and off we started for Yellow River, reaching there about 10 o'clock. We at once set up the tent, and prepared dinner, after which four of us started down the river in the boat to a large prairie two miles below.

The river was very high and full of snags, and it took all our time and attention to prevent a sousing. We had hardly run the boat into the rushes which line the bank when a large flock of ducks came directly over us. Four guns were quickly raised, and eight reports blended in one roar. Seven tumbled out of the flock. The boys struck out for good locations, while I remained in the boat. About two miles further down we heard what was almost one continuous roar. This was at the junction of the Yellow River and the Kankakee, on what is called Platt's Marsh. There was a club house there, and some of the members were using swivel guns. The ducks flew better than ever, and we secured sixty-nine. About 7 o'clock we started back to camp. It was quite dark, and we had to row up stream two miles, with numberless snags to watch for, and it was anything but fun. We didn't reach camp until 10 o'clock P. M., as tired a set of mortals as ever you saw, and hungry. At camp, however, we found a good supper waiting for us. We had a wedge tent, with plenty of hay to lie on, and a big fire out in front. About 1 o'clock Warren, who had been industriously snoring in the front part of the tent, awoke with a snort and a muttered exclamation of "Great Cæsar! Do you want to cook me for breakfast?" walked around the tent and "sunned" himself in the moonlight for an hour or more. It seems some one in the back part of the tent had gone out and stirred up the fire until the tent grew as hot as an oven, and Warren had the benefit of it all. In the morning everybody wanted to go down the river to hunt, since we had done so well there.

By moving we missed our morning's shooting, but concluded it would pay in the end. We reached a place as far out toward the river as we could get on a long point of land covered with hay stacks, which the boys named "Starvation Point." Our provender which we had brought from the house had about run out, and we must kill something or go hungry to bed, for we had sent home our game killed the day before. It was late when we started out, and the ducks seemed to have disappeared, for we only got a few shots and Warren one duck. Cal killed a prairie hawk and found himself up to his neck, for his gun kicked him off a tussock and setting him in the water knee deep. We straggled back to camp rather discouraged, with one duck as meat for six men, and hungry men at that. But we made out a pretty fair meal and did'nt eat the duck, for Warren had hidden it. About 12 o'clock I awoke and saw three or four of the boys around the fire busily engaged in watching something, but I could not make out what. Warren was snoring beside me.

The next morning Warren came tearing around the tent and exclaimed: "Who took my duck?" All looked surprised. Some one said the dogs ate it, but he said they couldn't get it, at the same time walking toward the fire. Suddenly he stopped and picking up a forked stick carefully trimmed up, he said: "What is this for?" and looking around espied on a small log the breastbone, legs and wings of a duck carefully picked. "By darn," was all he said. It raised a laugh, but he felt a little sore. He never found out who cooked it.

We had heard a good many brant during the night and hoped for better sport the the next day, so we struck out early and fared better, bringing in ninety-one.

We ate a rousing dinner and slept until 5 o'clock. Then the rest went out again in the evening, but I was sick from drinking too much marsh water, which was all we could get. They brought in forty. The next morning we broke camp, bade our friends good-bye and took the train home.

NYMRODDE.

NIGHTS WITH A JACK.

HE WAS very anxious to shoot a deer. When a man has set his heart on a thing, great is the disappointment if he happens to fail. Now, Smith almost succeeded, which is the worst kind of failure to bear up under. Smith is a splendid wing-shot. He can smash 98 balls out of a possible 100 any day. He is likewise a hard worker. He sleeps with one eye open all the time he is in the woods. Not for one moment is his mind diverted from the main issue. He gives nobody any peace who introduces irrelevant subjects for thought or action. He was anxious to try his luck floating or jack-shooting. The first night we tried it on the lake. At the lower end was a beautiful little secluded cove with numerous fresh signs all about. Cautiously, noiselessly, we circumnavigated the spot with our "lantern dimly burning." "Nothing in," said Smith, as we come out of the last bend, "A little early yet," said I, "perhaps if we hang up for an hour or so, something may come to water." So we hung off shore, stretched our limbs, counted the stars, watched a school of muskrats that went lazily floating by, then settled down to business again.

We had gone perhaps a hundred yards, in fact, were getting into a high state of expectation, when around a point just ahead of us came a boat with two headlights, either of which was strong enough in its brilliancy to allow a man to read fine print by its glare. It was very aggravating, for on the instant a deer snorted just in the bushes six rods off and presently we heard it bounding along toward the distant hills. "Kerosene is altogether too cheap hereabouts," said Smith. "Let's go back to camp," said I. Back we went.

An old trapper had told me of a bog four miles away from the lake much frequented by deer and little frequented by sportsman. We agreed to try our luck there. The following day, with packs made up of a small tent, blankets and lunch strapped on our backs, with a rifle and a gun for business, we trudged off. Cautiously working our way down to the opening where the beaver from time immemorial had built their dams and raised their dwellings, we posted ourselves at different angles, where as much space as possible could be covered by our weapons. The hours went by, night came on, but no deer. Flies had been plenty, and Smith made an excuse to smoke some rather rank cigars, and the whole bog was permeated with the stench. "This will never do," said I, when the deer's olfactories saluted that unnatural odor they quietly stole away. "It was too bad," chimed in Smith, "catch me carrying tobacco again on such an important expedition." He was true to his word.

Some days after we were in the same locality. We had been quietly on the watch for several hours. It was getting a little monotonous. While glancing up the bog I caught a glimpse of the back of a deer moving along in that direction. Now, I had posted myself opposite a run, and was entirely exposed in person, so that the quarry came straight on, and so soon as his antlers were in sight he had sighted me, and, as I supposed, had scented me. The woods rang with the report of my rifle. I had made a hasty shot. My eye had not sunk deep enough into the back sight—a most miserable sight by the way—and the game had fled. Smith came in on the run to help skin the buck, but he carries his hide intact to this day for ought I know. I had thrown away my shot, and my good record besides, for I had previously made some very good ones. "We will try once more," said Smith, "faint heart never won fair lady." I suppose in the use of the feminine he was thinking of meeting a doe, and a doe it proved to be, too.

On another dead water or bog we placed a light canvas boat imported for the purpose, though on the last mile of the carry it seemed to weigh a ton. It was one of those have-your-hair-parted-in-the-middle boats. Sitting in the stern with Smith before me, gun in hand, we quietly forced our craft along the ever-winding channel of the far-reaching bog. Our bullseye tied to a standard was turned to one side to cover one shore only. We had gone the whole distance of the still water, and had made half of the first lap. Smith was getting tired in his cramped position, and had placed his piece carelessly across the thwarts of the boat, and had brought his chin down to a loving proximity to his kneepans. "Smith," said I sharply, though in a whisper, "don't go to sleep, there may be something in ahead; be ready." "O pshaw! we shan't see anything to-night; they are off on a picnic." "Now mind," said I, "let's be ready in case something should happen along our way." "All right," came back to me.

The gun came down from its unnatural position, and Smith struck an attitude betokening readiness for emergencies. Well, to cut the story short, the deck had hardly been cleared for action, when the bullseye covered a very large doe which was standing just in the edge of the water, three rods away. "Shoot! shoot!" said I. Smith seemed in no hurry, however, but when I had repeated the command the piece spoke, and the right and left barrels were let go. Now it is a living fact that that doe was still standing on the shore after all this racket. "There it is! Give her another!" "I can't get my shells out, got the paper wet coming up the carry." "Take your knife to them." By digging away for some time he got one out and one in, and fired it. Next morning examining the shore we found blood marks, but that doe was never found. The next night's floating a brother sportsman he sent 12 buckshot into the shoulder of another doe near the same spot.

C. H. G.

SOMERS, Conn.

REED BIRDS AND BOBOLINKS.

Editor Forest and Stream:

I find the following surprising communication in the New York *Herald* of the 3d inst:

THE SALE OF REED BIRDS.—New York, Sept. 2, 1886.—*To the Editor of the Herald:* I desire to inform marketmen and others that by a law passed by the last Legislature the sale of reed birds, robins and meadow larks is prohibited. The penalty for selling or having any of these birds, or any part of them, in possession, is imprisonment in the county jail for not longer than thirty days, or a fine of not less than $10 nor more than $50. While I shall not consider it my official duty to urge the Game Protector to enforce the law, I cannot prevent his doing so, and although I suppose the Association for the Protection of Game, of which I am President, will ignore it, I cannot speak with authority, as no action has been taken. But any malicious or greedy person may proceed, under the statute which gives to the plaintiff one-half of the penalty, so that no one is safe in disregarding it. I give this notice now, as this is the season for reed birds, and heretofore no one has thought interference with their sale advisable or necessary.—ROBERT BARNWELL ROOSEVELT, President New York Fishery Commission.

Here is a declaration from a gentleman, made from the standpoint of his official position, that one of the laws of the great State of New York ought not to be enforced.

Mr. Roosevelt is "President of the New York Fishery Commission" under and by virtue of law of the State. If I am not mistaken, it is his official duty to enforce any and all laws pertaining to the protection of fish and game.

In this letter his expression for the law-making department of the government, so far as the law alluded to therein, is fairly contemptuous.

I make no attack upon Mr. Roosevelt personally. I know him by reputation only, but I know of him as a most excellent gentleman, hence this attack from him upon a wholesome and judicious law is the more to be deplored.

All good citizens ought to deprecate attack upon law and upon attempts to enforce existing statutes, especially so when such attacks come from official sources.

The reed bird is our bobolink. We in New England have been striving to save him from utter destruction. Our worst foe is the reed bird shooter, and the people who make a market possible for this Northern songster.

Does Mr. Roosevelt prefer depopulated Northern meadows, and robbery of our fields of their best and merriest songster to the enforcement of a law that has commended itself to a Legislature, and tallies with the tastes and judgments of a majority of the people?

Our robin is protected here. He takes in the season a few berries and cherries, but in the same season he destroys thousands of bugs, worms and larvæ. Why make him in New York merchandise in the market?

It seems that many are yet to learn that the destruction of birds is the ultimate destruction of agriculture.

With AUDUBON SOCIETIES forming throughout the States to save songsters from death for decorative purposes, it is discouraging, indeed, to find a man of Mr. Roosevelt's abilities, coupled with official weight and influence, arrayed on the side of destruction.

E. H. LATHROP,
Of Massachusetts Commission of Fish and Game.

SPRINGFIELD, Mass., September, 1886.

GAME NEAR A LARGE CITY.

GREENPOINT, L. I.—Shooting around New York city generally commences with me about the middle of March. I very often succeed in killing one or two English snipe about the 17th or 18th (last year I killed one on the 18th). I find them on a small farm on a hill which has two ponds with some grass and weeds around it, and very good feeding, which the many earthworms show when the old cornstalks are pulled. I have found very few snipe in the open meadows, the most of them I found in springholes, where I would look for woodcock in summer time. English snipe were very scarce last fall on Long Island, but I succeeded in getting a brace now and then on the places they generally frequent. Woodcock were not as plentiful last year as the year before, but there were two broods in the limits of Long Island City just across the East River from New York, of which one brood, both young and old, found their way to the bird stuffers' shops, where thousands of our singing birds find a too ready market. Woodcock I found last year in the densest and thorniest places. The most favorable ground was a patch of five-year-old saplings, intergrown with blackberry, green briar and young locust sprouts. I succeeded in killing about thirty and left quite a number for this year, as I believe the enjoyment in hunting is the pursuit and not in the killing of the game alone, and my heart won't break if I can't kill every woodcock or quail I come across. I believe that woodcock will return in spring to the same cover where they were bred the year before, and if the weather were mild enough some of them would stay all winter. I know of a very small woodcock, and the gamiest and most calculating one I ever tried to

shoot. I saw him one year as late as Dec. 10 on the same place where he had been all summer. Of quail I know of only one bevy on Long Island City grounds. Incessant shooting has made quail very shy and well educated. They take long flights, run to the heaviest brier covers, light on large trees, and dodge in every possible way at the arrival of hunter and dog. Some bevies that I have seen all summer in certain localities and succeeded in getting a few out of, left the ground altogether and could not be found again with the best dogs and the most persistent hunting. Rabbits are getting scarcer every year. There is no reason for having the law off one month longer on rabbits than on quail. It gives many hunters a pretext to go through the woods with gun and dogs and shoot quail. DOMESTIC.

BOSTON NOTES.

THE lovers of the rod and line are planning and taking fall trips to the trout waters. The excursion season gives place to the real sportsman usually on September 1, and this year is no exception. Several Boston gentlemen started for Moosehead on Monday, and one or two parties are planning a trip to Seven Ponds. The Androscoggin Lakes are drawing their usual crowds of sportsmen. Two gentlemen from the wool trade left on Saturday for the Oquossoc Association's camps. I hear that Lake Mooselucmaguntic has been drawn down to very low water by the Union Water Power Co., for the purpose of improvements on the Upper Dam, and that the fall fishing is to be ruined by that action. But again this is disputed, and it is claimed that the fishing will be all the better.

Mr. E. B. Haskell, editor-in-chief of the Boston *Herald*, has just returned from a very enjoyable outing at the Oquossoc Association's camps at the head of Mooselucmaguntic. He was accompanied by Mrs. Haskell and friends, including their pastor. C. H. Johnson, of Somerville, and W. B. Nelson, of Mattapoiset, with another friend, start for Camp Stewart, at the head of Lake Molechunkamunk, on Friday. Mr. Nelson is an amateur photographer, and his camera always goes with him. He has already made a good many views in that region. Two weeks later Mr. H. S. Kempton, of the Boston *Herald* staff, with one or two friends, will start for Camp Stewart. This party intends stopping over into October, and shooting a deer squarely in open season.

Short lobsters continue to come here in spite of the earnest efforts of Deputy Fish Commissioner F. R. Shattuck. That gentleman is spending a short vacation at Marstons Mills, Mass., in camp with his son. But when "the cat's away the mice will play." The schooner Monterey, ostensibly in the employ of the noted Trefethern, was seized on Friday by Capt. Gould, of the harbor police. Over 900 short lobsters were easily found on her, and she had a cargo in which evidently many more could have been found; but in the absence of Commissioner Shattuck there was no one to enforce the law by detaining the schooner, and Capt. Gould, much to his chagrin, was obliged to let her go. The statute, curiously enough, provides that any fish commissioner or his deputy may enforce its provisions, but a policeman or sheriff is powerless beyond the detention of the supposed short lobsters till the proper officer can be reached. But the statute also provides that the Governor, under the written request of the commissioner, may deputize other persons to execute the short lobster law, and an effort is being made to have Capt. Gould thus empowered, and that gentleman will work to save the lobster for the pure love of its protection.

The small shore bird shooting along Boston Bay and the South Shore is not proving very satisfactory this season, though a few plover and yellowlegs are occasionally bagged. There are a good many gunners, however. The law on ruffed grouse not being off till Oct. 1, the usual amount of interest in field shooting has not yet sprung up. Grouse are reported scarce within easy distance of Boston; that is, so as to get a few shots and return the same day. SPECIAL.

BOSTON, Mass., Sept. 5.

A KANSAS GAME TERRITORY.—Eureka, Kan.—I think we have sport to boast of here in Greenwood county. We have quail, chickens and ducks without limit. Squirrels are very plentiful in the timber along the creeks. Rabbits are so plenty that one really gets tired of shooting them. One recent Christmas Day four of us shot twenty-four, not half a mile from the house. I was spending the day in the country, and the boys proposed a turn before dinner. We were out a little over an hour. There are quite a number of deer and antelope in the county. Then in the spring and summer plover shooting is good. There seems to be an inexhaustible supply of them here. The first of the quail season (Nov. 1) friend Jones and myself would walk out about a mile from town, and in about an hour's time would bag from fifteen to twenty quail, and not "pot shoot" either. Almost every evening at about 4 o'clock we would stroll out to some inviting hedge, and then it would be music to some of my Eastern friends' ears to hear us. We could wear off the fatigue of the day's work in short order. One P. M. in December, Jones, Cleveland and I drove out two miles to a little stream, looking for ducks. In just three hours we had brought to bag 17 mallards, 13 quails, 7 rabbits and a chicken. Honors were about even all round. The chicken was killed at fully 75yds. rise, with a 12-gauge mod. choke, 4drs. powder, double wads and 1¼oz. No. 2 shot and single pasteboard wad. It was a load for ducks. For all ordinary shooting, at close range, such as quail, etc., I find 3drs. powder, single wad and 1 oz. No. 8 shot with pasteboard wad, is best. For ducks and other long, range, hard shooting, I prefer the above (4drs. and 1¼oz.) load, with perhaps a pasteboard wad between the felt wads over powder. Chilled shot is better than dropped shot, as it breaks bones better and does not take feathers and fur in with it. We have golden plover and Wilson snipe in abundance. Then if one wants the fun of shooting wolves, there are hundreds of them here. They trouble the farmers a great deal. The ducks come back about the middle of February or 1st of March and stay two months.—W. B. G.

SWIVEL GUNS IN ILLINOIS.—St. Louis sportsmen are much exercised over the destructive work of swivel gun duck shooters on Canteen Lake, Ill. These engines are very profitable to the market gunners, among them Baptiste Guennaud; but there is no game left for the sportsmen.

KEEPING GAME IN HOT WEATHER.—In the course of a letter from our Indian correspondent, "Shikaree," he says: "Meat will keep perfectly sweet for some days in the hottest weather if immersed in pure spring water, and covered with a film of sweet oil. If spring water is not available, use water that has been boiled. By renewing the water at intervals it may perhaps be kept sweet for a week or two." From the New Orleans *Picayune* we quote as follows: "Joints of meat will keep good even in the hottest weather, for a month, if plunged into boiling fat, when cool wrapped in straw and sewn in canvas bags, then hung in a cool place. Venison is said to be delicious if sprinkled, while fresh, with a mixture of charcoal, ginger, pepper, pimento, all in powder; afterward sewn up and buried six feet in the ground where it may be left for three weeks. It must be washed before cooking at a brisk fire. Salt should never be put on meat to be hung, it has such a hardening tendency. Perhaps few things are purer and more efficacious than a weak solution of permanganate of potash for restoring game, meat or poultry already tainted. How often will a few hours work the mischief in sultry weather, the meat changing to such an extent as to appear almost immediately spoiled. However, by washing in the fluid it can be sweetened. As long as the liquid changes color—that is, loses its pink tint and becomes greenish-brown—it must be renewed. When it ceases to change color the meat will do. After this treatment it is more suitable for braising, boiling, or stewing, than for roasting or baking—although it may be so treated if well dried and floured."

WORCESTER, Sept. 3.—On Monday an excursion party starts from here for a shooting trip in the Far West. They go to Chicago via St. Paul and Minneapolis to Lake Park in Minnesota, Fargo, Wheatland, Buffalo, Tower City, Alta, Sanborn, Eckelson, Medina, Tappen, Steele, Apple Creek, Bismarck, Dickenson and South Hart in Dakota, Fort Keogh and Bozeman in Montana and in Idaho, in the vicinity of Lake Pend d'Oreille, for large game, said to be quite plentiful in that region. From there the party will go to Portland, Oregon, for a few days and then return by the same route, stopping in Dakota at several points for duck and goose shooting. The trip will cover a period of about two months and will combine much sight seeing along with the sport with the gun. The party will be composed as follows: Hon. Max B. Richardson, of Oswego, N. Y.; Mr. and Mrs. Dr. L. Corcoran and Master Brewer Corcoran, of Springfield; Mr. and Mrs. George W. Moore, of Hartford, Conn.; W. H. Hutchinson, of Lynn, Mass.; Mr. and Mrs. H. F. Allen, of Grafton; Mr. and Mrs. A. B. F. Kinney and Mr. and Mrs. Jerome Marble, of this city.

GARDNER, Mass., Sept. 2.—The Mononomack Sporting Club to-day go into camp on Lake Mononomack, in Rindge, N. H. The club at their annual meeting elected the following officers: President, Aaron Greenwood; Vice-President, Geo. F. Ellsworth; Secretary and Treasurer, F. M. Greenwood. Ex. Com., C. H. Newton, A. Stevens, Geo. Nichols. The list of campers include the following: Walter Newton, of New York; J. S. Ames, of Norfolk, Va.; Frank Nichols and Mr. McKay, of Fitchburg; Thos. Sheldon, of Boylston, also John D. Edgell, C. F. Read, Dr. Garland, Fred Garland, C. H. Newton, F. M. Greenwood, Amos Coleman, Lewis A. Wright. A. Warren, C. Leslie Bent, Geo. Nichols and T. P. Perley, all of this town.—E.

A BARN FULL OF RAILS.—Chester, Pa., Sept. 4.—The open season for reed birds commenced on the 1st; but for the past three weeks birds could be bought in plenty. A man by the name of Rambo, living about two miles below Philadelphia, was caught trapping reed birds, and had in his barn over 5,000 of them which he expected to pick and flood the market with on the 1st of September. The birds are still poor and are hardly fit to eat. They say that all the farmers in Rambo's vicinity were engaged in the same business. Rambo was held in $600 bail by a Philadelphia magistrate. The penalty for trapping birds in Pennsylvania is $5 for the first bird and $2.50 for each following, so that if the law is followed out it will make quite a nice little sum, but I am afraid it will all end in smoke.—MAC.

ARKANSAS.—Little Rock, Sept. 4.—The opening of the season was observed by an army of hunters who met with various degrees of success. I went to St. Francis bottom and made a waterhaul. There is very little game there except bear. They are very plenty but I did not fall in with one. The overflow last spring drove everything out. Several deer hunters killed their game. A party on the prairie brought in eighty-two chickens. Two years ago they would have probably killed five or may be ten. Yet many want our game law repealed. Our representatives in this county are all right on that proposition and it will no go without a fight. We intend to try to tighten it instead of letting it go.—CASUAL.

PROF. WILLIAM COOK of Harvard College was killed by the accidental discharge of his gun while he was shooting bay snipe at Chatham, Mass., Aug. 27. He received a severe wound in the knee, which bled profusely. A young man accompaning him took Cook on his back and brought him across the beach to the boat, and rowed him to the main land, where he was taken to his boarding-house by several fishermen. Local medical aid was summoned and Cambridge doctors telegraphed for, but the bleeding could not be stopped, and after hours of intense suffering he died.

MASSACHUSETTS GROUSE.—Greenfield, Mass., Sept. 2.—*Editor Forest and Stream:* I see in this week's issue of your paper a repetition of what I saw in the Boston *Herald* of a few days back, in relation to New England game birds, wherein it states that the law in this State is off on grouse September 15. Where does this information come from? Chapter 276 of the Acts of 1886 places the close season on this bird from Jan. 1 to Oct. 1.—GREENFIELD. [The season begins Oct. 1. The mistake of our correspondent was not noticed.]

WASHINGTON, D. C., Sept. 1.—Rail shooting opens here to-day, and big bags are expected, as the birds are reported being plentiful. We consider from eight to twelve dozen a fair bag for one tide.—MARK RIGHT.

A SHOT AT A HERON.—New Castle, N. H., Aug. 31.—While out snipe shooting yesterday, I put up a great blue heron which flew ahead of me, and alighted, as I thought, out of gunshot. Determined to risk a shot, I put into my gun (a 10-bore, 9½lbs. Parker) a shell loaded with 5drs. powder and 1 oz. of TT shot, fired, and to my surprise saw the bird drop. Pacing the distance I found it was 123 liberal paces. Though the pellets were large, I call that a pretty lengthy shot. The bird was killed perfectly dead. Snipe are not very plenty this year so far. An early flight of coots is expected by the gunners here.—J. WENDELL, JR.

SHORE BIRDS AND WILDFOWL.—Elizabeth, N. J., Sept. 2.—While out shooting snipe last Tuesday in the rain, I saw a flock of geese fly over from northeast to southwest. I do not think that any one else from here saw them, as I accidentally ran across them while looking through my glass. Snipe shooting is very poor here for this time of the year; a few yellow-legs and plover is all that can be seen. Willets are very scarce.—PLOVER.

WILD TURKEY'S CALL.—Philadelphia, Miss.—I find that it is impossible for me with the letters of our alphabet to convey a correct idea of the different notes or calls made by the wild turkey. Although I have always been very successful in making the notes and deceiving the most wary of these noble birds, I found that it was not an easy matter to convey a correct idea on paper of just how it could be done.—S. P. NASH.

NEW YORK GAME LAW COMPILATIONS are published by the Utica Fish and Game Protective Association (compiled by John D. Collins, Secretary, 58 Franklin Square, Utica) and by the Anglers' Association of St. Lawrence River, and Eastern New York Fish and Game Protective Association (compiled by F. M. Danaher, Albany.

LE PRAIRIE'S ROW.—In your notes on Brandreth Lake in issue Sept. 2, you give the time made by my guide Le Prairie from Holland's Blue Mountain Lake to North Bay of Raquette Lake as four hours. It was three hours and thirty-five minutes.—W. HOLBERTON.

NEBRASKA.—Shelton, Neb.—The best time to shoot prairie chickens here is the latter part of August and the month of September. After Oct. 1 they gather in large packs and will not lie well to a dog.—A. W. S.

MICHIGAN.—Cedar Springs.—The prospects for fall shooting are unusually good, ruffed grouse being more plenty than for several years past.—W. H. W.

AT A PARTRIDGE FAMILY REUNION in Orland, Me., a stuffed wild partridge was mounted on the piano as the family emblem.

MUZZLE VS. BREECH.

Editor Forest and Stream:

Last September I ordered a .38-caliber Ballard schuetzen rifle. As I had been shooting a muzzleloading schuetzen gun for the last ten years I felt, so to speak, "kind of shaky" about beating the record of my previous shooting, thinking that no breechloading gun would shoot as exactly as a muzzleloader. The first good trial I gave the gun was in November last, when in 5½ hours of shooting, I made the big score of 109 6in. bullseyes in easy shooting. As my biggest score with the muzzleloader was only 58 6in. bullseyes in the great yearly shooting of the California Schuetzen Club in 1885, I was the most surprised man in the club, after making the above score, for which I received the gold medal for the most bullseyes. On the 15th inst. the yearly shooting of the club occurred again, and I am proud to say that I made the magnificent score of 230 6in. bullseyes in 9½ hours, shooting with the Ballard breechloading rifle, beating the next best man by 79 bullseyes. Following is my official score, taken from the secretary's book:

Time of shooting, 6½ hours. Shots fired, 643. Amount of 6in. bullseyes, 230. Amount of 10in. bullseyes during the day, 640. Outside the black, 3. Average time to each 6in. bullseye, 2½ minutes. Average time to each shot, 9 shots in 8 minutes.

The foregoing score does not allow me even a minute for resting, cleaning of gun, or refreshments, so you can see that I have given a full trial to the breechloader. During the last 120 shots fired I did not clean nor wipe the gun. That I have been crowned Schuetzen King of the State of California is an honor which not alone reflects credit to the sharp eye, steady nerve and good endurance, but also to the splendid weapon I have used. K. WERTHEIMER.

SAN FRANCISCO, Cal., Aug. 23.

Editor Forest and Stream:

At short intervals for many years I have been accustomed to seeing articles in your journal lauding the superior accuracy of the muzzleloading rifle as against the breechloader. In common with a majority of the Massachusetts Rifle Association, I have been desirous of seeing an exhibition of this boasted superiority. In the hope of bringing out these advocates of the muzzleloader the directors of the Massachusetts Rifle Association have from time to time put on rest matches in which the conditions have been varied from the usual Creedmoor rules as to height, trigger pull, etc., so that these muzzleloading advocatss could have a chance to come in and scoop things, and at the same time demonstrate how silly the great majority of riflemen are to stick to these inferior breechloaders when something so superior was to be had. These rest matches in which heavy muzzleloaders could compete have now been running over two years. The following are the conditions of our current match which will run for several months yet before closing:

"Rest Match.—Conditions—Standard American Target. Distance, 200 yards. Any rifle, without restrictions regarding weight, sights (telescope sight allowed), or trigger pull, with the exception that hair triggers must be provided with safety lock. Any position or rest. Five (5) scores to count. Five (5) scores may be counted at one competition. Entries unlimited. Entries to members, twenty-five (25) cents. To non-members, fifty (50) cents for first entry, and twenty-five (25) cents for re-entry each day. Ties will be decided by the next best score (or scores, if necessary). This match will close Thanksgiving Day, 1886. Prizes six in number. First prize, 12 per cent. of total entry fees; second, 11 per cent.; third, 9 per cent.; fourth, 8 per cent.; fifth, 6 per cent.; sixth, 4 per cent."

These conditions appear to be liberal toward the muzzleloaders, considering the great superiority claimed for these ancient weapons, and the fact that no breechloaders but such as would come under Creedmoor rules are used in these matches.

In view of these opportunities offered by the M. R. A. for the past two years, it would seem in order for the advocates of the muzzleloader hereabouts, at least, to adopt a motto—slightly modified to suit—which I once saw suspended over the door of a sportsman's resort in Florida, where gentlemen sometimes gave tangible evidence of the faith that was in them; the legend ran, "Put up or shut up." Changed to "Shoot or shut up," though somewhat slangy, it would be to the point. BREECHLOADER.

ATHLETIC GAMES will be contested on the grounds of the Brooklyn Athletic Association, DeKalb and Classon avenues, Sept. 11, P. M., the occasion being a testimonial to E. W. Johnston, the club's trainer.

DANGER SIGNALS from the Weather Bureau are not more significant of a storm than a cough is of consumption. Providentially we can cure any cough with Hale's Honey of Horehound and Tar. Sold by all druggists and country storekeepers. Pike's Toothache Drops cure in one minute.—*Adv.*

Sea and River Fishing.

Address all communications to the Forest and Stream Pub. Co.

A TRIP TO MAD RIVER.—I.

MAD RIVER, in Oswego county, N. Y., is really the northern branch of Salmon River, a fishing ground well known to many anglers in the northern part of New York. It was about 9 A. M. when we reached the end of our drive. Here we found that the man who acted as guide was absent. Will's first words were: "Well, Stillaboy, we are in a fix now. The place we want to go to is five miles or more from here and a good part of the way directly through the woods; I have the points of the compass if you think we could venture alone." Oh yes, I could do anything just now, or thought I could. Had I not come nearly four hundred miles to go there, and was not every moment precious to me? Perhaps there are not many men in the world that I would have said this to, but I knew what Will was. He neither grumbled at his luck nor found fault with the weather, nor the walking, nor the flies. Deliver me from any other company on a fishing excursion.

I strapped my knapsack on my back. It was filled with tins and boxes and cans and with a change of clothing should I get wet. It is one of the old Seventh Regiment kind, with a wooden frame around its sides and it is astonishing how much it can be made to accommodate besides the rubber blanket and the old railway shawl. The fishing basket was then slung over my shoulder. It had the crock of butter and a piece of pork and my wading shoes in it. And now with the two rods in my hand I was ready for the tramp. Will carried his knapsack and basket as well as I, only they were not quite so heavy as mine as he was burdened with the short-handled frying-pan to cook our fish and the axe to blaze our way. It was nearly 10 o'clock before we started and the August day soon grew warm. The underbrush were not thick, nor were there many windfalls to climb over or go round. The trees were chiefly beech, birch and maple with occasionally a hemlock and a few spruces interspersed. I led the way with the compass in my hand, (though I seldom looked at it) breaking twigs and branches as I passed along, while Will cut down saplings or stopped occasionally to make a blaze on some large tree. We had crossed two small ridges and two or three tiny brooklets, when there came to our ears the premonitory rumble of thunder. It was coming nearer and nearer. The rain would be on us directly, so with all possible speed we hung the rubber blankets over a low limb, stowed ourselves under it just in the nick of time, and when the shower burst upon us managed to keep perfectly dry. The shower continued for nearly an hour and then ceased almost as suddenly as it had begun. The moment the cloud had passed, we were in a blaze of light. Such another sight I had never seen. The sun was declining toward the west, and as the rays came in beneath the trees and through the openings in the forest, every leaf and twig and feather of fern glistened and glittered like silver. The drops that hung at the ends of the leaves or fell from the branches shone like diamonds and reflected the resplendent colors of the rainbow. We were in a forest of silver and green, an enchanted and fairy land.

But now came another experience, and that of a very different character. We had to hurry on, for there were two miles or more yet to be trudged, and that through the dripping underbrush where every branch sent down its shower. The knapsack was strapped on again, and I put my head through the opening in the rubber blanket. But oh how wet the woods were! Our legs were soaked and soaked again, and our feet slipped on all the old branches and roots hidden in the moss. Before many minutes I was wet almost to the waist, and the arm that broke the twigs was soaked to the shoulder. But on we must go, and on we did go. And now to lay our course became more difficult. As the sun declined toward the west the compass had to be consulted quite frequently. I could no longer keep the sun almost in front of me, nor over my right shoulder, and there was a tendency to bear off too much toward the south. Indeed, had the sun continued to shine, this tendency might have been disastrous, but before we had gone very far it was overcast again. Then the forest was somber and still.

We had seen but few birds on our way. Several partridges had started up along the path, a thrush had uttered his fall note of *cluck*, some bluejays had called *pe-yea* as we passed, and I would see the little wood pewee as I tried to look out from beneath the trees, fluttering at the ends of the limbs overhead or hear him call in his plaintive notes. However, the real forest is usually silent, except along the edge of the clearings or the borders of lakes and streams, and especially is this the case in August, when all birds are fledged.

But I am getting tired and have been looking for the stream for the past half hour. I am continually saying to myself, "on the other side of this knoll." And yet when we pass over it no river is there, sometimes not even so much as a brook. Are we wrong or is the compass wrong? No, the compass is not wrong. I never knew one to be wrong yet, and I advise every one who is making his way in the woods to be guided by it.

Our position was becoming serious. It was getting late in the afternoon. Had we missed the stream?

Will is off at my left and I am making my way relying upon the needle. I am warm and tired, and the lower parts of my body seem to be sending up a cloud of steam that condenses under my shoulders and falls back to be heated again as though I were an evaporator and condenser all in one. I am not prepared though to laugh at these things just now. The prospect is too serious. We may have to spend the night somewhere in the forest and find our way back by the track that we came. I will go on. There is pork in the basket and a loaf of bread on my back. I am in a hollow and an opening in the woods allows me to look some distance up the rise in front. There are dead trees. Three of them, and they do not appear to have been struck by lightning either. May be there has been a camp there, I say to myself. At least I will go and see. I do go. And there, sure enough, is the place that we are looking for, and below the bank I see the sheen of the rushing water and hear its pleasant splash.

"Hello," I shout as loud as I can call to Will, scaring a red squirrel that was near me and causing a pewee to respond in his plaintive call Soon Will's voice is heard as he calls back, "Have you found it?" "Yes," I reply, and then I hear him breaking the branches and chopping as he comes to where I am.

"Is this the place, Will?" I ask, as the poor fellow, looking red and exhausted like myself, came up.

"Yes, I think it is," he replies, "and lucky we are to find it."

"But there is no shanty here," I suggested, "and it is going to rain before long."

"No, there is no shanty here," said Will, "and that is another disappointment. But I am sure this is the place. See, the fellows that were here in June must have borrowed it."

And sure enough this was most evident, though the rains and a new growth had somewhat obliterated the marks of their mischief. There were the brands of the old poles and two pieces of bark that had been pulled off the shanty.

But now was no time to think of these things. "We must build another," said Will, in his resolute way. And after we had eaten a piece of bread and butter, he picked up the axe and we went to work.

It was quite a job to build this shanty, as Will called it. The bark did not peel well, and everything had to be done. But before the darkness set in we had a roof over our heads and were prepared to make ourselves comfortable. While Will cut the firewood, I laid the boughs and twigs for the bed and brushed up the sides of the camp. We had no bark to spare for that purpose, and spruce branches had to answer.

At last we were through, though, and no rain had fallen. The woods were still, and the silence would have been almost oppressive had it not been for the noise of the river. There was a peculiar gloom around us, and the fragrance of the woods seemed to be closed in and pressed down, as though there was a weight above the trees confining it to the surface. But, oh! how pleasant. A nice fire burned in front of the shanty, with a piece of old bark, well soaked by the shower, raised on two crotched sticks far above it, so that in the event of rain, should it come on in the night, our light would not be quenched.

The bark table was laid upon the boughs and in half an hour we were sitting and reclimbing by it. I need not say that the pork and bread and tea and crackers all tasted well, and we did ample justice to them all. Most of the readers of FOREST AND STREAM know all about this, and I am sorry for those who do not. Will had his smoke as we listened to the owls and made our plans for the next day, while we joked about our tribulations in the woods and laughed as we thought of our ups and downs. It was not long before I proposed that both should lie down. The rubber blankets were placed under us while Will wrapped himself in his "comfortable" and I found a use for my railway shawl. Soon Will was asleep. At least I judged he was. He was making a noise something like the scolding notes of a house wren and the sputtering song of a tree toad in the spring of the year. But there was no sleep for me. I was too timid or excited or something. It seems to me I thought of everything and heard everything sound, the fire and its snapping, the rain as it came steadily down, the noise of the river as I wondered how it looked. The journey through the woods was gone over again, and then, just as I was about to get a disturbed nap, a wretched porcupine—whose habitation I suppose was somewhere in the neighborhood—ran along the log at the back of the shanty, scratching and shaking the boughs that were under my head as he ran. And after an hour or more, just as I was about to go off again, he repeated the operation by returning in the same way.

And so it went until some time after twelve, I suppose, when I had a short nap, only to be awakened again by the feeling of water dropping into my eye. The fact of it was I was under a leak, the bark directly over my head having a knothole or crack in it. I got up, looked out into the darkness, replenished the fire and then cast myself on my blanket again. I was not uncomfortable. I was only wakeful. For a long time I listened to the rain as it came steadily down and the running of the river as it went laughing by, thinking within myself, we shall have the best kind of fishing after such a quiet storm. When I slept or for how long I could not tell, but again I was awakened by feeling something cold upon my cheek. Whether I had turned over or a new drop had found me I did not know. But I knew that the fire was low and I thought I heard an owl hoot. I moved again and lay for some time, when I saw that the day was dawning and this time heard the owls hoot for sure.

Will was sleeping as quietly as an infant. His wren and the treetoad noise had long since ceased. Indeed it ceased before he had been asleep an hour, and only occasionally would a deep drawn breath escape him. I make up my mind that I will try the stream while Will is sleeping. I move quietly around the shanty, put on my fishing clothes and get my traps together.

For once in my life, at least, I must say that I felt a little timid. I was in the deep forest and about to explore a stream where everything was wild and new to me. I came down the bank, climbed over a few logs, and found myself standing by a stream about twenty feet wide, that seemed to be running as though it wanted to get away from itself. It was a gloomy spot where I stood. The hill or the high bank opposite me was some two hundred yards away. It was clothed with hemlocks and spruce. Of course I could not see it plainly. To me it appeared something like a dark cloud that shuts out the light of the sky that is beyond it. I walk into the stream very carefully. There is no path along the side. I should think not. Nothing there but alder bushes, thick as they can stand, interspersed with fallen trees and bog holes. Ugh! The water is cold. Colder than that which has soaked me to the waist. I am nearly up to my knees. Hah! There is a bite. Here he comes; but I hope the next one will be larger. You are a scant six inches, and although the law does not protect you (there was no six-inch law at that time), a fellow's respect for himself ought to. And now I am feeling my way down stream, forgetful of the gloom and dampness, while my bait plays from side to side in front of me. The water does not deepen, but the bottom is rough and there is danger of stumbling every moment. More fish—one, two, three, four—nearly as fast as I can pull them out, none of them much over six inches, though, and they are not of the plump kind, but long and slim. I have a dozen now, and it seems to me the whole of them would hardly make a meal for a hungry man. Well may Will say that "the trout in Mad River are not large." Surely they are not.

I go on picking up one from time to time that I can keep. And now the water deepens, and as I look down I see I am coming to a stretch of still water. I notice that the rain has made quite a freshet. The low banks are flooded, here and there are pools among the alder bushes. I take two more, neither of them above the average size. And now I have gained the entrance to the still water, where I anticipate bigger luck. Not a bite, far down as I can throw. And a fly is tried with the same result.

It looks so wild and frightful down here, and the deep woods come so near the stream, that I think I will go up and fish above the camp. Will will be company, even though he may be asleep. It is too lonely down here.

I take another fish on my way up. Now for one in that place where the river turns to the left. I take three, but two of them have to go back. I am not fishing for sardines. I am just below the camp, and there seems to be a good place to fish here. The stream runs right against the bank and there is a deep hole, while a tree stands close to the edge of it, with some of its roots exposed. I will get all I want to make up a mess for breakfast here, thought I. And sure enough, the first cast brings me a nice one, while the second produced a half-pounder, his general color very dark and mottled, while the red spots shone out most beautifully. I shout to wake Will up and return at once to the camp.

It was only 6 o'clock now, though it seemed to me that it might be noon. I was tired. So tired that I thought of resting for some time. I did not tell Will this, for my trout had raised his hopes to the highest pitch. Then he had slept the whole night and consequently felt as lovely as a squirrel. But my enthusiasm for fishing even was passing away. However, I made the coffee and got out the bread and butter, with the condensed milk, while Will prepared the fish. His way was to put the fish into the pan, salted and peppered with just enough water to cover them, to simmer and stew until they were cooked through, when he would put about three ounces of butter in the pan, and after a little more stewing they were done. I must say that they were quite nice. And to soak his bread in the gravy, as he called it, seemed to be Will's especial delight. But this way would not answer well, I imagine, with large trout. My plan was the old orthodox method, clean the fish, dry them on a cloth, roll in flour or Indian meal and fry them in butter. I am always satisfied with trout cooked in this way. STILLABOY.

[TO BE CONTINUED.]

STINK POND.

Editor Forest and Stream:

To the readers of FOREST AND STREAM in Luzerne county, Pa., the name will be familiar as belonging to a certain little lake situated high up on a mountain distant about five miles from the city of Wilkesbarre. To some of them there will be associated with it recollections of pleasing incidents and good times. There are other lakes in its neighborhood, some larger, some smaller, and all more beautiful, but Stink Pond is perhaps better known and more widely celebrated than any of them. A good many years ago this little body of water was smaller and prettier than it is now, and was known to the inhabitants of the thinly settled region by the name of Sink Pond, but with the increase of population and greater number of mouths to repeat it, it became corrupted into the more vulgar name it now bears. It has numerous inlets of little mountain streams and is also fed by springs from the bottom. Its gently sloping shores of generally low land are very irregular, serrated with numberless recesses large and small, and it was once a beautiful sheet of clear pure water. But some sixteen or eighteen years ago the Crystal Spring Water Company took possession of it and built a dam at its outlet, throwing back the water over the lower shores and increasing its size more than double. Then as it spread out through the standing bushes and timber of large and small growth, covering up old stumps and fallen trees, it formed artificial swamps and marshes which in time became perennial, and when this vegetation began to die and decay, leaving standing tall leafless trees and bushes, it presented a scene barren and desolate indeed. There were few places where a boat could reach the shore, and if one attempted to walk around it the chances were that he would lose sight of the pond entirely and perhaps get lost in the many swamps as I did once to my sorrow. As the decayed vegetable matter increased the water became discolored and bitter to the taste and was not fit to drink until it had been filtered. However, after it had passed through the filter at the dam and had run its course down the little outlet stream until it came to the water pipes, it was tolerably good. The water company, with a view to encourage their patrons, gave it the more pleasing name of Crystal Lake, but this was not acceptable to those who knew it, and Stink Pond clung to it and was more befitting its character than ever.

One day it was discovered that the pond was alive with pike and catfish, and as the news spread fishermen began to flock there in large numbers, catching more than they could use or carry away, and the place became a scene of lively activity. The fish hog was in his glory. After a time the water company took a hand in the matter and put a stop to the slaughter by posting the shores and employing a watchman to prevent all fishing without a permit. They built a house for the watchman and his family, placed half a dozen boats on the pond, and issued permits indiscriminately at a dollar apiece. It was a great revenue to the company. As the fish began to show signs of decreasing in numbers, the permits were limited to twelve fish each, and as long as fish remained of good size permits were in great demand, for one could catch as many as he desired, and, as the boats were provided with fish wells, pick out his dozen from the largest and throw back the rest. But a time came when one was not so sure of the dozen fish he had paid his dollar for in advance, and it was even reported that some had gone away at night, after fishing all day, with nothing but sunburned faces and blistered hands to show for their day's work, digusted and swearing they would never go there again. As the fishing became poorer anglers became fewer, until there were hardly any one to go there at all, and Stink Pond was almost forsaken, but not forgotten.

There were a certain few "old stagers" who had formed an affection for the place, who liked to fish for the fishing itself, and they had waited long and patiently for this change. Now they could go there and enjoy a peaceful quiet day, undisturbed by the shouts and imprecations o, a noisy crowd. For them there were still good times to b had, though in a quiet, old-fashioned way, more attr acti v

to themselves, perhaps, than to the refined tastes of their more modern brethren. It was my good fortune to belong to this class of "old stagers," and as I recall some of the good old-fashioned times we had, the recollection is very pleasant. With an agreeable companion the journey was short, and arriving at the pond, perhaps, late in the day, we were still in time to use our rods in trolling for pike with varied success until the shades of evening approached. Then seeking some favorite nook, we would build a fire and have supper, not infrequently a part of our catch helping to form the repast. As the evening grew darker and while enjoying our after-supper smoke, we would change our trolling spoons for plain catfish hooks and cork float, and with angle worms brought for the occasion, bait up, push out a little way from the shore and wait patiently for bites. As we sat and talked and smoked, or silently watching the camp-fire as it lighted up the background and threw its long, golden streak across the water toward us, listened to the many voices of the night, the hoot of an owl, the squalling of a coon and splash of jumping fish, every sound seemingly magnified a hundred fold as it reflected from the water in the stillness, were all music to our ears, and the hours passed pleasantly enough.

Such fishing is not sport, it is contentment. There is a charm about it that penetrates deep into the sympathies of those who like it. We could enjoy a day's trout fishing with a fly, or trolling for bass or pickerel, as much as any one, and many days were pleasantly spent by us that way, but taking all in all we really enjoyed those nights still-fishing for the ugly catfish more than anything else. There was a quiet, indescribable influence in the surrounding darkness and loneliness that brought a feeling of contentment and happiness we could attain in no other way. Late in the night when we came to draw in our lines and go home, we regretted the necessity, but consoled ourselves with the reflection that the journey was but a continuation of the pleasures already experienced, for it was a pleasant walk down the lovely old road, so well known to us that we needed no light save that of our pipes, and as we refilled them and prepared ourselves for the start, we cast a last lingering look over the spot which had been so pleasant to us and mutually resolved that it should see us again soon. As we trudged along, puffing away at our old pipes, or stopping occasionally to rest and refill them, we rehearsed the story of past good times and formed our plans for future ones, until arriving home well on toward morning we were tired enough to seek a restful couch, and as we knocked the ashes from our pipes and bade each other good night, we felt that it was not all of fishing to fish, and an evening had been well spent. Bo.

Mansfield Valley, Pa.

AN ADIRONDACK EVENING.

THE mountains were casting their long, cool shadows over the dark waters of East Pond as Reuben—my guide—and I stepped out on its shore. We had made a carry from a larger lake where our camp was situated, and were glad to rest a few moments while I jointed my little bamboo rod and rigged a fresh cast, composed of a Beatrice, a light Montreal and a Brandreth. Though with thoughts intent on trout, I could not but notice the beautiful scenery before me. The little lake is completely surrounded by forest-covered hills, as yet untouched by fire or axe. Here and there the soft maples are showing their brilliant colors in strong contrast with their dark green neighbors. A slight breeze ruffled the surface of the pond, while the only sounds we heard were the occasional splash of a trout, or the harsh cry of a bluejay. Our light boat was soon in the water, the ever-present Winchester on the seat beside me in the bow, and Reuben in the stern handling the paddle. Quietly we glide out over the cool, dark waters, for when in the home of the "bonnie dun deer" and the savage bear, one quickly learns the habit of keeping silent.

As soon as we are clear of the lily-pads I begin casting, but at first with rather discouraging results, for not until the entire lake is in shadow, do the trout appear at all disposed to rise, and then at first only the smaller fry. I threw back several fish that at home would be considered very decent trout, but here nothing under half a pound is considered fair to keep. As we approached the upper end of the pond I noticed minnows skipping about in a manner that indicated the presence of large trout, and sure enough at the first cast I made in the shallows near the inlet, there was a fierce rush of several good-sized fish, two of which I hooked and killed after a sharp struggle that made the little rod quiver and the guide remark, "You will smash it sure." Three times in quick succession I killed two trout at a time, averaging ¾lb. each and then six single ones, the largest of which weighed 1¼lbs. and none under ½lb.; then, although they were still rising greedily, I stopped, having sufficient for present use. Well contented we paddled quietly back to the carry, drew up our boat and were soon ready for the homeward tramp. Suddenly I noticed the guide gazing intently toward the spot we had just left. "There's a deer," he whispered. Sure enough, away at the other end of the pond where we had just been fishing stood a fine buck quietly feeding on the lily stems. Quickly and without the slighest noise we push out again, but this time I handle the 10lb. rifle instead of the 7oz. fly-rod. With wonderful skill Reuben paddles up the lake, close under the bushes and without making the slightest sound. Several times the deer lifted up his head and watched us intently, while we remained motionless, hardly daring to breathe, and then he resumed feeding while the guide plied his paddle again. A quarter of a mile is thus passed, and now we are getting nearer. Slower still and, if possible, more carefully, paddles the guide. When within about 90yds. the buck gets uneasy, and Reuben whispers, "Shoot!" One might think that a deer at that distance was a pretty big mark, but I can assure the reader that after being cramped up in the bow of a canoe for twenty minutes and with the motion of the unsteady craft added, I found it exceedingly difficult to keep the sight where I wanted it. The deer seemed to be dancing around in the most wonderful manner. Finally I pulled but never touched him. For a wonder he only gave a startled look, and before he could realize what had happened I fired again. This time he fell like a log. We quickly paddled up to our victim and bled him. He was a magnificent beast, with a fine pair of antler which, as the guide expressed it, "looked like a rocking chair on his head." The bullet from the .40-60 Winchester had entered under the eye, passed through the brain, broken his neck, and was just ready to drop out through the broken skin.

With some difficulty we hoisted our game into the boat and then returned a second time to the carry. It was now quite dark, but by the aid of a little piece of candle which I happened to have in my pocket we managed to see to hoist him into a tree and break him up in good style. Here we left him to be sent for the next morning. It was no fun tramping over the carry in the dark, but an hour later, before a blazing wood fire, I forgot the discomforts and remembered only the pleasures of our exciting evening. Wakeman Holberton.

New York, Sept. 6.

Pennsylvania Trout Streams.—Camden, N. J., July 23.—At Brodhead Creek (or Analomink River), Monroe county, Pa., I had one very enjoyable week. I went via Henryville on the Delaware, Lackawanna and Western R. R. (ten miles above Water Gap), thence by team to take my friends, myself and baggage to the creek (three miles east of the station), we camped out. The streams are the Brodhead, West Brodhead, Paradise Creek and Stony River, all easy of access and teeming with the trout. There are two hotels on the West Brodhead, Henryville House, just back of the station, and Park House at Parkside, ¼ mile distant. On the main stream, Mr. Louis Long keeps a neat little boarding house where home-like accommodations can be obtained for a moderate sum. Parties can drop him a line to meet them at Cresco station (first station above Henryville), his post office address is Analomink P. O., Pa. The surrounding country is grand, the views to be obtained from the summits of the mountains are inspiring. The streams are easy to wade and have yielded some very good scores. The roads are, as a rule, passable. A good team will cost $3.50 per day. The famous Bushkill Creeks are 7 miles distant from Long's; High Knob and adjacent ponds (in Pike county) 12 miles. Bad road though, I am told. Ruffed grouse and Cotton-tails abundant, woodcock in season. Rather rough tramping over the hills, but the sport will repay it. Would recommend brethren of the angle to give this locality a place in their thoughts, when making up their excursions for next season. Mr. Long or the proprietors of the hotels will cheerfully give all desired information. The post office address of the hotels is Parkside P. O., Pa.—C. W. H.

Black Bass in New Hampshire.—Wolfboro, N. H., Sept. 4.—*Editor Forest and Stream:* Fishing for black bass here is good, and many are taken from what is now called Smith's Pond, but is more properly known as Winthrop Lake. This beautiful sheet of water is only about a half mile from Winnepesaukie Lake, just back of Wolfboro. On the 23d of last month, Messrs. H. M. Scott and Ried Benedict, of New York, were here and made some remarkably good scores. They were stopping with Sam Fay, of this place, who is a well-known personage, and had John Jackson for a guide. Mr. Benedict took at one cast three bass which weighed in the aggregate six and a quarter pounds. He used a nine-foot leader, with three flies, the first a red-ibis, the second a moose, and the tail fly a grizzly-king. I watched the struggle from another boat, and expected to see the leader part when the fish rushed different ways, but after a severe contest and much delicate handling, the fish were all brought to the landing-net. I have repeatedly taken two at once, although one good one is enough, but would not care to risk my leader with three two-pound bass on it at once.—Poke-o'-Moonshine.

Mount Vernon, Maine, Aug. 21.—This is one of the prettiest villages nestled among the hills, mountains and lakes of a State famed for its beautiful scenery and invigorating atmosphere. From my window I see two fine sheets of water and from a hill a little distance from the house I can count fourteen ponds or lakes with clear, sparkling surfaces. Half of these are well stocked with black bass and white perch, one or more with landlocked salmon, and all with myriads of pickerel. Two watersheds are in view—the Kennebec and the Androscoggin. The Kennebec waters nature stocked with white perch, the Androscoggin with the yellow perch, though now man has planted them with the white beauties. The black bass populates the crystal homes of both valleys. They are growing in favor with the sportsmen each year, and many come from distant sections of the country to enjoy the fun of the gentle art and are giving an increasing revenue to the hotels and the Maine Central Railroad. Long Pond is my favorite fishing resort here. I christened my new Henshall split bamboo rod with a 2½lbs. fighter, my first fish for the season.—J. W. T.

Trout and Mink.—Cedar Springs, Mich., Sept. 1.—Yesterday closed the trout season in this State for this year, and my last trip was especially gratifying to me, the last fish I caught being the largest I have taken this year. It measured 15in. in length and weighed 1lb. 2oz. While fishing on Dop Creek a few weeks ago I ran across a trout fisher that would have made "Old Izaak" look well to his laurels. I saw a dark animal jump into the water, and, diving, swim directly under the log I was standing on and come to the surface with something in his mouth, which he immediately took ashore. I overhauled it and it proved to be a mink with an 11in. trout. It was not over a minute from the time he jumped in the water till I had the trout. I knew that mink sometimes caught fish, but I never supposed they got trout whenever they wanted them.—W. H. W.

Netting in Great South Bay.—Patchogue, N. Y., Sept. 6.—*Editor Forest and Stream:* On Wednesday of last week, some fishermen of this place netted between 4,000 and 5,000 weakfish in the Great South Bay. The fish were not large ones, the average weight of these fish now in the bay is between 1lb. and 2lbs., and among the fish were a few Spanish mackerel. The fish were shipped to New York from this place in sugar boxes on two days in order not to excite attention.—Vigil.

An Old Trout in a Well.—Glastonbury, Aug. 31.—Mr. Ezra Hollister, of Wassaic, Conn., has a speckled brook trout that was placed in his well twelve years ago, when very small. Last week it was taken out and weighed 3lbs. There were a few scales knocked off in spots where the bucket hit him occasionally. He was carefully returned to his old quarters in the well.—M.

Winston, N. C., has a new club for protection of fish and game.

Fishculture.

THE AMERICAN FISHERIES SOCIETY.

PROCEEDINGS CONCLUDED.

The Chairman—The treasurer's report has not yet been read, and perhaps that should be read now. If the gentlemen will listen the secretary will read the report of the treasurer.

After the reading it was moved and seconded that the report of the treasurer be accepted and placed on file. Carried.

The Chairman—Article IV. of the Constitution which was adopted to-day provides that the regular meeting of the Society shall be held once a year, the time and place being decided upon at the previous meeting, or in default of such action by the executive committee. It will, therefore, devolve upon this meeting to determine the time and place of the next meeting of the Society. Will any gentleman present make a suggestion in regard to that matter?

Mr. Tomlin—Before this matter comes up there is one resolution here I would like to read and get an expression of opinion of the gentlemen present. Yesterday the preponderance of the evidence brought before us showed that it was better to propagate fish than it was to police the great waters of the lakes. I should like to present this resolution for consideration:*

Resolved, That it is the sense of this meeting that the public good of the States bordering on the chain of upper lakes would be best served by the establishment of fish hatcheries for the propagation of the spawn of whitefish and lake trout, and we do pledge ourselves to urge on our Congressional representatives and Senators to obtain an appropriation from Congress at this session to be devoted to this purpose.

Mr. Tomlin—I will say this has been a matter of consideration in Duluth for some time. We have communicated with our representative there and also with the Senators, and the matter is in their hands. Since I have been in the meeting here I have been making some inquiries as to the best method of procedure, and I learn it can only be done by Congressional appropriation or grant. If it is the sense of the meeting I would like to have the matter discussed, and would offer it as a resolution if it will be accepted.

The Chairman—You have heard the resolution that has been read. What action will you take upon it?

Mr. Mather—I should rather think, Mr. President, that this was a matter more pertinent to the Commissioners of Fisheries of the States and the gentlemen who are interested in the stocking of the great lakes really, than one that came within the scope of this organization, because it is a local matter, as much so as if the Association should move that the hatching of codfish be extended, or the stocking of the Mississippi or some other local stream. That is the view I take of the matter.

The Chairman—It doesn't seem to me that there is any objection if the gentleman simply wishes to get the opinion of the members present, from the bordering States perhaps, but otherwise, as Mr. Mather has suggested, it would be just as proper to petition Congress to stock the Connecticut River with shad, it seems to me, as it would be in this matter. The matter belongs more particularly to the State Commissioners and the citizens, the inhabitants of the various States in this immediate neighborhood and not for the Society, which is supposed to represent the whole United States. That is the idea that presents itself to the chair. It is open of course for discussion by the Society.

Mr. Dunning—I move that the resolution be laid aside until we get through with the business now under consideration.

The Chairman—Will any gentleman make any suggestion as to the time and place of the next meeting, either in the form of a motion or remarks in regard to the matter?

Mr. May—In order to bring the matter before the Society, I move that the next annual meeting of this Society be held in Washington on the second Tuesday of May, 1887.

Mr. Bartlett—I move that the next annual meeting of the Society be held at Quincy, Illinois, the "Gem City of the West," the speaker tendering the hospitalities of the city to the Society should they conclude to hold the meeting at that place.

Mr. Dunning suggested that the Society meet at Madison, Wisconsin, at the next annual convention.

Mr. Fairbank—I second the motion of Mr. May. I want to say here that I feel absolutely mortified at the lack of interest that our people have taken in this meeting. The Commissioners in the Western States, where they have a Commission, have not come here as I expected they would and as they ought to have done, and they don't deserve another meeting. We could have had more interest from the general public if the matter had been a little better understood and I supposed it would be. I don't know exactly where the fault is, but we have relied on Dr. Rowe to disseminate the matter in the press and have the general public understand the full scope and intention of the meeting and awaken some outside interest in it, but I have been absent myself and have been very much engaged in other things, and I supposed the matter was being attended to. I think we ought to rest on the laurels we have won this time and try a meeting at Washington, which is really headquarters.

Mr. Mather—Mr. President, I agree with what Mr. Fairbank has said about the advantages of Washington. Washington is a central point; it is at the head of the National Government, as some of you may know, and there is a vast museum of fishculture to be seen there. All the apparatus which has ever been devised is in the National Museum, and there are many advantages to be gained by having the meeting there. We have had the most successful meetings we ever have had in Washington, and while these questions come up about the East or West, I don't think it is worth while entertaining them. The Society is a national one in its scope and in its aim, and I do not hesitate to avow myself for Washington.

Mr. May—I will amend my motion, Mr. Chairman, by moving that the next annual meeting of the Society be held in Washington on the 12th, 13th and 14th days of May, 1887.

Which motion, being duly seconded, was carried.

Mr. Fairbank—I want to say a word or two more about the history of the Illinois Fish Commission, which the modesty of my associate, Mr. Bartlett, has prevented him from saying anything about. He has done all the work, and it is a little different work from what any other commission or State has done, and it has been so successful that I feel it is important to say something about it here and call your attention to it, especially to the Commissioners from the Western States. You, most of you, know the character of the water we have here, and in my talks with him in relation to planting and hatching fish, I said I didn't think he could do much of anything in that work, and Mr. Bartlett suggested that as there were millions of fish that were left every year along the Mississippi River by the receding water, the young fish in the spring going to the shallow water near the shores, and as the river went down they were left on the bottom in the pools and ponds there, millions and millions of them to die, the best work we could do would be to gather up those fish, sort them out and distribute them, and that is the work we have been on for the past few years. We have

*Mr. Tomlin was elected as a member of the Society, but has failed to complete his membership.

a boat and a gang of men that go along the shores of the river and gather up these fish, and we have all varieties, from the small-mouthed black bass to the buffalo, and we take them up there by the bushel and sort them out and have a tank car and that car is filled up with these fresh fish and is run over all the railroads in the State, and wherever it crosses a river we stop and dump in our fish, and we have distributed a great many hundred thousand of fish with very gratifying success, as we get from all portions of the State reports of the pickerel, bass and perch where they never were known before. This is a work that is easily and cheaply done, and considering the numbers of the fish we have distributed, it is much cheaper than any other work that is done in that line. It so very effective that I feel like suggesting it to the members, particularly of the Western States here, believing it is really a much more effective and profitable way of spending money than by hatching and attempting to plant the fish where they are not indigenous.

MR. CLARK—I understand they are planted in streams where they were not before. Do you think you would have got the same result if you had planted little fry in those same streams?

MR. FAIRBANK—Oh no, I agree with you that the larger the fish the better, still the character of the water of the small streams is similar to the Mississippi. Before the fish are sorted he picks out the best varieties, thinking that is the best way to plant them, and last season he has taken all kinds and thrown them in, so that the poorer varieties may make food for the others.

MR. DUNNING—There is a fish that is becoming quite common all over the country, from north to south and east to west, and I would like to have an expression of this meeting in regard to the fish being a profitable one for propagation. It is the carp, and we read what great size it attains in a very few years and how prolific it is.

MR. BARTLETT—I would simply say that in my opinion it solves the question of the cheapest food for the greatest number of people for the least amount of money. This question can be solved in the propagation of carp. In the State of Illinois there are now 6,000 carp ponds, and a great many of them are producing fish to-day. Applications this year on file for carp number 2,500 in round numbers, and they are increasing every day. Out of that whole number I have not heard of twenty-five that have denounced it as a failure. I have one carp in my possession now that I think is among the first received from the general Government, a male carp, which measures 36in. long and weighs 22lbs. A large proportion of the ponds in the United States are ordinary farm ponds.

The resolution of Mr. Tomlin being called up for reconsideration, the same was read by the chairman. The resolution and movement was supported by remarks from Dr. Sweney and opposed by Secretrry Mather and President Hudson. The question occurring on the adoption of the motion, it was carried by a vote of the members present, standing six in the affirmative to two in the negative.

The meeting then adjourned *sine die*.

STATE PROTECTION OF OYSTER BEDS.

LAST year Mr. E. G. Blackford, one of the four Fish Commissioners of the State of New York, was appointed by the Governor to the charge of the oyster investigation, and also with the enforcement of the laws to protect the oyster beds and prevent the dumping of garbage, sludge acid and other refuse in their vicinity. To this end he appointed Mr. Merserau to supervise this work, and under his direction a number of arrests have already been made, and they have secured a large amount of evidence to present to the September Grand Juries of Kings, Queens, Westchester and Richmond counties. Among the arrests already made are those of the captain of a tug, and four scow laborers, all of whom were in the employ of Commissioner Coleman's Street Cleaning Bureau. On June 8 they were detected emptying the two scows in the Sound, about three-quarters of a mile to the east of Execution Reef Light, off the harbor of New Rochelle. The oystermen of that locality say that for some time previous to these arrests, about 2,400 cartloads of garbage had been dumped daily in the vicinity.

Capt. Keys, in charge of the tug, was held for the Westchester Grand Jury in $1,000 and the men in $250 each. They claimed to have a permit for dumping the garbage where they did. Capt. C. W. Bayes, of the tugboat Maggie Moran, was tried recently before Justice Edmunds for the same offense, and on his plea of guilty was sentenced to pay a fine of $100 and to imprisonment in the county jail for 30 days. The captain paid the fine and the sentence of imprisonment was suspended. A similar case, that of the tug J. F. Winslow, will be tried before the same court soon.

The Commissioner and Oyster Protector have gathered very complete evidence in regard to the defilement of the waters of the Sound by means of sludge acid, having had detectives at work on the Kills and Newtown Creek for some time. It is asserted that 1 part of sludge acid in 10,000 of water is sufficient to kill all the oysters and fish subjected to its influence. A number of sludge acid cases will be brought before the Grand Juries of Kings, Queens and Richmond counties during the coming week, and it is believed that several indictments will be found. Commissioner Blackford declares that this law, unlike its predecessors on the statute book, shall be strictly enforced.

Answers to Correspondents.

☞ **No Notice Taken of Anonymous Correspondents.**

J. M.—Either arm will do.

G. L. H., Stanford, Ky.—Send us your name.

A. W. B.—Havre de Grace is a fitting out point.

W. M. B.—We cannot refer you to such a locality.

A. W. B., Sheepshead Bay, N. Y.—Go to Havre de Grace.

B., Chatham, N. B.—We cannot find any one who has the cartridges.

G. M. F., Augusta, Mich.—The sample you send is immature wild rice.

D. C., Minneapolis.—We can supply Quatrough's "Boat Sailers Manual," price $3.50.

A. I., Lynn, Mass.—If you want our aid send fuller particulars about the dog and give us your name.

B., Concord, Mass.—Go down to some of the Cape Cod resorts. See "Branting at Monomoy," in this issue.

A. G., Toronto, Can.—You can probably order the rowing machine through Peck & Snyder, Nassau street, New York.

H.—1. Red deer shed their horns annually. 2. Black bass for stocking purposes cannot be had from any source we are informed of.

G. W. D., Cleveland, O.—1. For prairie chicken grounds see notes in several recent issues. 2. The rifle is an approved one for hunting purposes.

J. McM., Cohoes, N. Y.—For black bass try Brant Lake, reached via Adirondack R. R., to Riverside, thence to Charlestown and drive of 7 miles to lake.

C. M., Dauphin, Pa.—Write to Capt. C. E. McMurdo, Charlottesville, Va., who can post you and put you right in the country if you tell him just what you want.

C. L.—1. Where can the best bear and deer shooting be had in Maine? 2. Near what lake in the Adirondacks can the same be found? 2. What is the nearest place for good squirrel hunting to New York, easily to reach and return in one day? Ans. 1. Go to Smith's at Tim Pond, John Danforth's or Capt. Barker's at Indian Rock. 2. Go to R. M. Shutt's, Indian Rock, Upper Chateaugay Lake, or to Chas. Fenton's, Number Four. 3. Sussex county, N. J., will afford good sport.

W. M. L., New Orleans, La.—You can get the tin screw tops for jars and canisters of the Consolidated Fruit Jar Co., 49 Warren street, New York, and a tinsmith will make the cans of required size. Seneca's "Camp and Canoe Cookery" recommends this.

EMERSON, Mich.—Will it hurt the accuracy and trajectory of a Sharps rifle, .45-cal., 30in. barrel, to cut off 4in. of the barrel? Ans. It will raise the trajectory, and for long distances reduce the accuracy. For short distances, when resighted, it will shoot very well.

J. C. C., Kingston.—The best books asked for are Hammond's "Training vs. Breaking," Ashmont's "Management of the Dog," Nessmuk's "Woodcraft," Seneca's "Canoe and Camp Cookery," Bogardus' "Field, Cover and Trap Shooting," Holden's "Book of Birds."

E. G. A., New York.—At Greenwood Lake pickerel are taken by trolling a dead minnow or a spoon by most anglers. The use of live bait on that lake is of rare occurrence, no live minnows can be obtained there and even dead ones must be brought from other waters.

LAKE CHAMPLAIN DUCK SHOOTING.—Will you kindly ask some of your correspondents as to the duck shooting on the upper part of Lake Champlain, where to go and who to go to? If any can give the desired information, will they address me at your office? —J. W. B. (New York.)

D. B. S., Brantford, Ont.—1. We cannot put you in the way of joining a hunting party going out for a hunt; perhaps some one seeing this paragraph may inform us of such a company, equipped with dogs, who would like to have an additional member. 2. Wild pigeons are uncertain in their nesting, their resort depending on condition of the mast. The last large nesting in this part of the country was in the woods of Pennsylvania.

A. W.—Stables's book will not give you the desired points; you will find the information in "Dogs of Great Britain," etc. 3. A dog may be of better type yet not a better dog than another; we do not remember enough of the two you mention to answer your question. 4. You will find a good picture of a Newfoundland in Vero Shaw's "Book of the Dog," or in "Stonehenge." 5. They have better Newfoundlands in England than in America.

AN ENGLISH READER, Manchester, England.—In reading your paper I came across the names of fish quite unkown to me. Will you kindly recommend me the best work on the fishes of America, United States or Canada. Ans. Norris's "American Angler's Book" and "Hallock's Gazetter" have the game fishes. The most comprehensive work, however, is "The Fisheries Industries of the United States," published by the U. S. Commission of Fish and Fisheries, in two volumes, one of text the other of plates. This has all the fish and aquatic food animals fully illustrated.

The Kennel.

Sept. 8 to 10.—Hornellsville, N. Y., Dog Show, Farmers' Club Fair. J. O. Fellows, Superintendent, Hornellsville. Entries close Sept. 1.

Sept. 14 to 16.—Dog Show of Attleboro Farmers' and Mechanics' Association. A. H. Wakefield, Secretary. P. O. Box 1483, Providence, R. I.

Sept. 14 to 17.—First Fall Dog Show of the New Jersey Kennel Club, Waverley. A. P. Vredenburg, Secretary, 14 Murray street, New York. Entries close Sept. 1.

Sept. 27 to Oct. 2.—Dog Show of Indiana State Fair Association. J. M. Freeman, Secretary, Bicknell, Ind.

Oct. 5 to 9.—Annual Dog Show of the Danbury Agricultural Society. B. C. Lynes, Secretary, Danbury, Conn.

Oct. 13 and 14.—Third Annual Dog Show of the Stafford Kennel Club. R. S. Hicks, Secretary, Stafford Springs, Conn.

Oct. 19 to 22.—Fifth Annual Dog Show of the New Brunswick Kennel Club. H. W. Wilson, Secretary, St. Johns, N. B.

Dec. 1 to 8.—First Dog Show of the Inter-State Poultry and Pet Stock Association, Cairo, Ill. A. A. Cowdery, Secretary, Cobden, Ill.

FIELD TRIALS.

Sept. 21.—Field Trials of the Manitoba Field Trials Club. Chas. A. Boxer, Secretary, Box 282, Winnipeg.

Nov. 8.—Second Annual Field Trials of the Western Field Trials Association, at Abilene, Kan. R. C. Van Horn, Secretary, Kansas City, Mo.

Nov. 8.—Third Annual Field Trials of the Fisher's Island Club, at Fisher's Island, N. Y. Max Wenzel, Secretary, Hoboken, N. J.

NEWPORT FOX-TERRIER SHOW.

NO dog show ever opened with brighter prospects than the one held at Newport last week, and none have been more deserving of patronage. It was the first specialty show ever given in this country, and was held under the auspices of a club whose object is the improvement of that useful, handsome, hardy and game little dog, the fox-terrier. We are aware that the A. F. T. C., like most other dog clubs, numbers among its members those whose love of a good dog consists in the satisfaction of seeing their names in print, but that the majority love their dogs for other and more commendable reasons is, we know, a fact. The entry, while not large, exceeded the expectations of the management; and the quality, while not up to the high standard of the prominent English shows, certainly was better than anything we remember having seen in America.

No expense was spared to make the show a success, and nothing was done by halves. The premium list was a most liberal one. Twenty-five dollars to each of the champion classes, and prizes of $20, $15, $10 and $5 to the open classes. The special prizes were about the best we have ever seen offered at a dog show, and ranged in value from $25 to $150. Pewter medals were not on view. Sterling silver and lots of it was deemed the proper thing. The Kelly Cup (value $150) is a splendid trophy, and proud indeed must feel the fortunate winner of it. The catalogue was English, the prize winners except in the puppy classes were English, and the judge was English. Those of the visitors who were not English tried to be. It was a very English show. The managers were Messrs. August Belmont, Jr., Edward Kelly, Fred Hoey and Thos. H. Terry, the last named being absent. The lion's share of the work was done by Mr. Belmont, to whose exertions the excellent arrangements were in a large measure due. Mr. John Read (English) was superintendent, and of course *il vait sans dire* that the dogs were well cared for. Mr. H. Clay Glover of this city acted as veterinary to the club, but as the dogs were with very few exceptions in excellent condition, his exertions were confined to smoking segars and pronouncing a dead dog dead. Spratts Patent (English) did the feeding and we did not hear a complaint. The judging was carefully and well done, as it always is by Mr. Redmond, who is one of the most popular judges England has ever had. As usual, he took great pains to arrive at just decisions, and his awards were well received by those best qualified to judge of their correctness.

The Messrs. Kelly had the misfortune to lose one of their bitches. She hanged herself during the first night of the show. With the exception of this little *contretemps*, all passed off merrily.

We regret to say the show was very poorly attended. When we entered on Tuesday morning it looked as though there would be a very large and fashionable attendance, as even at that early hour—ten o'clock—there were several ladies in the hall, and visitors were rapidly passing in. Even the club members were a little anxious about the comfort of their patrons, and people began to ask how Music Hall could accommodate such a crowd as was expected. All doubts were soon dispelled, as by 12.30 almost everybody had left the building, and but few ever returned. From that time the show appeared to be patronized by nobody but the club members and their families. It is quite evident that Newport is no place for a dog show, and we hope the club will make their next venture in New York, and select an earlier or later date. One thing the American Fox-Terrier Club has done—it has given a dog show, a good one, has shown its ability to manage a show creditably, and consequently has accomplished more than any other specialty show in the country.

Music Hall, where the show was held, is but a few yards from the Ocean House, and is well adapted for a show of two or three hundred dogs. Fear was entertained lest the constant howling, barking and yelping would annoy the hotel guests—disturb their slumbers; but as soon as the numerous mammas with daughters marriageable and passé ascertained that the dogs were imported English dogs, they threw open the windows and declared the row so "delightfully English" they would like to hear it all the year round. The weather was charming, you were supposed to know that from the specimens of humanity who were sauntering about with their pants turned up, just because they were not quite certain it was not raining in London.

The show contained several curiosities, not all of which were four-footed, and several of the imported dogs did not seem to relish the many futile attempts to convert into English what is "not built that way." Two or three young gentlemen (save the mark) vainly affected what reminds us of the once famous Alexandra Limp. You were supposed to know from their hobbling gait that some British nobleman had dislocated a limb or allowed the juicy old port to get into his big toe.

Another young man who moves in good society, carried his cane, which by the way was almost as big as himself, by the dirty end, but he never forgot to give the hand that held the dirty cane to his lady friends. Is that an English custom? Then there was a genius (in his way) who certainly contributed much toward relieving the show of the monotony which threatened it. Before speaking he would make a vigorous attempt to put his left ear in his mouth. When he wished to look at anything he shut his eyes and when he didn't wish to see anything he opened them. No wonder the keepers found it hard to convince the dogs that they were the ones that were on exhibition. Newport is not the place for valuable dogs; it is not the place for a dog show.

Splauger and Belgrave Primrose represented champion dogs and we were sorry not to see a larger and better class. We have many a time stated that neither of these dogs is first-class, or, indeed, anywhere near it, and we still hold to that opinion. Both dogs were well shown, in fact there is marked improvement in all of the Messrs. Rutherfurd's dogs since Dawson has had them in hand. With all his faults Belgrave Primrose is a terrier, but there is a decided lack of character about Splauger, and so deficient is he in that essential point that we would have placed Primrose first. Mr. Redmond examined the dogs very carefully, and it appeared to us that coat was the turning point in Splauger's favor. The latter has a decided advantage over his opponent in coat, but his very faulty head, and sleepy, expressionless appearance will, or should, always keep him back in fairly good company. The class for champions of the opposite sex was better, and contained Diana, Richmond Olive and Lyra. The last named was never in the hunt; her head is too faulty to entitle her to championship honors. Diana carries her five years very badly, and is going all to pieces in stifles, forelegs and feet. She always impressed us as being a bitch of delicate constitution, but we hardly expected to see her give way so soon. She has, without doubt, been one of the best bitches ever seen in this country. Richmond Olive scored another win, but she too is not improving with age and will soon have to make way for younger rivals. We told Heald twelve months ago that she was growing coarse and strong in head. Her owner must remember that very few terriers are like old Belgrave Joe, and that with age they almost invariably get thick in skull and wide in front. Olive was shown much too heavy and this intensified her growing defects; still she won with something to spare.

There were twenty entries in the open class for dogs and it was the best we have ever seen in this country. The fight for the much coveted blue ribbon lay between the well-moulded Valet and Bacchanal, the more truly bred looking son of The Belgravian and Bedlamite. Then came the aristocratic looking Earl Leycester, followed by the terror of all who poke their fingers at dogs, the daredevil Shovel. Raby Jack brought up the reserve. Valet was in no better company than he met at Birmingham, where Mr. Redmond gave him first prize and so his chances were voted good for a win on this occasion. The dog was shown a trifle too heavy, but he was looking much better than he did at Hartford. Our report on him at that show was substantially correct. There is no striking defect in him and when scored by points he must always occupy a very prominent place on the bench; but he lacks that true terrier character we all like to see; is rather too large and might be better in coat and loin. He has plenty of length of head and great punishing power, carries his ears well and stands on the very best of legs and feet. We thought him entitled to first prize on this occasion. Bacchanal, while looking sprightly and healthy, was shown too light of flesh and this gave him a tucked-up appearance which certainly did not add to his chances of success, and since he was last shown his gums have begun to recede, which also told against him. He is better in body, especially over the loin, than Valet and is of better size and shows more character. Earl Leycester, third prize, was undoubtedly one of the best dogs in the class. At several of the spring shows his merits were altogether ignored, but FOREST AND STREAM always had a good word to say for him. He is too leggy and is faulty in loin, and rather soft in coat, and was shown too light of flesh. While his head is not perfect, it is above average. In shoulders and width of chest he is little behind the best, and he shows considerable terrier character. Still we thought him fourth best in the class. Shovel, fourth prize, came near relieving the Chinese Minister of a part of his nasal organ. In fact, he appeared to be in a very bad temper all through the show, and made a number of well-timed sorties on dudes who persisted in aping Her Britannic Majesty's subjects. He is a workmanlike looking dog, but is growing very wide both in skull and chest, and has seen his best days on the bench. Still we thought him better than Earl Leycester, and would have placed him third. Raby Jack, vhc. and reserve, does not improve in head, and is rather leggy and light in middle. Mixture, vhc., is a very much better terrier, but, having lost an eye, was heavily handicapped. His head is deficient, but he has a grand body, plenty of bone, and good feet. He has already proved himself exactly what he looks—an excellent stud dog. Stableford Joe, vhc., deserved his card. He is growing cheeky, is not quite straight in front, faulty in back, too big, and lacks character. Scarsdale Jim, vhc., is faulty in head, but stands on good legs and feet, and is fairly good in body. Scarsdale, vhc., is well known to all our readers. He was in good condition. Warren Jim, hc., shows considerable character in head, but is too big and leggy, and is faulty in loin and forelegs; he deserved his card. Raby Tyrant II is too big, and is deficient in head and heavy in ears. Clover Turk, c., is deficient in head, coat and ears. How Regent Vox procured his hc. card we cannot say. He certainly was not noticed by the judge from whose book we took the awards; neither was his number posted on the blackboard. While Vox is snipy and much too leggy, we thought him worth a card, and he appeared to be of the same opinion. Elk is faulty in head, eyes, ears, loin and in coat. Jaunty is sheepish in expression, light of bone and faulty in feet. Quiz is too big and is wide in front, not straight in forelegs, heavy in head and deficient in character. Scarsdale Joe is weedy. Toby is a mongrel. Patrick and Cocaine were absent.

The corresponding class of ladies contained thirty entries and they were a much better lot than we expected to find.

Mr. Belmont took revenge for Bacchanal's defeat and scored first with Safety, a good one. She is a trifle light in limb, stands rather high and might be better in coat and feet. She made the best of herself in the ring and won with several points to the good. Mr. Belmont has had hard luck with his dogs and his victory with Safety was a popular one. Diadem was wisely withdrawn from competition and she should not have been sent to the show. Cornwall Duchess, second prize, although shown rather light in flesh was looking better than we have ever seen her, and much credit is due to Dawson for the condition in which the Messrs. Rutherfurd's dogs were shown. Marguerite, third prize, was lucky in getting on to the prize list as her condition was very bad and we would have put her back on that account. She is entered at Waverly and may be set right in time for that show. Saucy, fourth prize, showed up very badly in the ring and Mr. Rutherfurd found it necessary to turn her over to Dawson, who finally persuaded her to walk across the judges' ring but when he asked her to carry her ears properly and put up her tail she refused point blank. She is just a fair bitch but will never be a winner in good company. In head, ears, strength of limbs and coat she is deficient. Lurette, vhc. and reserve, is cheeky, leggy and wide in front, but shows some character. Delta, hc., was rather lucky in being noticed, as she is a wreck of her former self; she should be relegated to the stud, that is the proper place for her. Blemton Arrow, hc., like Delta, was suckling a litter of good-looking puppies by Bacchanal. Her feet are not good and she is light in bone. In head and ears she will do. Chance, hc., is faulty in skull, ears and coat and is too weedy. She was bred to Valet during the show, and the results of such a cross should be something above average. Chance is by Royal out of Diana. Leda, hc., does not carry her ears well and is leggy and light in loin. Blemton Lilly, c., was in luck's way. She is a very ordinary specimen, and is decidedly faulty in head, ears, legs, feet and stifles. Clover Polly, Clover Fidget, Scarsdale Folly, Venom III., Vice and Clover Poppy, exhibited by the Messrs. Kelly, are not show dogs, but owing to their good blood should throw better looking stock than themselves. Blemton Thyme, another well-bred one shown by Mr. Belmont, is not up to show form. Blemton Marigold, from the same kennel, was absent. Mr. Thayer's Raby Belle is very deficient in head and ears, but is fairly good in body, legs and feet. Nina never had a good head, but it is growing out of all proportion and she should be relegated to the stud. Her body, legs and feet should have earned for her a card. Pigeon is faulty in head, carriage of ears, expression and in feet, added to which she does not stand very well in front. Special is faulty in head, ears and shoulders and lacks character. Pearl is a weedy, snipy, scanty-coated specimen, and Mr. Morrell must endeavor to procure something better looking if he intends to compete successfully at dog shows. Mr. Ferguson's Floss has wretched head, shoulders, legs and feet, and is not a show dog. Bijou and Richmond Jewel should assume the duties of family cat. Fanny is deficient in head, eyes, shoulders, legs and feet, the only redeeming feature being her small ears. Queen is seen to advantage on the bench. She has grown very wide in front, does not stand well on her forelegs, and is faulty in feet, heavy in ears and rather soft in coat.

There were ten entries in the class for dog puppies, and Luke, by Mixture—Lyra, scored rather an easy win. He is a fairly good puppy, but not a crack by any means. He is round in skull, rather heavy in ears, a bit long cast, faulty in stifles and not as good as he should be in feet. Raby Tyrant II., highly commended in the open class, was second. Bristle, third prize, is deficient in head and expression, and does not stand well in front. We thought he pressed Raby Tyrant II. uncomfortably close for second place. Richmond Tyrant, vhc. and reserve, is faulty in head, ears and expression. Villain, c., we thought hardly worth a card. He is very weedy, and is leggy, sott in coat, faulty in head, eyes and ears and light in pasterns. Clover Trim, from the Clovernook Kennel, is underhung and not good either in head, legs or feet. Clover Plot, from the same kennel, is apple-headed and faulty in legs and feet. He was purchased by Mr. Tallman, and should prove a success in scaring the mice from that gentleman's pantry; he may not, however, take so kindly to having his tail pulled or ears pinned together. Dancer is not appropriately named, as his legs and feet are very poor and he is weedy and faulty in head and coat. Blemton Echo, from the same kennels, possesses no claims to show form. Fox is a very funny looking dog, and must have found his way into the class by mistake.

There were ten entries in the class for the opposite sex, and the quality was a trifle better. Pluck, just a fair specimen, was awarded first, but was closely pressed by Meersbrook Nan, who was in much better condition and is not so leggy. The latter is faulty in head, not quite right in back, stands too high, is light in bone and not particularly good in feet. Nan is rather soft and long in coat, and is not good either in skull or expression, albeit a fairly good bitch and above average. Saucy, third prize, was fourth in the open class, and Leda, hc., was also hc. in the open class. Peach Blossom, Frisky and Mr. Raymond Belmont's unnamed one will not develop into future winners.

There were only four wire-haired specimens in three classes, and they such a wretched lot that Mr. Redmond suggested withholding the prizes, but the management told him to award them, and so the fortunate owners had the satisfaction of taking considerable more money in prizes than the dogs are worth. There were four entries in the veteran class, and Old Royal, in great form, fairly smothered his opponents. Jeopardy was second best; her head is passable, but she is very wide in front and sadly deficient in legs and feet. Tip is faulty in head, ears, legs, feet and coat. Jersey is a weedy, poor-headed specimen.

Most of the twenty entries in the novice class were entered in other classes. Pluck, first prize, was first in the bitch puppy class, and Meersbrook Nan, second prize, was also second in the puppy class. Luke, third prize, was first in the dog puppy class. Chance, hc., and Leda, hc., held similar positions in the open bitch class. Suffolk Dandy, shown by Mr. Mortimer, is not a show dog, being too big and leggy, not straight in front, and faulty in feet; he also shows little character. Trap and Fly, exhibited by Miss Edith Cushing, are altogether devoid of terrier character, and Cinders, shown by Mr. Hoey, will never make a show dog, although there runs through his veins some of the best terrier blood in the country. He is faulty in head, body, shoulders, feet and coat. Grip, entered as a white dog, is a brindle and white of the Bill Sykes order; he did not strike us as being either a fox-terrier or a Newport dog. Janette was the last to claim our attention; a pretty little chocolate and white dog with most lady-like manners, graceful in every movement, fine in bone and soft as silk in coat; large and full in eyes and endowed with a most bewitching look; a lovely specimen, a society dog, but not a terrier.

SPECIAL PRIZES.

Meersbrook Nan, bred and owned by Mr. Thayer, won Mr. Redmond's cup for the best fox-terrier under 12 months of age, bred in America. She is by Meersbrook Ross and out of the well known English winner Meersbrook Model. Mr. Thayer also won the Kelly cup (value $150) for best fox-terrier over 12 months, bred in America, his exhibit for this prize being Raby Jack. Valet took the Hoey cup (value $100) for the best fox-terrier in the show as well as the W. K. C. cup (value $25) for best fox-terrier dog. The cup (value $25) for best fox-terrier bitch in the show went to Mr. Belmont's recent purchase Safety, and she and Bacchanal had no trouble in winning the cup (value $25) for best brace of fox-terriers (dog and bitch) in the show. The kennel prize to consist of not less than four was won by Messrs. Kelly and Hoey, who showed for it Valet, Shovel, Stableford Joe and Earl Leycester. Unfortunately for Mr. Belmont he could not exhibit Diadem. Her absence from the team certainly cost him the prize. The cup (value $100) offered by the club for best fox-terrier in the show under 12 months was won by Pluck, and the club's prize of $50 for best litter went to Mr. Belmont, who showed the best lot of puppies we have seen in this country. They are by Bacchanal out of Blemton Arrow, she by Royal out of Blemton Dust. Mr. Edward Kelly's prize (value $25) for best fox-terrier exhibited by a lady was won by Trap. We regret to say that the prize is of greater value than the dog. The prize (value $25) for best wire-haired terrier was won by Phyne, and here again is the prize worth considerably more than the dog that won it. Following is a complete list of the

AWARDS.

SMOOTH.—CHAMPION—*Dog:* L. & W. Rutherfurd's Splauger. *Bitch:* J. E. Thayer's Richmond Olive.—OPEN—*Dogs:* 1st, Kelly & Hoey's Valet; 2d, A. Belmont, Jr.'s Bacchanal; 3d and 4th, Kelly & Hoey's Earl Lancaster and Shovel. Very high com. reserve, J. E. Thayer's Raby Jack. Very high com., J. E. Thayer's Mixture, Kelly & Hoey's Stableford Joe, J. Bloodgood, Jr.'s Scarsdale Jim and E. Kelly's Scarsdale. High com., L. & W. Rutherfurd's Warren Jim and J. E. Thayer's Raby Tyrant II. Com., H. K. Bloodgood's Clover Turk. *Bitches:* 1st, 3d and high com., A. Belmont, Jr.'s Safety, Marguerite and Blemton Arrow; 2d, 4th and high com. (two), L. & W. Rutherfurd's Cornwall Duchess, Saucy, Chance and Leda. Very high com. reserve, F. Hoey's Lurette. High com., E. Kelly's Delta. Com. C. Rathbone's Blemton Lilly.—PUPPIES—*Dogs:* 1st, F. Hoey's Luke; 2d, J. E. Thayer's Raby Tyrant II., 2d, R. R. Belmont's Bristle. Very high com. reserve, J. E. Thayer's Richmond Tyrant. Com., A. Belmont, Jr.'s Villain. *Bitches:* 1st, F. Hoey's Pluck; 2d and com., J. E. Thayer's Meersbrook Nan and Raby Belle; 3d and high com., L. & W. Rutherfurd's Saucy and Leda.

WIRE-HAIRED.—*Dogs:* 1st, J. E. I. Grainger's Tyke. *Bitches:* 1st, J. E. I. Grainger's Phryne; 2d, A. E. Rendle's Venus.

SMOOTH OR WIRE-HAIRED.—VETERAN CLASS—1st, L. & W. Rutherfurd's Royal; 2d, P. Lawrence's Jeopardy.—NOVICE CLASS—1st and 3d, F. Hoey's Pluck and Luke; 2d, J. E. Thayer's Meersbrook Nan. High com., L. & W. Rutherfurd's Chance and Leda.

SPECIAL PRIZES.

Best dog or bitch, Kelly & Hoey's Valet, dog the same; bitch, A. Belmont, Jr.'s, Safety. Wire-haired, J. E. I. Grainger's Phryne. Best exhibit of four, Kelly & Hoey's Valet, Earl Leycester, Shovel and Stableford Joe; brace, A. Belmont, Jr.'s Safety and Bacchanal Best over 12mos. bred in America, J. E. Thayer's Raby Jack; under 12mos., J. E. Thayer's Meersbrook Nan; puppy, F. Hoey's Pluck, litter under 8 weeks, A. Belmont, Jr.'s Blemton Arrow, owned by a lady, Miss Edith Cushing's Fly.

ENGLISH.

THE COVINGTON DOG SHOW.

CINCINNATI, O., Aug. 30.—*Editor Forest and Stream:* The first annual dog show of the Latonia Agricultural Association was held at Covington, Ky., Aug. 24 to 27. There were 175 entries and only nine absentees. The show was very well managed and taken altogether would compare favorably with some of the larger shows. Major J. M. Taylor of Cleveland, O., judged the pointers, setters, foxhounds and beagles, and Mr. Geo. H. Hill of Madeira, O., the remaining classes. So far as I was able to learn, the judging gave general satisfaction. I was informed that the Association will give a show next year with a greater number of classes and larger premiums. Should they do so they will doubtless receive the hearty support of exhibitors. Following is a complete list of the

AWARDS.

ENGLISH SETTERS.—CHAMPION—*Dog:* Absent. *Bitch:* No entries.—OPEN—*Dogs:* 1st, P. B. Spence's Dan Voorhees; 2d, J. W. Hair's Stanton. High com., L. Trotter's Tom. *Bitches:* 1st, C. Schwein's Dolly S.; 2d, J. Schrink's Betta Williams. Very high com., Mrs. J. C. Sherlock's Lady Bess and G. H. Volker's Lady V. Com., T. Potter's Glen. *Puppies:* 1st, T. Potter's Liberty; 2d, J. W. Utter's Duke B. High com., W. C. Nelson's Slipalong and W. H. Wallingford's Dick. Com., W. F. McClure's Bettie Lee.

IRISH SETTERS.—CHAMPION—*Dog:* Absent. *Bitch:* J. A. Sullivan's Effie.—OPEN—*Dogs:* 1st, C. Hanitch's York II.; 2d, G. C. Walker's Joe. Very high com., C. Hanitch's Dash. High com., L. Hoffman's Prince. *Bitches:* 1st, Carey & Heister's Beauty Belle; 2d, P. Nolan's Flora. *Puppies:* 1st, F. V. Andrew's Kitty O'Brien; 2d, T. B. Lee's Parnell. Very high com., C. Breckinridge's Louie D. Com., P. Nolan's Nora.

BLACK AND TAN SETTERS.—1st, withheld; 2d, C. Hanitch's Prince. Com., J. J. Ciarlo's Nellie C.

POINTERS.—CHAMPION—*Dog:* J. H. Kraft's Robin Adair. *Bitch:* B. F. Seitner's Lady Croxteth.—OPEN—*Dogs:* 1st, Mrs. C. I. Engel's Young Meteor; 2d, W. C. Nelson's Tippecanoe. Very high com., W. H. Wallingford's Jack. *Bitches:* 1st, Reserve Kennels' Patti M; 2d, B. F. Seitner's Romp. Very high com., B. F. Seitner's Lilly Bang. *Puppies:* Prizes withheld.

COCKER SPANIELS.—1st, J. Lewis's Keno; 2d, C. W. Sander's Bob S. High com., Miss Bettie Carother's Titus.

FOXHOUNDS.—1st, 2d, very high com., high com. (two) and com., W. H. Metcalf's Beecher, Flora, Plum, Durey, Fannie and Kate.—SHAGGY FOXHOUNDS—1st, 2d, very high com., high com. (two) and com. (two), A. B. Whitlock's Trinket, Little Tramp, Freeland, Clara, Maria H., Buster and Whitey.

BEAGLES.—1st and 2d, Mrs. G. H. Hill's Banker and Marjory.

DACHSHUNDE.—1st and 2d, B. F. Seitner's Prince and Wallexie.

BASSET HOUNDS.—1st and 2d, B. F. Seitner's Nimrod and Fanchon.

FOX-TERRIERS.—*Dogs:* 1st, W. B. Brueckner's Flippant; 2d, R. Proctor's Snow. Very high com., W. Gale's Sport. *Bitches:* 1st, W. Gale's Fussey; 2d, W. B. Brueckner's Spot.

GREYHOUNDS.—CHAMPION—*Dog:* G. S. Parvin's Major. *Bitch:* J. F. Nicholson's Belle.—OPEN—*Dogs:* 1st, G. W. Rodenberg's Dash; 2d, E. Harrold's Skelper. Very high com. and high com., Schwein and Stevens's Spring and Skip. *Bitches:* 1st, J. Thompson's Maud S.; 2d, G. Bloomall's Queen. Very high com., H. Stine's Daisy. High com., E. Harrold's Fly and P. Kirby's Ruby. Com., Schwein and Stevens's Fannie.

MASTIFFS.—1st, W. T. Simpson's Eric; 2d, H. J. Groesbeck's Othello II. Very high com., H. Detmering's Duke. W. T. Simpson's Gerald and W. Muldoon's Carmen. High com., J. F. Nicholson's Bruno and R. E. J. Miles's Lyon.

ST. BERNARDS.—1st, F. B. Wiborg's Kobold; 2d, Mrs. J. B. Lee's Lady Alpha.

NEWFOUNDLANDS.—Prizes withheld. Com. Mrs. Julian F. Gracey's Curly.

COLLIES.—1st and 2d, J. E. Dougherty's Nellie D. and Grizzie. Com., W. B. Brueckner's Judge.

BULLDOGS.—No entries.

BULL-TERRIERS.—1st, W. Thompson's Lady; 2d, Col. S. A. Whitfield's Tommy.

HARD-HAIRED TERRIERS.—1st, withheld; 2d, J. F. Nicholson's Little Nell.

BLACK AND TAN TERRIERS.—1st, J. Englehart's Beauty.

DANDIE DINMONTS.—1st, withheld; 2d, J. F. Nicholson's Queen Mab.

PUGS.—CHAMPION—J. Englehart's Treasure.—OPEN—*Dogs:* 1st, J. Englehart's Roderick; *Bitches:* 1st, J. Englehart's Topsey.

YORKSHIRE TERRIERS.—BLUE AND TAN—1st, W. S. Price's Jersey Lily.

TOY TERRIERS.—Absent.

KING CHARLES SPANIELS.—1st, Mrs. J. O. Porter's Sir Charles.

ITALIAN GREYHOUNDS.—1st, 2d and very high com., J. Englehart's Pearl, Puck, Dolly and Queen. Very high com., H. Detmering's Dolly.

GREAT DANES.—1st, 2d, very high com. and com., A. Trinkle's Brock, Flora, Sarah and Bella.

MISCELLANEOUS.—Equal 1st, A. Boze's Pomeranian Shelly and deerhound Mac, and W. S. Jackson's Bedlington Elswick Lad II.

SPECIAL PRIZES.

Best English setter, P. B. Spence's Dan Voorhees; best bitch in open class, C. Schwein's Dolly S.; best bitch with puppies, F. Kramer, Jr.'s Pearl; best puppy, T. Potter's Liberty; best dog, got of Blue Dick or Britton, W. C. Nelson's Slipalong; best dog or bitch owned in Cincinnati, Covington or Newport, P. B. Spence's Dan Voorhees; best Irish setter, C. Lee's Lady Alpha; best trick dog, C. Schwein's Flo; best kennel Italian greyhounds, J. Englehart; best dog in miscellaneous class, A. Boze's Mac.

THE NATIONAL FIELD TRIALS.

Editor Forest and Stream:

The eighth annual field trials of the National Field Trials Club commence at Grand Junction, Tenn., Dec. 6. First comes the All-Age Stake for setters and pointers, for $750 divided equally between first, second and third—$250 to each. Next the American Derby, and after it the Champion Stake, which will be a sweepstake for the winner of first of any All-Age stake, including the All-Age Stake of these trials. To the winner will go the entrance money and $100 added by the club. If only one entry qualifies, the dog gets the stake; if more than one starts, the stake cannot be divided, but must be run to a finish. The entries for the All-Age and Champion Stakes close Nov. 1, except to winners of 1886, who must qualify the night previous to the race. All communications should be addressed to B. M. Stephenson, Secretary, La Grange, Tenn.

THE PUP AND THE PARROT.—Dr. Von Bremen of the east side is a very good wing-shot. Recently, in anticipation of the fall's shooting, he bought a promising pointer pup, which he began training. The Doctor never makes himself a present without remembering Mrs. Von Bremen. When he bought the pup for himself he bought a parrot for his wife. The pup was already trained to obedience, and the instinct peculiar to his breed was strong within him. The parrot is of a lively, and loquacious disposition, and was a fluent talker when she arrived at the residence of the Von Bremens. Straightway upon her arrival she announced that her name was Loretta, and that the rest of the household could go—below purgatory. The housemaid was ordered to set her cage on the rear extension window sill. In the course of the day the pointer pup found his way into the room where the cage stood, and he instantly located the bird. With noiseless step he approached within a few yards of the cage, and then became rigid in a beautiful pointing attitude. The parrot watched him intently for a moment and then sang out loud and clear, "Ah there!" The effect on the dog was paralyzing. He ceased pointing, dropped to a sitting posture, and gave way to his bewilderment. "Stay there!" came in a gruff and commanding tone from the parrot's cage. The pup had been severely trained and he feared to disobey. His head dropped between his forelegs, and in an attitude of utter dejection he awaited further commands. The doctor had been looking on from the hallway, and when he entered the room the parrot was reviling the pup in a mixture of English and Spanish, and the pup was grovelling in the rug, but afraid to run away. Whether the pup can ever be induced to again point at a feathered creature is a question in the Doctor's mind. The pup is now daily exercising his characteristic instinct by pointing at a small cat that lives in the back yard, and which, by cautious experiment, he found to be speechless and inoffensive.—*New York Sun.*

ST. JOHNS DOG SHOW.—*Editor Forest and Stream:* Most all arrangements for our approaching bench show of dogs are now completed, and we have the assurance of a large number of intending exhibitors that they are going to be here, and be here in force. The American Intercolonial and International Express Cos. will carry all dogs to and from this show at one rate, and the Intercolonial and New Brunswick Railway will carry them free when in charge of owners or care-takers. All dogs will be fed free on Spratts dog food, the managers will send a competent person who will attend to this matter and under whose direct supervision the feeding will be done. The premium lists will be ready in a few days and I will forward them with other information which may be desired. The special premium list is very liberal, we expect to make larger additions to it. The entries will close Oct. 9. With the unlimited space in the building the club has secured for the purpose of holding the show in, it will be next to impossible to overcrowd it. The weather here on the dates of our show is always very pleasant. We hope to have a large number of visitors and exhibitors from the United States and will promise to make their stay as pleasant as possible.—H. W. WILSON, Secretary (St. Johns, N. B.).

NEW ENGLAND KENNEL CLUB.—Boston, Aug. 31.—*Editor Forest and Stream:* The New England Kennel Club has been duly incorporated under the laws of the State of Massachusetts, with the following officers: President, T. C. Faxon; Vice-President, Charles H. Baker; Secretary, F. L. Weston; Treasurer, Wm. O. Partridge. Executive Committee—T. C. Faxon, A. W. Pope, Wm. O. Partridge, Edw. A. Moseley, Frank H. Cunningham; Finance Committee—T. C. Faxon, A. W. Pope, John E. Thayer.—F. L. WESTON, Sec'y.

THE WAVERLY DOG SHOW has 427 entries, among them many well-known prize winners. There are 20 mastiffs, 54 St. Bernards, 5 Newfoundlands, 1 Great Dane, 10 greyhounds, 9 deerhounds, 52 pointers, 44 English setters, 9 black and tan setters, 18 Irish setters, 35 spaniels, 3 foxhounds, 32 collies, 27 beagles, 10 pugs, 17 bull-terriers, 30 fox-terriers, 3 black and tan terriers, 2 rough-haired terriers, 1 Bedlington, 3 Skyes, 1 toy and 6 Yorkshire terriers, 4 King Charles and 2 Blenheim spaniels, 3 miscellaneous, and 20 in the selling class.

THE HORNELLSVILLE DOG SHOW.—The entries for the Hornellsville dog show number 210 in the regular classes. The puppy and selling classes will bring the number up to about 350. This is a very good showing for the first attempt, and the club will doubtless feel encouraged to hold an annual show.

THE AMERICAN SPANIEL CLUB.—New York, Sept. 6.—*To the Members of the American Spaniel Club:* The annual meeting of the American Spaniel Club will be held at Waverly, N. J., on Wednesday, Sept. 15 (second day of the N. J. K. C. dog show), at 11 o'clock A. M. A full attendance is requested.—A. CLINTON WILMERDING, Secretary, pro tem.

AN ACTUAL INCIDENT.—A man, his dog and his wife came to town last Friday. A drunken fellow jostled the wife off the sidewalk and stepped on one of the dog's paws. He apologized for running against the wife. The man readily accepted the apology, and then thrashed the fellow like blazes for stepping on the dog.

THE CLOVERNOOK KENNEL.—Mr. Edward Kelly, the proprietor of the Clovernook Kennel, informs us that he is about to reduce his kennel and retire from extensive breeding, as he has not the time to give his personal attention to it.

KENNEL NOTES.

KENNEL NOTE BLANKS.—For the convenience of breeders we have prepared a series of blanks for "Names Claimed," "Whelps," "Bred" and "Sales." All Kennel Notes must be sent to us on these blanks, which will be forwarded to any address on receipt of stamped and directed envelope. Send for a set of them Sets of 200 of any one form, bound, for retaining duplicates, sent postpaid, 30 cents.

NAMES CLAIMED.

☞ **Notes must be sent on the Prepared Blanks.**

KENNEL MANAGEMENT.

☞ **No Notice Taken of Anonymous Correspondents.**

J. S. S., Pittsfield, Vt.—My setter dog is troubled with a hot nose a good deal of the time, and when in this condition cannot locate game. Last year you prescribed something, which was very efficacious. His bowels seem to be in good order, and nothing is the matter with him except his hot nose. Ans. Give your dog 5 drops tincture of nux vomica three times daily on the tongue.

F. J. L., Horn's Mills, N. H.—A foxhound bitch, 3yrs. old, had distemper last fall. It seemed to settle in her eyes. They were very bad, so that mornings it was impossible for the dog to see, they were covered so thick with a yellow matter. I had them washed many times a day, but found that would do no good, so I placed a seton about 1½in. above the eyes. This seemed to have the desired effect, for they soon grew better, and in about three weeks seemed well. I took out the seton in January. They have been all right until about one week ago, when the dog got out and had a hard run. Since then they have been sore and seem to be growing worse; discharge large quantities of matter and look very bad. Ans. Give your bitch five drops of Fowler's solution of arsenic in the food three times daily. Drop into the eyes a few drops of solution of sulphate of zinc, two grains to the ounce. Do this twice daily.

Rifle and Trap Shooting.

Address all communications to the Forest and Stream Pub. Co.

RANGE AND GALLERY.

GLEN COVE, N. Y., Sept. 1.—Glen Cove Rifle Club, wind 8 o'clock brisk, bright light, Creedmoor third class target, 200yds., off-hand. International Rifle Association rules:

Baker	6	3	5	5	3	6	0	7	3	4—42

CREEDMOOR.—The fall meeting will open next Monday. A new match, added since the programme was printed in these columns, is the Steward Match, open to all comers, at 200yds., Creedmoor targets, five shots, sitting, kneeling or standing, with any military or special military rifle; an allowance of two points will be given to competitors who use the Remington rifle, State model, the allowance to be added to the aggregate of the three scores. All prizes to be won on the aggregate of three scores. Entries unlimited. Match open every day. Prizes for this match will be partly in cash and partly in kind, including two silver-plated cups presented by Mr. J. H. Steward, of London, and $25 presented by Col. James H. Jones, 12th Reg., N. G. S. N. Y.

WILMINGTON, Del., Aug. 30.—Two matches were held by the Wilmington Rifle Club at Schuetzen Park this afternoon. Conditions at both matches were the same—Standard American target, 200yds., off-hand. Teams were selected by Bacon and Simpson. The score is as follows, out of individual possible 100 points and team possible 400:

W. A. Bacon	9	3	7	7	5	9	1	5	4	10—60
C. Heinel, Sr	6	6	6	5	6	6	9	7	9	8—68
S. J. Newman	5	6	7	8	8	5	4	7	4	8—62
J. Scott	7	10	5	5	9	5	5	5	5	5—61—251
H. Simpson	3	4	3	4	5	3	6	2	4	5—39
W. F. Seeds	9	9	5	8	10	8	7	5	5	7—73
Harry Heinel	10	7	5	4	8	8	8	9	8	6—73
W. O'Connor	4	6	5	10	4	3	4	5	4	6—51—236

A new selection of teams was made for the second match. The score is as follows, out of individual possible 100 points and team possible 500:

W. A. Bacon	6	4	2	6	4	3	5	3	4	4—41
W. F. Seeds	8	8	5	5	6	8	7	3	5	7—59
S. J. Newman	6	10	3	4	5	4	6	6	3	6—53
H. B. Seeds	6	9	7	6	7	8	7	4	4	9—67
W. O'Connor	7	10	9	10	4	8	4	3	5	9—69—289
H. Simpson	6	7	4	6	4	9	9	4	3	4—56
C. Heinel, Sr	9	6	5	8	7	9	5	4	5	7—65
H. Heinel	5	5	8	4	7	7	7	4	5	5—57
U. Fuller	5	2	3	6	6	7	6	5	3	4—47
J. Scott	5	6	2	8	5	6	5	9	2	6—54—279

GARDNER, Mass., Sept. 1.—Members of the Heywood Guards, Company F, 2d Regiment, M.V.M., at Hackmatack Range 200yds., Creedmoor count:

C N Edgell	21 21—42	F H Kendall	19 20—39
C A Hinds	20 21—41	W W Thompson	18 19—37
H J Block	19 21—40	B F Thrasher	17 18—35
E B Taylor	20 20—40	F White	16 17—33
S T Chamberlin	19 20—39	W Hunting	14 18—32

HAVERHILL, MASS., RIFLE CLUB, Sept. 4.—Two hundred yards, off-hand, standard target. Record match:

W D Palmer	9	6	8	8	9	9	7	9	10	9—84
F Merrill	9	9	8	5	9	7	4	10	9	10—80
A Edgerly	7	8	10	5	7	9	6	10	7	9—78
H Tuck	10	8	6	3	8	6	8	10	9	6—74
J F Brown	8	8	7	9	5	7	4	7	9	6—69
W Worthen	8	9	5	5	7	7	8	9	6	5—69

Telegraph match with the Elgin, Ill., rifle club:

W D Palmer	6	7	6	9	8	6	6	8	9	8—73
J F Brown	8	8	5	7	6	6	6	6	10	5—67
H Tuck	10	6	10	9	9	6	8	8	9	8—83

E Brown	6	4	10	6	6	7	4	8	7	7—65
W Worthen	6	5	10	8	7	7	8	7	8	9—75—431

Elgins telegraphed 422.

THOMASTON, Conn., Sept. 4.—Weather conditions, good light, with light 9 o'clock wind:

W H Dunbar	10	4	9	7	8	7	8	10	8	6—77
F A Perkins	5	10	6	9	7	8	4	5	10	7—71
C F Williams	7	6	8	6	7	9	6	8	7	6—68
A Fox	6	3	9	3	6	6	8	4	4	8—57

A FINE CLUSTER.—Chicopee Falls, Mass. The annexed target, reduced one-half from full size is one made at the testing ground of the Massachusetts Arms Co. and shows what can be done with a Maynard properly treated. The target is of 50 consecutive shots and was fired June 28 last with a .32-caliber May-

nard 28in. barrel, 35grs. of powder and a patched bullet of 65grs. The target was made by Z. E. Leonard (employed in Massachusetts Arms Co's works) from an ordinary bench rest, the barrel being rested about 6in. from the muzzle, butt held to the shoulder, using aperture sight, the shots being thrown in a group just over the bullseye.

SCRANTON, Sept. 1.—The regimental trophy competed for here to-day on the Nayaug Range was won by the Thirteenth Regiment of Scranton by a score of 324 points. The Sixteenth Regiment came second with a score of 319 points and the First Regiment of Philadelphia was third, with a score of 293 points. This being the third time in succession that the trophy was won by the Thirteenth Regiment it becomes the property of that organization. The other regiments taking part in the match are the First, Sixth, Eighth, Sixteenth, Twelfth, Fourteenth and the State Fencibles.

THE CHAMPIONSHIP CONTESTS at Union Hill, N. J. for the $100 cup closed last Thursday. Mr. Hayes, of Newark, scored 2,216 and maintained his lead, winning the prize. Other scores were: M. Dorrler 2,121, Lober 2,116, Flack 2,088, Vogel 2,078, Joiner 2,049, C. G. Zettler 2,048, Zimmerman 2,013, J. Coppersmith 2,009, A. Begerow 2,008, Walters, 2,001.

NEW ORLEANS, Aug. 29.—At the United States Barracks every Sunday during the last two months, the teams of the Louisiana Field Artillery, Louisiana Rifles and Tennison Rifles of the State National Guard, have been practicing at the target range. Some good shooting was done to-day. Sergeant Uter, of the Louisiana Field Artillery, made 24 out of a possible 25 at 500yds. range. Capt. Tennison made 24 out of a possible 25 at the 500yd. range.

The following is the aggregate score of the Tennison Rifles team at 200 and 300yds. out of a possible 125: Capt. Tennison, 87; First Sergeant Sanborn, 77; John Reilly, 73; Corporal Thompson, 71; Lieut. Blake, 68; H. Zulauf, 67; T. Crawford, 67; James Martin, 65; L. McDonald, 60; John Heatch, 45; J. V. Rareshidde, 44; A. Martin, 20.

The following is the Louisiana Rifles' score at 200yds.: H. C. Meyers, 24; Pavia, 39; A. H. Meyers, 38; Cooney, 46; Corporal Stack, 61; Sanders, 53; Corporal Bernhardt, 46; C. Rolling, 45; Corporal Beyers, 69; P. Viosca, 64; Lieut. A. P. Maier, 41; Sergeant P. Moses, 73; James, 54.

The following is the score made by Battery B, Louisiana Field Artillery, 200yds target: Lieut. J. Reynolds, 17; Sergeant E. Uter, 21; Sergeant A. Weber, 11; Corporal J. A. D'Hemecourt, 13; Private S. C. Bahan, 3; Private W. F. Sadler, 18. 300yds. target: Lieut. J. Reynolds, 10; Sergeant E. Uter, 20; Sergeant A. Weber, 6; Corporal J. A. D'Hemecourt, 16; Private S. C. Bahan, 11; Private W. F. Sadler, 0. 500yds. target: Lieut. J. Reynolds, 14; Sergeant E. Uter, 25; Sergeant A. Weber, 2; Corporal J. A. D'Hemecourt, 19; Private S. C. Bahan, 0; Private W. F. Sadlet, 20.

THE MASSACHUSETTS TEAM.—The team which is to represent Massachusetts at the coming rifle meeting at Creedmoor has been selected, and the names of its members are appended in the order which their scores, made in practice, entitle them to. Of the team which will represent the State this year on the New York range but seven members were present last year, viz.: Bumstead, Frost, Eades, A. C. White, Hinman, Bartlett and Grant. Lieut. H. White, Company D, 1st Infantry, made a record which entitles him to a place on the team, but for business reasons he was obliged to withdraw. In the contest last year Pennsylvania was first with a score of 1,014, Massachusetts second, score 959, and New York third, score 933. The practice this year shows an improvement over that of 1885, and leads the militia to hope that Massachusetts representatives may lead the field. The names in order of relative merit are: Lieut. C. S. Bumstead, 2d Infantry, I. R. P.; Capt. C. W. Hinman, 1st Brigade, I. R. P.; Private M. W. Bull, 2d Infantry; Private F. R. Bull, 2d Infantry; Private Lincoln Grant, 1st Cadets; Private A. C. White, 2d Infantry; Private M. W. Daulton, Company D, 1st Infantry; Capt. John Osborn, 1st Brigade; Private A. L. Brackett, Company D, 1st Infantry; Sergt. W. M. Merrill, 2d Brigade; Lieut. R. P. Eades, 5th Infantry, I. R. P.; Capt. J. P. Frost, 2d Brigade, I. R. P.; Private C. C. Foster, 1st Cadets; Private F. D. Bartlett, 1st Cadets; Private T. B. Wilson, 2d Infantry, substitute, to be added in case of vacancy.

HOW TO SEE BULLETS FLY.—Rochester, N. Y.—*Editor Forest and Stream:* Those of your readers who are interested in rifle shooting, yet never saw a rifle ball in its flight, may desire to satisfy themselves by ocular proof that the bullet is visible in going through the air. If they will try to get a view under the conditions I did last week they will probably be gratified. A rifle club was shooting at pottery disks, 6in. in diameter, set on iron rods, elevated about forty feet in the air and situated 100yds. from the shooter. The rifles were nearly all .44-cal. breechloaders. By standing a few feet back of the man shooting, and watching the target carefully with a small telescope, I could see nearly every ball that missed the mark, especially those that went near the target. I was able to see only one of those that hit the disk, and in that case I thought the charge of powder was smaller than usual, as the report was low and the velocity of the ball appeared to be appreciably slower, for I saw it going directly to the center of the target, which was smashed. The direction of fire was out over Lake Ontario, but the elevation of the guns made an unclouded sky the background, thus giving the telescope a clear field beyond the target. I suppose that if one were endeavoring merely to catch a glimpse at the flying bullet, he should have the shooter aim at a mark not over an inch in diameter, as he would then be more likely to get the bullets in the field of the glass.—E. REDMOND.

THE TRAP.

Scores for publication should be made out on the printed blanks prepared by the Forest and Stream, and furnished gratis to club secretaries. Correspondents who favor us with club scores are particularly requested to write on one side of the paper only.

TRAP-SHOOTING REFORM.

Editor Forest and Stream:

I have read the various articles in your most valuable and most interesting journal on the question of trap-shooting reform. Its object seems to be to help the poor shots.

Now I am a very poor shot with little experience at the trap, and hardly enough skill perhaps to be called an amateur shot. Yet as this question seems to affect all those who aspire to greatness before the traps, I beg the privilege of adding my mite to the controversy. The very fact of my inexperience may be why the question appears different to me from its aspect to some. To my mind it is like tying a stone about the neck of excellence and casting it into the sea. It is placing a brand on every man who has spent hours of intelligent study, hours of labor and dollars of expense at the target and with different guns to find the proper tools to do the work, time and expense in diligent practice to solve the angles and strain the eye, arm and nerve to superiority and skill.

Now if shooting tournaments are closed against such men the life, interest and excitement of the tournament is gone. Such men greatly add to the pleasure of shooting. It is no sport to see some one bang away into space and hit nothing, neither is there any pleasure to such a shooter, and he will be a long time learning. But if he can constantly be in intercourse with good shots he can't help but learn. All our good shots have had to learn and had to pay for it too. All my shooting has been purely for pleasure and recreation and for reputation or profit. I enter a sweep with the boys, pay my dollar and shoot it out for a dollar's worth of fun. I hit in a tie I always divide unless some one prefers to have the fun of shooting out and in that case beat him if I can. If he wins he is welcome to all he gets and if I win I congratulate myself on having so much fun for nothing. I enter a tournament whenever my business permits, and whoever gets my money is welcome to it if he gets it fairly. Those who squeal would do so sooner if beaten by an amateur than if beaten by our best shots. They have not the backbone to shoot in any contest. What they need is a trap behind the barn or somewhere near the house and practice to give them courage.

Sweepstake shooting is a form of gambling, and those who gamble must learn to lose as well as win. If they cannot afford to lose better practice behind the barn awhile at costs of birds than cry because another can fairly excel them. Such is the opinion of one amateur. Let us hear from tournament be held in New England, we who are barred would attend and act as judges and referees or do anything in our power to assist the contestants.

I think it will be rather difficult to make a set of rules to govern trap-shooting which will be acceptable to all. At all events I have had all the experience I want in such matters. At the first meeting of the National Gun Association in New Orleans, I spent night after night in Rhodes' gun store, staying until 11 o'clock or later, taking notes of the proceedings for future reference. There were present quite a number of trap-shooters from all parts of the country (no end of champions of all creation, etc.) and all were asked to make suggestions, and nothing was adopted unless it received the majority of votes of those present. We certainly tried to do our best and we received very little credit for it. When the rules were published a great deal of fault was found with them. One writer in a prominent sportsmen's paper said that such a body of men should have accomplished something satisfactory, but in fact they had not done better than a lot of boys, or words to that effect.

Now, gentlemen, some of you say that the present rules are wrong. Why don't you make better ones? You seem to know just what is wanted. You are perfectly right when you say they should be made to suit the majority. Do not try to please the experts, make them for the amateurs. As far as I am concerned I have shot a great deal at the trap; I have won and I have lost; if I am barred or handicapped, I have nothing to say. At one time I wanted to hold our New England challenge badges and I did hold them all for a long time. At present I hold the clay-pigeon badge of the New EnglandAssociation. If any one wants it they can challenge for it. I will name the grounds and the time, and the badge shall be there. I will not enter for it, whoever wins is welcome to it. C. M. STARK.

DUNBARTON, N. H.

Editor Forest and Stream:

Vice-President Freeman having done me the honor to indorse, in some degree, my proposition of classing, by record, the shooters who take part in trap-shooting tournaments, I am emboldened to make known still another plan, hoping that my efforts may bring some brighter men into this discussion. These tournaments are of great benefit when rightly conducted, and the gambling spirit discouraged, because it is a fact that in this State it has been of great use in developing a correct feeling regarding our game laws, as well as tending to raise the standard of sportsmanship. It will do so all over the country if we can get our amateurs to attend in large numbers the tournaments which may be held.

Mr. Freeman speaks in issue of Sept. 2, of classing from 90 per cent. highest, and 50 per cent lowest, by record, saying that the N. A. will record and classify the records sent them. Now, a perfectly just method of placing men according to skill and at the same time all to enter and shoot together ma by be done in this way: We will suppose A., B., C. and D. are to ot in a match and no two are of equal skill with the gun. A. is shown by the record to be a crack shot, and belong in the 90 per cent. class. B. is a little less skilled, and is in the 80 per cent. class. C. averages 70 per cent. and D. 50 per cent. They are to shoot at 20 clay-pigeons each, and all want to be placed on equal terms; placed equally distant from the trap, etc., A. can average to get 18 out of his 20. B. averages 16, and to put him on equal terms with A., is given 2 broken birds, so that if he breaks his usual number, 16, will tie A., who should from his known ability break 18; and so on down to D., who, averaging 50 per cent of birds shot at is allowed 8 broken on his score before firing his first shot; hence, if he breaks his usual number, 10 of the 20, will score 18 with A. Now, please don't get a thinking that I am saying that each one *will* break a certain number according to his skill. We are simply trying to put them all on even footing at the start, in order that all can shoot on same terms, excepting the breaks given those of lesser skill, and all stand an equal chance of winning. Precisely as in yacht racing. The boats are measured, both in hull and sails, and the larger, being able to go faster by reason of superior size and power to carry sail, must give time, defined by established rule, to its lesser rival, in order to race on even terms. Otherwise there would be no yacht racing, for the biggest and most powerful boat would win, other things being equal. Handicapping in the usual manner in distance from the trap does not accomplish what is desired, for modern guns, as Mr. Freeman truly says, preclude any equalization of the differently skilled men who handle them in the distances now in vogue. I believe there are plenty of ways to arrange this matter we are now discussing, once let the system of records be fairly established. So far as men traveling under assumed names—"ringing," to use a racing term—let it be remembered that all contestants must be a member in good standing in some club, and that club in good standing in either State or National Association, be certified to by either his club or association, his record also certified, penalties imposed when frauds are attempted, and my word for it, but little trouble would occur from "ringers." NOR'EAST.

AUBURN, Me.

EMERALD GUN CLUB.—Sea View Park, New Drop, Staten Island, Aug. 26. Live birds, 5 ground traps, 21-30yds:

Ties, miss and out: at 25-30yds., Butz won first; 30yds., Godfrey second; 25-30yds., Remsen third; 21yds. Cherry fourth or O'Siekie trophy.—THOS. CODEY, Secretary.

GARDNER, Mass., Sept. 2.—The Gardner Sportsmen's Association are arranging for a team shoot with the Winchester Gun Club, each club to make its scores upon its own grounds. At the regular meet at Hackmatack Range but few were present. Out of a possible ten clay birds, the following were broken: B. Y. Burkman, 7; C. O. Bent, 7; E. T. Blodgett, 6; L. P. Webber, 5.

YONKERS, N. Y., Sept. 4.—There will be a match at live pigeons between the Washington Heights Gun Club and Yonkers Gun Club Sept. 10, on the grounds of the Yonkers Club, each club 10 men, 10 birds each, 80yds. boundary, use of both barrels. This being the third match between the clubs, causes considerable interest, as each club has won a previous match. The grounds are situated on M,idland avenue, South Yonkers, near station of South Yonkers on N. Y. City & Northern R. R. Match called for 2 P. M. Visitors welcome.—L. J. SCHLESINGER, Sec'y Y. G. C.

ST. LOUIS, Aug. 31.—Match to-day on the grounds of the Western Gun Club between the Central and Diana Gun Clubs:

NEW ORLEANS, Aug. 29.—The Louisiana Gun Club held their regular prize shoot to-day, which resulted as follows:

First Class.							
Chauder	6	5	4—15	Mayronne	7	4	3—14
Reneicke	7	5	3—15	A Drouct	5	4	3—12
Febiger	4	5	3—12	DeFuentes	8	4	3—15
Second Class.							
Jung	5	3	2—10	Commargere	6	3	3—12
Trincard	8	3	2—13	Landry	4	3	3—10
DeBlanc	2	5	3—10	Parker	4	3	3—10
Third Class.							
Demontroud	3	0	1— 4	Doane	7	3	0—10
Saxon	4	3	3—14				

The first column is the total of 5 double bats, the second 6 double clays and the third 4 single clays.

PENSACOLA, Sept. 2.—At a contest for the State of Florida championship badge between the Dixie Gun Club and the Pensacola Gun Club, the latter won by a score of 146 to 135. The targets used were the American clay birds. The number shot was 225 birds by each team.

JERSEY CITY HEIGHTS.—The regular monthly shoot for the cup of the Jersey City Heights Gun Club on grounds at Marion, Sept. 2, J. C. H. G. C. rules, 7 live birds each. Official score:

H. Siegler (29)..	1 0½1 0 1 1 —4½	Krammer (27)..	1 1 1½½½ 1 1 —6
Dickens (26)..	1 1 0 1 1 1 1 —6	Hughes (29)..	1½1 0 0½0 —3
Cannon (27)..	1 1 0 1 0 0 1 —4	Burdell (25)..	0 0 0 1½1 1 —3½
Heritage (25)..	0 1 1 1 1 0 1 —5	J. Von Lengerke(27).	1½11111 —6½
Quinlan (27)..	0½1½0 1 0 —3	Newbold (24)..	½½½½½1 1 1½ —4½
Cummins (25)..	1 1 1 1 0 1½1 —5½		

J. Von Lengerke takes cup and first money, Dickens and Kranmer divide second, Cummins, third. After this there were numerous sweeps, Siegler, Taybor, Hughes and Quinlan as usual scooping in the boodle. Saturday afternoon the 4th inst. was well enjoyed by some twenty of the members and friends at clay pigeon and bat shooting.—JACOBSTAFF.

BROCKTON GUN CLUB.—The Brockton Gun Club and Jamaica Plain Club shot a match on Sept. 4 at the Clarendon Hills Range at Hyde Park. The team from the shoe town proved too much for its competitor, defeating it by a score of 129 to 102. The first 10 shots per man were at clay pigeons, and the remaining at bats. The score:

	Brocktons. Pigeons.	Bats.

HUDSON, Mass., Sept. 1.—The Hudson Gun Club held its first tournament of the season at its grounds on Central street to-day. There were a large number of trap shots present. Boston, Marlboro, Clinton, Maynard, Lacominster, Berlin, Lancaster and other places were represented by the participants in the tourney. Dinner was served at Crystal Springs. Sweepstakes shooting was the order of the day. There were twenty-one events.

ST. PAUL, Minn.—The Tournament in connection with the Minnesota State Fair at St. Paul opened Aug. 31. The *Pioneer Press* thus comments: Were it not for the vast crowds drawn by other features of the grand show offered by the Fair Association, the assemblage collected about the club house of the St. Paul Gun Club yesterday to witness the initial shoot of the tournament, would have been considered very large and excited universal comment. The large number of spectators was not confined to gentlemen who presumably had predelictions for the gun, trap or dog; but many ladies, both on foot and in carriages, were seemingly deeply interested witnesses of the contests with the breechloaders. Yesterday's shooting would have convinced any one who had seen the shooting of the proverbially accurate Englishman—either in his island home or pitted against the erratic Frenchman at Dieppe—that meeting ground of all famous shots of England and the continent—that the knights of the breechloader of America were the peers, if not the superiors, of all shootists on earth. Single and double birds—which in shooting matches consist of a black disk probably 4in. in diameter—were shattered time after time till it became monotonous, in a nonchalant, seemingly unconscious manner by those contesting for the prizes, till those uninitiated came to the conclusion that it was the easiest thing in the world to do when, had they been tempted to try, they would have been unable to hit a flying hogshead at 10 paces. The first event was for a purse of $150, entrance $2.50, at 15 single Peoria blackbirds, first prize $60, second $45, third $30, fourth $15. There were 21 entries and the shoot resulted in Parker taking first, Block second, Kennedy third and Baldwin fourth money. The second event was for a purse of $120, entrance $2, first prize $48, second $36, third $24, fourth $12, at 5 Peoria blackbirds. There were 21 entries first money being divided between Paul and Krueger, Parker second, Baldwin third. The third event was for a purse of $180, 10 singles and 5 pairs Peoria blackbirds, first prize $72, second $54, third $36, fourth $18, fifth 100lbs. shot, Parker took first, Kennedy second, Baldwin and Gordon third, Thomas fourth, Skinner, Hine and Pfister fifth. The fourth event was for a purse of $120, entrance $2, 10 straightaway blackbirds, first prize $48, second $36, third $24, fourth $12, fifth 25lbs. of powder—Parker, Black, Ensign and Swan first, Alstrom and Gordon second, Macomber third, Durant, Brown and Kennedy fourth. Williams fifth.

Canoeing.

Secretaries of canoe clubs are requested to send to FOREST AND STREAM their addresses, with name, membership, signal, etc., of their clubs, and also notices in advance of meetings and races, and report of the same. Canoeists and all interested in canoeing are requested to forward to FOREST AND STREAM their addresses, with logs of cruises, maps, and information concerning their local waters, drawings or descriptions of boats and fittings, and all items relating to the sport.

FIXTURES.

SEPTEMBER.

Mohican Races every Thursday through the season.
11. New York, Sailing Trophy.
18. Brooklyn, Sailing Races.
25. Brooklyn, Challenge Cup.
25. New York, Sailing Trophy.

N. Y. C. C. INTERNATIONAL CUP RACES.

The first race arranged for Friday, was postponed at the request of the visitors as neither Pearl nor Nautilus was ready. Mr. Stewart's new canoe, which he was to sail, was disabled in her first trial on Friday, and narrowly escaped from sinking in the middle of the Bay. Like the other, she is a sample of bad and careless work by good workman, an evidence of this being found in the fact that her forward mast tube was fitted without any step and fastened at the heel with one small brass screw. The first time she went on port tack the heel of her racing mast split the Spanish cedar garboard on that side, and when she went on the other tack it repeated the performance there. Her crew discovered that she was leaking very fast and promptly shifted all ballast aft, lowered mainsail and made for the nearest land as best he could. Her large fore compartments are in no sense watertight as the thin deck is not screwed to the beams or bulkhead, while on deck is a large airhole with a loose hinged lid. With 200lbs. of metal on board she would have sunk beyond question. The handiwork in both the Pearls shows clever and skilled mechanics, the planking is laid in a way that is only possible to a thorough workman, but beyond this every part shows hurry and lack of care. In the new boat the two sides are not alike, the rabbet being cut differently at the bow, while the keel, stem and stern, the latter two of straight grained wood instead of knees, are poorly constructed. The timbers and ribbands, especially in the first boat, are badly split in nailing, the decks are very thin and not sufficiently screwed down, and there are many other weak points. In the new boat the board is further aft, which is a great improvement, the old one not requiring any mizzen. The mizzen mast is stepped in the deck, the mast tube being only 4in. deep instead of running down to the keel. As in the other boat the centerboard trunk has closed so much that the board rises and falls with great difficulty. Owing to Friday's mishap and the fact that Nautilus had to fit a new brass drop rudder which was delayed on its way from Albany, it was 1 P. M. before the two were afloat and rigged.

A large number of visitors were waiting on the balcony of the Corinthian Y. C. House, used by the canoeists through the courtesey of Admiral Padelford. The officers and members of the new Ideal Cruising Association attended in a body, and their uniforms, specially designed for cruising and camping, attracted very favorable notice; in fact in personnel the body compares very favorably with many older clubs. On board the steamer J. E. Moore were also a number of ladies and gentlemen prepared to follow the canoes.

The day was clear and bright with a good S. E. wind, and the tide was in the last quarter of the flood. The course was from the club house around a buoy off Clifton, thence to a buoy off Bay Ridge, and home, 4¼ miles, two rounds to be sailed. The distance was not accurately measured. The contestants were:

Nautilus	W. Baden-Powell	Royal C. C.	15 ×31
Pearl	Walter Stewart	Royal C. C.	14.6×22½
Lassie	C. B. Vaux	New York C. C.	15 ×28
Guenn	William Whitlock	Brooklyn C. C.	15 ×30

Pearl carried 110lbs. of ballast, 50lbs. board, and 68 and 15ft. in main and mizzen. Nautilus carried 120lbs. of shot, 50lbs. board, 90 and 23ft. sails, Lassie's two sails weigh 21lbs., her shot 75lbs., sails 70 and 20ft. Guenn has a 30lbs. Rath board, 75lbs. of shot and 86 and 15ft. sails. All carried balance lugs, the Pearl having her roller mizzen. At 1:15 P. M. the first whistle blew to come to the line. Four minutes later came a second whistle to prepare, and at 1:20 the whistle to go was given. Pearl was over first on starboard tack with Nautilus close astern, while Guenn lost a minute and Lassie 1m. 20s. before crossing. Nautilus was soon about and well clear, but Pearl hung near the line until Lassie came so near as to put her about. Meanwhile Nautilus was well away, hugging the docks to cheat the flood tide. She held in further by Bechtel's wharf and soon Guenn and Pearl headed her, leaving Lassie astern.

Working down at a fair rate the order was changed off the Wrecking Company's Basin, where Nautilus, her crew lying down below and with one reef in main, now took the lead again. So they worked down until the weather mark was turned thus:

Nautilus	1 54 00	Guenn	1 56 15
Pearl	1 54 30	Lassie	1 58 00

It was a pleasure to watch the large boats come about, turning like tops, Nautilus being specially fast, but the straight keels of the Everson boats told in the tacking, as they were much slower in stays.

Once around, Pearl headed up the Bay on second leg, but Nautilus was at a loss for some little time, and headed down the Bay until signalled from the steamer. The flood was strong now, and up they horsed with wind on starboard quarter. Lassie stowed mizzen and started in earnest. At 2.06 she went through Guenn's lee. The leg was soon covered, and the boats were timed at the second mark:

Pearl	2 9 10	Lassie	2 10 30
Nautilus	2 9 13	Guenn	2 10 45

The wind had been dropping and was now very light. All jibed for a run in, and Nautilus shook out a reef, passing Pearl to windward at 2.20. At this time a good puff struck in and drove them to the end of first round thus:

Nautilus	2 24 20	Lassie	2 24 52
Pearl	2 24 30	Guenn	2 25 10

Lassie had almost made up her loss at start, and had gained 3m. 30s. on the reach and run over Nautilus.

Off they went on port tack, Nautilus and Pearl falling under a schooner at anchor, while Lassie and Guenn weathered her. Off Bechtel's wharf the order was: Nautilus, Lassie, Pearl, Guenn. Off Clifton Lassie made a bold bid for Nautilus's lee, but a little maneuvering found her in rather a poor berth under Nautilus's lee bow. At the mark the times were:

Nautilus	2 50 05	Pearl	2 52 10
Lassie	2 50 45	Guenn	2 55 05

In the beat down Lassie had a fast but 8s.

The second leg found Mr. Baden-Powell on deck, where all the others had been. This time the wind had headed them a little and all made a tack for the buoy, the times being:

Nautilus	3 08 35	Guenn	3 14 45
Lassie	3 12 10	Pearl	3 15 40

Nautilus at once set a spinnaker to port and steamed away for home with a good breeze, winning by too much to make the finish exciting. The times were:

Nautilus	3 24 45	Guenn	3 30 30
Lassie	3 26 50	Pearl	3 31 56

Nautilus beats Lassie 2m. 5s., Guenn 5m. 45s., Pearl 7m. 11s. A lunch was laid in the club house for the sailors and guests, and after an hour's rest the second race was called. The wind was now stronger from S.E. with an ebb tide over all the Bay. The final gun fired at 4:45, and with it Nautilus went over first, with Guenn second, Lassie third and Pearl last, but the start was more even than in the morning. Nautilus, with a reef in, soon stood in to shore on port tack with Pearl following her, while the American boats held far out into the Bay, Guenn going through Lassie's lee. Both were well astern at the first of the race, but nearing the mark it was evident that they had come up greatly, the question being which pair would turn first. Nautilus finally came up ahead, whirling round quickly, while Lassie missed stays and hung for a time.

Nautilus	5 03 45	Lassie	5 05 10
Guenn	5 04 30	Pearl	5 06 10

Nautilus still carried one reef, and Lassie was fast overhauling her when she ran into a strong tide rip. She pitched heavily and shipped several pails of water, which could not be bailed out during the remainder of the race. Once going again, she pulled ahead and passed Nautilus to leeward at 5.16. The mark was turned thus:

Lassie	5 24 45	Guenn	5 26 10
Nautilus	5 25 56	Pearl	Not timed

Pearl had dropped far astern and could not be timed. Lassie had made the reach with mizzen stowed, but set it for the run in. Guenn now came up also, and passed Nautilus to leeward, the ending of first round being:

Lassie	5 32 57	Nautilus	5 34 43
Guenn	5 34 20	Pearl	Not timed

The trio stood out again on starboard tack, but Nautilus soon tacked inshore, as at first. The American canoes held full sail, but she had a reef in each. The beat was made without any notable points, but at the turn Nautilus was ahead and Lassie astern. The times were:

Nautilus	5 55 03	Lassie	5 55 37
Guenn	5 55 35	Pearl	Not timed

Nautilus, now carrying no mizzen, soon shook out her full mainsail and set mizzen, but Lassie outran her and raised the hopes of the Americans on the steamer. The times were at the second mark:

Lassie	6 12 10	Guenn	6 14 45
Nautilus	6 13 15	Pearl	Not timed.

Again Nautilus set her spinnaker, but the gear was not clear and some time was lost in doing it. It was too late to save the race, though she closed up Lassie's lead, but the time previously lost was too much. After a very exciting run the boats were timed:

Lassie	6 26 28	Guenn	6 40 00
Nautilus	6 26 13	Pearl	Not timed.

Mr. Stewart went pluckily over the course though handicapped with a leaky boat.

In the evening a party remained at the club house and next morning they were joined by Mr. Lucien Wulsin, of Cincinnati; Vice-Com. Gibson, Messrs. P. M. Wackerhagen, Mix, Thomas and Cushman, of Albany. A scrub race was sailed in a very light air, in which the two English boats won easily.

The third race was sailed Monday in such weather that it was not finished within the stipulated time of three hours, and consequently must be resailed. The day was rainy and cloudy, with wind N. E. to N. in the morning, and every promise of a stormy race, but by afternoon there was little wind left. At 3 P. M., the hour set, there was little prospect of a race, and some delay was also caused by repairs to the Pearl's deck tiller, so that it was 3:31 when the final gun was fired, there being then a light northerly breeze and rather dense haze over the bay. Nautilus went over promptly with Guenn and Lassie close astern, but Pearl lost 40 seconds on the line. The first leg, to Clifton, was free, and Nautilus soon set her spinnaker to port, while Lassie was winged out. The two kept together inshore, while Guenn and Pearl were also close to each other but further out in the tide. The first turn was made thus:

Nautilus	3 51 40	Lassie	3 52 00
Guenn	3 51 50	Pearl	Not timed.

Lassie passed Guenn early on second leg, but when last seen in the fog she was a half minute astern of Nautilus. No times were taken at the second mark, but the end of the round was timed:

Nautilus	4 33 49	Pearl	4 37 15
Lassie	4 34 13	Guenn	4 42 04

The wind dropped still lighter as the boats grew dim again in the second round and at first mark they disappeared entirely, only to be seen faintly at intervals. The time passed very tediously in watching, and finally Nautilus was seen making for second mark to windward against a strong ebb tide. Again she was lost, and as there was no wind it was evident that she could not finish in time. Finally she was seen coming on slowly under full sail and spinnaker set forward as far as possible. Her progress was very slow and she did not finish until 4:40:01, or 9m. over the time limit. Lassie and Guenn paddled in and Pearl sailed in later on. The race was set down for next Wednesday. Nautilus is now working far better than at Grindstone and is certainly a very fast canoe, especially in light airs. Her owner is no longer new to her, but is doing much more with her than in the A. C. A. races, when he handled her for the first time. On Monday he sailed an excellent race, and it is probable that in such weather Nautilus would come out ahead of Lassie every time.

THE MEET OF 1886.

MODELS.

WHILE all who attend the annual meets of the A. C. A. do so largely for the purpose of spending a pleasant vacation among old friends, for the social camp-fires and the delightful cruises that are possible, there are a great many, and the number is growing yearly, whose chief interest in the meet is centered in a study of the canoes present, and of their adjuncts and relative performances. To these earnest canoeists the meet of 1886 promised such an opportunity as has never before been given to compare canoes of radically different types and modes of construction, as well as a great variety of sails and gear; and all will admit that in this respect certainly there has been no disappointment.

We have seen heavy canoes at a meet before, notably the Toronto boats in 1884, and though they certainly showed to disadvantage beside the lighter canoes, the results were not accepted as conclusive, as they were neither built, rigged nor handled as the English boats were. Thanks to the enterprise of the New York C. C., to whom American canoeists owe so much, the leading sailors of Great Britain were tempted to visit us with their canoes to compete for the N. Y. C. C. International Challenge Cup, and incidentally to visit the meet and take part in the regular races, giving an excellent opportunity to compare their canoes with ours.

Modern canoeing, as all know, originated on the Thames over thirty-five years since, and it is a very curious coincidence that on the occasion of the first visit of the Thames-built canoes of the present there should be also at the meet for the first time one of the earliest Thames-built canoes, a boat antedating the well-known Rob Roy of 1865. The following description is written by her owner, Dr. C. M. Douglas, of Lakefield, Canada, who brought her to Grindstone this year. That he has not overrated her paddling qualities was proved not only by the way he held Mr. Johnson in one race, but by the manner in which she followed race after race over the sailing course. When the four boats disappeared from view in the final Cup match, the glistening double blade of the Harmony was still visible at the far end of the course.

"The canoe Harmony puts in a modest claim to the notice of canoeists. Hitherto she has been unknown. She has never entered for a race, the cruises that have been made in her have been quite insignificant. She bases her claim to distinction on the belief that she is the first and oldest decked canoe of the civilized sort in America, and her owner believes that the consideration due to age should be accorded to her.

"This canoe was built in the year 1864, a year before Mr. Macgregor brought canoeing into the notice by the publication of an account of his well known cruise in the Rob Roy. The builder of the Harmony was Mr. William Biffen, of Hammersmith, near London, he had then the reputation of being the best modeller of small boats in England, having earned well merited notice as a builder of the small model yachts used for sailing on the Serpentine in Hyde Park. The Harmony was originally a sectional boat, divided into three parts, so that she could be packed on a box for convenience of carriage. Her first cruise was on the waters of the English Channel, about Shorncliff and Dover. She had also a short cruise on the Thames and on the English lakes of Cumberland and Westmoreland. I found the boat too light for general cruising, however, and on the eve of my departure for India in 1865, I sent her out to Quebec, and she remained at Lake Charles, near that city, for nineteen years; for the most part reposing on the beams of my friend's boat house in a very dilapidated condition. Last year I remembered my old canoe and had her sent to me at Lakefield, where she was renovated and again put in commission this spring. The Harmony is a paddling canoe, *pure et simple*. Probably her lines are as good for this as could well be conceived, and on the water she looks a veritable canoe clipper. She is no longer a sectional boat, the divisions having been permanently fastened together, a butternut deck, elevated coaming and hatch have been also added, in place of the varnished silk and waterproof apron which she had at first. Owing to these additions and numerous tingles over cracks she has grown very considerably in weight from what she was originally. Her dimensions are: Length 20ft., beam 2ft., depth amidships 4in. (from kelson to gunwales). Her draft of water is only some 2in. when occupied by a paddler of ordinary weight, and her floor is so flat that she is remarkably steady. I have fished and even shot out of her. A paper canoe built on this model should be an undoubted success. The great drawback to the Harmony is that the Spanish cedar of which she is built is so light as not to be able to withstand the shocks incidental to canoe cruising; a paper canoe would be stronger and less likely to be split. Of course, the cruising for which she is best fitted is in waters the shores of which are well settled, so that camp equipage need not be carried. For this, a canoe on the model of the Harmony is well adapted, and a small sail could be used with a fair wind to vary the monotony of paddling."

From this simple craft the Pearl and Nautilus is a long step, well-known to most canoeists, but so important as to warrant a brief review here. In the beginning the only canoe in general use beside the light paddling craft like the Harmony, used on the Thames, was the Rob Roy, a simple form of sailable-paddling canoe about 14×26in., used for cruising. How this boat was improved upon in the production of the Nautilus about 1870, and the new canoe imported to the United States a little later, becoming the model for the majority of our canoes, is an old story now. At this date (1870-72) American and British canoes were practically the same, but owing to many circumstances they began to diverge until now the Vesper, Pecowsic and Venture giving battle to boats of a very different type. In England the development of the sport was quite rapid, a large and powerful club, the Royal C. C., was formed about London, which made the laws and set the fashions for all England. Cruising soon was lost sight of and racing took a foremost position, which it has since, unfortunately, held. The home waters of the R. C. C. offered little inducements to the cruiser, but were available for racing, and this branch of the sport soon eclipsed the other. Even for racing the waters were limited in extent and ill adapted to encourage any but a special model of canoe. The Thames at Teddington, Kingston or Hampton is only a narrow stream, making a very tortuous course a necessity, while Clandon Lake, a small pond, the sides of the course are very short and thus frequently exposed to the variable and squally winds. Over such courses a boat that would turn quickly was a necessity, consequently the size was made up in beam rather than length, and ballast was soon added for the double purpose of securing a great momentum in tacking and an increase of stability in the puffy winds, while the crew were seated below. The new boats were soon discovered to be fast, seaworthy and weatherly, and to sail so well with the Thames gigs that they could enter the races of the latter. This made an additional incentive to increase the power of the boats, which culminated in a 48ft. canoe with a plate bulb, and several hundred pounds of lead ballast. Of course these canoes, when in racing trim, were neither cruisable nor portable, but it mattered little, as they were used only in a limited locality for racing.

In America the development of the sport was much slower, radiating from New York, where the only club existed, to various parts of the country in the form of cruising. The early races of the N. Y. C. C. were failures, and the beginning of canoe racing may be said to date from the very successful regatta of the club in June, 1879, followed in August by a visit of some members of the club to Lake George, and their participation in races arranged there in connection with the college rowing races of that year. Since the formation of the A. C. A. in the following year, canoe racing has been a fixed institution, but the Association has labored chiefly to promote cruising, and has placed such wholesome restrictions on the size of canoes that the all-around cruiser has, as a rule, led the racing list, and we believe will continue to do so. The question of transportation has also aided to keep down size, and has militated against the big canoes. If a canoe of 100lbs. weight with no ballast, or even with 30 or 40lbs. in centerboards and 75lbs. of shot, can do as much as one with a board of 56lbs. and over 200lbs of shot, with the necessary increase in weight and bulk, certainly the former is to be preferred, especially as it can be paddled, while the heavy boats cannot. There has never been any common measure between the speed of the heavy English boats and the lighter American ones, and the meetings at Grindstone and in New York Bay have been looked for to settle this open question.

The visiting canoes, while differing in detail, are similar in principle, boats built to the full A. C. A. limit of beam and of greater depth than is done here, both carrying single plate boards of 56lbs. and heavy shot ballast. Two samples of the famous Pearl have been sent out, Mr. Tredwen's newest boat, raced by Mr. Stewart at Grindstone and Mr. Stewart's boat used by him at New York. They are very similar, blunt-ended on deck, large midship section; almost as deep at the gunwale as the rule admits and with little sheer compressed into a quick turn at the ends. In appearance they contrast very badly with the easier and more graceful lines of the American canoes. Their size and fragile construction make them difficult to handle, while no attempt is made to paddle them, a small single blade being carried to aid in maneuvering rather than with any idea of propulsion even for a limited distance. The build is so light as to unfit the boats for cruising; even were they fitted for it in other ways, while the great weight of the board makes it a difficult and dangerous thing to handle alone except under the most favorable circumstances.

The Nautilus is also bulky and similarly ballasted, but with finer lines, less side and a fair sheer is a much handsomer boat to American eyes. She would probably be easier under paddle than Pearl, and a double blade which she carries indicates that such a possibility as a flat calm is kept remotely in view. In construction she is much stronger than the Pearl, while divested of her fittings her weight will compare favorably with some American canoes of much less capacity. Neither of the three carry afterboards, the single board in the first Pearl being so far forward that she has a weather helm with no mizzen set. In the second Pearl the board is further aft, lessening this defect at the expense of accessible stowage room. In the Nautilus a very different plan is resorted to. The maximum draft, about 7in., is only 5ft. from the bow, and from this point, near which also the center of the board is located, the keel curves up quickly to a drop of only 1½in. at stern. By this means the center of lateral resistance is kept well forward and is but little altered by raising or lowering the board. A very curious feature in this connection is the mode of landing; the drop rudder is triced up and the boat beached stern foremost, the mizzenmast lifted out and the crew has but a step to the shore. This method of overcoming the difficulty of properly placing one board is certainly novel, and though similar in principle to the Irish coble, it is as yet untried in canoes. Two Nautilli of this model have been built and sailed successfully against other heavy models, but we do not know yet how the principle would work if applied to a lighter canoe, say 15×30 by 11in. at gunwale, and even if successful in sailing the model may not prove well adapted for paddling and all around work. The idea certainly is ingenious and worthy of a careful study as offering a possible solution of the single-board problem, and we hope to see it fully tried in an American boat. If it is not successful in all particulars the double board system of English origin, but lately discarded by them, must be relied upon for the present by all who object to folding boards. In all of the boats the thwarts (operated by grooved wheels 6in. in diameter on top in place of a yoke, and a foot yoke on the trunk) are much wider and deeper than in American canoes.

Passing to the winning boats at the meet the Vesper was illustrated and described in the FOREST AND STREAM of March 25 and April 1. Her dimensions are 15ft. 6½in. x30½in. with 10in. depth. She has a perfectly flat floor carried as far fore and aft as possible, her load waterline having no hollow. Built to weigh but 75lbs. for empty hull with 8 or 9lbs. for Atwood board besides, and sailed without any ballast she marks a step back to the early days of racing in this country when many flat-floored canoes were used with very little or no ballast. It has been generally believed, especially by canoeists on salt water, that a certain amount of ballast was necessary for windward work in any troubled water, but Vesper and Pecowsic certainly went well in the lump of the leeward race on Aug. 26, and this question of light vs. ballasted canoes in lumpy water is as yet as far from a settlement as many others are after the many indeterminate results of the meet. Certainly in what sea there was they beat the heavy boats to windward. What they would do in New York Bay for instance is another question, and there is no doubt a point within the limit of "canoeable waters" where the Nautilus, for example, would be steadier and faster. No more vital question vexes canoeists to-day than this one of heavy, light or no ballast, and all must agree with us that if the light canoe can be proved the equal of the heavy one the gain in all ways must be great. Thus far the proof seems to show that the Vesper, Pecowsic and Venture, and the Lassie, Sunbeam and Mona are superior in most weathers to the Pearl and Nautilus.

The Pecowsic has attracted special attention this year by her performance, while she has besides several features well worthy of inspection. Her dimensions are 15ft. 10½in. x28¾, with a rising floor, the V section common to all of Joyner's Diamond model; fine water lines and a rather full deck line, which accounts for her buoyancy and dryness in a lop. Her side is low, her stowage room very limited, and it is doubtful whether, if carrying a fair cruising load, she would be nearly as fast as now, while she would, no doubt, be very wet and uncomfortable. Her board, a common pivoted plate of thin brass, is fitted in a low trunk in the cockpit, and would be in the way in cruising or sleeping, but she is used for neither. Fast she is under sail and should be under paddle; but beyond this she has little to recommend her, and we should regret much to see the type of boat become popular. Her success may be attributed to fine lines, light displacement and a minimum of resistance, permitting the use of a small, low and very effective sail area. Such a boat, whether yacht or canoe, can be made fast, but at the expense of comfort, safety and accommodation. The weight, 100lbs., if we are correctly informed, is heavy considering the extreme simplicity and the absence of hatches, etc. What is most astonishing is the ability of the boat, entirely unballasted, to windward.

While naturally of the large fleet the two leaders and their special rivals attract the greatest notice, there were dozens of excellent canoes present from the hands of various builders. As winner of the combined sailing and paddling race, Lassie has added to her previous record and shown herself an all-around boat in every sense, her owner cruising and winning races in her alternately, besides the evidence of this race as to her sailing and paddling powers. The old Venture, too well known to need special comment, was sailing fast as usual. Mr. Ruggles also had some fine canoes, among them Delight and Sofronia, all evidently fast, though only among the second flight in the races. Where the starters are so many, it is very easy for a good boat to have her chances spoiled at a buoy or at the start; and now the boats, as a rule, are so nearly even that while out of a fleet of say twenty only three or four attract attention as winners, the next ten on the list may be but little astern of them.

The Ontario company showed some promising boats, but all in new hands, and consequently not sailed at their best. Among them was Dr. Neidé's new St. Hubert, a very handsome canoe, and Mr. Brokaw's new boat No. 570, designed by Mr. W. P. Stephens, which, though untried by her owner previous to the races, won a place on the record. Two similar boats, differing in size, but based on the same model, both designed by Mr. Stephens, were the Mona, a very finely finished canoe, built by Sauvé, of Brockville; for Com. B. W. Richards, 15ft. 11in. x30in., with two boards; and Peggy, built by McWhirter, of Staten Island, for Mr. Grant E. Edgar, jr., of Newburgh, a 15×28 canoe, a deeper Nirvana, so successful last year. She also had two boards and sailed very fast, winning second place on the record, but was out of the Challenge Cup race through a foul. Mona was also unfortunate in the same race, as her deck yoke, of black walnut, broke and disabled her.

This year, at least, none of the heavy canoes from Toronto have been at the meet, but instead they have sent some very fine boats, a cross between the old Pearls and the American models. Abler and more powerful apparently than most of the latter, they have none of the bubbliness of the Pearl, but a fair sheer and side line, and easier lines throughout, with dimensions of about 15×30. They are neatly built lapstreak boats, with mahogany decks and one or two centerboards.

In summing up the results of the races, one fact at least is apparent, but beyond that it is very hard at this time to go. In all the races the heavy boats have been beaten by the lighter ones, the Pearl and Nautilus by a number of American canoes of various models; and it is also to be noted that the unballasted canoes have defeated the ballasted ones. How much this means it is now impossible to say; certainly the former have shown up well and demonstrated their fitness for some work. Whether they are better for all American waters, St. Lawrence River, the Hudson, New York Bay and Boston Harbor, is as yet an open question, perhaps not to be settled until a salt-water meet.

FIXTURES.

SEPTEMBER.

9, 11. Cup Races.
11. Hull, Cham., Hull.
11. Corinthian, Sweepstake, Marblehead.
11. Sandy Bay, Sweep., Glouces-
17. Toledo, Pen., Toledo.
18. Sandy Bay, Club, Rockport.
18. Great Head, Club, Winthrop.
19. Quaker City, Review, Cruise.
25. Buffalo, Club, Lake Erie.
28. Beverly, Club, Naliant.

YACHT RACE EXTRA.

THE FOREST AND STREAM YACHT RACE EXTRA, 16 pages, illustrated, is for sale by all newsdealers, or will be sent from this office, postpaid. Price 10 cents. Contains account of all international races, plans, etc. Intended for yachtsmen and for those who want to "post up" on yachting.

THE AMERICA CUP RACES.

SEPT. 7, N. Y. Y. C. COURSE.

THE first trial between Mayflower and Galatea was sailed on Tuesday and resulted in a decided victory for the American yacht. With those who witnessed the inside race of last year and were present again on Tuesday, it required but a slight effort of the imagination to make them forget that a year had passed and that they were not looking at Puritan and Genesta instead of their younger rivals. The race of Sept. 14, 1885, was duplicated so closely that a change of names and hours in the account would answer for a very fair description of this week's contest. Galatea was white, while Genesta was black, and Mayflower was made even more hideously grotesque by a liberal misapplication of potlead than Puritan, but for the rest there was little difference. The same sluggish work in light airs at the start, the American yacht showing a decided superiority in such work, leading through the Narrows and increasing it all day; a better breeze outside the Hook, this time heading the yachts a little more going out than was the case last year, a gain for the striped yacht inside the Hook again, bringing her in before the wind a winner by 4m. less than last year. The fleet of attendant vessels was even worse and many of them showed an utter disregard for the racers, not only washing them badly, but actually closing the course and taking the wind regard-

less of the ineffectual protests of the judges' tug. Of course it was known that this would be the case when the course was chosen and it was more a good luck than anything else which has saved the Committee the responsibility for a mishap of some kind. Coming home, although in perfectly calm water, the Lower Bay for a distance ahead of the racers was plowed up and tumbled into a very respectable sea, that tossed about the yachts and sent the big can buoys jumping up wildly. Fortunately both the yachts were served about alike and the result of the race was not affected by the disturbance.

A worse morning for a race never broke than on Tuesday; calm, cloudy and sullen, the best that promised was a dull drizzle and a postponement, but to the surprise of all it cleared away finely by 9 A. M., and the race was sailed under such perfect skies as only September brings to us. The breeze was too light for a real yacht race, but as the inside course is only intended for a pageant and little better was expected, it did not much matter. The club course, as designated for this race, was as follows: From a line drawn from judges' steamboat to buoy No 18, opposite Owl's Head, L. I.; thence (keeping outside of Fort Lafayette) to and around buoy No. 10, passing to west and south of it; thence to buoy No. 8½, passing south of it and north of buoy No. 5, off point of Sandy Hook, to and around Sandy Hook lightship, turning it from north and east, and then returning over same course to westward of the home stake-boat, which will be anchored abreast of and to eastward of buoy No. 15. All yachts must pass to eastward of West Bank buoys Nos. 9, 11, 13 and 15, and to westward of red buoys Nos. 10½, 12, 14, and 16, both going and returning, and must keep to southward of buoys Nos. 8 and 8½, on Flynn's Knoll, and a mark boat placed between these buoys and to the eastward of buoys Nos. 1 and 3, on the False Hook outside, going and returning. (See map FOREST AND STREAM Aug. 26.)

The light wind from S.E. was hardly strong enough to work in when Galatea and Mayflower were towed out to the starting line in the midst of an immense fleet of vessels of all kinds. On board the cutter were Messrs. Lloyd Phœnix and Fred May, while Captain Gibson, who sailed Priscilla last year, accompanied her as pilot. On Mayflower were Gen. Stone, Mr. Burgess, Dr. Bryant, and Messrs. Richards, Tamas, Fay and Herreshoff, with Capt. Joe Ellsworth. Both yachts set their clubtopsails, while Mayflower had a small jibtopsail in stops. At 10.45 the first whistle blew, and at 10.55 the start was given. The tide was near the end of the ebb as Mayflower came for the line on starboard tack, breaking out jibtopsail. Quick as she was, Galatea was a little quicker, and neatly cut in between her and the Luckenbach, going over on her weather. The times were, Mayflower 10:56:12, Galatea 10:56:11. The first leg was carried in toward the Long Island shore, and it soon became apparent that Mayflower was gaining. At 11:01 Galatea tacked, Mayflower at once following and planting herself in the white one's weather quarter. Galatea at once set her jibtopsail, but Mayflower continued to leave her slowly. A large bark lay at anchor in the channel and Mayflower nipped clear of her very prettily, while Galatea passed under the stern to leeward. As in the Puritan-Genesta races, whenever the wind was light the Galatea seemed to slide off to leeward compared with Mayflower. In tacking the former was much quicker, but this could not make up for serious loss on other points. All through the first part of the race it seemed that Galatea was sailed too close, every sheet flat in and the boat held as far up as possible, while her movements were slow and sluggish in the extreme. The wind was a mere zephyr, but Mayflower moved with some appearance of life, going ahead at a decent rate with tide to aid her, but her rival seemed devoid of all life.

Off Clifton at 11:12:30 Mayflower tacked, and at 11:13:30 Galatea followed. At 11:20 Mayflower, just clear of the Narrows, went on port tack, feeling a little more air; while Galatea, still inside, was almost motionless, with everything hard and flat as possible. At 11:27:30, when just outside the Narrows, Galatea went on port tack, Mayflower being then over by the South Beach of Staten Island. So the work went on, a very slow beating to windward with Mayflower constantly gaining. Nearing Buoy 10 Galatea was sailed a little freer and began to pick up the leader slowly. The flood tide was coming with full force and the S. E. wind held very light still.

At 12:58 Mayflower passed Buoy 10, and the board was "given her a toot fiend" on each steamer leaped for joy at the unearthly and discordant uproar. Galatea passed the same mark at 1:02 P. M. Mayflower was then near Buoy 8½, where the times were taken thus:

Mayflower	1 01 51	Galatea	1 07 07

About 1:15 Mayflower had the point off Sandy Hook abeam and caught the freshening breeze outside; but Galatea lay quiet inside the point moving very slowly. The yachts could now lay a course that would fetch them but little to leeward of the Sandy Hook Lightship. Out they went on starboard tack, Mayflower in the midst of the fleet and Galatea almost alone some distance astern. At 2:49 Mayflower tacked for the mark, rounding at 2:35:02, starting sheet as she did so and breaking out balloon jibtopsail at the same time. Galatea had held higher on the leg out and was nearer the mark when she tacked at 2:44:13. She also set her balloon jibtopsail, but it was not handled as quickly and neatly as Mayflower's.

Coming in the positions changed only by Mayflower increasing her lead, and it was now a stern chase as hopeless as Genesta's last year. The times at Buoy 10 were:

Mayflower	3 37 00	Galatea	3 50 00

Mayflower dropped spinnaker boom to starboard, and set spinnaker in stops, but did not break out, as the wind was too nearly abeam. The finish was devoid of any incident, the leader being so far ahead. Mayflower broke out her spinnaker by Dix Island, while Galatea had set hers before passing Buoy 10. The usual din of guns and whistles saluted Mayflower as she crossed the line at 4.22.53, the winner by 12m. 02s. The summary is:

	Start.	Finish.	Elapsed.	Corrected.
Mayflower	10 56 12	4 22 53	5 26 41	5 26 41
Galatea	10 56 11	4 35 32	5 39 21	5 38 43

Mayflower allows Galatea 38 seconds over the course of 38 miles.

From the time of the first tack after crossing the line it was reasonably certain that Galatea had no chance of winning unless the wind changed greatly and everything indicated the repetition of the Puritan-Genesta match, as was finally the case. Like Genesta she seemed sluggish in such light winds, a part no doubt being due to the sailing, but all day Mayflower moved with a certain appearance of life, even when going slowest. What the boats can do in a better breeze and over an open course is by no means indicated by this race, but as far as very light weather and smooth water is concerned Mayflower must certainly be rated far above her rival. Throughout the entire race she was beautifully handled, the honors both at the tiller and the halliards going to her. That Galatea might have done much better at the start is the opinion of all who witnessed her sailing, but even with this difference she would have been badly outsailed in such weather. The second race, to-day, is over a windward or leeward course outside the Hook.

LIEUT. W. HENN.

LIEUT. W. HENN, R. N., owner of the cutter Galatea, was born in Dublin in 1847, his father being a landed proprietor in County Clare. He entered the Royal Navy in 1860, and served as naval cadet and midshipman in the line of battle ships Britannia and Trafalgar, and as midshipman from 1862 till 1866 on board the crack frigate Galatea, during which time she was employed on the North American Station. It was at this time Lieut. Henn first landed in America and experienced that hospitality which is now being repeated.

From 1867 till 1871 he served as Lieutenant on board H. M. S. S. Daphne and Dryad, during which time he took part in the Abyssinian war and was also employed in the suppression of the slave trade off the coasts of Arabia, Zanzibar and Madagascar. While engaged in this service, in command of the ship's boats, he had some startling adventures and succeeded in capturing or destroying 17 slave vessels.

In 1872 on his return from Africa he was selected from many volunteers to be second in command of an English expedition which was dispatched to search for and relieve the celebrated Dr. Livingston; but soon after leaving Zanzibar (he being then in command of the expedition) he fell in with H. M. Stanley, who had already accomplished the object for which the Lieutenant had been sent. Much disappointed at having to break up the expedition, he returned to England, and afterward served in the flag ship at Plymouth. In 1875 he was, at his own request, placed on the retired list of his rank, and then took to yachting. He has since owned the 30-ton cutter Minnie, in which he kept afloat all the year around, making among others a voyage around the Mediterranean in the winter. In 1877, the Lieutenant took unto himself a wife, who is even more devoted than himself to a seafaring life. Finding a 30-tonner rather small for long cruising they bought the yawl Gertrude, of some 80 tons, and for 7 years made her their home. During that time the Gertrude sailed nearly 50,000 miles, most of which was done in the Mediterranean, where the Gertrude also won many prizes in the International regattas at Nice and elsewhere. In 1884 the Galatea was at Mrs. Henn's desire designed by Mr. J. Beavor Webb, for the purpose of challenging for the America's Cup, a project which for many years both of them had intended to carry out.

BEVERLY Y. C.

114TH REGATTA. FIRST OPEN RACE, MONUMENT BEACH, SEPT. 4.

THE day opened with a good E. by N. wind, shifting to N. E. All but Petrel started with single reefs, she made a mistake by starting double reefed. Course for first and second classes, leaving black buoy 3, Scraggy Neck buoy and Bird Island buoy on starboard, and return, 11 miles. Course for third class, leaving black buoy No. 3, Abeal's Ledge buoy No. 1 and Dry Ledge buoy on starboard, black buoy No. 3 on port, and return, 7½ miles. Judges: F. Elliot Cabot, R. P. Owens and Wm. Nichols. Judges' yacht, Maude, B. Y. C. Following is a summary:

FIRST CLASS.

	Length.	Elapsed.	Corrected.
Quisset, R. B. Hiller, Mattapoisett	29.06	2 06 25	1 58 10
Creep, E. C. Stetson, Mattapoisett	30.05	2 06 41	1 59 18
Surprise, J. M. Codman, B. Y. C.	27.03	2 07 03	1 56 30
Mary, G. E. Phinney, Mon. Beach	29.06	2 07 27	1 59 12
Tramp, T. Aikin, Cuttyhunk	29.08	2 08 26	2 00 21
Hazel, J. C. Crosby, Osterville	27.05	2 10 36	2 00 14
Mollie, J. Hill, Mon. Beach	27.00	2 11 00	2 00 11
Myth, T. Parsons, B. Y. C.	27.04	2 11 26	2 00 59
Superior, W. Phinney, Mon. Beach	27.01	2 11 39	2 00 55
Emilie, Dan Crosby, Osterville	27.07	2 12 02	2 01 51
Almira, J. F. Phinney, Mon. Beach	29.00	2 13 15	2 04 31
Mabel, S. H. Perry, Mon. Beach	27.04	2 18 27	2 08 00
Whisper, S. M. Weld, B. Y. C.	27.05	2 24 16	2 15 31

SECOND CLASS.

Crawl, J. E. Hiller, Mattapoisett	26.04	3 08 57	1 57 24
Cadmus, H. E. Perry, Mon. Beach	26.04	2 14 06	2 02 33
Grimalkin, E. L. Dorr, Jr., B. Y. C.	24.07	2 15 01	2 01 25
Echo, A. W. Baker, No. Chatham	24.10	2 17 26	2 04 08
Falka, D. P. Robinson, Wareham	25.02	2 20 11	2 07 18
Tantrum, C. W. Amory, B. Y. C.	25.01	2 20 29	2 07 30
Lestris, J. Crane, B. Y. C.	24.02	2 20 39	2 06 32
Flirt, G. H. Lyman, Jr., B. Y. C.	25.02	2 21 57	2 08 34
Beatrice, M. Curry, B. Y. C.	24.10	2 22 16	2 08 58
Harold, W. Crosby, Osterville	25.02	2 23 00	2 10 07
Success, J. F. Perry, Mon. Beach	24.07	2 23 36	2 20 00
Romp, E. B. Robinson, Pocasset	25.07	2 24 22	2 11 58

THIRD CLASS.

Fannie, F. A. Sargent, B. Y. C.	23.10	1 38 26	1 28 31
Eleanor, John Parkinson, B. Y. C.	13.08	1 39 46	1 29 42
Mertie, A. F. Crowell, Woods Aole	23.06	1 40 50	1 30 37
Petrel, G. W. Richards, B. Y. C.	20.07	1 46 49	1 33 46
Alice, A. F. Marvel, Pocasset	21.00	1 48 37	1 36 01
Secret, S. M. Weld, B. Y. C.	22.09	1 48 49	1 37 55
Crab, J. Whiting, Marion	16.11	. . .	. . .
Mist, J. M. Clark, Marion	16.10	. . .	. . .

All the boats are cats. Grimalkin is a new boat, modeled by Edward Burgess. Her sister boat, Sprite, took first prize in the club race at Marblehead the same day. Prizes were as follows: First Class—1st, Surprise; 2d, Quinet; 3d, Mary. Second Class—1st, Crawl; 2d, Grimalkin; 3d, Cadmus. Third Class—1st, Fannie; 2d, Eleanor; 3d, Mertie.

115TH REGATTA. SECOND OPEN REGATTA, MARBLEHEAD, SEPT. 4.

Although not quite as large as the B. Y. C. race of '83, the affair was a great success, 135 yachts crossing the starting line, making it the second largest race ever sailed; while the weather was better for a true test of speed than in '83. The wind was a strong whole-sail E. by S. breeze, and the easterly winds of the last few days had kicked up a good deal of a sea outside.

The racing boats began to drop into the harbor on the 3d, and were coming in all day Friday, although the heavy sea of that day prevented many of the smaller boats coming down.

Saturday A. M., early, a thick fog seemed about to ruin the race, but by 8 A. M. a brisk northeaster had cleared it off, and the bay was seen to be dotted with boats beating down. The beat down from Boston was a long one, however, and many of the smaller boats arrived too late to start.

By 11 A. M. the judge's yacht, Mr. Edgar Harding's schooner Priscilla, E. Y. C., was in position, as were all the stake boats; and as the wind had hauled round to E. by S., where it held true and stationary throughout the race, the course numbers were run up and promptly at 12:30, the advertised time, the starting gun was fired; followed 5m. later by the gun for first class, the other guns following at 10m. intervals.

The little imported cutter Shona, sailed by Capt. John Barr and a crew drafted from Clara, was dodging right along the line as the gun fired, and was off like a flash, swinging her No. 2 topsail. She was followed eleven seconds later by Shadow, with Capt. Aubrey Crocker at the wheel, carrying club topsail. Mabel crossed between these two, then came Maggie and Neptune, with the rest of the class close behind.

The course gave them a beat out to Half Way Rock, then a long run up the coast to a stakeboat off the Spindle, at entrance to Swampscott Harbor, then a long thrash to windward, back to Half Way and a run home.

Shadow and Shona easily distanced the others, and had it hot and heavy between them, both boats being handled for all they were worth. Shona seemed to have a trifle the best of it beating out of harbor, but at the Spindle they were close together, and some fine work was indulged in, the cutter got the best of it, and spun out a little lead on the beat back, which she rather increased running home, and finally won by 3m. 16s., corrected time, after one of the best races ever sailed here.

Folly, Cannon and Lizzie P. Daly led off in second class, then they came by so thickly that the judges had enough to do to get their times, twenty-nine boats crossing in this class. In third class Seabird led off, and nine others followed inside of a minute, thirty-two boats going off in this class.

As the fourth class gun sounded, Tartar, which was right on the line, was off at once, with Tom Cat two seconds behind her; and then the judges had the hardest work of the day. Bluebell, sailed by a stranger, as her owner was one of the judges, started in wrong class, and as she crossed the line Peacemaker got her bowsprit inside Bluebell's mainsheet, swinging her round into the judges' boat, where she hung for two or three minutes, while some fifteen or twenty boats were crossing the line beyond, forty-five boats in all going off in fourth class. In fifth, Dolphin and Sassacus led off neck and neck, and nineteen boats followed them.

The fourth and fifth classes sailed a 7½-mile inside course, with a long beat down the Beverly shore. The first boat in was Tom Cat, closely followed by Tartar, then the others in a long string. Soon after this a big topsail appeared over the neck, with another just astern. They were the leaders of the third class, who had beaten out to Half-Way Rock, then a run to S. E. breaker and a reach to the mouth of the harbor.

The leader proved to be Seabird, and the second she rounded the point she broke out her spinnaker and crossed the line first, with the new Burgess sloop Sprite under similar sail close astern, but the latter having started long astern was an easy winner.

Second class had a long course, a beat out to Half Way Rock, a long run dead before wind to Egg Rock stakeboat, a dead beat to Tinker's Island and a run home. Atalanta with a broken spinnaker pole, held in place by three of the crew, was first over the line, closely followed by Eva, who wins on allowance. Lizzie F. Daly was the first keel home and wins subject to protest.

It was some time before the first class boats arrived. Finally a topsail and head of a spinnaker came in sight over the land, and as she cleared the point it was seen to be Shona, and crossed the line amid a noisy salute from the tugboats and excursion steamer Stamford.

Names of ports are written in full, clubs abbreviated as follows: A., American. B., Beverly. C., Corinthian. B. H., Bunker Hill. D., Dorchester. E., Eastern. G. H., Great Head. H., Hull. J., Jeffries. L., Lynn. Q., Quincy. S.B., South Boston. Sandy B., Sandy Bay. S. Bay, Salem Bay. W. L., West Lynn. Summary as follows:

Flirt, Jay-Eye-See, Marion T., Nancy D., Imp, Ina, Rocket, Chemaun, Idyl, Nonpareil and Rudolph did not start.

List of Winners: First Class Centerboards—1st, Shadow; 2d, Magic; 3d, Violet. First Class Keels—1st, Shona; 2d, Percy H.; 3d, Viking. Second Class Centerboards—1st, Eva; 2d, Atalanta; 3d, Black Cloud. Second Class Keels—1st, Lizzie F. Daly; 2d, Ione; 3d, Thialí; 4th, Cricket. Third Class Centerboards—1st, Sprite; 2d, Goodluck; 3d, Nora; 4th, Tyrant. Third Class Keels—1st, Witch; 2d, Kitty; 3d, Saracen. Fourth Class Centerboards—1st, Tom Cat; 2d, Tartar; 3d, Zoe; 4th, White Wing; 5th, Em Ell Eye. Fourth Class Keels—1st, Zetta; 2d, Vesper; 3d, Nixie; 4th, Carmita; 5th, Hard Times. Fifth Class Centerboards—1st, Alpine; 2d, Flora Lee; 3d, Dolphin; 4th, Mamie; 5th, Mirage.

Judges: Daniel Appleton, W. A. Jeffries, John Dane, Gouverneur Kortright, Geo. A. Goddard, E. L. Lodge, W. Lloyd Jeffries.

It is to be noticed that the four new Burgess boats average well. Sprite and Nora take first and third in third class centerboards, and Nixie takes third in fourth class keels. Beth did not return. The new sloop Ramona, built by Harley, of Monument Beach, entered, got almost on to the line, then bore off and crossed just beyond the line. She sailed the course and crossed again beyond the line. Her time was about ten minutes behind Shadow.

Following protests were made, to be decided later, all prizes affected being held in abeyance for the present: Seabird vs. Nora, foul. Ione vs. L. F. Daly and Maggie vs. Violet, for cutting inside Pig Breakers. Vera vs. Carmita and Vesper, length. Fancy vs. Seabird, length. Mamie must also be remeasured.

Grimalkin has been remeasured, 21ft. 7in., so takes second prize from Lestris by 6s. in race of Aug. 21. Atalanta and Bessie sailed off their tie for the pennant in first class in the above race, Atalanta winning.

BLUE WITH A GOLD CASTLE.

SHONA--SHADOW.

THE races between Madge and Shadow left the question so far an open one that the friends of each yacht have for five years held different opinions on the matter. Perhaps a little light may be shed on the question by the race of Saturday at Marblehead, in which another Watson boat, this time a five-tonner instead of a ten, met the Shadow and beat her squarely beyond doubt or cavil. Shadow has been generally admitted to be the fastest boat of her size and type in our waters, and her claim to this position cannot be questioned, as Wave's and Schemer's was after their defeat. As well-known she is a centerboard sloop 33ft. 6in. l. w. l., 14ft. 4in. beam and 5ft. 4in. draft, while her rival, a thoroughbred cutter of extreme type, is 33ft. 6in. l. w. l., 5ft. 9in. beam and over 6ft. draft. Shadow is 36ft. 8in. over all, while Shona is 42ft., hence the small boat gives time to the large one under a rule of length plus 1-5 overhang. The little cutter, handled by John Barr, beat the famous sloop, sailed by Capt. Crocker, 4m. on even time, and under a length and sail area rule would have made a far better showing.

LARCHMONT Y. C., FALL PENNANT REGATTA.—On Sept. 4 the Larchmont Y. C. sailed the annual fall pennant regatta in a strong S.E. wind over the club course, from Larchmont to Execution buoy, thence to Matinnicock buoy, thence to Captain's Island and back to finish, thence to Execution buoy, thence to finish for Class II., 22 miles. For the other classes from Matinnicock to starting line, thence to Execution and back to finish, 17 miles. Only 8 yachts started as follows:

		Length.
	CLASS II.	
Santapogue	Arthur Hunter	40.08
Mona	Leslie Cotton	38.06
	CLASS IV.	
Zoe	Oswald Sanderson	22.08
Gannet	Oliver Adams	21.10
	CLASS V.	
Mimic	George G. Murry	27.04
	CLASS VIII.	
Orienta	G. I. Seney	21.11
Nezle	Com. W. S. Alley	20.00
Dorothy	W. H. Coombs	20.06

The whistles blew at 11:47 and 11:57. The start was made as follows:

Santapogue	11 49 01	Volusia	11 56 10	
Orienta	11 49 01	Mimic	11 57 16	
Mona	11 50 06	Zoe	11 58 59	
Nezle	11 50 33	Gannet	11 59 00	
Dorothy	11 52 36			

There was wind and sea enough to make lively work and reefs were turned in with difficulty. The times were:

	Start.	Finish.	Elapsed.	Corrected.
CLASS 2.				
Santapogue	11 49 01	3 55 00	4 05 59	4 05 59
Mona	11 50 06	3 58 30	4 08 24	4 06 06
Volusia	11 56 10	Disabled.		
CLASS 4.				
Zoe	11 56 00	4 17 09	4 20 09	4 20 09
Gannet	11 57 00	4 16 54	4 19 54	4 18 17
CLASS 5.				
Mimic	11 57 00	Withdrew.		
CLASS 8.				
Nezle	11 50 33	4 17 53	4 27 20	4 23 16
Dorothy	11 53 36	4 34 00	4 40 24	4 35 09
Orienta	11 49 01	Disabled.		

Orienta capsized and Volusia carried away a shroud and withdrew. The judges were Messrs. J. T. Fisher, E. J. Greacen and F. C. Griffith.

THE CAPSIZE OF THE FROLIC.—Last week, when bound to Marblehead, the yacht Frolic, lately sunk and raised in Boston harbor, picked up a headless body, supposed to be that of a boy who was lost from her when she sank. We have not yet learned the previous history of this boat. Cannot some of our Boston readers furnish it?

THE GALATEA'S MONKEY is an expert sailor and "mans" the yards as well as the captain himself. Landswomen, when they call on Lieut. and Mrs. Henn, do not know which the most to admire, this cute little beast, the shipshape saloon, or the curiosities de voyage collected by Mrs. Henn and which she kindly exhibits to favored visitors. The monkey, however, is regarded as the great gun of all, but time will show if he is the mascot the sailors think him when "mug" day arrives.—*Boston Herald.*

"I AM WELL AND STRONG and don't need to insure." Queer logic! When you are sick and broken down you *can't* get insured. Now is the time to insure—in the Travelers, of Hartford, Conn., best and cheapest of sound companies.—*Adv.*

The Fluttering Fly.
PATENTED MAY 4, 1886.

THE FLUTTERING FLY.
Patented May 4th, 1886.

With the exception of our Patent Compensating Reels and Section Bamboo Rods which we introduce to the public, this fly, invented by Mr. Wakeman Holberton, is unquestionably the greatest and most radical improvement in fishing tackle ever made. The chief points of manifest superiority of this method of tying flies over the old-fashioned way are:

1st—The wonderfully life-like and fluttering motion this fly has when moved on the water.

2d—The fish is almost certain to be hooked if it touches the fly.

3d—Any of the present favorite combinations of color and form can be tied in this way. Thus, those who believe that fish are attracted by particular colors or forms of fly, can have their old patterns in the patent style.

4th—These flies not only offer less resistance to the wind in casting, but more resistance to the water in drawing. Hence one can do as good work with a small hook tied this way as a large hook tied as before. Experience proves that flies dressed this way can be tied on hooks two sizes smaller than one would use on old-fashioned flies.

We take this means of notifying dealers and fly-tyers that we shall prosecute any infringement of our rights under this patent to the fullest extent of the law. Our course, in regard to the protection of our patents and copyrights, is known to some people. We assure such people that the same old course will still be pursued by this firm.

We add a few extracts selected from the numerous and unanimously complimentary press notices of this fly. We could add many letters from well-known and expert anglers if we were willing to drag the names of private gentlemen into our advertisements.

Scientific American: "When so arranged the wings offer less resistance to the air in casting. As the fly is slowly drawn toward the angler the wings expand, and give it a fluttering, life-like motion, much more alluring to the fish."

Forest and Stream: " * * * more like a natural insect than the old patterns whose wings close when being drawn through the water. * * * Great merit lies in its superior hooking qualities. A fish cannot nip at the wings or tail, but swallows the hook before any part of the fly."

American Angler: "There is no question as to the killing qualities of this fly. All fish are attracted more by the action of the fly than by color or form. * * * This fly will certainly, when drawn against the current or over a placid pool, *seam* the surface with an attractive wake, and its expanded wings will create a fluttering motion, assimilating the struggles of a live insect. * * * We are told that few fish are lost by those who use this fly. We do not doubt it."

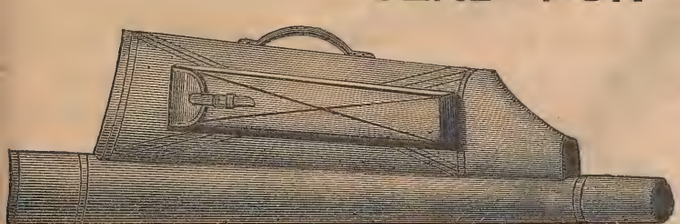
Every sportsman knows how much comfort and pleasure a perfect fitting hunting suit gives. We guarantee to furnish exactly this.



It is some years since we first placed on the market the Barnard Shooting Coat. It at once met with the approval of every sportsman who saw it. While it was considered at that time as the most complete shooting coat made, we have from time to time added little improvements which sportsmen know how to appreciate, and which has kept it far in advance of all competitors. The special features of the A 1 Barnard Shooting Coat are the game pockets, extending all the way around the skirt, and is divided into three sections, with a separate entrance to each. This admits of carrying game so that they will balance the load of shells if they are carried in the pockets, or to place it so that it will offer the least inconvenience possible to the shooter in walking. The shoulder pieces are padded with a soft, springy material to prevent the gun when carried on the shoulder from bruising it. The collar is made of the softest corduroy, of the color to correspond with the coat (dead grass color), and the cuffs are also lined or faced with corduroy. After considerable study and experiment we now cut a sleeve so that the arms can be raised in shooting, and not lift the load of game and shells.

Please observe that every coat that we sell to the trade bears on the lining our trade mark.

Our line includes everything required to make a complete sportsman's outfit. To those living out of town, our measurement blanks will afford a perfect means of being well suited. Goods sent C. O. D. with privilege of examination, or post paid on receipt of price.

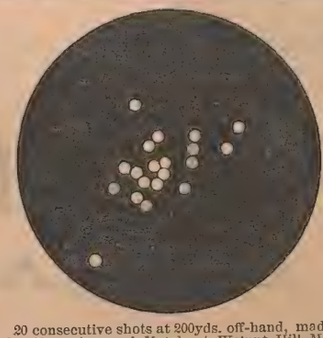
HARDER'S Patent Breech-Loading Rifle and Shotgun.

With Over and Under Barrels.

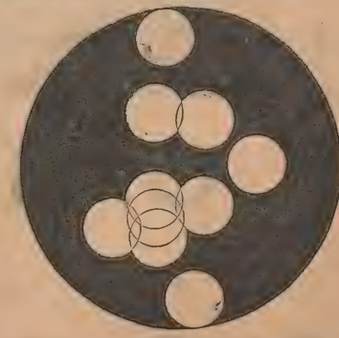
Pat. June 9, 1885.

Send for Descriptive Circular.



J. E. HARDER,
CLEARFIELD, PA.

These Guns are unequalled for Accuracy, Range, Safety, Workmanship, Balance, Style and Material.



This gun can be used for any purpose that any other two guns are used for. For the farmer, the marksman and the hunter, for both small and large game. They are made of the finest materials, with steel rebounding locks, low hammers, set trigger to rifle barrel that may also be used as a single trigger. Weight, 9 to 12lbs., checkered pistol grip, oiled or varnished stock, line engraving. .32, .38 and .44-calibers kept in stock, using Winchester cartridges, 12, 16 and 20-gauge shot barrels. Price, $45 for any length barrels. If pistol grip and engraving are not wanted price will be $5 less.

10 consecutive shots at 200yds. off-hand, Dec. 18, 1885, with Ballard 6½ Rifle, 38—55, by Wm. P. Gage, Saratoga, N. Y. Highest recorded score in the U. S. on the American Decimal Target, counting 95.
Cut is one-quarter size.

20 consecutive shots at 200yds. off-hand, made in the Sharpshooters' Match at Walnut Hill, Mass., Dec. 26, 1881, by H. G. Bixby, of Nashua, N. H., being two consecutive scores counting 115 each on the Mass. Target. These were made with a Ballard 6½, 38—55. *Cut is one-sixth size.*

10 consecutive shots at 200yds. with rest, made at Guttenberg, N. J., on May 8, 1886, by M. Dorrler, using a Ballard No. 10 Rifle, 38—55.
Cut is full size.

Pictures of the Field.

Phototypes of the Pictures by John M. Tracy.

MR. JOHN M. TRACY has won a reputation for his faithful portraits of dogs and his beautiful and sympathetic delineations of the incidents of the field. All the poetry and grace of a pointer or setter in the stubble have been caught with the eye of the artist and the enthusiasm of the sportsman, and transferred to the living canvas with a skill which has given Mr. Tracy a name above that of any other American artist in the same field.

We have for sale a series of admirable phototypes (photographs in printer's ink), of these paintings, which preserve with admirable fidelity the spirit of the originals. The phototypes are 15x20 inches. They are as follows:

Title of Picture.	*Name of Dog or Dogs.*
Quail Shooting in Tennessee,	Gladstone and Peep o' Day
On the Grouse Moor,	Emperor Fred
Prairie Chicken Shooting in Minnesota,	Dash III. and Countess May

The Kennel.

Eastern Field Trials Club.

EIGHTH ANNUAL MEETING

To be held at

High Point, North Carolina.

OPEN TO THE WORLD.

Commencing Thursday, Nov. 18, 1886.

Trials to be run on quail under E. F. T. Club Rules.

ORDER OF RUNNING:

MEMBER'S STAKES.

Open only to club members, each entry to be owned three months prior to closing of stakes, and handled by the member making such entry. First prize, cup, value $100, to be known as Eastern Field Trials Cup; 2d prize, the Sanborn Cup, value $75; 3d prize, a piece of plate, value $50. Entries close Oct. 1, 1886. Each member allowed one entry free; each additional entry, $10.

EASTERN FIELD TRIALS DERBY.

Open to all setter and pointer puppies whelped on or after Jan. 1, 1885. Purse, $700. First prize, $400; 2d, $200; 3d, $100. FOREST AND STREAM donates $50 to handler of winner of 1st. $10 forfeit; $10 additional to fill; nominations closed May 1, 1886. The club offers the Eastern Field Trials Breeders' Cup, value $100, to the breeder of the winner of 1st in Derby, the breeder to be the owner of the dam of such winning puppy at the time the bitch was bred to the dog.

ALL-AGED POINTER STAKES.

Open to all pointers, except any first prize winner of any All-Aged Stake, or winner of any special pointer cup in All-Aged Stakes at any recognized field trials. First prize, $300; 2d, $150. $10 forfeit; $15 additional to fill; Entries close Oct. 1, 1886.

ALL-AGED SETTER STAKE.

Open to all setters except any first prize winners of any All-Aged Stake, or winner of any special setter cup in All-Aged Stakes at any recognized field trials. First prize, $300; 2d, $150. $10 forfeit; $15 additional to fill; entries close Oct. 1, 1886.

CHAMPION SWEEPSTAKES OF ALL-AGED STAKES.

Open to all previous winners of first prizes at any recognized field trials. $10 forfeit; $15 additional to fill; entries close Oct. 1, 1886, except for winners of 1886, which are to qualify right previous to running at $25. Two entries to fill to make a race. Club adds $100 cash and American Field donates a valuable silver cup, value $100, all to go to winner of first.

NOTICE.—Any trainer or owner working or shooting over any dog or dogs entered for trials south of the track of Piedmont Air Line, for a distance of 7 miles above and below and back of Hotel Bellevue, from Oct. 1 until conclusion of trials, shall forfeit all entrance moneys, purses and cups.

Good board at hotels from $1 up per day. Transportation to and from the grounds at moderate prices.

B. F. WILSON, President.

For further particulars and all communications address WASHINGTON A. COSTER, Sec'y & Treas., Box 30, Flatbush, Kings Co., N. Y.

ANSWERS TO CORRESPONDENTS.

THE NEW GOVERNMENT OF THE PARK.

AS we announced at the time of the adjournment of Congress, that body failed to provide any funds for the protection of the Yellowstone Park during the ensuing year. The result of this omission was to throw out of office the Superintendent and his ten assistants and so to deprive the Park and the public, to whom the Park belongs, of the services of an able and energetic official, who commanded a trained force of competent and faithful men. These public servants have now been replaced by a body of other guardians. The law which governs the Park, so far as it is governed at all, provides that the Secretary of the Interior may call upon the Secretary of War for troops to assist in the care of the Park, and when Mr. Lamar learned that no appropriation had been made for the salaries of the Superintendent and his assistants and for contingent expenses, he requested the Secretary of War to furnish him with troops. This was done, and Captain Harris of the First Cavalry assumed the charge of the Park a short time since.

The public will naturally inquire, what changes, if any, have followed the displacing of the civil by the military protectors of the Park. Are the forests still protected from fire, the game from the cupidity of the skin or meat butcher, the geyser craters and hot spring incrustations from the brutal vandalism of selfish or unthinking tourists and specimen hunters? Are things going on in the good way to which we have become accustomed under Col. Wear's superintendency? Or is there a change for the worse? Are fires sweeping over the mountains, destroying the green timber and burning out the forest floor? Is the game being killed within the Park? Are the natural curiosities being broken down and destroyed? These are questions which the public will ask.

Well understanding the importance of having exact and reliable answers to all these inquiries, the FOREST AND STREAM recently despatched to the Park a competent correspondent with instructions to carefully examine into all these matters, to get at the truth with regard to them, at no matter what cost of time or money, and to report fully to us the result of his investigations. The person selected for this work is one who has for many years been familiar with the reservation, who has followed with care its history since the passage of the organic act setting it aside as a National Park, and who, from his familiarity with the region and with its history is peculiarly fitted for the task set before him.

The first portion of his report has just been received, and it reveals a condition of things in the Park which may fairly be called deplorable.

Upon the withdrawal of the civil force, the first of last August, a large number of people seemed to take it for granted that all protection for the Park was at an end. Early in that month forest fires were started in a number of localities. A party of Lemhi Indians are reported to have fired a great extent of country near the eastern line of Idaho in or very near the Park, and these fires are spreading rapidly, involving a great extent of country. Fires have been started on the northern slope of the Town Creek Range in the Park, and on Black Tail Deer Creek. The first one noticed on Black Tail was so isolated by E. Wilson, who had been one of Colonel Wear's most efficient assistants, that it could not extend, and must have burned out; but almost immediately another was discovered within three-quarters of a mile of the same place, and this, although four men fought it for some time, soon got beyond their control and at last accounts was spreading fast and doing an incalculable amount of damage. On the northeast side of the Park things are no better. Fires are raging in the neighborhood of Soda Butte, and on Slough Creek, and there is reason to believe that these were set intentionally by persons who laugh at the troops, and defy them to capture them in the act of firing the timber. They know perfectly well that they are safe from the militia. Through the energy of Wm. McLellan, as already noticed in FOREST AND STREAM, three persons have recently been captured, who, if they have not set the timber on fire, have at least displayed criminal carelessness with regard to their camp-fire. These men were on their way to Cooke City and left a large camp-fire in such a position that there is every reason to believe that if it had not been extinguished by McLellan it would soon have originated a new fire in the Soda Butte region. Although McLellan had been thrown out of office by the neglect of Congress to provide for the Park, he had not therefore lost all interest in the reservation. He had now no power to make arrests, but the soldiers who had been stationed at Soda Butte had this power, and procuring assistance from them, he followed up the travelers, captured them and brought them into the Hot Springs on the evening of Sept. 1.

But what shall be done to these men if they can be convicted of a violation of the regulations? Congress has enacted no law providing for the punishment of crimes or misdemeanors within the Park. No penalty more severe than expulsion from the Park can be visited upon them, and when they shall have been escorted beyond its borders there is nothing to prevent their returning to it as soon as they may feel inclined to do so.

So much for the fires, of which more are now burning in the Park than have occurred during all of Col. Wear's administration.

With regard to hunting, things are no better. Hunters and tourists appear to believe that all restrictions are removed. Much game has been killed in the Park, and hunting parties pass through it scarcely concealing their intention to hunt within its limits. A New York clergyman, Mr. W. S. Rainsford, by his own statement is known to have recently killed an elk on Pelican Creek. Jack Baronet saw two Cooke City men, named Van Dyke and Nichols, leading out of the Park two pack horses loaded with meat. As it was after his term of office had expired, he had no power to make arrests. Captain Kingman, the engineer in charge of roads and bridges in the Park, recently found on Black Tail Deer Creek the freshly-killed remains of an elk, from which most of the meat had been taken. Our correspondent has seen in the Park tourists on horseback armed with rifles who professed to be in search of game, "but," he remarks, "they were the kind of hunters who expect to find the game sitting down by the side of the trail waiting to be killed." Numerous other instances might be cited illustrating the present utter disregard of the regulation which forbids shooting in the Park.

It is impossible at present to go further into this subject, but hereafter we shall give other instances of the utter contempt in which the laws governing the Park are now held.

In another column is printed a communication from Col. Wear, in reply to the charges made against him in the Park debate in Congress. It is a subject of much regret that the Park should have been deprived of the intelligent and careful supervision of so competent and efficient a Superintendent as Col. Wear proved himself to be during his term of office. It is a huge piece of folly for the Government to let loose the vandals upon the Park, and nothing less than a national disgrace that Col. Wear's force of assistants should be succeeded by soldiers who go off on drunken sprees, and in the people's pleasure ground "hold up" stage coaches of tourists in regular old-fashioned "road agent" style.

MATCH RACES OVER THE N. Y. Y. C. COURSE.

NOW that the New York Yacht Club has vindicated its power to hold one of the Cup races over the club course on New York Bay, in spite of a general desire on the part not only of both contesting parties, but of yachtsmen generally that all the races should be over an open course, it is to be hoped that they will in the future be guided by the experience of this race, and abandon forever the inside course for match races. For the annual regatta it answers well enough; the ladies can see the race; the steamers can cut across and easily keep up with the yachts in any wind; and taken year in and year out the inevitable flukes are fairly distributed. The conditions of a match race, however, are very different. Every fair-minded person wishes that both yachts may have exactly the same chances of wind and weather, something that never happens over this course. Early in the season, when the matter came up for discussion, the Cup Committee promised to use their utmost efforts to secure a clear course. As we predicted at the time, this has proved simply impossible, their polite request to tug and steamboat captains to keep clear of the yachts was about as effectual as it would have been for them to have stood on the hill at Fort Wadsworth and made the request verbally. All happened as every one knew it would, tugs crossed the bows of the two yachts, a steamer ran close aboard of Galatea, and both boats suffered from the continuous wash and blanketing. It is not due to the efforts of the Committee but to kindly chance that the evils were about evenly distributed between the two boats, the result was not seriously affected, and very fortunately nothing occurred in the shape of an attempt to hinder the visiting yacht. Now that it is all over and the course has been generally condemned, the Regatta Committee express their regret that the steamers should have acted so badly.

The right of the New York Yacht Club to hold one race over the club course, or even to hold only one race in place of three, is undisputed; it is fully settled by the deed of gift, but here is a much broader view to be taken of the whole matter. The club is supposed to be working in the interest of true sport, in the promotion of a healthy competition among gentlemen. Is the New York Yacht Club course a fair neutral ground for a match, giving full and equal chances to both competitors, and if not why do they adhere to it? The first question has been answered negatively by the thousands who saw the last race, the latter question can only be answered by the New York Yacht Club.

THE FISH AND GAME COMMISSIONERS OF OHIO advise us that a convention is proposed of the citizens of that State to adopt some measures for supporting the Commissioners in their efforts to conserve the game and fish. There is abundance of the right material in Ohio, if it could be brought together and united for the purpose. We hope to record a large gathering at the convention.

THE PROPOSED MATCH between American and English trap-shooters will give an impetus to the growing interest in that sport; and there is shooting talent enough in this country to take care of the trophy competed for.

"OUR NEW ALASKA," the book of travel and description, by Charles Hallock, announced some time ago has, after a series of vexatious delays, at last come from the press and is now ready.

"THE STUDIES OF MASTER PETER," a famous French book on forestry, has been translated into English and will be among the early announcements of new books from this office.

THE CREEDMOOR MEETING is now in progress. A full report will be given in our next issue.

IX.

CAMP GANGES, Lower Gurhwal.—Reaching camp after our night of weary watching for the man-eater, G. went to his own room to dispose of his correspondence, of which a goodly file awaited him, and to pore over his papers, while I summoned the sheristidar and sat down to my arrears of work, for I knew that G. would be dragging me all over the place during the ensuing week. He turned up about 3 o'clock, rod in hand, and an hour later I was glad to follow his example. He was nowhere in sight, so I bent on a gold spoon, and fished away for an hour in a deep hole full of fish just below the bungalow, without getting a run. Wearied at length I tried a succession of holes further up stream, with no better luck.

Fishing has this disadvantage over shooting, that you can have no sport without the voluntary coöperation of the fish; but it has this advantage, that fish are fickle, and may join in at any unexpected moment. I don't absolutely assert that I was influenced by this train of philosophy in returning to the first hole. I believe, in fact, my mind was mainly active on the subject of the man-eater and our failure to come to terms with him, but whether by any thread of philosophic reasoning weaving itself with my meditations, or simply "promiscuously," I returned to the first hole, cast just where the rapids entered it, and struck my fish the first cast. The hole was right under the high bank, so that I could not get down stream, on my side, and finding I had a heavy fish on, I walked across the stream, nowhere much more than a foot deep. The fish never left the hole, which was about 80yds. long and 20yds. wide. He dashed about in it in lively style for about ten minutes, and then came in to take a look at me, which apparently produced no very favorable impression, for he was away again in good style. This last round exhausted him, and when he once more yielded to the reins it was unconditionally, and I soon had him on the dry shingle. Reaching the bank I saw G. approaching, his man apparently well laden, and waiting for them to join me, I found he had five fish, the weights of which he requested me to assess. I gave a seven, three tens and a fifteen, and estimating my own at twenty pounds, asked G.'s verdict. He declined an opinion, but produced his patent balance, and weighed the fish separately, getting an eight, two nines, an eleven and a sixteen; my own was eighteen pounds.

Charley turned up soon after, and we sat down to a good forester's dinner of venison soup, fish, corned beef, black partridge and curried peacock. G. was excessively put out about the man-eater, and was scarcely able to touch on any other subject the whole evening, after Charley's adventure had been discussed and commented on. He was convinced that the beast had heard us coming, and either slunk off at once to return no more or perhaps lain in hiding and watched the whole process of muchan building before he stole away. In this I agreed with him, for if the beast had gone off to drink before we came, he would most assuredly have come back. At one moment G. was almost resolved to go straight back the next morning and see if the kill had been touched since. Then there was a lament that I had left the strychnine in the howdah when we deserted the elephants. The final conclusion of it all was that there was no safe clue to follow up, and would be none until we heard of another kill, and as G. had work on the Ramgunga, the man-eater was necessarily postponed for another opportunity.

The next morning I took G. along with me to inspect the firelines, which we got over by 10 o'clock, and being then seven miles up stream we decided to come down the lower bank, inspect the river with an eye to my proposed clearing operations, and do some shikar. Charley was taken along with us, as his opportunities for getting an elephant mount were few, and G. had determined that he was not to get an elephant for the first season, nor indeed so long as his work should be concentrated in one subdivision.

We devoted an hour to the quest of tiger, and had allowed many hog-deer to escape unmolested, when at length a good stag rushed out and stood at twenty yards. G. fired, the beast made a startled motion, pricking his ears but never turned his eyes toward us, and G. fired a second shot; beyond a quick turn of the head and ears there was no other movement; the stag, startled at the report, but unable to determine whence it came, stood irresolute, while G. fired shot after shot. I looked on laughing until the tenth shot, when Charley could stand it no longer, and dropped him with a well-directed shot from his smooth-bore. G. looked pale with vexation, and my laughing didn't improve matters much.

"Did you ever see your rifle tested at a mark?" I asked. "Oh, the rifle is right enough," he said. "I suppose there's something wrong with me this morning." "I don't know," I said, "every shot went over, and if you test your weapon at 20yds. at a mark, I believe you will find it rise six inches or nearly." This was the true explanation, and as soon as G. realized it he was himself again. A double express with a high trajectory may make a good bag in able hands, and account for many animals at short distance, shot on the run, with the sportsman above his game, and G. had never even thought of making allowance, although he was an old sportsman and a good shot, but a steady pot, broadsides on, at less than 20yds., left nothing to chance.

A little later Charley bowled over a hind, which set G.'s tongue going, and when on opening her she proved with fawn, the lecture was renewed and driven home forcibly. We next took a long stretch of the river, and taking the elephants midstream, I pointed out the amount of work necessary for a clear mid-channel. While still midstream G. caught up his rifle and fired. Following the direction of his eye, I caught sight of a stag's head and shoulders as he peered out from a tall clump about eighty yards off, and saw him wheel short round at the shot; but he hardly got his own length before he fell over and had nearly done struggling when we came up.

It was now long past noon, and loading our stag we pushed on for camp, which we reached without further adventure; in fact, I kept G. near the river's bank at all but the angles, and as we got down stream there was no cover very near the river.

Getting home we went for our bathtubs while breakfast was being prepared, and after the meal was disposed of G. and I sat down to a discussion of my proposal of river clearance. There was no provision in the budget for the outlay, but I estimated to do it for four thousand rupees; to save two thousand on timber carriage, divest one thousand from fire lines, and charge the last thousand on the first day of the new official year (April 1) if G. would guarantee to secure sanction. G. had already discussed my proposals at headquarters and secured provisional sanction, subject to his own approval, so impressing on me that he had not time to go into the matter thoroughly and that all responsibility of failure or mistaken estimate must rest on my head, he bade me go on with the work, promising official instructions on his return from headquarters. I sent off for men at once, and the next morning commenced with fifty coolies which were increased to a hundred by evening; I spent the day out with Charley initiating him in the work, and by evening we had opened up a good rafting channel between the holes below the bungalow, and another hole lower down. In the evening I saw two bamboo contractors and agreed with them to let them cut five hundred thousand bamboos in a virgin forest up stream, to clear the river for them to be rafted down to Boksar, and to transport them myself from Boksar down, for the privilege of using them as floats. This settled I announced myself ready for departure, and G. at once gave the word to march the next morning.

Leaving Charley with plenty of work on hand in river and fire path clearances, keeping stock of sawn timber got out by our own men, both for export and in execution of local requisitions and with instructions to send me a daily budget of information under all heads, I once more set off on my rambles Gangesward. G. proposed a day's pig sticking *en route*, and as my hill pony was not fast enough, he offered me a mount, so we took our spears along with us. The first day's march was a long one, about eight miles south, to the road, and ten miles west, and the direct line from Boksar, over so rough a country that we thought it better to make the detour. Reaching the road we rounded the spur which hemmed in the river on the right bank, skirting the base of the hilly ground in a northwesterly direction, that is above the road. Here we put up a good many jungle fowl and succeeded in bagging five. In the course of the march too, G. knocked over a four-horned antelope and I bagged a tiger cat, but although we put up a great many spotted deer, I saw but one stag and missed him ignominiously.

We got to the camping ground about 1 o'clock, hot and hungry, and saw that the camels had not long been in, for the tents were only in course of erection, but we soon forgot breakfast and everything else, on learning that the man-eater had bagged another victim, about twenty-five miles to the west, that is to say forty-five miles westward of where we had struck his last kill. The man who had brought the news stepped forward and made his salaam, and calling for chairs we sat down under a tree and heard his story. He described the locality as a valley about ten miles from the Ganges, and perhaps seven or eight miles in from the road. At between 10 and 11 o'clock of the day before, he and his father, who had come from the settled villages of Upper Gurhwal, had reached the valley, and were walking down it toward the Ganges, he in advance and his father about five yards behind him, on a narrow pathway fringed with high grass on either side, when he heard a long drawn aspiration like a sigh, accompanied with a slight rustling noise; he looked round and saw that a tiger had got his father by the back of the neck, and took to his heels without waiting to study further details. In answer to a question from G. he said his father made no cry, which was intelligible enough. When a tiger seizes his prey from behind he invariably gets his fangs on each side of the neck vertebræ, and the slightest twist renders death instantaneous, unless it be a buffalo or similar powerful beast. The victim is dead before he knows it.

And now what was to be done? G. gave orders not to remove the howdahs from the elephants, and proposed an immediate start; I objected that we should arrive in the evening without camp, and too late to do anything, and suggested as an amendment that we should start at midnight, reach the spot at daylight, beat the valley up thoroughly, fire it if we failed to put the beast up, and then rejoin our camp, which, starting very early, might make two marches and get in shortly after noon. G. was very impatient and restless for action, but the amendment was accepted, the howdahs removed, and in a little while we sat down to discuss the affair over a good breakfast.

In the afternoon I lay down and took all I could out of my charpoy, and maintained the same tactics after dinner, and was just beginning to doze off when the khansman appeared to announce "coffee ready" in G.'s tent. Everything necessary for breakfast—milk, coffee essence, beer, a cold loin of venison and bread—were all packed in the howdahs, and as soon as we had disposed of our coffee and lighted our pipes we mounted to our seats and away.

The journey was tedious; there was no moon, but the air was clear and the stars shone brightly, and we went on our way indifferent to the noises of the night. The jackal's howl, the leopard's deep noyaow, the stag's bellow, the startled rush through the underwood, fell on our ears by turns; but toward morning, just as we approached the branch road that led to our valley, the deep, low, guttural notes of a tiger moving on our right set us on the *qui vive*. He was traveling on a parallel line with us, and judging from the sound, no more than sixty or eighty yards off. Occasionally he would stop, for his walk was faster than ours, and once I was sure I saw his eyes gleam, and as we were then close to the branch road, I whispered to G. that if he would forge a little ahead the tiger would probably keep me company and give him a chance for a snap shot on the road. The next moment we were at the turning, and G. saw the beast clear the road at a bound, but had no chance for a shot. We heard the notes a little longer on our left, but they gradually grew fainter, and all was still. A few miles more, and the voices of the night were succeeded by the notes of birds greeting the first dawn; objects became more distinct, and there remained but one little saddle for us to cross before we reached our destination, when at once there burst on our ears the wildest babel of sound, of pain, of rage, of fury that ever mortal experienced or conceived. The high notes were unmistakably those of a tiger, and for a moment I thought a boa-constrictor must have got our late friend in his folds, but soon in the low notes we recognized the fierce wrath of some savage boar which had presumably dodged the first spring and was now doing battle for his life.

We had pulled up at the first sound, and G. now started into the jungle calling to me to come on; I called him back and begged him to let them have it out first; the battle was raging some 300yds. off, and after a whispered conference, we effected a compromise, deciding to steal up under cover of the noise and range ourselves for a shot at the fitting moment. We got up within 60yds. without disturbing the combatants who were too much occupied with their own pursuits to heed us, and concealing ourselves partly, behind a clump of bamboo, looked on at the spectacular concert. It was still too dark to make out details very distinctly, the tiger had hold of the boar about the ribs with his claws and had fixed his fangs in his withers, but the boar's head was under the tiger's chest, and although the combatants pushed hither and thither the relative positions were but little changed; all the tiger's efforts to throw his hindquarters off and get clear appeared in vain. By this time the general tone of the concert was double bass, both boar and tiger indulging in the low notes, but occasionally the tiger gave forth a yell of mingled pain and rage, and again reverted to the low notes and fought on. The elephants were now getting very excited, and could hardly be held in, the day broke far enough to render the whole scene clear, and G. tried to steady his elephant for a shot, but in vain, when presently the tiger relaxed his hold of fang and claw, and attempted to spring off, and the next moment, to my astonishment, he was on his back and the boar on him; it was a short moment of triumph; the tiger once more seized the boar in the embrace of his forepaws, when, quick as thought, he gathered his hindlegs up under the boar's belly, and as he stretched them out, cutting through flesh and entrails, the old boar fell over with a groan, still in his death agony crunching the entrails of the tiger. Seeing that the tiger was unable to rise, we took up our elephants, and as soon as we had quieted them a little, G. put in a shot in the tiger's shoulder which finished him. The tiger's belly was opened up the whole length, and half his entrails torn out and masticated.

Apparently the boar had been on his guard and wheeling sharp round and meeting the tiger on his spring, his tusk had ripped open the tiger with one stroke, and finding himself pinioned by tooth and claws he had made the most of his painful position, while the tiger crunched at his shoulder blade and tore his ribs and flanks. He was a powerful old fellow with formidable tusks, which I secured with some difficulty, having nothing better than a hunting knife to decapitate him with; but the day being now fully broken we determined to go after the man-eater without delay and leave boar's head and tiger where they lay for the present.

[TO BE CONTINUED.]

THE PARK SUPERINTENDENCY.

Editor Forest and Stream:

According to promise I herewith submit a statement of the charges made against me as Superintendent of the Yellowstone National Park on the floor of Congress by Mr. Henderson of Iowa and others; all of which charges are false, as I am able to prove by the records of the Department of the Interior and by some of the best men in Montana and Wyoming.

It is charged that "I have become interested in a coal mine, which is situated in the Park, and that immediately thereafter, no doubt with the knowledge of the Senator who introduced the bill, a bill was introduced in the Senate of the United States, which would cut off that portion of the Park, leaving it in my possession with a title." This charge is false and wholly without foundation. I am not interested in a coal mine in the Park nor anywhere else and never was. The bill cutting off the Montana strip, which is the portion of the Park referred to, was introduced by Senator Vest in the United States Senate on the 4th day of February 1884, during Mr. Arthur's administration and before I was appointed Superintendent of the Park. I am now and always have been opposed to cutting off that portion of the Park, and told Senator Vest so and asked him to have the bill amended in that respect, or that section stricken out. That section of the bill, I am informed, was written by Professor Arnold Hague, a member of the Geological Bureau, who had been stationed in the Park and who was familiar with all the lines, and he desired a change in the boundary line which would bring it down two miles south, so as to conform with the boundary line between the Territories of Montana and Wyoming. There is a coal mine just within the limits of the Park near the road leading from Mammoth Hot Springs to Cinnabar, from which the hotels at this place are supplied with coal. Last fall C. T. Hobart, General Manager of the defunct "Yellowstone Park Improvement Company," before he left the Park, put a man of the name of McMinn in charge of the mine, with instructions to hold it. This man McMinn kept around him a lot of congenial companions. I considered him an improper character to be allowed in the Park so I ordered him to move out. He appealed to Mr. Hobart, who wrote to the Secretary of the Interior, and the Secretary wrote me in regard to the matter. I replied that McMinn had been placed in charge of the coal mine by C. T. Hobart, for the purpose of holding the mine in case the bill cutting off the Montana strip of the Park passed Congress and became a law, and that I did not propose to become a party to any such scheme by allowing him to remain in the Park; all of which the files of the Department will show.

It has also been charged "that I am at the head of the 'Yellowstone Park Association,' a hotel company doing business in the Park, and have leased hotel sites at all the different places of interest for the purpose of creating a monopoly of the hotel business in the Park," all of which is false and without any foundation whatever. I have no interest and never had in any hotel or other company or association doing business in the Park, nor have any favors been extended to the "Yellowstone Park Association" which have not been extended to all others doing business in the Park; and for the truth of this statement I refer to the letter of Hon. C. Gibson, president of said association, to the *Pioneer Press* of August 10, 1886.

G. L. Henderson, who is a brother of Congressman Henderson of Iowa, is the instigator of all these charges, and was at one time an Assistant Superintendent but was dismissed by Secretary Lamar, a short time before I came here. His son and daughter, W. J. and H. L. Henderson, hold a lease in the Park at Mammoth Hot Springs on

which they erected a small building and keep a boarding house called the "Cottage Hotel," and G. L. Henderson, their father, lives with them as a kind of business manager. He has made trouble for all the former Superintendents nearly, Major Conger especially. He came to see me some time ago and wanted me to give them permission to change the plans and specifications of their hotel building, which had been approved by the Secretary of the Interior, and give them permission to erect a frame addition to their hotel. I told him the plans and specifications had been approved by the Secretary of the Interior and I had no authority to give him permission to change them; but told him to make a written application stating what changes they desired to make and I would forward it to the Department for its action. This he never did, but went off and telegraphed the Secretary of the Interior that I had prohibited them from proceeding with the erection of their hotel, and misrepresented and lied about the whole matter. The telegram was referred to me by the Secretary for an explanation, which I made stating the facts and this reply is on file in the Department.

The charge that I allowed certain favored persons to use the government sawmill at this place and denied the use of it to others was made by this man Henderson, and like all the other charges he has made is a lie. The sawmill is under the immediate and exclusive control of Capt. Dan. C. Kingman, Corps U. S. Engineers in charge of construction of roads and bridges in the Park, and a watchman is employed to take care of it. Henderson came to see me about getting the use of the mill, and I referred him to Capt. Kingman, which is all I had to do with that matter. Capt. Kingman told him he could have the use of the mill on the same terms that he had allowed other persons to use it, viz., by giving bonds to deliver it up in good order, which he refused to do.

The order requiring all freight wagons doing business in the Park to be equipped with tires not less than 4in. wide was made by the Secretary of the Interior on the recommendation and at the request of Capt. Kingman, and applies only to heavy freight wagons. In enforcing this order I have only carried out the instructions from the Department on that subject as I have tried to do on all others.

In regard to prices charged for transportation and the complaint that I have allowed persons to charge exorbitant and illegal rates, I have only to say that under date of Sept. 2, 1885, I was directed by the Department to "assume no control over contracts for transportation made outside the limits of the Park." As contracts for transportation are usually made at Cinnabar or Gardiner, I have no control over the matter.

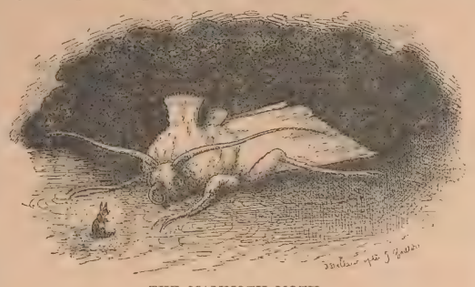
Since I took charge of the Park I have done nothing in my official capacity that I would not do over under similar circumstances, and I have no apologies nor excuses to offer. In order to see that the laws were properly enforced, I remained at my post all last winter, something that was never done by any former Superintendent. As a consequence, there was more game and better order in the Park to-day than was ever known before, as the many visitors this season and every one familiar with the Park will testify. I have worked hard and have worked my men hard. Last winter when the snow got too deep for them to travel on horseback, I sent them out on snowshoes, and they did their duty faithfully and well and were always at their post. I have made many lasting and valuable improvements during my administration, and as to my administration I refer to Capt. Dan. C. Kingman, Corps U. S. Engineers, and to Professor Arnold Hague, Geological Survey. They have been stationed in the Park and are familiar with all that I have done and know, too, under what disadvantages I have labored. The many visitors to the Park this season have all expressed themselves highly pleased with the condition of affairs, and not a single complaint has been made by any one. The laws have been strictly enforced, especially those in regard to the sale of intoxicating liquors in the Park. I have reported all official actions to the Department and they have been approved by the proper authority. I have done nothing of which I am ashamed, but on the contrary I feel that I have accomplished much to be proud of under all the circumstances.

Chief Justice Waite, Ex-Secretary Bristow, Gov. Hauser of Montana, Mr. Adolph Sutro of California, Gen. John C. Black and many other prominent gentlemen, who have visited the Park this season, were highly pleased with the condition of affairs and so expressed themselves.

D. W. WEAR.

MAMMOTH HOT SPRINGS, Wyo., Sept. 1, 1886.

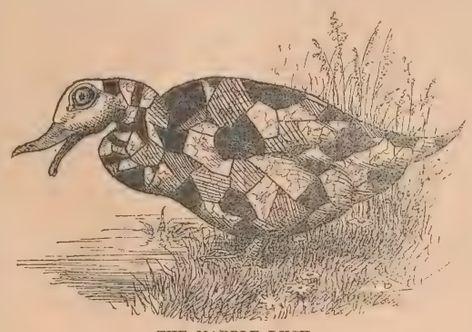
TRAVELS IN BOON GAH ARRAHBIGGEE.



FROM THE DIARY OF JOSEPH GOATER.

EDITED BY F. H. TEMPLE BELLEW.

(Continued.)



* * * WE did not by any means confine our explorations to the land, but often taking the canoe made excursions around the lake and among the hundreds of small islands with which it was filled. In no spot in the world I have visited did I ever see such a superabundance of animal life as in and around this piece of water. Herons, snipe, spoonbills and a variety of other waders abounded, while the web-footed swimming birds seemed endless in numbers and varieties. The groves were filled with monkeys, lemurs, green parrots, cockatoos, snakes, lizards, rabbits, porcupines and a great many other animals resembling nothing we are familiar with in America or Europe. Some of the animals I speak of were almost identical in appearance with those we have in our own country, the rabbits, for instance; and some deviated only slightly in some respects from our types, while others again, though evidently belonging to the same genera, showed some marked distinction. It would be vain to attempt to describe them all separately, but I shall do so as I come across them in my perigrinations.

As I have remarked before, the islands on this lake were so close together that the limbs of the stately trees that grew upon them locked overhead, forming tunnels of dense foliage, through which our canoe glides noiselessly along like a mute-borne coffin through the aisles of a cathedral; an illusion only destroyed by the pipe of the lemurs scrambling from tree to tree overhead, and the notes of the dense flocks of green parrots and other birds that wound in long sinuous lines in and out of the tortuous wooded passages. The tranquil flowers growing upon the shore or floating on the surface of the water were no less beautiful and interesting than the birds, beasts, fishes and gay insect life that gave such animation to the scene. One's attention was never allowed to rest, something novel continually presenting itself to challenge notice. Here clinging to a tree and scarcely discernible from the bark, was a gigantic moth, whose wide-open wings measured 12ft. from tip to tip. There seated in the crotch of a gum tree, dosing stupidly in the noon day heat, squatted a green ape with pendulous nose and flabby draped jowls,

THE MAMMOTH MOTH.

winking and blinking now and then lazily or petulantly brushing away an obtrusive insect from his nose with his bulbous fingers. A little further on would be a flock of the abundant marble ducks with plumage marked out in irregular geometrical forms of black, white red, blue and yellow, precisely like some mineral production of the quarry. This duck is the most delicious eating, and in my opinion far surpasses our justly famous canvasback. In another place a dense covey of scarlet duck would make the waters appear clothed with gore. And in still another a dense mass of the woo-wang with their

THE MARBLE DUCK.

long necks held vertically in the air and swaying backward and forward would produce the impression of a field of some strange reed or grain stalks waving under the breeze.

At one point my attention was arrested by an odd-looking prehensile little beast with a large, pointed snout, hanging by its tail to the limb of a tree, about ten feet over the water. The thing was perfectly motionless and seemed to be asleep, but curiosity induced me to stop the canoe and watch it. I had been doing this for about three minutes when suddenly it dropped, there was a splash in the water, a little foam, some circular ripples, and it had disappeared. Presently there was a terrible commotion a little further down, the water flew about in all directions and was lashed into soap suds. Then I saw the little creature struggle to the surface with a good sized

THE DIVING DINGO.

fish impaled on its barbed, horny snout. With this it struggled up the bank, and set to work cutting it in two by vigorous saw-like motions of the snout. Presently the two halves of the fish lay motionless on the grass, and the little hunter set to work to eat it, after which he disappeared in a neighboring burrow.

I had occasion often here to regret my lack of scientific knowledge, preventing me as it did from properly classifying the strange beasts I came across, or of even knowing in what direction to look for the distinguishing marks of different genera and species, but I trust that the crude data I may furnish of what I have seen in this truly marvelous land may come under the observation of minds better stored with exact scientific knowledge and methods than my own, and be thus turned to profitable account.

Often as I have lain at night under the spreading limbs of the beautiful mosomea tree, looking at the stars twinkling between its leaves, or at the broad moon sailing tranquilly through the broad sky, have I reflected on the strangeness of my position. That same calm moon would in a few hours shine down on my beloved ones at home (ones alas! whom I was destined to see never more*), and they would gaze up at it as I was then doing, perhaps thinking of me and marveling what might be my fate. I felt that this distant moon and these stars were our common property and links that bound us together. And here was I by an accident thrown into an unknown land, of which civilized man had no knowledge or conception. I alone of all the world knew of its existence and the marvels it contained, and yet the secret might die with me, for I knew then of no means of escape. If this country should be an island (as afterward proved to be the case) with a swirling maelstrom of water all around it such as that through which I had passed, how could I possibly get away. The natives had no idea whatever of any human world outside. Beyond to them was the future heaven or hell. They committed their dead to the rivers, the rivers carried them into the surrounding lake and they were gone.* No living man who had essayed to explore beyond the island had ever returned, and it was now considered an impious crime against the Great Spirit to make the attempt. Knowing only a few words of their language, I could but glean a vague idea of their mysterious theology. One thing was manifest, however, that while they did not absolutely worship an evil spirit, or devil, most of their religious rites were directed toward propitiating him. To the Good Spirit, or Godhead, whom they also recognized as the Creator, they paid little attention. He did not need any propitiation; he was on their side and they on his. They seemed to feel toward him only an affectionate comradeship, like soldiers to their general. This they would manifest in various ways. If they happened to secure any particularly delicious piece of fruit, or any flower or bird of more than ordinary beauty, they would pat it affectionately, saying, "*Aharooma bote urra, woo Aharooma urra*," "God, the good little God, gave me that, or sent that." The opposite emotion of displeasure was conveyed by a guttural grunt. If they escaped from some peril, storm or flood, or wild beasts, or even some trivial accident, or on the healing of a wound, they would exclaim, "*Clock*† *Aharooma, woo Aharooma packkadogue warr. Wombarr, appapapackwa.*" "Oh, God, little God, we beat the devil that time, didn't we?" I shall have more to say further on, when I reach that part of my diary, about their religious rites, devil worship, devil tribute, homage, or cession, whatever one may call it. At present I must return to my lake and river experiences.

*This was added in a different colored ink, evidently written later, probably when looking over his earlier MSS.—F. B.

*In another part of his diary Mr. Goater speaks of the graves of the mothers. This at first struck me as being inconsistent with the practice—he here mentions of committing their dead to the rivers and lake. But I find in a later part of his journal he describes their burial rites and the erection of tombs over the hair and nails of the deceased, those being the only parts interred.—F. B.

†This word, which I have spelled clock, is in reality not an articulated sound, but a kind of report, or click, produced by drawing the tongue sharply from the roof of the mouth, and was an universal form of exclamation among the natives to expres surprise or admiration.—J. G.

SAM LOVEL'S CAMPS.—V.

THE next day's dawn came with slow reluctance to dimly light a dismal landscape, over which had come one of those disheartening changes so frequent in our northern latitude that it seems strange they are not expected as in the common course of nature, rather than wondered at and spiritually rebelled against. The succession of the seasons had apparently been turned backward in the gloom and mystery of one night, and where yesterday spring was jubilantly triumphant over the reconquest of her realms, winter was reigning again. Snow had been falling for an hour or more, driven by the north wind in a long slant from the leaden sky to the earth, whitening the dun fields and turning the brown and green woodlands to spectral gray, till the trees looked like ghosts of the slain embodiment of spring. The sluggish waves of the Slang beat with a sullen wash on the wind-swept shores, but in the sheltered coves a seal of leaden ice was set upon them. The wild ducks, happy and content in any weather that gave them open water, were splashing and diving and breasting the black flood, but the land birds were in sorry plight. They huddled in the thickets for shelter, and if one attempted to pipe a song, its thin, half-frozen notes added no cheer to the day, but rather made it all the more dreary.

When Sam awoke with a dull sense of changed weather in his bones, and sat up in his bed to look abroad, the picture set in the triangular frame of the shanty front, a pointed bit of gray sky above white fields and black water, with a foreground of snow-laden bushes, the blackened stakes, cross pole and brands of the dead camp-fire, was so utterly cheerless that only the desire of companionship, ever craved by misery, impelled him to arouse his comrades. The hound came stretching and yawning forth, and after a sorrowful look abroad and a sniff of the damp air, gave a dolorous whine, crept back to his dark corner to comfort himself with forgetfulness of the outside world. While Pelatiah suffered in silence, with unworded wishes for the comfortable warmth of the kitchen stove at home, Antoine loudly denounced the meteorological change. "Ah'll never see so many damn wedder in litly while all ma life tam, bah gosh! What for he ant jus' well be sprim wen he'll get all ready, jus' well as jomp raght back in midlin of winters? Bah gosh, Ah dunno, me! Wal, Ah don' care, Ah 'spose we'll got have it some fire on aour stofe, ant it?" and getting himself together he began a search, axe in hand, for some dry kindling. Chipping away the weather-beaten outside of an old stump, he soon got at its yellow heart, and with shavings and splinters of it presently had a cheerful blaze lapping the snow and dampness off the back-log. Breakfast was hardly in preparation when the snow turned to more dreary rain, that came pelting down with a dull patter, freezing as it fell. All hands turned cooks and made frequent rapid dashes from the shanty's shelter to the sputtering fire, one encouraging its feeble efforts with a punch or a morsel of dry fuel, another giving the frying fish a turn or a shake, another snatching out of the veil of smoke a hurried glance at the pot that was fully possessed of the proverbial perverseness of watched pots, and stood long on the order of its boiling.

When at last patience was exhausted and hunger would no longer be temporized with, they made a sally and brought in the half-cooked rations. The potatoes seemed to be suffering an epidemic ossification of the heart, for every one had a "bone in it," and the fish, except the outside and thinner parts, was raw. Antoine's onions did strong and excellent service in helping out the sorry meal, and when it was got through with the little party settled

down to making the best of the discomfort of a rainy day in camp. They related the events of yesterday; what befell Pelatiah has already been told in the last chapter, and so he told it to his companions with but few eliminations, for he felt no unwillingness now to let them enjoy the fun of his mishaps, and he with pride set forth to the fullest extent the dimensions of the big fish that he had lost, a monster that somehow seemed to belong to him almost as completely as if he had captured him—as the big fish, that all of us who go a-fishing have lost, are yet ours. Is it by right of discovery that we hold a sort of claim on them?

Sam and Antoine had not gone far on their cruise when, as they rounded the point between the Slang and the creek and floated slowly over the sunny, wooded shallows, a party of "playing" pickerel was sighted by the Canadian, who was paddling. Two or three lusty fellows had the upper tips of their tails and dorsal fins above water, now gently moving them, now splashing about in a spasmodic flurry, then disappearing for a minute, then breaking the surface in another place near by. Antoine got the canoe close to them without alarming them and Sam fired into the thick of the group. The Ore Bed's big bullet made the water boil and set half a dozen swift, arrowy wakes flying off in different directions; but that was all. Not one silvery, upturned belly gleamed out of the settling sediment, and Antoine broke forth in lamentations and reproaches. "Oh, sa-cré ton sac! Oh, bah gosh! da's too bad. Oh, you'll shoot all over it! Ant Ah tol you more as fo' honded tousan tam, wen you'll shot at peekrel you ant want shot at it, hein? You'll want shoot at it where he'll ant look so 'f he was! Way onder where you'll see it! You don't can't rembler dat, hein? Bah gosh! wen Ah'll rip-proach you up to some more of it, 'f you ant did more better as you was dat tam, Ah'll goin' shoot masef, bah gosh!"

"Wal, Antwine," Sam said with a shame-faced little laugh, "I never shot at one afore, 'n' 'f I don't du better next time you 'reproach' me up to some fish, you shell do the shootin'." "*Re*-proach! oh golly! wal I'll be dum'd 'f I s'posed you 'd lugged any o' Solon Briggs's big words all the way daown here!" and moistening a patch he rammed a bullet down the long barrel, making the grimaces that one who drives home the ball in a muzzleloading rifle always does, as if his own interior was suffering the leaden invasion.

"Wal, Ah don't care, Sam, Ah'll hit dat words 'baout so close you'll hit dat peekrils, ant it?"

"Cluster, Antwine, cluster, you knocked the head right off on 't!"

And so with restored good humor they went on till another bunch of fish was sighted and got near to, when Sam, aiming well under, "onhitched." Four good sized pickerel, some hit, some only stunned, rolled bellies up and were got in-board before they had thought of moving a fin. In such murderous fashion, approved by custom like many another quite as bad, they got all the fish they cared for and met with no mischance worse than one or two misfires. When they were homeward bound and both paddling without change of places, as they rounded a broad patch of button bushes they came suddenly upon Sam's late adversary, poling his skiff slowly along and looking for fish with his gun lying in front of him. His face still bore the imprint of Sam's fist, but he bestowed upon them a friendly grin, and hailed them with "What luck?"

"Tol'able," Sam answered, "What's yourn?"

"The cussedest luck 'at ever you see," was the reply. "My blasted ol' gun 's missed twict when I had all-killin' good chances, an' one big one 't I rolled up got away 'fore I c'ld git a holt on him. S'pose 'f I didn't want one so con-demn bad, I'd a-got a boat load. My folks is sick [in Yankee parlance one's "folks" means his wife]. No appetite t' eat, 'n' nothin' 'll du but a fish, an' I swear! I can't git so much as a punkin seed!"

"Wal," Sam said, picking up a good fish by the gills, "we've got more 'n we c'n use 'fore they spile; take this t' yer folks."

"Why, naow," said the man, poling his skiff a stroke nearer, "if 't wan't jist as 't is, I wouldn't think on it, but if you *kin* spare it jest as well as not, I 'ld be a thaousan' times 'bleeged tu ye, 'cause Seusan she—but" stopping his craft "I do' want no more o' yer cussed *gum!*"

"All right," Sam answered with a laugh, "we haint a peddlin' gum to-day. Haul up an' git yer fish." And tossing it into the skiff, he paddled away, while the recipient of the gift thanked him a "thaousan' times" and profanely remarked in conclusion, "You *air* the curiest damn man ever I see, I *swear*. Say!" he shouted after them, "You c'n come here 'n trap an' be damned a thousan' years!"

While Sam was pondering as he paddled whether this long lease of privilege pertained to trapping or perdition, Antoine interrupted his meditations with the question, "What you spose mek dat mans so good nachel, Sam? What you spose he'll got matter wid his face of it? Look lak he strak some boddy wid it, ant it!"

"Oh, like 'nough he knocked it agin a tree or suthin', pokin' raound here mongst this 'ere trash. An' he 's got over bein' mad 'cause he's faound out 't we're harmless kinder creeturs."

"Dat all you'll know 'baout it," Sam?" with a crafty, inquiring glance as he leaned sidewise to get a look at his companion's face. "What mek it got so clever so quick aft' he'll bruse bose of it so hard? Hein?"

"Oh, thunder in the winter! no, I d' know nothin' 'baout the man. Mebby he's ben tu a prayer meetin' 'n 'xperenced a change o' heart."

"What he'll meant he ant want some gaum, hein?"

"Haint a-hankerin' arter it, I s'pose. What in time do we care 's long's he behaves hisself? Let 'im go."

After several minutes of silent paddling Antoine asked in a low, earnest voice, "Sam, 'f Ah'll tol you sometings, you ant never tol someboddy long's you leeve, you hope to dead fus'?"

"Wal," Sam answered with deliberation, "I do' know, Antwine, 'f you ben a stealin' suthin' or a killin' somebody, I don't wanter hev ye tell me on 't, but if it's some little thing 'taint very weeked I ha' no 'bjections to promisin' an a hearin' on 't."

"Oh, no-no-no-no! Ah ant never steal notings, an' ah ant never keel someboddy sin Papineau war; not quat, come pooty near dough dis tam, but ah ant keel it, do it some good. You ant tol of it?"

"No, I won't tell; ease your mind, Antwine."

"Wal sah, Sam," with slow impressiveness, "What hail dat man his face of it, what mak' heem be so good nachel, Ah'll goin' tol you, sah. *Ah'll leck it dat man tudder day!*"

"You licked him? Why, you haint seen 'im 'fore sen the day 't you was tellin' me haow he sassed ye; an' you said then 'at you did'nt tech him, nor wouldn't. Why didn't you tell me 'baout your lickin' him then?"

"Wal, sah, Ah'll tol you, Sam. You see, Ah was 'fraid Ah'll keel him, Ah'll leek it so hard. Naow Ah'll fin' aout he ant be dead, Ah don' care for tol you. Oh! bah gosh! Ah'll mos' keel it. Ah'll keek it on hees face wid ma fis' where you'll see it. Ah'll strak it wid ma foots where you ant see it. Ah'll paoun' it, Ah'll mek it hollah 'O, don't hurt me some more.' Al'll be so scare all dat naght for 'fraid he'll dead. Ah ant mos' sleep any, sah! Yas, ant you hear it me tombly an' grunt, hein?"

Sam was shaking violently, but as Antwine could not see his face, he thought his agitation was perhaps caused by horror at the recital of the terrific combat. Warming with the Falstaffian tale, he shook out a "B-o-o-o-h-h-h!" from his pursed lips, and shouted, "Oh! Bah gosh! Ah'll paoun' it, Ah'll jump top of heem! You ant b'lieve it, you come 'long to me, Ah'll show you where Ah'll knock de barks off de tree wid heem, an' de bloods an' skins an' hairs all scratter 'raoun' de graoun'!"

Sam was no longer able to contain the fullness of laughter that oppressed him.

"What you lafft at, Sam?" Antoine demanded sternly.

"O, dear me, suz! Antwine, I can't help a laughin' to think what a wollopin' you give that man, an' a slattin' the graound with him, an' barkin' trees with him! What a massy it is you didn't kill the poor creeter!"

"Wal, Ah tol' you, Ah'll feel pooty glad for dat, me. Ah'll ant wan' be hang for it. Say, Sam, you s'pose prob'ly dat fellar sue me up to law for leek heem so hard, hein?"

"Wal, no, I don't hardly b'lieve he will, Antwine. I guess he's hed all he wants on ye."

"Wal, Ah guess so."

"Come to think on 't naow, I seen him the next day arter you give him sech a whalin', 'n' I never noticed 'at the' was a thing the matter of him. Cur'us, wa' n't it?"

"You'll see it nex' day?" Antoine asked anxiously, "Wal! Bah gosh! Ah dunno 'f he ant show it, prob'ly hees faces ant got tam yet for swellin' up an' git blue 'n' black, ant it?"

"I shouldn't wonder a mite 'f that was it, Antwine."

This dismal day Antoine swore Pelatiah to secrecy, and enlivened an hour with the acted story of his great fight, that began at this relation to assume in his mind the reality of an actual occurrence. Often after their return to Danvis the doughty champion recounted this exploit to half credulous audiences, and though Sam, when a listener, seemed sometimes to laugh in the wrong place, he never let fall a word to cast a shadow of doubt on its truthfulness.

Antoine proposed to concoct a chowder which he promised them should furnish a dinner so good as to make amends for the badness of their breakfast.

"Dey ant on'y but jes one ting was better as feesh, an' dat was be feesh wen he be cook in chowdy, 'cep' mud-turkey." So putting on a heavy coat he took the kettle to the shore and spent so much time there in washing it that he came back with a shell of frozen rain upon his garments, such as loaded all the branches with its dull glitter, cracking and clattering with every sway of the wind, and crunching under foot on the iced mat of last year's herbage. Pork, fish, potatoes, crackers and onions furnished all the requisites for a chowder, a dinner all in one pot, and one that needed no constant tending, therefore well suited to the conditions of a roofless kitchen in a stormy day. When it was set to seething over the now well-established fire, they sat in the shelter of the shanty front, the elders smoking frequent pipes, Pelatiah solacing himself with the cud "that cheers but not inebriates."

"Samwill," he said after much speechless if not quite silent rumination, and a long look out into the cheerless, icy woods, with no sign of life in them but one red squirrel chipping a cone on a hemlock limb, and too much depressed in spirit to utter one saucy snicker or defiant chir, "Samwill, I sh'ld think the' 'ld be bears, an' panthers an', an' annymills in these 'ere woods. They're big 'nough seems 's 'ough."

"Don't 'pear to be much in 'em, bigger'n coons," Sam answered, "we thought we heard a lynk oncte or twicte, but mebby 't wa'n't nothin'. Like 's not the's a painter a-travellin' through 'em oncte 'n a while praowlin' back an' to, but I ha'n't seen no signs on 'em."

"Tell us abaout that painter 't you killed, Samwill," said Pelatiah, starting up with a sudden interest, "I never heard ye, though I've kinder hearn tell on 't."

"Oh, the' wa'n't nothin' 'baout it, only I happened to shoot him."

"Wal, Samwill, tell 'baout it, wont ye?"

"Wal," Sam said, looking abstractedly into the fire while he slowly filled his pipe out of a nearly-spent blue paper of Greer's or Lorillard's "Long smoking," "the' wa'n't no painter huntin' 'baout it, only a happen-so. I was a bee huntin', in September it was, 'n' his hide wa'n't wuth fo'pence only to look at, 'n' I'd got some bees to workin' in a little lunsome clearin' 'way up 'n under Tater Hill, 'n' lined 'em int' the woods, 'n' reckoned I'd got putty nigh the tree, 'n' I was saunderin' 'long lookin' caref'l at every tree 'at hed a sign of a hole in it, when I seen a shake of a big limb of a great maple, 'n' then I seen the critter scrouched onto it clus to the body an' a-lookin' right at me. I'd left the Ore Bed back in the clearin' much as ten rods off 'long wi' my bee box, 'n' my hat sot mighty light on top o' my head as I backed off, slower, I guess, 'n' I'll go to my own fun'al. Soon as I got him aout o' my sight—though I don't s'pose I was aout o' his'n—I made dum few tracks to the ol' gun, I tell ye, an' then come back slow an' caref'l. There he sot scraouched daown jest where I left him, an' his dummed yaller eyes right on me 's if he hedn't never took 'em off, 'n' mebby he hedn't. When I got in 'baout six rods, I drawed a bead right betwixt 'em 'n' onhitched. He didn't jump, but kinder sagged daown ont' thel imb an' turned under it 'n' le' go fust one foot 'n' then nuther, 'n' arter hangin' by the last bunch o' claws for a minute, come daown, ker-flop. He clawed an' flurupped an' graowled julluk amy dummed waounded cat, an' I stood back 'n' gin him the floor. But his senses was all knocked aouten on him, an' he didn't know 'nough to git to me 'f he wanted tu. I hussled anuther charge int' the Ore Bed tol'able spry, but 't wa'n't needed—he was deader 'n hay 'fore I got the cap on. An'," said Sam, after a pause in which he refilled his pipe, "I faound the bee tree not tew rods furder on, an' tew weeks arter I took it up an' got a hund'ed paounds o' the neatest honey 't I ever see." And he seemed to feel quite as much satisfaction in the recollection of finding the bountiful supply of wild honey as in the killing of the great cat.

"By gol!" said Pelatiah, letting out his long held breath in a great sigh, "I sh'd thought you'd a ben scairt!"

"Wal, no," Sam said, still thinking of the bees, "they didn't sting me none to speak on."

"Dat mek me tink," said Antoine, coming in from a brief inspection of the chowder, and nursing a coal that he had scooped out of the ashes in his pipe bowl, "mek me tink one tam me ma brudder-law keel one dat panter in Canada. We was go huntin' for deer. Ah guess so, an' da was leetly mite snow on de graoun'. Wal seh, we'll see it track, we ant know what he was be, an' we'll folla dat, oh, long long tam. Bamby he'll go in hole in rock, leetly laidge you know, 'baout tree, four, probly seex tam big dis shantee was. Wal seh, boy, Ah'll left it ma brudder-law for watch dat holes, an' Ah'll go 'raoun' back side laidge see all what Ah'll see. Ah'll look veree caffly, an' bah gosh, what you tink Ah'll fin' it? Leetly crack in rock 'baout so wide ma tree finger of it, an' dat panter hees tail steek off of it 'baout so long ma arm, probly, where he'll push hind fust in dat holes. An' he'll weegly hees tail so," waving his forefinger slowly. "Wal, Ah'll tink for spell what Ah do. Den Ah'll go cut off strong steek so big half ma wris' and two foots long. Den Ah'll tek hol' dat tails an' tied knot in him, veree caffly, den Ah'll run steek t'rough an' pull knot *hard!* Oh, bah gosh! you'll ought'y hear dat panters yaller an' holler! Wus as fo' honded tousan cat! Yes, *seh!* Oh, he'll hugly, Ah tol' you! but he can' help it, he can' got it loose 'less he pull up hees tails off. Wal, seh, Ah'll lafft at it, Ah can' help it, mos' Ah'll split off ma side. Den Ah'll go 'raoun' ma brudder-law, an' he'll be scare mos' dead, an' goin' runned way. Ah'll tol' heem, Ah goin' in dat holes shoot dat panters. 'Oh, gosh!' he'll ax me, 'he tore you dead more as forty piece!' Ah'll say, 'Ah so good man Ah'll don't 'fraid me.' Den Ah'll crawl in dat holes an' Ah'll shoot it, boom! raght 'tween hees head! An' bamby pooty soon he ant yaller some more, be all still as mices. Den Ah'll come off de holes an' Ah'll tol' ma brudder-law he'll crawl in an' pull off dat panters. He'll pooty 'fraid for go, but bambye he go. He touch hol' of it, he can' pull it cause hees tail tie, but he ant know. 'Bah gosh!' he say, 'dat panters more heavy as two ton! Ah can' pull it!' Den Ah'll go 'raoun' an' taked off dat steek, an' holla 'pull!' an' ma brudder-law pull more harder he can—*boom!* he go tumbly on hees back, dat panters on top of it! Oh! bah gosh! 'f he ant scare, ma brudder-law. Yas *seh!* Wal, seh, boy," after a pause during which no one spoke, "'f you ant mek b'lieve dat stories you go Canada 'long to me Ah show you de steek. Ma brudder-law he'll saved it. Ah ant never tol' you stories so true lak dat, seh!"

"I ha' no daoubt o' that, Antwine; you couldn't tell a lie big 'nough to choke ye. Haint that 'ere mux o' yourn 'baout done? I'm a gittin' wolfish."

After due examination the French cook pronounced the chowder ready to be served up, and it proved so toothsome that of the whole kettleful there was hardly enough left for Driver's supper.

Then with smoking and more story telling they wore out the dreary day, and at nightfall the sky was brightening with the promise of a more cheerful morrow.

A FAMILIAR TITMOUSE.

Editor Forest and Stream:

One Sunday last April Mr. Livingston, a fellow member of the Kent Scientific Institute, and myself were out for a walk, when at noon we sat in the shade of a white pine to eat our lunch. A few rods below me a chewink was at work among the dead leaves. This led me to remark, "I wonder if the time will ever come when, as man gets better and learns to treat the birds more kindly there will be a good many species that will be so tame as to come and eat from his hand. There are some parts of the world now where the birds are so wild that they are tame; they have seen so little of man or have been so little disturbed by him that they are no more afraid of him than they are of a horse or cow here. Prof. Steere found such a place in the Andes." I referred also to one or two of our little birds being so tame as to allow a man to approach within four or five feet of them and told of Mr. E. A. Samuels' story of a *Parus atricapillus* alighting on his boot and looking up into his face, when he was seated on a log in the woods one winter day. A few minutes later I had left my box with some bread in it, when a bird appeared on a lower limb of a tree but a few yards away. It was a titmouse (*Parus atricapillus*). I said: "That's the bird I was telling you about." Moving from limb to limb and coming a little closer, its general demeanor seemed to tell us that it was actuated by feelings of friendship or curiosity, or both. Tempting as was this hypothesis, I thought that in reality it was attracted by the crumbs in my box which lay two or three yards to Mr. Livingston's right, or by something we were eating, although I knew that it was insectivorous and he was eating crackers and I an orange. The bird continued to show interest in something about us and soon flew to a bush behind Mr. Livingston, alighting a yard, more or less, from his head. It then flew and fluttered over his head for a few seconds and lit upon it. It soon returned to the bush. Mr. Livingston, turning his head part way around, said softly: "This beats the boot story." The titmouse came back and fluttered over his head as before, then alighted again and in a few seconds flew to his hand, which he held up with a cracker between the thumb and forefinger, while the elbow rested on the ground. He was partly sitting and partly lying on the hillside. The bird stood with one foot on the cracker the other on the thumb that held it, and remained there for something like a quarter of a minute. It seemed to look at Mr. Livingston, though I do not think it was exactly facing him and probably didn't stare at him with the directness of which the human eye is capable. I could not see anything to indicate that it

was interested either in the cracker on which it had its foot, or any other food we had brought. After it left his hand the bird was soon out of sight. This was the only titmouse we saw that day, though we heard their notes off in the marsh several times as we went on to get trailing arbutus. What we had seen seemed like the vision of a fairy dream. We were both considerably affected by it and consider it one of the pleasant incidents of our lives.

It was an interesting coincidence that we were speaking of a case of familiarity on the part of this bird, and less than ten minutes later witnessed ourselves a still more remarkable instance of the same thing. E. L. MOSELEY.

GRAND RAPIDS, Mich.

"LIKE CURES LIKE."

JUST as I was concluding my paper on the *Ptomaines* last year (see FOREST AND STREAM, Aug. 20, 1885), news arrived from Paris that M. Pasteur, after five years of patient labors, indulged a confident belief in the success of his treatment of hydrophobia by inoculation. The previous discoveries of M. Pasteur, had already caused him to be regarded as one of the greatest benefactors of the human race, and now this new and most startling remedy of all prompted me then to add the speculative words, "Perhaps a prophylactic against snake bite may come next." Inoculation for various diseases on the principle *Similia similibus curantur*, seemed to be the success of the day and the hope of the future, and I ventured to throw out the suggestion, "Why not for snake bite, also?" not, however, claiming originality in the idea, but only seizing on that occasion to re-introduce it. Since then several instances where inoculation with venom is really practiced as a protective have come to my knowledge, a column in a London paper (*Globe*, March 31) being the result. Encouraged by the fact that the subject proved of sufficient interest to be partially reproduced in these columns (FOREST AND STREAM, June 24), I will now add a few more cases in point, corroborating the somewhat vague assertion that among certain half savage tribes the custom still prevails of inoculation with snake venom as a protective principle, in the language of science an *anti-toxic*.

Among the many instances already recorded was that the people along the coast of Southern Mexico (the precise part not named) have a habit of inoculating themselves with the virus of the rattlesnake or some other poisonous serpent, which novel vaccinnation renders them absolutely safe from the bite of the deadliest reptiles. Another example, also from the New World, is a statement by the Rev. Charles Bixby, a native of Surinam, that in Dutch Guiana, preventive inoculation of snake poison has been practiced there for centuries. The venom glands are extracted, dried and pulverized, and some of the powder is rubbed into a wound caused by abrasion of the skin, generally on the arm. Persons thus treated are said to be bitten with impunity. Through these columns both these reports, containing so much of practical interest at the present moment, may meet the eyes of those who may be able either to confirm or to investigate the truth of them.

A still more recent, though incidental, testimony of the use of the dried venom gland is given by Mr. G. A. Farini, in his lately published work "Through the Kalahari Desert." The belief prevails among the Bushmen, he tells us, that two venoms destroy each other, and that the natives invariably provide themselves with the "dried poison sac" of a venomous snake. With this in their pocket they are not afraid of the most deadly species. Mr. Farini witnessed the treatment in the case of some of their oxen which were bitten by a viper. One of the Bushmen made a few slight incisions round the wounds and rubbed in a powder which he said was prepared from the dried venom glands of another snake. In a few hours the cattle were well again. One of the Bushmen who declared that he was not afraid of the bite of the deadliest snake so long as he was provided with a dried venom sac to rub into the wound, illustrated the treatment on his own person much sooner than he anticipated. For he actually was bitten. Coolly taking out some dried poison sacs he reduced them to a powder, pricked his foot near the bite and rubbed in the powder as he had done with the cattle. Then he extracted the fangs and glands of another snake (an *elaps* 5 or 6ft. long) which had been previously killed, drank a drop of the poison from the virus sac and fell into a stupor which lasted some hours. (This stupor was probably as much the effect of the bite as of the drop of venom which he swallowed) at first the wound swelled greatly as we are told, but began to subside after a time. The next morning he again inoculated himself. In four days the swelling had entirely subsided and he was well. A small lizard, whose name is not given but which is supposed to be venomous, is dried and used in the same way as a remedy for its bite. The belief is that the two venoms neutralize each other.

These facts being incidental, not special records, related by a non-scientific witness, it may be argued that the bite could not have been very deep, or that the snake may not have been a poisonous one, and the victims might have recovered without any remedies at all. Just as M. Pasteur's opponents contend when a patient has recovered, that the dog that had bitten him was not mad, and that he would not have had hydrophobia in any case. To which we may reply with the old adage, the remedy would have been worse than the disease, for snake venom, even diluted, may kill a person. Besides, the Bushmen do not appear to confine the principle "like cures like" to snake bites only. Scorpions abound in that region, especially near the Orange River, where you can scarcely turn over a stone of any size without exposing a scorpion. A Bushman in Mr. Farini's company got stung by one and immediately provoked a second scorpion to sting him as a remedy for the first wound. Another Bushman told Mr. Farini that when working in that district he got stung so often that the venom had no effect upon him.

With a creature still smaller than even snake or scorpion the process of assimilation or the rendering the system tolerant of animal poisons, has been proved in the sting of a bee. A young medical man a few years ago experimented a good deal with bees, in which he was much interested, and he found that after he had been stung a few times he became proof against further stings. His experiments were recorded in a periodical devoted to the interests of bee-keepers, *The Bee-Keeper's Journal*, I think it was. The circumstance is an interesting corroboration of the method under consideration.

Few would have the courage to experimentalize on heir own persons, by rubbing in dried snake venom as a preventive in case of being bitten; but as a remedy when bitten there would be less danger in trying it. It is noteworthy that the whole gland—not merely the contents—are dried by the Bushmen and the natives of Dutch Guiana, the venom by which means becoming to a certain extent adulterated or modified, as is the case with M. Pasteur's prepared rabific virus, on the vaccination principle of a milder form of virus or of disease protecting the body from the more fatal attack.

That the system can be rendered callous to or tolerant of mild serpent venom has been proved by Dr. Stradling's experiments on his own person. This well-known ophiologist pursued a course of scientific studies in serpent venom for several years, and he affirms that he so far succeeded as to render himself proof against the bite of some of the smaller venomous snakes of South America, when his return to settle in England put a stop to his experiments. In a published letter he says: "That a tolerance can be established by habitude for certain snake venom I have proved on my own person; and in this there is nothing special to these more than to any other animal poisons." And we now find confirmation to this in the case of scorpions and bees as well as snakes, and no doubt many other noxious things against which the human organization becomes proof in time. Accidents from snake bites are not rare, even in America, and the Bushmen's remedy might be tried first on animals, but care must be taken in handling the powder, which might penetrate a wounded finger and produce fatal results to an unbitten agent. CATHERINE C. HOPLEY.

LONDON, England.

RED AND GRAY SQUIRRELS.—McKeesport, Pa. Sept. 6.—While canoe cruising and camping on the Cheat River in West Virginia this summer, one evening the campfire conversation turned upon the much mooted disappearance of gray squirrels on the advent of the reds. After numerous instances had been cited, an old-time trapper who had trapped successively in Kentucky, Ohio, Michigan and Manitoba, told us that it was a well known fact that gray squirrels castrate their young, leaving a few only to keep up the breed, and that while knowing this he had never heard of red squirrels castrating greys, but this fact he had witnessed on two occasions. Perhaps there are other reasons for the disappearance of gray squirrels, but the above looks very plausible and was told by a man of undoubted veracity and was news to the three "tenderfeet," who, however, are going to do it again next season and so gradually become "old stagers."—C. V. W. [This subject was discussed at some length in the FOREST AND STREAM, December, 1877, and February, 1878. The conclusion there drawn from the evidence presented was that while in certain instances the gray or black squirrels might suffer in this way as an incident of the war of the reds upon them, in the vast majority of cases when the organs appeared to be wanting they were in reality present in an undeveloped condition. See issue of Feb. 21, 1878.]

SNAKE FANGS AND RATTLES WANTED.—A well-known English lady ophiologist, who is taking an enthusiastic interest in the American Exhibition to be held in London next year, is desirous of completing a collection of *Crotalus* fangs and rattles, to form an exhibit. Should this meet the eye of naturalists or sportsmen who happen to encounter rattlesnakes, and who are similarly zealous in the cause of science, they can add greatly to the interest of the scientific department of the display by sending the rattles and fangs of such snakes. In order to make such an exhibit interesting, each pair of fangs should be kept with the rattle of the same snake, accompanied by its name, and wherever possible, details of its length, where found, and whether a full or a half-grown snake. As the rattlesnake season is drawing to a close and the exhibit must be prepared before the spring campaign commences, early responses will be welcome. We will undertake to forward to the American office of the exhibition such specimens as may be contributed.

SPOTTED SANDPIPER SWIMMING.—While collecting birds along Buffalo Creek, near this place, a short time since, I shot and wounded a spotted sandpiper as it was flying near the surface of the water. It fell in the water, and on my approach I was much surprised to see it dive and swim for about 15ft. beneath the water. The stream at this point was about 12ft. wide and 2ft. deep, and without a ripple, so every motion of the bird could be distinctly seen. In swimming it used its wings in much the same manner as it would in flying, and at every stroke would dart through the water a distance varying from 6 to 12in., keeping about a foot below the surface of the water and near the bank. The feet were kept straight out behind and were not used at all. After a long chase in this manner it was captured and found to be slightly wounded. I have frequently shot and wounded them as they were flying over water but never knew one to swim under water before.—H. A. KLINE (Forreston, Ill.).

FANGS OF THE RATTLESNAKE.—Fruitland, Fla., Sept. 6.—*Editor Forest and Stream:* I send you to-day by mail the fangs taken from a rattlesnake killed by me in this neighborhood. It measured 7ft. 2in. in length and was 30in. in circumference. I send them to convince you as well as others that rattlesnakes have more than two fangs. You will see that the largest fang was grown into the jawbone, the mate to it was broken off, therefore I did not extract it; there were also some that were too small to handle and were not extracted. Some time ago I saw it stated in your columns that rattlesnakes had but two fangs, I trust that these will convince you that they have more, in fact a good surplus for future emergencies.—H. R. SMITH. [The fangs sent by our correspondent are twenty-one in number, from $\frac{1}{16}$in. to 1in. in length. Is not the measurement of the girth as here given, 30in., an error?]

Now that the fall fashions are about being introduced, let the ladies of the United States show their good taste and delicate womanly instincts by refusing to buy hats and bonnets upon which the plumage of birds is in any way used for trimming or decoration. Other forms of ornamentation quite as pretty and more appropriate can be devised, and by taking a firm stand in the way indicated the fair sex can do an incalculable amount of good in the preservation of the singing and insectivorous birds of the country, which are now in great danger of extermination. —*Washington Evening Star, Sept. 2.*

TRAJECTORIES OF HUNTING RIFLES.

A FULL report of the tests made by the FOREST AND STREAM, at Creedmoor Range, Sept. 26-Oct. 19, 1885. This was the most elaborate and careful trial of the trajectories of hunting rifles ever undertaken. The test was made wholly with the purpose of determining facts; and the results as here given embody a vast amount of practical information about the principles of rifle shooting. Thirty-four rifles were tested, including the several calibers. The report should be in the hands of all rifle shooters, whether their practice be at the range or on game. Price 50 cents.

TWO OF A KIND.

I.

BOSTON, Mass., Sept. 13.—*Editor Forest and Stream:* The vacationist has left the haunts of the fisherman. The first frosty nights of autumn are usually too much for his kid-gloved organism. He has left the field to the true sportsman, who loves the frosty air and the crisp autumn days, when all the glory of the maple and the somber coat of the birch is to be had with the outing. The tourist—the hotel blower—has departed for the season, but not yet his hurtful babble in the newspapers. What would you think, good FOREST AND STREAM, of a man who would steal and then brag of it in a newspaper article? What would you think of the moral standing of the paper that would allow a correspondent to publish such an article?

The Boston *Sunday Times* came out last Sunday with an article purporting to have been written at a camp on Lake Kennebago, in Maine, the closing of which is as follows:

I am now a fugitive from justice. Two days ago I shot my first deer, and this is how it was. There were two in the boat as we silently paddled up the stream to Little Kennebago. The day was cool and bright and considerable breeze was stirring, the most inauspicious time to hunt this cautious animal. All day we sat, silent, with scarce a noise, save the ripple of the water on the sides of our canoe. In the afternoon we paddled to the shores of Little Kennebago and slept. Two hours after sundown we lit our "jack," as the lantern raised on a mast in the bow is called. It was a beautiful Ferguson costing in the neighborhood of $10, and at this expense I reasoned we should surely entice the game. As we rounded the inlet the moon seemed hidden under a cloud and the waters were calm. I heard a slight noise. Our lamp shed a long beam on the water before us. In an instant I could see two bright eyes intently gazing at the light. I recognized the form of a deer standing in the water. I fired, and a handsome 3 year old doe weighing 175lbs. dropped. My excitement and enthusiasm came then. When we reached camp, I awoke my fellow companion and we both viewed the spoils, and I felt the victor. The moon was high above us, the forest densely black, and the pale light shimmered o'er the waters of the lake, and there stretched across the canoe, with still bleeding throat, lay the deer. We shall always remember that sight. If any reader comes up to Kennebago he may visit our camp, where he will be treated cordially, and see the pelt stretched to dry, far from the warden's sharp eye, back in the wood. NOTSEM.

Now, I have not the slightest doubt that the fellow has lied and has never shot a deer, but the harm he has done in telling it is all the same. In another part of his article he goes on to say that Warden Huntoon, game and fish warden of that section, is "one of the most unpopular men of that part of the country." Was a sheriff ever popular with thieves? If that correspondent of the *Sunday Times* did actually shoot a deer, as he claims, then he is guilty of stealing—stealing from every honest sportsman the game the law was made to protect. He ought to be punished and the shame that an honest man would feel would hardly reach him, for he has published himself as a "fugitive from justice." As much as to say: "I have committed a crime and am proud of it." But if he will come out from behind his *nom de plume* and send his true name to the FOREST AND STREAM, to be forwarded to me, I will fix his case so that he can never set foot on Maine soil again without being arrested. And more than this, I will promise to try my best to persuade Gov. Robinson to grant a requisition, in order that he may be taken back to Maine for punishment. If Warden Huntoon is unpopular, then it may interest this writer in the *Sunday Times* to know that an effort will be made in the Maine Legislature this winter to have the State furnish about ten unpopular men—unpopular to lawbreakers and thieves—ten wardens where there is now one, to guard and protect her large game during the close season. The best men in Maine are waking up to the value of her game and fish to the State, if protected during a proper season, and no doubt money can be had to do the work that a few "unpopular men" have heretofore had to do for nothing. SPECIAL.

II.

HAMILTON, Ont, Sept. 11.—*Editor Forest and Stream:* The inclosed was clipped from the Hamilton *Spectator* of this city of Sept. 2, which is proof sufficient that the deeds committed by the parties, who cannot be termed sportsmen, must have occurred in August. The item is credited to the Syracuse, N. Y., *Courier:*

Henry J. Mowry and party arrived home from Canada at 10 o'clock last night. Mr. Mowry reports that the party had a most enjoyable time. They were joined by Colonel John M. Strong at Belleville, and proceeded 70 miles up the Trent River to Gilmore Station, which is located on a chain of lakes and surrounded by the dense Canadian forests. Colonel Lamont enjoyed the fishing and hunting greatly, and proved himself an expert with the rod. Deputy Collector Davis, of Binghamton, caught 100 fish in one afternoon. A fine catch of salmon was made, and all the gentlemen agreed that for fishing and hunting the locality far surpassed the Adirondacks. The party killed a four-year-old buck and the partridges were as plenty as robins in the country. Colonel Lamont derived great benefit from his trip and was charmed with the locality. Collector Beach declared last night that he had never had a better time in his life. He tells a romantic story about catching a gamy salmon, and, of course, embellishes the narrative in the usual manner of an expert fisherman. The entire party were delighted with the trip, which each one intends to take again next summer.

As in Ontario partridges do not come in till the 15th of September and deer until the 15th of October, it is apparent that Mr. Mowry, the colonels and collector have broken our laws. Good care will be taken that the sportsmen about Belleville are informed of this breach of the law, and that steps will be taken to punish those at Gilmore Station who aided them. Surely the sportsmen at Syracuse and Binghamton will have spirit enough to send Mr. Mowry, Col. John M. Strong, Col. Lamont, Deputy Collector Davis and Collector Beach to Coventry. ARCH'D E. MALLOCH,

Prest. Wentworth Fish and Game Asso'n.

AN UNNECESSARY DEATH.

Editor Forest and Stream:

According to the FOREST AND STREAM of Sept. 9, 1886, Prof. Wm. Cook, of Harvard College, bled to death "after hours of intense suffering" from a gunshot wound of the knee. If the report is true it is in order to state that his death from hemorrhage was wholly unnecessary, and that any boy with common sense and a very little knowledge of blood vessels could have stopped the bleeding in a few minutes. Perhaps a word on the subject will be of use to some of your readers who may be shot in the same way, or who may happen to be present on the occasion of such an accident to another person.

When a limb has been injured so that the large blood vessels are opened, a handkerchief twisted into a roll, or a coat sleeve, or a strong piece of cord, should be tied loosely about the limb above the wound (toward the body). A stick should then be slipped under the knot and turned around and around until it has twisted the cord so tightly that the circulation of blood in the limb has been stopped. Some pieces of common twine and a pair of forceps are then wanted. Threads pulled from a coat will do for twine, and a couple of sticks whittled to a point will answer for forceps. The wound is washed out with water, and the constricting cord about the limb is slowly loosened. A sudden spurting of blood from some one point will soon be observed, and then the cord is again tightened and a search made for the end of the blood vessel which spurted. This end is then to be pulled out a little way with the forceps and a piece of twine is firmly tied about it with a square knot. That blood vessel having been attended to, it is out of the way, and the cord about the limb is again loosened in order to show the cut end of another vessel (after again washing out the wound). All of the bleeding points of any importance can be found in this way and the hemorrhage stopped. The cord about the limb must then be removed entirely. If the bleeding points are situated deeply in the wound it will perhaps be necessary to make the wound larger with a jack-knife and to cut away and destroy ragged bits of tissue which are in the way. The cut for enlarging the wound should be in the long axis of the limb, unless the operator happens to be a medical man who knows where a cross cut could be made to advantage. If there is a slow oozing of blood from minute blood vessels a hard wad of grass or a handkerchief rolled up into a ball can easily be bound in with sufficient compression to stop the bleeding.

The injured man is now safe, if his only danger was from hemorrhage, and he can wait for twenty-four hours if necessary, for the surgeon to arrive. The surgeon will do the same work over again, but more thoroughly, replacing the twine ligatures with cat gut and preparing the wound antiseptically in order to prevent inflammation and suppuration afterward.

It is well to remember that bleeding from any one point can always be stopped by putting a finger on the bleeding vessel—simple enough, isn't it? MARK WEST, M.D.

[The writer of the above is the author of a book entitled, "How we Treat Wounds To-day," published by the Putnams.]

LOUISIANA GAME INTERESTS.

IT is a pleasure to find in the press such editorial expressions of opinion as the following taken from the New Orleans *Times-Democrat* of recent date: In the ancient ante-bellum era the hunting grounds of this State were famous throughout the South. All over the State they were preserved and worked in the shooting season, principally, by gentlemen sportsman. After the war the government sold about a hundred thousand, more or less, condemned muskets here, at prices that placed them within reach of the lowliest Nimrod in the land; and the weapons which had been used in the attempted extirpation of armies were turned to the extermination of our feathered and four-footed game.

It was not until 1877, we believe, that any successful steps were taken to protect our indigenous game from the perpetual warfare of the meat-seeking tyros, who slew the nesting quail and the nursing doe with as much avidity as they slaughtered the gallant five-pronged buck in the "blue," or swept away with one shot the autumnal bevies of birds in their "nooning" retreats.

The universal and unlicensed hunting even caused a sad diminution of our finest migratory game birds. The swift-winged Wilson's snipe has been made to depart from some of his favorite feeding grounds in the vicinity of this city. The green-winged teal, the mallard and the canvasback have deserted many of the ponds and weed-grown flats, to seek security in the more inaccessible marshes; and the deer, before the law intervened to save them from utter extermination, were gradually being driven westward, toward the last American hunting grounds in the Rocky Mountains.

To insure the return of the migratory birds there should be some restriction on the promiscuous shooting now carried on in the feeding grounds. In some portions of the State the professionals themselves regulate the times and methods of shooting, and find it to their interest so to do. One community of them alone has taken up about forty square miles in the marshes around Lake Salvador, and by limiting the hours of shooting, procure all the game they want without scaring the flocks hundreds of miles away from the most frequented haunts.

It is easy to afford protection to the native birds and deer, and under the beneficial influences of our game laws both quail and deer are said to be increasing in Louisiana.

One of the noblest game birds in all the world has within the past few years been imported into this State, and is now increasing and spreading fast. This is the royal English pheasant, which was introduced in Louisiana, a few years ago, by Mr. John A. Morris and put in a 3,000-acre preserve in St. Tammany parish. The birds have been breeding very rapidly and spreading, and the young broods seem to thrive splendidly. It will be a great day for Louisiana sportsmen when they can have a pheasant "battue" as frequently as they once enjoyed the old-time deer drive.

Another extensive game preserve has been recently started by New Orleans gentlemen on a large piece of park land near the mouth of Pearl River. This has been stocked lately with several hundred dozen quail, and promises to be one of the fine hunting fields of the near future.

In the way of sports of the flood, this State is almost as famous as it once was, and may be again, as a hunting ground. The three finest varieties of the bass tribe, the green trout, black and striped bass, frequent its creeks, bayous and rivers, as do also many other species of the gamy genus *Percidæ;* and any of these fish, it has been shown, thrive splendidly, multiply rapidly, and attain their greatest size in artificial ponds, constructed by several of our citizens who are greatly interested in pisciculture. The Louisiana passes, bayous and bays of the whole seacoast, from Pearl River to the Sabine, abound in all the varieties of the Gulf fish, from the delicate croaker to the tackle-defying tarpon, silverfish or grande ecaile.

In a word, this State is a winter paradise for the true sportsmen; and if its citizens will see that its present game laws are rigidly enforced, in ten years it will be the finest hunting ground in the United States. There is no close season for its fishing, and no end to the sport afforded by its present fishing grounds. The time may come when the varieties of bass will need protection; but for nearly all other varieties it has the Gulf of Mexico to furnish an inexhaustible and undiminishing supply of the very best fish that swim in the sea.

DAKOTA PRAIRIE CHICKENS.

PERMIT me thorough the FOREST AND STREAM to answer the many inquiries I have had as to the locality of the places in Dakota, where I have found chicken and grouse shooting in "paying quantities." In your issue of Aug. 26 you publish a list of "shooting and fishing resorts" on the line of the Hastings and Dakota division of the Chicago, Milwaukee & St. Paul Railway, as detailed by General Passenger Agent A. V. H. Carpenter. Circulars of this kind are generally looked upon as advertisements and not always fully credited by those seeking hunting grounds, but I can vouch for the accuracy of this circular as regards Groten, Aberdeen, Wolsey, Woonsocket and Mitchell. The particular grounds over which I have hunted most are in Hand and Spink counties. Leaving the Chicago, Milwaukee & St. Paul Railway at Redfield, about eleven miles southwest of Redfield is Cottonwood Lake, a body of water one half mile wide by one and one-half miles long. Here I spent two weeks of the month of October and never had better duck shooting, with enough of geese and brant to give variety to the sport. Near the Lake is Turtle Creek; walking along its banks the hunter will put up a flock of ducks at almost every bend, and coveys of chickens or grouse when "cutting across" from point to point on the creek. From Cottonwood Lake, almost due west, it is nineteen miles to the village of Howell, and the whole nineteen miles is good chicken ground. Fourteen miles southwest from Aberdeen is Scatterwood Lake, another great resort for ducks, geese and brant.

There are many other small lakes near Aberdeen and Ashton, at any and all of which duck shooting will be found, and one can hardly go astray for chickens and grouse. All of these places can be reached by rail and good accommodations will be found at all of them.

S. C. G.

GRAND HAVEN, Mich., Sept. 8.

TARGET TESTS AND SHOT.

Editor Forest and Stream:

Why did not Mr. Brown say he made the targets sent to FOREST AND STREAM with the trap sizes of Tatham shot? The inference was that they were made with regular 7s and 8s. If he will get a couple of bags marked as follows, "Tatham's improved chilled shot, Nos. 7 and 8," and will target his gun from them, he will find it impossible to make any such patterns as he reports. Also by counting 1¼oz. struck measure from the No. 7s, he will find my count pretty near right. It is one of the tricks of the gun trade to target with trap 8s, and to tag the gun as making certain patterns with No. 8, intentionally omitting the word trap. Mr. Cruttenden is right when he says the only absolutely correct way is to count each load, but unless we had one of Mr. C.'s machines for counting pellets it would be rather tedious counting 20 or 30 loads. In such a test as Mr. Cruttenden proposes it would be necessary to do so. Still I think my way of counting a load from each bag will give you a better idea of your patterns than accepting the number on the printed list, or (if using the trap sizes) the figures on the bottom of the bag. When you make targets with the trap shot, say so, and do not try to convey the impression that your patterns were made with regular sizes. The advice from a member of Tatham's firm, telling sportsmen to use that brand of shot which gives them more pellets than they expect for their money may be satisfactory to some; it certainly would not be so to me. When I find a certain size of shot kills my birds or breaks artificial targets better than others, I want that size. If I wanted more pellets to the ounce I would get a smaller size.

C. M. STARK.

DUNBARTON, N. H., Sept. 11.

THE PROPOSED MOOSE PRESERVE.

Editor Forest and Stream:

In reply to your inquiry: There will be no difficulty in detecting and preventing moose killing under the system of preserve which I propose. I speak of what I know, having spent many winters in the forest among lumbermen as land surveyor and explorer, and I do not think that I am a visionary. Lumbermen spend the winter in camps, crews averaging from ten to twenty men, who have a boss over them, and each knows what the other does. The only time when the lumberman troubles the moose is during the period of deep snows, when he walks up to him on snowshoes and butchers him—that is to say, during the whole or part of February, the whole of March and part of April. When the moose is killed the body is hauled to the camp and eaten by the lumbermen. The log surveyor, who visits the camp weekly, must be cognizant of the fact that a moose has been killed; he can tell even by the scattering hairs of the animal, differing from those of any other beast, which he will notice about. I would propose that when the lumber contract is signed by all intending to cut logs on the preserve that there be a penalty inserted imposing a fine of $200 upon any camp in which any of the men were concerned in killing moose, the payment to be a charge on logs. Of course it would be necessary, during the above-mentioned months, to have two or more foresters, whose duty it should be to travel around lines and to see that all regulations were duly carried out. If any moose killing was discovered by them, one-half of the penalty should go to such forester. From my knowledge of the woods and its inhabitants, I would say that with reasonably good woodsmen as foresters it would be morally impossible for any camp's crew to conceal the death of a moose. First, there is the moose track in the snow, followed, if chased, by the man's snow track, to tell the whole story; the forester need only follow this up. Then, when a moose is killed there is a wide toboggan track made by those hauling the meat to the camp; this is easily followed even after two snow storms.

I may mention that on the reserve which I would propose to buy there are in one place from ten to fifteen lakes, ranging in size from one-quarter to three-quarters of a mile, within a radius of five miles, which abound in trout from ¼lb. to 1¼lbs. in weight, in none of which lakes, to the best of my knowledge, has a fly ever been cast, the fishing having been done by hunters with bait, chiefly in winter, to secure bait for sable traps, etc. EDWARD JACK.

FREDERICTON, N. B.

TESTED BY DOLLARS AND CENTS.—Mr. F. M. Gilbert, of Evanstown, Ind., who is well known as an ardent sportsman and game protector, puts it in this way in his paper, the *Tribune News:* It is strange that men who live in a game country cannot see the great benefit in keeping game laws enforced. We will put the matter in dollars and cents (something that the most ignorant understand) and try and give a little illustration. A certain town in Minnesota is in the very center of what was last year a good prairie chicken country. If the chickens had been protected it would have been a good one this year, but the natives of the section began shooting the young birds as early as the first of August, and by the 15th there were none left worth shooting. The birds were sent to St. Paul and Minneapolis, where they brought possibly enough to pay the greedy law-breaking market-hunters enough to pay for their ammunition. Now, from the personal knowledge of the writer, there were at least thirty gentlemen who went into that section at a great expense to shoot chickens, and who gave up the matter and went home the next day. Let's figure the thing. They divided into pairs and paid $5 per day for teams. Total if they had stayed five days longer, $375. Board at hotel, $300 (if they had stayed). Now add what the local gunsmiths would have gotten for ammunition, then the various amounts that free-handed sportsmen (for your true sportsman pays for his sport) would have spent, and one thousand dollars would hardly have covered the cash amount that that little town would have taken in in that one week if the villagers had had the nerve to enforce the laws. Figure it up for yourselves. Will the sportsmen go back with their money next year? No. The place is killed forever, and all because a few sneaking, greedy, law-breaking pot-hunters went out and killed the birds before they were strong enough to get away. Of one thing all law-breakers may be assured, and that is that every case that comes before the game warden of this district this season will be pushed to the full extent of the law.

NEW BRUNSWICK BEAR GROUNDS.—The great Miramichi fire devastated a large portion of the pine forests of New Brunswick, many years ago, and quite an area of the land so run over by fire is now covered with blueberry bushes, which in their season yield abundantly. Of this fruit bears are very fond, and during its season subsist almost entirely upon it. This time of the year, then, offers a favorable opportunity for hunting them with the rifle. As the bushes are low, very little cover is afforded them, and they can be seen at quite a distance. I have seen quite a number of these animals while traveling the woods of New Brunswick, but they would invariably make all possible haste to get away. I know but one instance of a bear attacking a man, and that was in defense of her young. October and November are much the best time of year for bear hunting, as the days then are cool and the nights not too cold for camping out. The bears then resort to the beech ridges, where they in most instances find an ample supply of food. Fredericton is a good starting point, and there one may get all the information necessary and procure trusty guides. I may mention the faithful and honest Indian, Gabe. I might also refer you to H. B. Rainsford, Esq., a prominent barrister of Fredericton and a thorough sportsman.—D. MCMILLAN (Belair, La.).

PLOVER IN PLACE OF WOODCOCK.—Oakland Mills, Pa., Sept. 9.—Of all our summer game birds there is no more wary or shy bird than the field or upland plover, which we have here in season from the 15th of July until the 1st of September, when they leave us for the shore and swamps of Jersey. This bird keeps in flocks of from three to a dozen while on the uplands, and is in its finest condition then. I have shot these birds in August when the force with which they fell to the ground would break the skin and the fat would ooze out in a small stream till the bird's feathers were soaked with it, while woodcock shot at the same time would be in such poor condition as to be hardly worth eating. Now, if sportsmen would spend more time after upland plover instead of slaughtering America's finest and fast-disappearing game bird (the woodcock) in July, they would prolong the existence of this noble bird, and have much finer shooting the latter part of August and all through September. A great many make the excuse that woodcock do not stay till October, but I think if they let them alone until the 15th of August, they will find them in sufficient numbers all through September and part of October to warrant good sport.—C. N. B.

COLORADO.—Berthaud, Sept. 6.—It is reported that the White River Ute Indians, numbering 1,500, are scattered along the entire country between Meeker and Glenwood Springs, and are said to be killing 400 deer every day for their skins; and a party of hunters are killing deer over on the West Dolores simply for the sake of getting hides; the carcasses of the dead deer have been seen and found by parties who have recently returned from there. This shows where the deer of Colorado are going to. About Oct. 13 will see me off for my regular fall hunt in the Caspar Mountains, Wyo. I expect to meet a party from Ohio at Larime City that will go with me to the hunting grounds. We anticipate a grand good time after the antelope, deer and elk. Duck are now coming into our lakes, and shooting will soon be good. A number of lions and black bear have been killed in the hills near here lately.—ELK.

HARD LINES OF A SEA GULL CREW.—The Victoria, Tex., *Advocate* reports: "The schooner Flower of France, 15 tons, containing five men and a woman, capsized near Grass Island, not far from Saluria. The crew drifted on the hull until Thursday morning, when they were picked up by a boat from the life-saving station. The vessel belonged on the Mermenteau River, La., and was engaged in hunting sea gulls for their plumage, used in millinery. Those on board were: Capt. A. Raggio, W. J. Manning, Rea Armo, Hite Burch and J. S. Spencer, the latter of whom had his wife with him. The Flower of France was valued at $1,200 and had but recently arrived in Matagorda Bay from Brashear. About 600 gulls had been secured, which were lost, together with $300 worth of guns and ammunition."

THE REED BIRD LAW.—New York, Sept. 11. *Editor Forest and Stream:* I desire to call the attention of market-men and others interested in the subject to the fact that by a law passed by our last Legislature (Chap. 427, Laws 1886), the possession or sale of bobolinks (otherwise known as reed birds), robins and meadow larks after the same have been killed, is prohibited. As this is an entirely new statute, which I shall deem it my duty as one of the State Game and Fish Protectors to enforce, and as the season is at hand during which those birds have heretofore been sold without interference, I think it proper that I should call the attention of the public to this subject.—J. H. GODWIN, JR., State Game and Fish Protector for the Second District.

THE PRESIDENT'S HUNTING.—New York, Sept. 6.—*Editor Forest and Stream:* I have no doubt you have seen the article in the daily papers about the buck President Cleveland shot through the neck at Round Pond a few days ago. Can you give the readers of your paper this week a full account of the chase and the name of the guide who must have secured a good "tail holt?"—S. A. [The Jenkinses of the daily press have given all that was to be given about it. We are not informed of the circumstances, though we have heard a minute description of a previous hunt on Clear Pond, when the other boats considerately gave the Presidential craft the lead and then headed the buck toward it, so that when the shot was finally fired, it was at short range and successful.]

QUEBEC.—Montreal, Sept. 4.—So far but a very few good bags of feathered game have been captured by our sportsmen since the opening of the season on the 1st inst. There was the usual number of birds bred here, but the pot-hunter got his work in early, and the result is with one or two exceptions, general discontent among our law-abiding sportsmen. Within a few days we may expect a cold storm that will bring in the northern birds, which will improve matters materially and then there will be smiles where there are murmurs and repining now.—STANSTEAD.

VERMONT.—Highgate, Vt., Sept. 3.—The writer's son reports a good bag of woodcock, ruffed grouse and woodchuck made on the 1st. The indications are that there will be good grouse shooting this season in this vicinity. Woodcock are also fairly plenty, though they are now moulting, and it requires a good dog to find them. Large numbers of ducks breed in the marshes near here, but our shooting will soon drive them away, and the same evil will prevent good sport when the flight birds begin to arrive.—STANSTEAD.

CONNECTICUT.—New Preston.—The law is off for shooting woodcock, quail and partridge in this State on the first of October. I have hunted here for the past twelve years and have never yet found a place where I could kill as many of these birds as I can right here. I have killed on an average from eight to fifteen of these birds from the first of October to the middle of November. Quail, woodcock and partridges, I feel safe in saying, will be found as plenty here as anywhere in the New England States.—FRANK GRANT.

DAKOTA PRAIRIE CHICKENS.—Bismarck, Dak., Sept. 4.—The very short grain crop in this vicinity seems to have caused the prairie chickens to seek the timber. They are not as plentiful as usual in their customary haunts, and their absence from their old grounds can only be accounted for on this hypothesis, for there is certainly no other reason for the disappearance of the very many coveys noted this spring and summer.—J. G. R.

DELAWARE, Sept. 13.—Rail and reed birds very scarce, also very few woodcock; hope to find more in November as we very seldom shoot them in summer, and hope the time will soon come when summer woodcock shooting will everywhere be a thing of the past. Woodducks fairly plenty; shall try them in a few days and will report. Bristle, or pintails, have also begun to put in their appearance; they also give fine—SPORT.

OHIO GAME AND FISH.—Dayton, O., Sept. 6.—*Editor Forest and Stream:* There is a movement, yet small, to get all in this State interested in the preservation of fish and game to meet in a general convention at Columbus, near the close of the year, for the purpose of forming an organization to carry out present legislation by backing up the officers, and to do such work as such a meeting only can accomplish.—C. V. OSBORN.

THE UNITED STATES CARTRIDGE COMPANY publish an illuminated catalogue, in which by means of bronze and silver inks the brass of the shell and the lead of the bullet are reproduced with great fidelity; the paper patch, where used, is also shown in white. The work is an interesting exhibition of how attractive a catalogue may be made with a little ingenuity.

THE FRENCH EXILES, the Comte de Paris and the Duc de Chartres, whose own hunting seats have been lost to them, have gone to Glenspean Lodge, Invernesshire, Scotland, where they have rented the Glenspean shooting from the Mackintosh of Mackintosh, at the rent of £750 for the season.

GEORGIA'S WANT OF A LAW.—Rome, Ga., Sept. 4.—Game prospects were never better; birds hatched well and are now well grown. The great curse of this country is the pot-hunter, who nets and traps with impunity, as we have no game law.—F. C. H.

A TRIP TO MAD RIVER.—II.

BREAKFAST restored my spirits, and then Will's enthusiasm kindled the flame in me. "Let us go up stream, Stillaboy, for a mile or so and fish down. This will give us all we want, I guess, for dinner and tea. Then we will have a laze, and to-morrow morning get some to take home." And now we are at it. Will has caught one and I have had a rise. He has another one and I have no more rises. Directly we are in the water wading, he with his bait floating in front of him and I trying to let my flies float down. Another one rewards Will, and now I have my flies quite near his bait. I get a rise. That is all, while Will secures the fish. "Try a worm, Still," says he, "you cannot cast in these alders, the trout are not educated up to taking a fly here." "No, but here is a hole," I reply, as we come to quite a little pond where a windfall and brush have dammmed up the stream. I make a good cast and again have a rise, while Will throws out and hooks the fish at once. This is enough. I take to bait-fishing too.

Now I have a fish, but he is too small to keep and Will has a little one too. We catch plenty of them but they are all small. Almost all were small just in that locality. Thousands were caught the next year and for several following years to stock the trout ponds in Lewis, Jefferson and Oswego counties and streams along the Rome and Watertown R. R. So completely skinned was Mad River that a State law was passed protecting it for five years. And last summer we were told that the fishing was quite good again in these wild waters. But we go on and the fingerlings are abundant for nearly a quarter of a mile. And now the water runs slower and the stream is more contracted. Here I take three quite nice ones and will gets two. We do not catch so many little ones nor do we find so many fish. I am just as well satisfied, I would sooner catch one good fish than a dozen little ones. I want a pan fish not a sardine.

Here comes a kingfisher, and he springs his rattle as he shies off when about to pass over our heads, and a bluejay has just flown across the stream below, turning his head to have a look at us. I can see now most distinctly his blue plumage, the brighter in the sunshine, as the dark woods along the bank form a good background to bring out his colors. Then a squirrel chatters either in answer to the kingfisher or because he sees something strange. A rapid current again and we are standing where we can look up and down the stream for a little way. The valley is widening below. But there is a windfall lying across the river, forming a nice pool. Now for a good one. Will has him. He is only 8in. though, and I have one 7in. I must try a fly here. Red-hackle, coachman and black-gnat. No. And Will hos another hardly up to the required length. No use; no more bites. We have a hard time getting around the end of the tree. The brush and the alders are fearful and the deer flies give me considerable trouble. I can stand them, though. They are not so bad as black flies and mosquitoes in June. The kingfisher goes down again and waits until he has passed us before he begins to scold. The water is falling, I see, and there is a mink track in the sof tmud by an old root. But here comes another fish—three of them, while Will gets his share. A cessation of luck, and there is another good hole, where the stream is undermining the bank. I have another dark-backed fellow with bright spots and another of lighter color. They are plump fish and not long and thin. More little ones for some distance, though none that we have caught are large. The banks of the stream are contracting and I see we are coming to a good hole. It is shaded by a yellow birch. But where can a fellow stand, for the stream here is overhung by alders. I have one. No, I have missed him and my leader is caught. Good-bye leader. There is no getting you down and I cannot wait. Will is in much the same fix, though he gets his loose and before I am ready he secures three fish. My line is in again, I make it a point always to carry some hooks, leaders any flies in a piece of damp paper, so that I can straighten the gut the moment I put them on. I have a fish and a pretty good one, as they run here. He is 9in. Below this weight two or three more.

We now see the tops of the dead trees that stand by the camp. This reminds me that there is such a place as home, for I seem to have forgotten everything, and all at once I recognize the fact that I have been oblivious to the ordinary concerns of life for hours. Half a day has dropped out in pleasure. When surrounded by nature and absorbed in its wilds I have almost forgotten that there were other scenes in this world. I seemed to have no idea of the hour of day nor the day of the week nor of the month of the year. It might have been to-morrow or yesterday with me, so utterly had the mind been abstracted. But those dead trees and what stood so near them brought me back. I drew my watch from my pocket and found the hour to be half past twelve.

The moment I stepped upon the dry land I seemed to be tired and felt almost sleepy enough to fall down in my tracks. But the dinner must be prepared and I must cook the trout this time. After dinner Will took a smoke, while I threw myself on the boughs. It was nearly five o'clock when I woke up, and Will was sleeping by me. I was refreshed now and felt ready for another wade, so I aroused Will and we donned our fishing clothes again. The sun had now declined pretty far in the west, and by the time we reached the fishing point we found it deep in the shadow of the hills.

We wanted to take some trout home and of course desired to have them fresh. Now, thought I, there are trout in that pool and they are disposed to bite this evening and they may not do so to-morrow. If I should make a little pond here, where the water runs, by digging a small excavation in the gravel near the bank and allowing a little stream to trickle through it, I could put my fish in here and have them fresh on the afternoon when we start for home. So I at once set to work, nor was it many minutes before the pond was completed. I allowed a little rill to run into it through some stones and also made a way for the water to escape. Indeed I regarded my work as quite ingenious and felt perfectly satisfied that I had carried out a good idea. And now I am prepared to stock my preserve. Here comes the first one, a good seven-incher plump and round. And here comes another and another and another until there are some thirteen in all. Returning to the place the next morning I expected to find my trout all right, but imagine my surprise when I came to my pond and found just one fish remaining in it, and that the smallest one in the lot. There right by the stones that surrounded the pond, on the inside near the bank and in the soft mud was a large mink track. I stooped down and looked very carefully. There had been no going in and out of the pond, and the track went on just as though a mink had simply run along there. The fact of the matter was the water rose in the night just an inch or so, my barricade settled down and the fish escaped.

We began again. By 10 o'clock we had gone perhaps a mile and a half. To be sure all that we wanted had not been secured, but there were enough for Will's family and a few to send (of the very finest) to an invalid lady. And now we must return, get our dinner and start for home.

The rods were taken apart by the edge of the stream. The top joint of my rod stuck. Most all fishermen know what that is, and how easy it is then to break the tip or twist off the ferrule. But I did neither. I simply got a piece of birch bark and lit it, and while it was burning held the ferrule over the flame for a few moments, turning it around in my fingers, that all parts might be heated alike. When I found that it would not come the first time I heated it a little more and at once it came apart with a pop. I wiped the black from the brass, rubbed off the points with my handkerchief, put them in the case and they were ready for another year.

It was a little after twelve before we left the camp and then we were bothered for some little time in finding our trail. Indeed I own up to the fact that we had not gone half a mile before I was completely bewildered. It did not seem possible to me that we were following our own marks. I was continually looking to the left of them and this with all the compass said. Many a time have I thought since that had it not been for Will and his quickness to see the line, instead of getting out of the woods at a quarter of three we would have spent the night there. They waited tea. Will's wife said she wanted trout for supper. She had them, too, and fresh they were. As for ourselves we wanted ham and eggs. STILLABOY.

Since "A Trip to Mad River" was written, an article in FOREST AND STREAM of July 30 called "The Six-Inch Trout Law," leads the writer to think he has been misinformed respecting the present fishing in that stream. Redfield is but a few miles below where he fished and if the trout are so small there they must be still smaller in Worth Township.—S.

BLUEFISH AND MENHADEN.

DURING the past week the menhaden steamers along the coast of New Jersey have struck oil, for the long-absent fish have appeared in numbers sufficient to cause rejoicing among the fishermen. The bluefish have also come in with them, and large catches are reported along New Jersey, Long Island and the Massachusetts coast. The market has been well supplied with fish of this species, and although the price has kept up fairly, several cargoes have been bought for the freezers.

Anglers are likewise rejoicing with the marketmen and the oil men, for their interests are really identical, and the lively catboat has been seen scudding over the waters of Barnegat Bay and off Absecom, Sandy Hook and Fire Island in great numbers during the past week, and fish of 6 and 8lbs. have been comparatively frequent, while schools of 3 pounders have been plenty. It is true that they put in an appearance late in the season, and at the risk of having the chestnut bell rung up on us we will venture the remark "'tis better late than never."

The news that the fish had struck in spread very rapidly, and the squidders along the New Jersey coast, who had been watching daily for any sign of success among the catboats, got out their lead and bone imitations as soon as the trollers and the gulls gave them notice that bluefish were coming in, and, standing upon the beach, they threw their artificial squids into the surf with very fair success. At first those who pursued the more artistic method of capture, known as chumming, lacked bait, but before the week closed the wielders of the rod and reel reported some fair catches about Fire Island Inlet, for the menhaden boats which had bait to sell had the baskets at the masthead and this sign was hailed with joy by the rod fishermen, and soon the oily slick from their chum was drifting seaward through the inlet of Great South Bay and the hungry bluefish were following up the trail.

Editor Forest and Stream:

Will you insert in the FOREST AND STREAM the inclosed opinion of a Block Island skipper in regard to bluefish and menhaden:

"In a recent conversation with a *Sun* reporter, a Block Island skipper, after scoffing at the inland editorial opinion that the menhaden steamers had killed off the bluefish's food and driven the bluefish to other coasts, said: 'It is all nonsense to say that menhaden are scarce. The sea is full of them, and they are to the ocean what mosquitoes and other insects are to the land. The more you kill the thicker they are; and the bluefish are thick enough, too, but blast 'em, they won't bite. It is impossible to kill off the menhaden. They have been plenty all the season, and the other day I sailed through acres of them, but when you put out a squid, whether it had a nice new eel skin on it, or only the foot of an old red stocking, why, bless you, they wouldn't even look at it. I tried 'em well, but it was no go. Instead of menhaden being scarce I should say that they were almighty thick, and that the reason why the bluefish won't bite is because they can get all the fish they need, and prefer a menhaden naturally to an iron hook, as you and I would.'"

Our fishermen report plenty of large bluefish on the New Jersey coast this week. T. J. CHURCH.

TIVERTON, R. I., Sept. 9.

THAT FROG RECIPE.—Indianopolis, Ind.—The writer has observed that when one rushes into print to answer a question addressed to another, he seldom knows anything about the subject, but desires to appear "smart." I had it in mind to reply in this strain to "Snakeroot," but forebore, knowing full well that in time "Kingfisher" would trim him up in a style peculiar to himself. I now have my revenge, and while thanking "Kingfisher" for his interesting frog story, begin to regret having entertained any feeling against "Snakeroot" for offering me a stone when I asked for bread.—HOOSIER.

MY FIRST TROUT.

THE train landed us at Graymont, Colorado, about noon. The town lies at the terminus of the road which runs up Clear Creek Cañon after the gold and silver of this rich region. The whole bed of the valley has been dug over, and the mountain sides to their very summits pierced with mines by seekers after the shining metals. The village consists of several cabins and a very primitive sort of a hotel, with a clear, cold, trouty looking stream leaping by. The engine turned around and the tourists who had dined with us got on board followed by the hotelkeeper and most of his family, bound for the circus at Georgetown. It looked for a while as if we were left in possession of the hotel and entire town. But one man kindly stayed behind to cook our supper and lent me his rod. Gentle reader, you perhaps can appreciate the feelings of one who had read with breathless interest, for years, the fishing columns of the FOREST AND STREAM, and was now about to make his first cast for trout. To catch one of the wary tribe would be worth almost any effort. Victories over black bass would be far outshone.

I left my wife with a couple of young ladies whom we discovered were in the house, and started with ready flies and high hope. Clear Creek, a well-named stream, was full of floating wood, which is cut far up the mountain sides, shot down to the side of the stream in long wooden troughs and then sent floating toward Georgetown. There was no hope for me but to trudge up beyond the point where the wood was being put into the creek. Two miles up I found three men were up to their waists in the ice cold water dislodging the wood and working it down the stream. Above them everything was clear and promising. Every rock looked as if there was a trout beside it, and each quiet spot promised a rise. Out flew the dun-colored fly across the clear stream and came back untouched. The Little Professor, with a white hat on his head, and other snow-capped mountains stood all about looking on, but I hardly saw them. At length, climbing over the rocks, I came to a particularly favorable looking spot where the roots of a tree made it almost certain that my first trout was lurking. I crawled up cautiously behind a big boulder, and made a cast with all the skill of which I was master. If the trout was there he kept on lurking, I finally left him to his fate.

After sundry dabs at the water in likely spots, a hopeful halt was made where a great piece of granite spread out its huge bulk to protect and keep quiet, with the help of a half sunken log, a deep pool where it seemed certain there must be half a dozen "speckled beau—," I mean trout. Out flew the line, falling softly on the water, but the expected swirl and tug failed to connect. But I was not yet entirely disheartened. Another cast resulted in another disappointment. Surely, I thought, I could not go back to the hotel without my first trout which I had so confidently expected to catch. But I did, gentle reader. I haven't caught him yet. He still swims some stream, or perhaps he isn't born yet. *Quien sabe?*

RICHARD G. HOBBS.

SPRINGFIELD, Ill.

"SPANISH MACKEREL OFF MOREHEAD."—Cincinnati, O., Sept. 6.—Your correspondent Mr. G. C. Connor speaks of Spanish mackerel weighing 15lbs., also describes them as "green and pearly-gray and maroon spotted." In some seven seasons spent on the Jersey coast I never saw a Spanish mackerel weighing over 6 or 9lbs. and I saw a great many. They are not green and pearly-gray, but very silvery and the spots are decidedly golden. I think Mr. Connor mistook a bonito for a Spanish mackerel. His description fits the latter very accurately. The bonito is often sold in the markets for Spanish mackerel and I have seen a specimen that weighed 14lbs. The Spanish mackerel will average 4 to 5lbs. in weight.—CALUMET. [The Spanish mackerel, *S. maculatus*, has golden spots and is occasionally found of 10lbs. weight, but the usual weight is from 1 to 3lbs. The allied forms are the cero and the king cero, *S. caballa* and *S. regalis*, the latter growing to 25lbs. and is furnished with brownish spots. These fish are often confounded by anglers. The bonito is a striped fish and is said to pass for Spanish mackerel in some markets, but its appearance is so different that we do not see how any person at all familiar with these fishes can mistake them. Perhaps the fish captured by Mr. Connor were the king cero, *S. regalis*, which may be called Spanish mackerel in parts of North Carolina.].

PRESERVING RODS DURING THE WINTER.—*Editor Forest and Stream:* The season approaches, and in fact, is here, when fishermen must put away their rods for the winter. This is a matter of more importance than some suppose. More rods are spoiled by neglect or improper care during the winter than from any other cause. Every person who owns a rod should have a care for it, but one trouble with me was that my love of a good rod has induced me to spend so much for them that I can hardly afford to buy expensive cases to store them in. The other day, however, I found what to me was a new contrivance, which is cheap and very serviceable. It is a rod case made of rolled paper, japanned, covered with cloth and made waterproof. It has handsome nickel trimmings, and is jointed in such a way as to be most convenient. It is light and very durable and is just the thing in which to lay away a rod for the winter or to carry it in on a trip. The contrivance is patented, but I did not learn where it is made. It struck me as being the cheapest and safest device for insuring the proper care of rods during the long winter.—FLY-ROD.

BOSTON AND MAINE.—There is considerable activity around the gun stores, though hardly as much as usual at this season. The fact is that the shooting is rather poor within easy distance of Boston. There is as much outfitting for the Maine woods as ever, but this does not include the great number of sportsmen who can get away for but a day or two at a time. To go through from Moosehead Lake, in Maine, to the Katahdin Iron Works is becoming a popular trip with Boston sportsmen, and one or two parties are planning to go that way in a few days. Another member of the wool trade will start on his annual trip to the Upper Moosehead region about the 20th. Mr. Heath, of the firm of Ginn & Heath, book publishers, is contemplating a trip to the Androscoggin Lakes. Mr. Geo. T. Freeman, of the firm of Harrington & Freeman, jewelers, is now on a gunning trip to Eastham for a few days. Mr. Freeman takes his little boy, ten years old, with him.—SPECIAL.

A RONKONKOMA CIRCUMSTANCE.—New York, Sept. 13.—I have been at Ronkonkoma during the past week and found the fishing quite bad, although the water is cold and free from grass. Few fish have been caught, but of those nothing under 1½lbs. L. M. They evidently are off feed, as it is difficult to even get the small perch to take the fly or worm; hence bait is scarce for the craft. Saturday morning I had a very funny experience. Was fishing at 7 A. M., clear and cool westerly wind. I put a medium-sized frog on a No. 2 Sproat hook and sank it near the bottom in about 28ft. of water. I soon felt a tug, and giving the bass ample time to gorge, struck and commenced to fight him; but he let go after a few struggles, evidently not hooked. I reeled in to replenish bait, and imagine my surprise to find my frog gone but in its place a nearly dead 4in. perch hooked clean across head between mouth and eyes! Will you or your readers explain how this happened and so enlighten—BROOKLYNITE.

THE BASS RECORD.—A report from Castleton, Vt., in the Troy *Times* of July 20, stated: "While Fish Warden A. H. Smith was returning from a midnight trip to the northern part of Lake Bomoseen Wednesday, he saw a large fish floating on the water. He drew it to Goodwin's boat landing and procured a pair of steelyards and weighed the fish. It proved to be an Oswego bass. It was 34in. long and weighed a little more than 25lbs. The fish had apparently been dead several days." If that weight can be verified, is it not the largest bass on record? —TROY. [We have written to Warden Smith, but no reply has been elicited.]

A FAIR ANGLER'S SKILL.—Birmingham, Conn., Sept. 4.—During two weeks of last month Mrs. Brewster and myself were camping on the inlet to Cranberry Lake, St. Lawrence county, N. Y. The stream is called the Inlet in that section. Mrs. Brewster caught out of one hole, in one hour, two speckled brook trout, one of which weighed 4lbs. and the other 3lbs. 10oz. She caught them alone, that is without help, no one except herself touching the rod. Pretty good for a lady, isn't it?—CYRUS BREWSTER, JR.

MONTREAL.—Quebec, Sept. 8.—The catch of bass, doré and maskinonge has been a large one in the St. Lawrence waters, which shows the effects of protection.—STANSTEAD.

THE OHIO FISH AND GAME COMMISSION.

IN the list of Fish Commissioners in our issue of Sept. 2, we gave the names of the officers of the previous year, followed by a note to that effect, and saying that there had been no information furnished. It now appears that an entire change has been made, and the following are the names and addresses of the board:

C. V. Osborn, President, Dayton.
H. P. Ingalls, Huntsville.
John Hofer, Bellaire.
A. C. Williams, Secretary, Chagrin Falls.

We will esteem it a favor if the Commissioners of the different States will notify us of any change in their officers. We aim to keep our readers informed on this subject.

PLAN OF A FISHWAY.—Bridgewater, N. S.—Build a rough but strong crib-work with a log bottom and sides, one side, if the river bank be rock; the sides high enough to be above the rock floor, the rock being carefully laid with large and small rock, so as to resemble the "natural run of water round the end of a dam," the large ones to form pools for rests, crooked and uneven, just as a natural run over rocky bottom, with a grade from 6 to 8ft., but it may be that a sharper grade will answer as well as the lesser grade over plank or cut stone. Then fill in with concrete to tighten and keep the stone rock in their place. The side, or sides, may be of hewn timber or planked, say, 2 or 3ft. above the bottom. The head should be 18in. or 2ft. below the top of dam, with a strong open pier in the pond to protect all from drift ice, logs, snags, or any drift debris from injuring the work or plugging it up. The rock bottom will be begun at the very lowest end, even under water, and may be fitted into the bottom logs and fastened by iron and wood plugs. Care must be taken to have it contract the water into a narrow stream, when at its lowest, and every pains taken to have it resemble a "natural stream." Where a rocky formation is at one side, but the bottom and one pier outside is required, while if the formation be of soft drifting material, a pier at each side is required. It may be at any part (place) of the dam, to answer circumstances. The rocks and concrete answer the double purpose of ballast and floor, and additional ballast may be placed in the piers at the sides, making the whole structure perfectly solid and durable. By this mode of fishway it is easily seen that fish may be taken over impassable rapids of high elevation, but my object is to lay my plan before the public and learn their views concerning it.—E. D. DAVISON.

THE NEW YORK OYSTER COMMISSION.—Fish Commissioner E. G. Blackford, in charge of the oyster investigation of the State, is gradually getting things into shape for a complete survey of the oyster beds of the State, to be made by W. G. Ford, Jr., an engineer formerly attached to the U. S. Coast Survey. Careful measurements are to be taken, and when the work is completed every plot of ground under water will be so positively defined on a map that buoys and stakes may be dispensed with. The field work will be accomplished during the summer and fall, and during the winter the maps will be made. At the same time the lines are being defined the depth of water, the temperature, the diversity and character of the bottom will be studied. When the work is completed, a bill will be framed and presented to the Legislature for action, which will give any one whose grounds have been surveyed the opportunity to obtain a title to the same by the payment of $1 per acre, in conformity with the law now in force in Connecticut. At the present time the tenure of oyster grounds in this State is rather held by custom and habit, and disputes as to ownership are constant. When the lines have been drawn and legal rights to grounds are shown beyond chance of dispute, a title will be given which will be as valid as if granted for uplands. Whenever natural oyster beds are found, they being the property of the public, they will not be interfered with. To those to whom titles are given a small yearly tax will be imposed to keep up the system. At Cold Spring Harbor some experiments in the artificial culture of oysters will be made by Mr. Fred Mather, and an analysis of the water from the different oyster beds is now being conducted by Mr. Bashford Dean.

THE NEBRASKA COMMISSION.—We have the report of the board of Fish Commissioners of Nebraska for the year ending Dec. 31, 1885. In former years the U. S. Fish Commission was depended upon for a supply of carp for distribution, but this year enough mirror carp were raised to supply all applicants up to the close of the season, besides a large number retained for breeders at the fishery. Superintendent O'Brien reports the demand for carp to be four times larger than heretofore. The following are the numbers of fish distributed during 1885: Brook trout, 121,000; California trout, 8,000; wall-eyed pike, 5,575,000; black bass, 605; carp, 2,745; total, 5,707,350.

FISHWAYS FOR VIRGINIA.—The State of Virginia is now erecting McDonald fishways on Reed Creek and all of its tributaries, with the object of opening the way for the ascent of bass, red-eyes and catfish from New River. The head waters are to be fully stocked with brook and rainbow trout, and full protection is guaranteed by consent of the land owners along the stream. As this stream has been heretofore without fish, the results accomplished will be watched with great interest as furnishing a measure of what may be accomplished by stocking and protecting waters by fishways.

WYOMING.—Fish Commissioner Gramm has returned with his car load of fish, and distributed them through the Territory. He had a whole car load of black bass, sun fish and catfish.

LAKE GEORGE CAMP AND CANOE CHATS: Gossip on Canoes, Camps, Religion, Social Manners, Medicine and Law, Gastronomy, Politics and Marriages. Illustrated with ten phototypes of beautiful views on the lake. New York: A. J. Whiteman, 1886.

This pretentiously printed volume purports to record the experiences and conversations of three canoeists at Lake George. From the title one might expect to find its pages pervaded with the perfume and breezy freshness of the forest and bright with the glinting sunshine of the rare spot where the scene is laid; but the atmosphere of the book is quite the reverse; it is unhealthy, fetid and depressing. The three canoeists (whom we take to be fictitious characters) are a divorce lawyer, who is a crank on the subject of marital infidelity; a physician, who is well posted on female immorality, and a clergyman, who does not resent an outrageously blasphemous joke. The subjects discussed are multifarious, chief among them being the depravity of the female flirt; to this the talk comes around again and again with disgusting frequency and the pertinacity of prurient persistency. The average canoeist, who takes up "Camp and Canoe Chats" for what canoeing there may be in them, will lay them down again in vexation at the recurrence to sexual sinning. All this would be well enough in its place in a treatise on psychiatry or as a contribution to the literature of the social evil, but it does not properly come under the head of canoeing, any more than a cabbage grower's discourses on the ravages of snails and slugs would come under the head of shooting on the wing, or a series of conversations on leprosy would belong to angling. As a piece of literary work the book is devoid of art, and overtaxes the reader's credulity. The snake scene at the end is as ridiculous as it is impossible. Mrs. Janus (the moral monstrosity who serves as the author's "horrible example") swims after her drowning child, bursts a blood vessel, and being brought to land, dies in this wise: "Long and earnestly she looked into the eyes of the frightened child, and as the blood still flowed from her mouth she grew weaker and weaker. At length the face began to lose expression. At this moment a rustle was heard in the undergrowth, and looking for its cause, all beheld an enormous serpent rearing its head to seize a white dove that was fluttering and about to fall into its jaws. The woman's eyes followed theirs. As she saw the reptile a shudder passed over her form that seemed like a convulsion. Her eyes regained their expression, and with one powerful effort she raised up her body to gaze upon the monster. 'At last,' she gasped, 'at last I know.' Then with a struggle she raised her arm and waved it toward the dove. The motion seemed to release it from the fearful fascination of the serpent, and with a quick movement it rose into the air and flew away. The serpent glided off, stopping now and then to look back with upraised head and open mouth, out of which its forked tongue flickered viciously. In the backward turn of its head and expanded jaws there was a hideous resemblance to the old artful smile and glance over the shoulder which had been one of the dying woman's frequent gestures. The spectators shuddered at the sight. The tide of life had nearly ebbed. Clasping her child still closer, the mother whispered, 'Shun the serpent and be the dove, darling—be the dove.' The arms relaxed, the form sank backward, and the great soul was gone."

It must not be inferred from what we have said, however, that there are not many bright things in this book, and the lawyer, physician and clergyman being men of the world (albeit the author proves them donkeys in the chiromancy incidents), have a deal of shrewd philosophy. The illustrations are beautiful specimens of printer's-ink photographs, happily chosen and finely executed.

SOUTHERN CALIFORNIA: Its Valleys, Hills and Streams; its Animals, Birds and Fishes; its Gardens, Farms and Climate. By Theodore S. Van Dyke. New York: Fords, Howard & Hulbert, 1886.

Mr. Van Dyke is by profession a lawyer. Some years ago, at the instance of his physicians, he abandoned a lucrative practice, and leaving his home in Minnesota, sought health in the milder climate of Southern California, where he has since resided. As a writer he needs no introduction to the readers of a journal whose columns have frequently been graced by contributions from his pen. In the handsomely printed volume before us, the scope of which is set forth in its title, he has endeavored to picture the outdoor attractions of his adopted home. His preface, in which the reader is taken into the author's confidence in a manner quite as charming as it is winning, warns us that we need not hope to find a book on Southern California which is not tinctured either by ignorance or by affection; in this volume one finds that Mr. Van Dyke's pages, if colored at all, owe their hue to affection, but never to any lack of information. He writes in graphic style of the hills and valleys and bays of that Pacific summerland. The descriptions of natural scenery are vivid; one sees the flower bedecked hillsides, catches mid-air the flash of bird plumage, and hears the whirr of wings, the beat of hoofs and the tinkling splash of the waterfall.

The advantages of Southern California as a permanent home are set forth, and the disadvantages appear to be detailed with equal frankness; as are also its agricultural and industrial capacities, for Mr. Van Dyke has no land to sell nor lots to boom. We most heartily commend the volume to any one who may be seeking information about Southern California, to all who enjoy close studies of the ways of nature, and to all who enjoy well written descriptions of a favored land.

POEMS: DRIFT WEED. By Celia Thaxter. Boston: Houghton, Mifflin & Co.

It affords us much pleasure to direct attention to these

two volumes of verse, which contain many poems of nature. Mrs. Thaxter is a clever and loving observer of bird life, and her sympathy has been warmly interested in the work of the AUDUBON SOCIETY. The first volume is in its thirteenth edition; the second in its fourth; and we hope to see each multiply.

THE PERCHERON HORSE. In America, by M. C. Weld; in France, by Chas. Du Hays. New York: Orange Judd Co, 1886.

The work of M. Du Hays, first published in 1868, is well known, and the publishers have taken the recent formation of an American Percheron Horse Breeders' Association as a fitting occasion to reissue it. Mr. Weld's part of the book is a brief review af the importation of the breed into this country and its growth in favor as a draught animal.

ADVENTURES OF AN OLD MAID. By Aunt Ruth (Belle C. Green). New York: J. S. Ogilvie & Co. Price 25 cents.

This is a book which is likely to interest fourteen-year-old country girls who have visited their city relatives; and for that matter forty-year-old girls and boys may appreciate its Widow Bedott style of humor. The publisher kindly sends us a printed ready-made notice, and asks us to say that "Her adventures will draw tears from a stone."

MY FRIEND JIM. By W. L. Norris. New York: Macmillan & Co., 1886. Price 50 cents.

This is a novel containing several passages of more than usual power, and entitling it to a rank above the ordinary, every-day product of this fiction-flooded day. It forms one of Macmillans summer reading series, and is in good company along with such masterpieces as Kingsley's "Hypatia" and "Westward Ho!"

THE AUTHORIZED LIFE OF LINCOLN, by his confidential secretaries, John George Nicolay (now marshal of the Supreme Court of the United States) and Col. John Hay (lately Assistant Secretary of State of the United States), will be the leading feature of *The Century* for 1886-7.

Address "American Kennel Register," P. O. Box 2832, New York. Number of entries already printed **4126.**

THE HORNELLSVILLE DOG SHOW.

HORNELLSVILLE, Sept. 11.—*Editor Forest and Stream:* The first annual dog show of the Hornellsville Kennel Club, held here the past week in conjunction with the Agricultural Fair of the Farmers' Club, was a pronounced success. There were considerably more than 200 dogs on exhibition, many of them being well-known winners at some of our best shows. The classes for setters, spaniels and beagles were well filled, especially the latter. The display of the Hornell Spaniel Club was an interesting feature of the show. The mastiffs, St. Bernards, deerhounds, bulldogs, and, in fact, nearly all of the breeds, were fairly represented, with the exception of the pointers, which were few in number and poor specimens of the breed. The judging gave general satisfaction.

Rockingham and Foreman again met to contest for the honors in the champion class for English setter dogs, and after a long and careful examination Judge Davidson decided in favor of the former. Both were looking well. Many of the setters were not in good condition and some of the decisions would probably have been reversed had all been shown at their best. The champion class for English setters was divided although there was but one bitch entered, Lidderdale, she was off in coat. In the open dog class Royal Prince was an easy winner, he was well shown and will undoubtedly be heard from again as he comes very near being first class and is as well bred as any. Knight of Snowden, was placed second. He was not looking so well as when at Newark last year and appears to be growing coarse. Marc, reserve, and Don Petrel, very high com., are both as good as Knight although Don was not in good form. Lassie, the winner in the bitch class, is a nice little bitch but did not show up well. Passion, winner of second, crowded her uncomfortably for the place. Helen Douglass, reserve, looking fairly well, was the only other in the class worthy notice.

Chief, looking his best, was alone in the champion Irish class. In the open dog class, Tim, looking better than I ever saw him, was away ahead of anything in the class. In the bitch class, Youbee scored a win over Molla and Nellie, the latter shown much too thin.

Old Argus and Heather Belle were the only Gordons shown and won in their respective classes.

The pointers were a poor lot. Beau Beau, winner of second, was the best, but her mangy condition beat her.

The spaniels were a nice collection, although most of them were shown by the Hornell Spaniel Club and not for competition. Black Prince won over his kennel mate in the champion field class. In the open dog class Niven's Darkey was alone. He was given first, which he well deserved. Niven's Busy, winner of first in the open cocker class, is a beauty of the correct type, and I shall expect to see her beat many a good one next year if she is shown. Doc, winner of second, and Ned Obo, reserve, are well known. The winning foxhounds and deerhounds are also well known.

The beagles were a striking feature of the show. Although not up in number to some of the displays of our leading shows, the quality was equal if not superior to anything I ever saw together at New York. Mr. A. C. Krueger, the judge, gave entire satisfaction. In the champion dog class Bannerman, in splendid condition, was shown for exhibition only, being the property of the judge. Rattler I. won over Rattler III., the latter not being the equal of the winner in body or coat. The winner is growing throaty and is a trifle wide in front. In the champion bitch class Bonnie received the award, being the only entry. Her muzzle is her weakest point. In the open class Cameron's Racket, the property of the judge, was not for competition. Jupiter, the winner, was hard pressed by Goodwood Rattler, who scraped 15in. hard. Jupiter is somewhat coarse, heavy in head, and thick in leather. Driver is long cast, deficient in coat and not of the correct type. Tempest, a very promising puppy, was not in the best of condition, which consequently magnified his faults, making him appear long cast and leggy, he can also be improved in muzzle. The bitch class was one of the best I have ever seen. Myrtle won with Jessie second. Both these bitches were commented upon in your report of the late New York show. Music III. is a very nice bitch, is a trifle snipy and her eyes are not as prominent as they should be; she is just a trifle long cast and her coat can be improved. Betty, heavy in whelp, is off in ears and muzzle. Vic, a bitch of great quality, shows age, her mouth is gone and she was shown too fat. Virginia is snipy, has open feet and shows throatiness. Queen Bird showed signs of mange, she is poor in ear and too light in muzzle. Dot, the remaining entry, is deficient in coat and tail, a trifle long cast and out at elbows. In the class for under 12in. only one entry was shown who just managed to get under the 12in. standard. He was off in muzzle and feet, otherwise a fair little dog.

The mastiffs were well represented by Hero III., Agrippa and Nell, well known. Lady Nevison and Bell Nevison are just fair specimens.

The smooth-coated St. Bernards were a very good lot, Apollo, winner in the champion class, was not looking nearly as well as when I saw him last.

Mr. Harrison showed four capital collies, two dogs and two bitches, winning first and second in each class. The bitch Miss Penelope is very good.

Mr. J. E. Thayer carried off all the fox-terrier prizes for which he had entries, as did Mr. Dole in the bull-terrier classes. His winning bitch, Lady Tarquin, has less faults than any bitch I have seen. Among the other terriers were some good ones. Dan O'Shea's Irish terrier Erin was shown as Grinn. Mr. Naylor's Scotch Rosie and Dandie Dinmonts Pride of Leda and Bonnie Briton, Mr. Shinn's Skye Lady Kate and Mr. Muss's black and tan Lady well deserved their prizes. All of them are well known. Mr. Thayer was the only exhibitor of bulldogs. All of them have a long list of winnings.

The dogs were fed on Spratts biscuit under the supervision of Mr. John Read to the satisfaction of the exhibitors. The special prize for the city sending the largest number of dogs went to London, Ont., with 51 entries, 43 owned by Mr. D. O'Shea, the second prize going to Mr. J. E. Thayer with 13 entries. Following is a complete list of the

AWARDS.

ENGLISH SETTERS.—CHAMPION—*Dog:* F. Windholz's Rockingham. *Bitch:* T. G. Davey's Liddersdale.—OPEN—*Dogs:* 1st, J. Johnson's Royal Prince; 2d, T. G. Davey's Knight of Snowden. Very high com. reserve, T. G. Davey's Marc. Very high com., D. O'Shea's Grouse and W. Tallman's Don Petrel. High com., T. G. Davey's Canada. Com., Chatauqua Kennels' Teddy Bang. *Bitches:* 1st, T. G. Davey's Lassie; 2d, W. Tallman's Passion. Very high com. reserve, T. G. Davey's Helen Douglass. Com., D. O'Shea's Nettie.

IRISH SETTERS.—CHAMPION—*Dog:* Max Wenzel's Chief. *Bitch:* No entries.—OPEN—*Dogs:* 1st and 2d, Max Wenzel's Tim and Cat-Foot. *Bitches:* 1st, Max Wenzel's Yoube; 2d, D. O'Shea's Molla. Very high com., T. J. Farley's Nellie.

GORDON SETTERS.—*Dogs:* 1st, J. E. Thayer's Argus. *Bitches:* 1st, D. O'Shea's Heather Belle.

POINTERS.—*Dogs:* No entries. *Bitches:* 1st, T. G. Davey's Canadian Queen; 2d and very high com., Lackawana Kennels' Beau Beau and Christmas Luck.

FIELD SPANIELS.—CHAMPION—A. C. Wilmerding's Black Prince.—OPEN—1st, D. O'Shea's Niven's Darkey.

Best kennel English setters, T. G. Davey; Irish setters, Max Wenzel; Collies, M. Harrison; beagles, W. S. Diffenderffer, 2d, Somerset Kennels; St. Bernards, W. W. Tucker; bulldogs, J. E. Thayer; spaniels, Fay and Baxter; bull-terriers, F. F. Dole. City prize, 1st, D. O'Shea; 2d, J. E. Thayer.

HORNELL.

MASTIFF SALE.—Mr. A. Gerald Hull, of Saratoga Springs, N. Y., has purchased from the Ashmont Kennels the well-known mastiff bitches Lorna Doone and Bal Gal, and the winner in the Waverly open dog class, Debonair.

THE WAVERLY DOG SHOW.

THE first fall dog show of the New Jersey Kennel Club, held at Waverly this week in conjunction with the New Jersey State Agricultural Society, is a decided success. The entries number 427, which is a larger number than we expected to see at this season of the year. The quality of the animals shown is above the average, many of the classes being exceptionally good in this respect. The new building erected by the Agricultural Society is well adapted for the purpose, being very well ventilated and fairly well lighted. The judging was not begun in very good season on Tuesday, but good progress was made and all but four small classes were finished that day. The attendance has been very good so far and with the big crowd expected to-day and to-morrow the club will undoubtedly clear a handsome balance. The dogs are well cared for and with the exception that the Adams Express Company was very dilatory in delivering the dogs intrusted to its care, everything connected with the show appears to run smoothly.

AWARDS.

MASTIFFS.—CHAMPION—*Dog:* Ashmont Kennels' Ilford Cromwell. *Bitch:* Winlawn Kennels' Prussian Princess.—OPEN—*Dogs:* 1st, Ashmont Kennels' Debonair; 2d, E. H. Moore's Ilford Caution; 3d, R. H. Derby's Pharaoh. Very high com., J. L. Winchell's Boss and Winlawn Kennels' Scipio. High com., J. Smieton, Jr.'s Kaffir and Winlawn Kennels' Hector. *Bitches:* 1st, Ashmont Kennels' Alice; 2d and 3d, Winlawn Kennels' Queen II. and Hebe. PUPPIES—*Dogs:* 1st, 2d and very high com., Winlawn Kennels' Regulus, Percival and Ilford Hercules. *Bitches:* 1st, J. L. Winchell's Boss's Lady Clare; 2d, Winlawn Kennels' Daphne.

ST. BERNARDS.—ROUGH-COATED—CHAMPION—*Dog:* Hermitage Kennels' Duke of Leeds. *Bitch:* Hermitage Kennels' Rhona.—OPEN—*Dogs:* 1st, J. E. Orr's Bronze; 2d, Hermitage Kennels' Cyrus; 3d, J. W. Burgess's Rene. High com., P. Thurtle's Tell. Com., A. J. Massey's St. Triphon and J. Ellice's Monarch. *Bitches:* 1st, Dr. Young's Empress; 2d, Hermitage Kennels' St. Bride; 3d, very high com. reserve, very high com., high com. and com., Hospice Kennels' Jean d'Arc, La Duchesse, Sheila and Dame Blanche. ST. BERNARDS.—SMOOTH-COATED—CHAMPION—*Dog:* W. W. Tucker's Apollo. *Bitch:* Hermitage Kennels' Leila.—OPEN—*Dogs:* 1st, Hospice Kennels' Hector; 2d, Hermitage Kennels' Eric; 3d, withheld. Com., Progressive Kennels' Duty and W. W. Tucker's Souldan. *Bitches:* 1st, Hermitage Kennels' Alma II.; 2d, Progressive Kennels' Girola; 3d, W. W. Tucker's Princess Louise. Very high com. reserve, Progressive Kennels' Apajune. Very high com., Hospice Kennels' Thisbe. High com., Hermitage Kennel's Hilda.—PUPPISS—*Dogs:* 1st and 2d, W. W. Tucker's Zeno II. and Prince Karl. *Bitches:* 1st, Hospice Kennels' Queen of Sheba; 2d, Progressive Kennels' Lady Arline.

NEWFOUNDLANDS.—1st and 2d, D. O'Shea's Bruno and Leo.

GREYHOUNDS.—CHAMPION—C. D. Webber's Mother Demdike.—OPEN—*Dogs:* 1st, C. D. Webber's Pembroke; 2d, H. W. Huntington's Duke. Very high com., C. D. Webber's Stormy Day. *Bitches:* 1st, C. D. Webber's Sister in Black; 2d, H. W. Huntington's Hawthorne Belle. Very high com., W. Blackham's Begonia. *Puppies:* 1st, and 2d, C. D. Webber's Stormy Day and Lady May.

DEERHOUNDS.—CHAMPION—J. E. Thayer's Chieftain.—OPEN—*Dogs:* J. E. Thayer's Highland Laddie. *Bitches:* 1st, J. E. Thayer's Ramona. *Puppies:* 1st and 2d, J. E. Thayer's Highland Laddie and Highland Lassie.

POINTERS.—LARGE—CHAMPION—*Dog:* Absent. *Bitch:* No entries.—OPEN—*Dogs:* 1st, C. J. Peshall's Nick of Naso; 2d, A. Collins's Captain Fred; 3d, C. J. Peshall's Jimmie. Very high com., F. Kammel's Dash. High com., H. J. Bennett's Rugby. Com., F. Smith's Joe. *Bitches:* 1st, withheld; 2d J. N. Lewis's Fan Fan; 2d, G. W. McNeil's Beauty. Very high com., H. J. Bennett's Polly Varden. Com., W. Hepsley's Jill.—SMALL—CHAMPION—*Dog:* Absent. *Bitch:* No entries.—OPEN—*Dogs:* 1st, H. J. Bennett's Phelan; 2d, Dr. S. Fleet Speir's Don Donald. *Bitches:* 1st, Reserve Kennels' Patti M.; 2d and 3d, J. H. Phelan's Dress and Rosa. Very high com., Vail & Wilms's Lady Snow. High com., T. G. Davey's Canadian Queen and J. N. Lewis's Jill. Com., G. W. McNeil's Temptation and W. S. R. Ogilvy's Peg of Limavaddy.—PUPPIES—*Dogs:* 1st, Clifton Kennels' Bangso; 2d, G. L. Wilms's Naso of Jersey. Very high com. reserve, C. J. Peshall's Lorne of Naso. Very high com., H. Vail's Naso of Devonshire. Com., J. H. Shippee's Grover. *Bitches:* 1st, very high com. reserve, very high com., high com., G. L. Wilms's Mayflower, Galatea, Natation and Queen of Naso; 2d F. Lister's Louise of Naso. Com., H. J. Bennett's Lady Davidson'

ENGLISH SETTERS.—CHAMPION—*Dog:* F. Windholz's Rockingham. *Bitch:* T. G. Davey's Liddersdale.—OPEN—*Dogs:* 1st, T. G. Davey's Knight of Snowden; 2d, Dr. S. Fleet Speir's Herz; 3d, J. Von Lengerke's Prince Dash. Very high com., H. B. Duryea's Royal Sultan, Mrs. F. A. Cannon's Yale Belton and Reserve Kennels' Pendragon. High com., L. B. Wright's Prince Jester and T. G. Davey's Marc. Com., T. G. Davey's Canada and Dr. S. Fleet Speir's General Arthur. *Bitches:* 1st, F. Windholz's Cora of Wetherall; 2d, G. W. Neal's Daisy Foreman; 3d, T. G. Davey's Lassie. Very high com. reserve, W. Tallman's Passion. Very high com., P. C. Ohl's Nettie B. High com., F. Windholz's Princess Phœbus, Rosecroft Kennels' Hazel and W. Tallman's Lulu. Com., T. G. Davey's Helen Douglass. PUPPIES—*Dogs:* 1st, H. B. McKnight's Paris Boy; 2d, R. V. Ohl's Lord Percy. High com., W. J. Dean's Rocket. *Bitches:* 1st, Rosecroft Kennels' Forest Belle; 2d, H. B. McKnight's Michigan Belle.

BLACK AND TAN SETTERS.—CHAMPION—E. Mahar's Royal Duke.—OPEN—*Dogs:* 1st, J. N. Lewis's Bluff II.; 2d, S. A. Hess's Dash; 3d, R. Cusack's Tony. *Bitches:* 1st, D. O'Shea's Heather Belle.

IRISH SETTERS.—CHAMPION—*Dog:* Max Wenzel's Chief. *Bitch:* C. T. Thompson's Trix.—OPEN—*Dogs:* 1st, Park City Kennels' Gerald; 2d, Max Wenzel's Tim; 3d, I. H. Roberts's Bruce. Very high com. reserve, H. B. Goetschius's Chief II. Very high com., C. W. Rodenburg's Chip. High com., H. B. Wright's Glencho's Boy' *Bitches:* 1st, 2d and 3d, Max Wenzel's Yoube, Ready and Dinah. Very high com., A. W. Pearsall's Lillie Malone.—PUPPIES—*Dogs:* 1st, Max Wenzel's Cat-Foot. *Bitches:* 1st, I. H. Roberts' Helen.

FIELD SPANIELS.—CHAMPION—A. E. Rendle's Compton Bandit.—OPEN—1st, D. O'Shea's Niven's Darkey; 2d, E. M. Oldham's Lady Abbot.

COCKER SPANIELS.—CHAMPION—J. P. Willey's Shina.—OPEN—LIVER OR BLACK—*Dogs:* 1st, American Cocker Kennels' Doc; 2d, Fay & Baxter's Ned Obo. *Bitches:* 1st, J. P. Willey's Miss Obo II.; 2d, very high com. and high com., Fay & Baxter's Widow Cliquot, Yum Yum and Bijou; 3d, D. O'Shea's Niven's Busy.—ANY OTHER COLOR—1st, withheld; 2d, W. S. Gadling's Sparkle. High com., R. J. Seabury's Rex. *Puppies:* 1st, A. W. Day's None Such; 2d, Fay & Baxter's Yum Yum. Very high com., W. S. Gadling's Adonis and P. H. Barnard's Montague. High com., W. S. Gadling's Romeo.

CLUMBER SPANIELS.—1st and 2d, M. Richardson's Newcastle and Tyne.

FOXHOUNDS.—CHAMPION—D. O'Shea's Roxey.—OPEN—1st, D. O'Shea's Ranger. *Puppies:* 1st, D. O'Shea's Ranger II.

COLLIES.—CHAMPION—*Dog:* No entries. *Bitch:* Hempstead Farm Co.'s Lady of the Lake.—OPEN—*Dogs:* 1st, J. Van Schaick's Scotson; 2d, M. Harrison's Nullamore; 3d, Glencho Collie Kennels' Kenneth. Very high com., J. Watson's Bounce and Clipper. High com., M. Harrison's Blue Jacket. *Bitches:* 1st, Hempstead Farm Co.'s Lady Ellis; 2d, M. Harrison's Gem; 3d, J. Ellice's Rose. Very high com., R. H. Moore's Gypsey. High com., M. Harrison's Miss Penelope.—PUPPIES—*Dogs:* 1st, J. Van Schaick's Scotson; 2d, withheld. High com., J. D. Shotwell's Tom Brown. *Bitches:* 1st, withheld; 2d and high com., J. D. Shotwell's Madge and Jessie.

BEAGLES.—CHAMPION—W. S. Diffenderffer's Rattler III.—OPEN—LARGE—*Dogs:* 1st, H. F. Schellhass's Trailer; 2d, Somerset Kennels' Jupiter. Very high com., F. D. Ogilby's Flasher. High com., W. H. Child's Tony Weller, E. R. Coleman's Racket and G. Laick's Goodwood Rattler. *Bitches:* 1st, W. S. Diffenderffer's Myrtle; 2d, Somerset Kennels' Jessie. Very high com., W. S. Diffenderffer's Queen Bird and Betty, E. R. Coleman's Maud, Somerset Kennels' Virginia, H. S. Schellhass's Trinket, D. O'Shea's Music III. and P. Dorsey's May Belle II. High com., C. P. Lewis's Dot.—SMALL—1st, D. O'Shea's Fair Maid. *Puppies:* 1st and 2d, H. F. Schellhass's Echo and Melody. Very high com., W. S. Diffenderffer's Tempest. High com. and com., J. H. Seeley's Nellie and Royer.

PUGS.—CHAMPION—City View Kennels' Bradford Ruby.—OPEN—*Dogs:* 1st, City View Kennels' Ko-Ko. *Bitches:* 1st and 2d, City View Kennels' Lady Cloudy and Tiny. Very high com., Edith A. Bannister's Jessie. *Puppies:* 1st, City View Kennels' Ko-Ko; 2d, C. D. Bannister's unnamed.

BULLDOGS.—1st, E. S. Porter's Caliban.

BULL-TERRIERS.—CHAMPION—F. F. Dole's Count.—OPEN—OVER 25LBS.—*Dogs:* 1st, W. F. Hobbie's Grabber; 2d, F. F. Dole's The Baron. High com., J. Patterson's Judas and C. A. Stevens's The Earl. *Bitches:* 1st and very high com., F. F. Dole's White

Violet and Lady Tarquin; 2d, C. A. Stevens's Rose. UNDER 25LBS.—*Dogs:* No entries. *Bitches:* 1st, C. H. Hays's Venus. *Puppies:* 1st, D. O'Shea's Lill; 2d, Livesey's Tuff. High com., Stegman's Toby.

FOX-TERRIERS.—CHAMPION—*Dog:* J. E. Thayer's Belgrave Primrose. *Bitch:* J. E. Thayer's Richmond Olive.—OPEN—*Dogs:* 1st, 3d and very high com., Kelly and Hoey's Valet Shovel, and Earl Lycester, 2d, A. Belmot, Jr.'s Bacchanal. Very high com. and high com., J. E. Thayer's Raby Jack and Raby Tyrant II. Com., D. O'Shea's Lythem Ben. *Bitches:* 1st and 2d, A. Belmont, Jr.'s Safety and Marguerite; 3d, J. E. Thayer's Raby Belle.—PUPPIES—*Dogs:* 1st, F. Hoey's Luke; 2d and high com., J. E. Thayer's Richmond Tyrant and Raby Tyrant II. *Bitches:* 1st, F. Hoey's Pluck; 2d, J. E. Thayer's Raby Bello. Com., H. C. Dennison's Trix.

BLACK AND TAN TERRIERS.—1st and high com., G. D. Woodill's Queen and Victor; 2d, E. Lever's Jet.

IRISH AND ROUGH-HAIRED TERRIERS.—1st and 2d, D. O'Shea's Erin and Fly.

BEDLINGTON TERRIERS.—1st, D. O'Shea's Zulu.

SKYE TERRIERS.—1st, Mrs. L. E. Bellinger's Tanzie; 2d, C. A. Shinn's Lady Kate.

TOY TERRIERS.—1st, withheld; 2d, D. O'Shea's Nellie.

KING CHARLES SPANIELS.—1st and 2d, Royal King Charles Kennels' Roscius and Princess. Very high com., Miss Jennie Bennett's Gipsy. High com., Mrs. M. Kronheim's Spark.

BLENHEIM SPANIELS.—1st and 2d, Royal King Charles Kennels' King Victor and King Pippin.

YORKSHIRE TERRIERS.—1st, A. W. Cabot's Lancashire Star; 2d, very high com. and com., W. C. Wellman's Prince II., Joe and Dandy.

MISCELLANEOUS.—LARGE—1st, Zeller's Marco.—SMALL—1st, Topsy. SELLING CLASS.—1st and 2d, A. W. Pearsall's two unnamed bitches. High com., A. W. Pearsall's dog; J. Connor's Gipsie Queen.

SPECIALS.—Ilford Cromwell, Old English Mastiff Club cup. Beaufort, pointer sweepstake.

KENNEL NOTES.

NAMES CLAIMED.

☞ **Notes must be sent on the Prepared Blanks.**

Cora. By Geo. W. Schenk, Burlington, Ia., for tawny and white smooth St. Bernard bitch, whelped Aug. 1, 1886, by Tucker's Apollo (Medor—Blass) out of Laone (A.K.R. 2416).

Tyras and Minka. By Geo. W. Schenk, Burlington, Ia., for orange tawny and white St. Bernard dog and bitch, whelped Aug. 1, 1886, by Tucker's Apollo (Medor—Blass) out of Laone (A.K.R. 2416).

Jenny and Jura. By Geo. W. Schenk, Burlington, Ia., for orange and white smooth St. Bernard bitches, whelped Aug. 1, 1886, by Tucker's Apollo (Medor—Blass) out of Laone (A.K.R. 2416).

Nevada Dick. By Geo. W. Schenk, Burlington, Ia., for solid liver cocker spaniel dog, whelped July 7, 1886, by Hornell Silk out of Gypsy (Bonanza—Bonny).

Nigger II., Chic, Nell and Topsy. By Geo. W. Schenk, Burlington, Ia., for black cocker spaniels, two dogs and two bitches, whelped July 7, 1886, by Hornell Silk out of Gypsy (Bonanza—Bonny).

Fred Gladstone. By Chas. Tucker, Stanton, Tenn., for white and lemon English setter dog, whelped May 16, 1886, by Gladstone (Dan—Petrel) out of Flounce (Druid—Ruby).

Fanny Gladstone. By J. M. Fromfield, Jr., General Wayne, Pa., for orange and white English setter bitch, whelped Aug. 30, 1885, by Gladstone (Dan—Petrel) out of Flounce (Druid—Ruby).

Rebel Rod. By J. M. Fromfield, Jr., General Wayne, Pa., for blue belton English setter dog, whelped April 9, 1886, by Roderigo out of Gypsey Maid.

Volantes. By J. H. Phelan, Jersey City, N. J., for liver and white pointer dog, whelped Dec. 18, 1885, by Donald II. (Donald—Devonshire Lass) out of Lady Bell (Bang Bang—).

Queen Mab and Romping Girl. By Thos. W. Mills, Montreal, Can., for light brindle and fawn brindle bull bitches, whelped July 31, 1886, by Guillermo (Moses—Juno) out of Patti (Toreador—Betsey).

Monarch and Bellissima II. By Thos. W. Mills, Montreal, Can., for dark brindle bulldog and bitch, whelped July 31, 1886, by Guillermo (Moses—Juno) out of Patti (Toreador—Betsey).

Clipper, Star and York. By Detroit Kennel Club, Detroit, Mich., for three stone fawn pug dogs, whelped Aug. 14, 1886, by Treasure (Fritz—Banjo) out of Jipsey (Don Juan—Foxey).

Bandit and Rustic. By D. S. Gregory, New York, for liver and white and lemon and white pointer dogs, whelped July 19, 1886, by Bracket (Graphic—Bloomo) out of Lucia (Croxteth—Belle).

Gath's Gem. By Blue Blood Kennels, Newburyport, Mass., for black, white and tan English setter bitch, whelped May, 1886, by Gath's Mark out of Dell.

Gerald, Garland and Gertrude. By F. C. Wheeler, London, Ont., for fox-terriers, one black, tan and white dog and bitch and one white, black and tan bitch, whelped July 21, 1886, by Avenger (A.K.R. 804) out of Dudley Rage (Pickle II.—Frantic).

Adonis. By Mill Brook Kennels, Bergenfield, N. J., for dark brindle, correct markings, St. Bernard dog, whelped May 15, 1886, by Verone (A.K.R. 418) out of Nellie (Dirk—Abra).

Archer. By Mill Brook Kennels, Bergenfield, N. J., for orange brindle, correct markings, St. Bernard dog, whelped May 15, 1886, by Verone (A.K.R. 418) out of Nellie (Dirk—Abra).

Anette. By Mill Brook Kennels, Bergenfield, N. J., for orange, correct white markings, St. Bernard bitch, whelped May 15, 1886, by Verone (A.K.R. 418) out of Nellie (Dirk—Abra).

Asa and Ajax. By Mill Brook Kennels, Bergenfield, for tawny and white St. Bernard dogs, whelped May 15, 1886, by Verone (A.K.R. 418) out of Nellie (Dirk—Abra).

Gathstone. By Blue Blood Kennels, Newburyport, Mass., for black, white and tan English setter bitch, whelped April 27, 1886, by Gath's Mark out of Mag (Gladstone—Lavalette).

Spot Dash. By Robert Leslie, Lynn, Mass., for white and liver ticked pointer dog, whelped July 12, 1886, by Sir Philip Sydney (Fosco—Kit) out of Topsy (Jake—Bess).

Mont Royal Kennels. By Thomas W. Mills, Montreal, Can., for his kennels of bulldogs.

BRED.

☞ **Notes must be sent on the Prepared Blanks.**

Girola—Duly. Progressive Kennels' (Flatbush, L. I.) St. Bernard bitch Girola (A.K.R. 1606) to their Duty (A.K.R. 3858), Sept. 2.

Lady—The O'Donoghue. Excelsior Irish Water Spaniel Club's (Milwaukee, Wis.) Irish water spaniel bitch Lady (Bob—Bridget) to their The O'Donoghue (Mickey Free—Eily O'Connor), Sept. 10.

Brenda Secunda—Ilford Caution. E. H. Moore's (Melrose, Mass.) mastiff bitch Brenda Secunda (Turk—Brenda) to his Ilford Caution, Sept. 3.

Nellie—Turk II. W. E. Weeks's (Winchester, Mass.) mastiff bitch Nellie (Major—Mollie) to E. H. Moore's Turk II., Sept. 2.

Dixie—Merchant Prince. B. C. Johnson's (Boston, Mass.) St. Bernard bitch Dixie (Romeo—Juliet) to E. H. Moore's Merchant Prince, Sept. 6.

Diva—Merchant Prince. H. M. Bullivant's (Boston, Mass.) St. Bernard bitch Diva to E. H. Moore's Merchant Prince, Sept. 2.

Sandella—Ilford Caution. J. S. Coxey's (Massillon, O.) mastiff bitch Sandella (Boss—Bess) to E. H. Moore's Ilford Caution, Sept. 8.

Fawn—Chief. F. M. Brasher's (Brooklyn, N. Y.) Irish setter bitch Fawn (Elcho—Noreen) to Max Wenzel's Chief (A.K.R. 231).

WHELPS.

☞ **Notes must be sent on the Prepared Blanks.**

Dixie. W. E. Deane's (Somerset, Mass.) beagle bitch Dixie (Flute—Thorne), Aug. 30, five (four dogs), by his Flute D. (A.K.R. 2288).

Thule. Mill Brook Kennels' (Bergenfield, N. J.) collie bitch Thule (Garry II.—Lassie of Wyckoff), Sept. 3, eight (five dogs), by Dr. J. W. Downey's Gordon.

Patti. Thomas W. Mills's (Montreal, Can.) bull bitch Patti (A.K.R. 2528), July 31, nine (two dogs), by his Guillermo (A.K.R. 671).

Jess. Geo. Chillas's (Toronto, Ont.) Clumber spaniel bitch Jess (Jack—Jill), Aug. 29, five (three dogs), by F. H. F. Mercer's Johnny (Ben—Joan).

Canace. C. B. Gilbert's (New Haven, Conn.) basset hound bitch Canace (Jupiter—Citron), Sept. 2, five (three dogs), by his Bertrand (Bourbon—Cigarette); one dog and one bitch since dead.

Gypsy. Geo. W. Schenk's (Burlington, Ia.) cocker spaniel bitch Gypsy (Bonanza—Bonny), July 7, six (four dogs), by Hornell Spaniel Club's Hornell Silk.

Laone. Geo. W. Schenk's (Burlington, Ia.) smooth St. Bernard bitch Laone (A.K.R. 2416), Aug. 1, five (one dog), by W. W. Tucker's Apollo (Medor—Blass).

Flossie Belle. Thos. Taylor's (Four Mile Run, Va.) Irish setter bitch Flossie Belle (A.K.R. 2433), Sept. 5, three dogs, by B. F. Guy's Galliard (Snap—Vic).

Fannie B. E. J. Blake's (Hartford, Conn.) St. Bernard bitch Fannie B. (A.K.R. 3850), Aug. 5, fourteen (five dogs), by E. R. Hearn's Duke of Leeds (A.K.R. 1535).

SALES.

☞ **Notes must be sent on the Prepared Blanks.**

Gypsy. Black cocker spaniel bitch, whelped March, 1885, by Bonanza out of Bonny, by Geo. W. Schenk, Burlington, Ia., to Aug. Becker, same place.

Cricket. Black Newfoundland bitch, age and pedigree not given, by Geo. W. Schenk, Burlington, Ia., to Aug. Becker, same place.

Chic. Black cocker spaniel dog, whelped July 7, 1886, by Hornell Silk out of Gypsy, by Geo. W. Schenk, Burlington, Ia., to Wm. McArthur, same place.

Nell. Solid black cocker spaniel bitch, whelped July 7, 1886, by Hornell Silk out of Gypsy, by Geo. W. Schenk, Burlington, Ia., to Associated Fanciers, Philadelphia, Pa.

Topsy. Black cocker spaniel bitch, whelped July 7, 1886, by Hornell Silk out of Gypsy, by Geo. W. Schenk, Burlington, Ia., to C. McDonald, Chicago, Ill.

Nigger II. Black cocker spaniel dog, whelped July 7, 1886, by Hornell Silk out of Gypsy, by Geo. W. Schenk, Burlington, Ia., to E. B. Yerington, Virginia City, Nev.

Nevada Dick. Liver cocker spaniel dog, whelped July 7, 1886, by Hornell Silk out of Gypsy, by Geo. W. Schenk, Burlington, Ia., to F. L. Wilder, Virginia City, Nev.

St. Joe. White, black and tan fox-terrier dog, age not given, by Fennel out of Molly, by F. C. Wheeler, London, Ont., to John P. Waters, New York.

Peveral. Lemon and white pointer dog, whelped June 30, 1886, by Bracket out of Rosa (A.K.R. 1443), by J. H. Phelan, Jersey City, N. J., to J. A. Dyson, Washington, Ga.

Barbelle. Liver and white pointer bitch, whelped June 30, 1886, by Bracket out of Rosa (A.K.R. 1443), by J. H. Phelan, Jersey City, N. J., to O. W. Donner, Coosaw, N. C.

Troubador. Liver and white pointer dog, whelped June 30, 1886, by Bracket out of Rosa (A.K.R. 1443), by J. H. Phelan, Jersey City, N. J., to Wm. Eaton, New York.

White Rose. White pointer bitch, whelped June 30, 1886, by Bracket out of Rose (A.K.R. 1443), by J. H. Phelan, Jersey City, N. J., to G. W. LaRue, New York.

Rossifer. Liver and white pointer dog, whelped June 30, 1886, by Bracket out of Rosa (A.K.R. 1343), by J. H. Phelan, Jersey City, N. J., to Mr. Fielder, Newark, N. J.

Fred Gladstone. Blue belton English setter dog, whelped May 16, 1886, by Gladstone out of Flounce, by Chas. Tucker, Stanton, Tenn., to C. Fred Crawford, Pawtucket, R. I.

Bracket—Lucia whelps. Pointers, whelped July 19, 1886, by D. S. Gregory, New York, a lemon and white and a liver and white dog to Edward Kessler, Staten Island, N. Y.

Ranger—Fannie whelp. Black cocker spaniel dog, whelped June 14, 1886, by W. J. Furness, Ogdensburg, N. Y., to G. H. Carr, Hartford, Conn.

Ben Nevis—Lady Mac (A.K.R. 3715) whelps. Collies, whelped April 20, 1886, by Jas. G. Gardner, New York, two dark sable dogs and two black, tan and white bitches to J. D. Shotwell, Rahway, N. J.

Buecher—Cricket whelps. Newfoundlands, whelped March, 1886, by Geo. W. Schenk, Burlington, Ia., a dog each to C. Mather, J. Beck and M. Metzger and two bitches to A. Becker, same place.

Countess Zoo. Black and white English setter bitch, whelped Oct. 7, 1884 (A.K.R. 2159), by Warren H. Beede, Lynn, Mass., to E. K. Wheeler, same place.

Haines's Chief. Red Irish setter dog, whelped Sept. 11, 1885 (A.K.R. 3064), by L. A. Haines, Atlantic City, N. J., to F. W. Trimble, Baltimore, Md.

Bianca. Fawn, black points, mastiff bitch, whelped August, 1884, pedigree unknown, by Wacouta Kennels, St. Paul, Minn., to O. N. Kyle, Florence, Mass.

Mountain Chief. Orange and white St. Bernard dog, whelped April 23, 1886, by Merchant Prince out of Bernie V., by E. H. Moore, Melrose, Mass., to J. H. Cromwell, New York.

Salsa. Fawn mastiff bitch, whelped May 6, 1886, by Ilford Caution out of Bess, by E. H. Moore, Melrose, Mass., to E. B. Sears, Boston, Mass.

Ilford Caution—Bess whelps. Fawn mastiffs, whelped May 6, 1886, by E. H. Moore, Melrose, Mass., a dog each to J. D. Freeborn, Cheyenne, Wyo. Ter., and H. Falconer, Shelburne, Ont.

Ilford Caution—Countess whelp. Fawn mastiff bitch, whelped May 6, 1886, by E. H. Moore, Melrose, Mass., to H. Falconer, Shelburne, Ont.

Merchant Prince—Miranda whelp. Orange and white St. Bernard dog, whelped July 12, 1886, by E. H. Moore, Melrose, Mass., to J. S. Coxey, Massillon, O.

IMPORTATIONS.

Brenda Secunda. Mastiff bitch, age and pedigree not given, by E. H. Moore, Melrose, Mass., from R. Cook, Essex, Eng.

DEATHS.

Suwanee. Black cocker spaniel bitch (A.K.R. 658), owned by A. C. Wilmerding, New York, Sept. 4, from congestion of the lungs.

KENNEL MANAGEMENT.

☞ **No Notice Taken of Anonymous Correspondents.**

F. H. B., Buffalo.—A setter dog was taken with distemper after he was one year old and was pretty near well when he had a relapse, from which he has recovered, except that his head has fallen in above the eyes and great weariness after exercise, also chattering of teeth. Ans. Give your dog 10 grains of the iodide of potash three times daily in solution. Keep the bowels open with syrup of buckthorn or castor oil in teaspoonful doses.

Forest and Stream Fables sold by all newsdealers.

Answers to Correspondents.

☞ **No Notice Taken of Anonymous Correspondents.**

A. A. A., Pittsburgh, Pa.—The seining was contrary to the law.

BOSTON.—The writer of "Branting at Monomoy" will oblige by sending address to this office.

M. T., Boston, Mass., who recently inquired for books on catamaran, will oblige by sending his address.

H. F. M., Boonton, N. J.—Where can I get a colored plate of black bass flies? Ans. Apply to W. Holberton, Vesey street, New York.

READER.—1. When does the hounding season on deer in Ontario open? 2. Can one from the States buy a deer in Ontario and ship it to this side by paying duties on it? Ans. 1. Oct. 15. 2. No.

J. E. M., Easton, Md.—I send you by mail a small frog new to me; would like to know something about it. Ans. The frog did not come to hand; it was probably detected in the mails and arrested under the rule forbidding transmission of live animals.

H. B., Gainesville, Fla.—Please say in "Answers to Correspondents" whether or not the "Illustrated Yacht Race Supplement" mentioned in recent number, is gratuitous to subscribers and if not state price. Ans. No; it is an extra publication. The price is 10 cents.

G. B., Toronto, Can.—When out camping recently I caught a black bass trolling which measured 21in. in length and 14¾in. in circumference in the thickest part. Having no means at hand of weighing him, I took his measurements as above. Can you give me an estimate of what his weight would be? Ans. Perhaps 6lbs.

W. F. C., Connellsville, Pa.—Please give me the names of four or five fishing clubs. Ans. Cuttyhunk Club, address New Bedford, Mass. Pasque Island Club, ditto. West Island Club, Newport, R. I. South Side Sportsman's Club, Oakdale, N. Y. Suffolk Club, Islip, N. Y. These clubs are permanently located and receive mail at the places named. Many clubs have homes on some lake or stream, but are only open when occupied as the members live at a distance.

F. B., South Norwalk, Conn.—Some years ago a law was passed in this State protecting rail until Sept. 12. A special law for Fairfield and New Haven counties allowed shooting on and after Aug. 20. This year shooting was done on and after Aug. 20 on the Housatonic River. As I believe the special law for Fairfield county has not been repealed and we do not want it repealed. I claim we had a perfect right to shoot rail in this county on and after Aug. 20. Does the new September law make void the special law of Aug. 20 for Fairfield county? Ans. The law making season open Sept. 1 is a State law and covers all counties. It was approved March, 1886, and amends Chap. 121, Laws of 1882.

W. K. P., Athens, Pa.—1. Can you give me a description of the "Lord Baltimore" and "Page" flies? 2. Is there any book which describes these flies, and if so, where can I obtain it? 3. Is there any fly that the Susquehanna salmon take, and if so, what one? Ans. 1. We do not find these flies named or figured in any book or plate; they may be new or local flies, or may be well-known flies which have been rechristened. 2. Answered above. 3. There is no such fish as a "Susquehanna salmon;" the pike-perch or walleyed pike is misnamed a "salmon" in Pennsylvania, and you may mean this fish. If so, we will say that it will take a red-ibis as well as any fly, but it does not rise freely. Put a shot on the gut and let the fly sink and troll it.

Rifle and Trap Shooting.

WING-SHOOTING WITH A RIFLE.

MR. H. C. BLISS, of Des Moines, Iowa, is an enthusiast upon the use of the rifle with its single bullet in place of the shotgun with its shower of pellets in a great bulk of snap-shooting. He has put his experience into a compact little book, which is interesting from end to end.* He talks with sense and modesty, does not claim to know everything, but sets out to tell what he has learned by many trials of patient shooting. His object, he says, is a sincere desire to encourage Americans to become experts with a rifle. He finds that "most of the works that are written and most of the practice that is indulged in is at long range, and while this is undoubtedly a legitimate field for practice, the writer claims that it is just as legitimate and more necessary, by far, for a rifleman to handle his weapon rapidly and accurately at short range. This style of shooting has not been practiced to any great extent except by a few professionals, and they have thrown such an amount of mystery around it that amateurs have thought the art entirely beyond them."

In his opening chapter he speaks of the necessary qualifications for a good snap-shooter, and says: "The question is often asked, What is necessary to become a wing-shot with a rifle? I think I can answer that question with one word: practice; and not so much of that as some people think. When Dr. Carver first came before the public, even some of the best riflemen of the West thought that he was specially gifted, and two of the best shots on the Pacific coast talked the matter over and concluded that it wasn't worth their while to try it. Afterward, they decided to see what they could do, and did a little practicing, all alone, where no one could see them, and to their infinite surprise they found that they could, with a little practice, do nearly everything that Carver claimed to do."

He at once sets aside the idea that there is any special gift in this sort of shooting, and lays down the general conclusion: "It would seem, on the whole, that a man of nervous temperament has some advantages in 'snap-shooting' over others, because he naturally makes quick motions, and this is absolutely necessary in this kind of work. Another thing to always remember in practice is not only to make your motions quick, but to put in use enough muscle to have your gun come firmly to your shoulder every time you raise it, and strike the shoulder firmly. Don't be 'dainty' and 'gingerly' about your work, but make every motion as if you meant it. Regular troops are taught and drilled continually on this point, that every motion should be made with vim; and if you drill under the instruction of an old army officer for a week, you will find that at the end of that time he will have that so thoroughly impressed on your mind that you will never forget it."

He lays stress upon the importance of starting aright and his instructions show that he has been there and knows what he is talking about. He says: "Your first lessons in snap-shooting should be such that you will feel encouraged at the result and not get disheartened, as you are liable to do if you attempt difficult feats. I think that this is one of the things that has spoiled many a naturally good shot. He would attempt some of the feats of professionals, and, of course, fail, and then give the whole thing up in disgust. See first that your gun is not loaded, hold it in the position of 'ready,' but do not raise the hammer, unless it interferes with your sights, fix your eye on some small object, either in the room or at something out of the window, and bring your gun quickly and firmly to your shoulder, trying meanwhile to have the sights aligned with the object you are looking at. Take it down, and try the same thing over and over again. At first, of course, the gun will not come where you want it to, but you will find that a half hour's practice a day (more if you can spare the time) for a week will do wonders for you, and that the gun will be almost where you want it the instant it strikes your shoulder. This kind of practice you will find to be a great help to you even after you have become a good shot and have stopped practice a little while. If you are going out to shoot, take up your gun and go through the motions a few times, and it does you almost as much good as firing."

The matter of a target he regards as important and makes his instructions very plain as to what the target should be and how to use it, saying: "The first target that I would recommend to the beginner is by all means one that swings, and is large enough and the range short enough so that you can see every time what you have done. A 12in. target and a 30ft. range are about right to begin on.

"Then, when you begin to practice, do not hold your gun to your shoulder, aiming at one end of the space where the target swings and wait till it has come back to that point two or three times before you shoot. This is one of the most common errors that beginners are apt to fall into, and nothing could hurt you more.

"Bring the gun to your shoulder and try to have the sights come to the right place, as I have said before, when it strikes the shoulder; but when it does strike the shoulder don't fail to pull the trigger. If you fail to hit the target the first few shots, never mind, but go ahead. Get into the habit of firing when you ought to fire and this very thing will nerve you up to your work.

"A great many will tell you that a good shot never sees the sights on his gun but shoots by instinct. The instinct that all good shots have is the instinct of bringing their gun to the proper place when they try, and right there is the instinct part of the business ceases, and in one-quarter of a second they have time to adjust the sights and then pull the trigger. That is another thing that is done by instinct—pulling the trigger. You will find that after some practice you will pull the trigger without knowing it, and without any apparent effort, just as you would move your hand to catch a ball that was thrown to you.

"A few hours' practice at a swinging target will show you that you can get nearer the 'bullseye' each 100 shots that you fire, and you will soon want to try your hand at something else. Before leaving the swinging target, extend the range, if possible, to 75ft. by degrees, say 10ft. at a time. Try hitting at different points in its flight; I mean, say put in 10 consecutive shots just as it passes the center, and then try to hit it just as it is half way between the center and the end. This will show you whether you are falling into the habit of shooting at it at one particular point or not, and help to break you of that habit.

"Another good thing to practice is 'call shots.' Stand at the score with your gun at 'ready,' and have some one call for you as follows: He first asks you, 'Are you ready?' You answer, 'Ready!' and he then calls, 'One, two, three, fire!' His counting and the word 'fire' should not occupy over one and one-half or two seconds. At the word 'one' you bring your gun to your shoulder, and before the word 'fire' is entirely spoken your gun should be discharged. This is one of the best things to practice that I know of, especially at a swinging target. You have to shoot quick, and you do not know where the target will be. This is another place where you do not want to take your gun down from your shoulder and say, 'I couldn't get on to it that time.' Shoot whether you are 'on to it' or not, and keep shooting till you can get somewhere near the center. I will venture to say that before you have fired 300 shots in that way you will find no difficulty in bringing your gun so near to the right place at once that the majority of shots will be fired in the 'called' time without trouble.

"One reason why I would urge you to always shoot as soon as the gun comes to the shoulder is, that it will get you very soon in the habit of pulling the trigger unconsciously, and that is one of the necessary things to learn in quick shooting, as stated before. After you have learned to shoot fairly well at a swinging target it will be time enough for you to begin at objects thrown up in the air. And before leaving the swinging target I would advise shooting at a smaller object than the target that you began on. A small round or pear-shaped iron ball, say 1in. in diameter, at 50ft., is a good thing to try after you have gotten so that you can hit the bullseye pretty often.

"And as soon as you begin this kind of shooting, you will see the reason why I have advised you to begin at something large enough to see where you were shooting. You will come in some day when the conditions of light are a little different from what you have been used to, and go to shooting at some small object like the above target and will miss it ten or twenty times, and very likely feel disgusted with yourself or the gun, or something, very much. Now go back to your old big target again, and shoot as rapidly as you can ten or more shots, without stopping, and then look at them. You will very likely find that you have made a very fair score, if you had been shooting for a cluster, as it is called, or trying, in other words, to see how near you could 'bunch' your shots; but you have also been shooting either too high or too low, or to one side. And as soon as you find out the trouble you will go ahead at the small target again and make a good score. A few lessons like this will give you confidence in yourself, so that when you get out and begin to shoot at objects thrown in the air and fail to hit them for

*"Wing and Glass Ball Shooting with a Rifle." Containing instructions for beginners in snap shooting and an exposure of some of the popular fallacies in regard to it. By H. C. Bliss. Franklin News Company, Philadelphia, Pa. Price 50 cents.

a few shots, when you think and almost know that you are holding on them, you will not throw the gun aside in disgust, but will go to experimenting to find out the trouble."

The particular construction of the target is made so plain that any foundryman ought to turn it out. It is the target upon which the learner does his "exercises," so to speak, before passing on to the elaborate performances of taking living objects on the wing. He directs:

"For a swinging target, you can have cast at any foundry a disc, from 13 to 14in. in diameter, with a bullseye 1 or 1½inches in diameter. The plate should be at least ¼in. in thickness, so that it will not break easily, and should be convex, that is it should slope back from the bullseye to the edges. If it is cast flat, and you shoot at it at short range, the bullet will splatter, and you will be likely to lose an eye. There should be rings cut into the pattern, from ¼in. to 1in. apart, so that you can readily see how near you are getting to the center. The rod that it swings from should be of iron, and, if possible, at least 10ft. long. This will give you a good long swing to your target. There is one peculiarity, however, about a swinging target that few people realize, and that is, that whether it has a swing of 3ft. or 10 from one end to the other, it takes the same length of time to swing across; that is, there will be just as many beats to the pendulum in a minute when you start it as there are just before it stops. But when it has a long swing it goes faster, and is therefore more difficult to hit. You should have two holes, and run bolts through these, and have the rod that it swings on split at the bottom and fastened to these bolts. This is better than having the rod fastened in one place at the top, for if you do this it will turn around sideways to you when you hit it near the edge. After each few rounds the target should be covered with white paint. When you get so that you think you can hit something small, go to a hardware store and get a carpenter's plumb. If you have your target (the small one) dark and your background white, you will find it much easier to hit."

He goes on to say that for ball hitting an assistant is useful in tossing the object aimed at. He speaks plainly to the point in advising that the utmost care be taken to guard against those bits of criminal carelessness which generally go under the head of "accidents." He remarks: "You should always remember this, however, that unless the man who handles the gun is careful, the man who tosses the ball is in a dangerous place. In shooting at objects thrown by hand to fall perpendicularly, I am always careful never to lower the gun to a level with the head of the man who tosses the ball. This is the only safe rule to follow when the balls are thrown in this manner. Of course, when they are thrown to one side there is not this danger. You cannot be too careful in all this kind of practice to never point your gun at those who are assisting you, and if you are tossing the ball yourself, keep a sharp look out at the man with the gun, and if he lowers it carelessly a few times, and does not take warning when you speak to him about it, just drop him and shoot with some one else.

He takes his pupil along by gradual steps, and his only fear is the well founded one one that the tyro will try to be too clever all in a hurry, and not consent to do one thing well before trying to make a brilliant showing. His instructions on this point are:

"When you begin to shoot at objects thrown in the air, follow the same rules that you did in beginning at the swinging target, that is, hold your gun at 'ready' till the object is thrown, and shoot at something large enough so you can see where you hit; and the nearer round the object is the better.

"For instance, if you throw up a stick a foot long and an inch in diameter and throw it so that it will whirl, it will look like a large object, but you readily see that you can put a ball three-fourths of an inch from the center and still miss your target. Either a round ball or a round, flat disc of wood thrown so the flat surface will be toward you, are good objects to begin with. The size at first is immaterial so long as you get them large enough. Try a disc 4 or 5in. in diameter to begin with. You can very easily reduce the size when you get so you can hit this—and see at first how near the center you can come. Remember also that it is easier to see and hit a dark object in the air than a light colored one.

"In your first practice at the swinging target I have advised you to shoot at the target anywhere and not get into the habit of trying to catch it at the end. So in beginning to shoot at objects thrown in the air, I would advise you to shoot at them just at the turning point as they are poised in the air and before they begin to descend. I do this for two reasons; first, because they are easier to hit at that time, and, second, because it insures promptness and rapidity of action.

"You will find that you have no time to waste. Your object should not be thrown over 15 or 20ft. high, and you will soon realize that to get your gun to your shoulder and get it properly sighted from the time the ball or disc leaves the thrower's hand, until it is poised in the air, needs a full and free play of all the muscles. If you wear a coat you want it loose enough so it will not interfere with your motions, and if it is summer time you will not only find it convenient to 'shuck your linen,' to use a Kentucky phrase, but will probably loosen your shoulder braces and throw them off in addition.

"After you have gotten so as you can hit small objects thrown perpendicularly up in front of you and at short range, hitting them just at the turning point, as I have said before, begin to try other things, but in all your practice stick to one thing till you can do it fairly well. Don't get smart too quick; I have no doubt that some one will read this book and say, 'Why that is simple enough; any one can do that,' and so think they can hit a nickel in the air as soon as they have bought a gun, and perhaps go out and try it for their first lesson. They will probably be disappointed, for while it is easy if you will follow instructions, and you can learn without trouble in the time specified, you had better stay at home and not try to learn than not to go at it right, and I cannot impress on your mind too strongly the necessity in everything connected wth shooting, of paying attention to the smallest details; usually they are the secret of success."

There are some trial shots which the author describes for his learner and they are good enough for even the practiced shot to get much sport out of. A few of these shots we quote: "Have some one stand near you at your side and toss a ball out in front of you, rising say to the height of 20ft. and falling about 60 or 80ft. away. This is much better than shooting from a trap; for if you get used to shooting from a trap you will soon look for the ball in one particular place every time, and of course get into a bad habit. Then toss the ball away from you, but not so far, and try to hit it just before it strikes the ground. Then have it thrown over your head from behind. In fact, try hitting it thrown in as many different ways as possible. A good target to use and that will stand a good deal of wear for this kind of work is a solid rubber ball, about the size of the glass balls. You can tell when you hit it by the way it jumps, even after it is so shot to pieces that you cannot see where it was struck. If you use a repeater, take a small cardboard box—an empty cartridge box is a good thing—and put it on the water about 25 or 30ft. away. Shoot just under it the first time, and if you shoot at the right spot it will jump into the air 2 or 3ft. Now try to reload and catch it in the air before it touches the water again. Probably, the first time you try it, one box will be enough to last you for the trip; but is good practice, and, as in your other practice, you will be surprised to find what a few hundred shots will do for you. I think, on the whole, that an object thrown by hand is about as good to practice at as anything, because there is always that delightful uncertainty about just where it is going, that lends novelty to each shot."

Naturally Mr. Bliss goes on to wing-shooting and confesses that his first efforts were not very great successes. He grows personal and says: "About the first shooting that I tried on the wing was at blackbirds. I fired at least 100 cartridges at them as they were flying close around me without getting a feather. What the reason was I could not imagine until long afterward. I held as near point blank on them as possible, never thinking that at so short a range I would have to make an allowance and shoot ahead of them. Some time afterward I made a visit to the Pacific coast, and while there it was my good fortune to meet Dr. Geo. Chismore, of San Francisco, one of the best amateur shots and most genial gentlemen on the 'slope' or anywhere else, for that matter. In talking with him about it, he gave me his experience in gull shooting, which I take the liberty to quote. He was using a Winchester Express, which carries an extremely heavy charge of powder and a light ball, the intention being to send the ball with great velocity. He had not been able to hit gulls at 50 or 60yds., although he had fired a great many times. One day he was shooting at them and fired at one about 150yds. away, I think, and just as he pulled the trigger his left foot slipped. He was standing on a slippery rock at the time. It was too late to stop and the gun went off. To his extreme surprise he killed the gull. The gun was pulled ahead about 6ft., he thought, and he told me that this incident opened his eyes, and that after this incident he hit a number of birds at from 75 to 150yds. Since then my wing-shooting has improved very much, but it was hard for me to realize that so many misses were due to shooting behind my game until I had proved it in a good many ways.

"If you are near the water where birds are flying, one of the best ways in the world to post yourself is to shoot at them as they skim along the surface. Take swallows, for instance. They fly quite rapidly. Carry your gun along with them and fire point blank at them. As the ball strikes the water you will be astonished to see how far ahead of the splash the bird is. Now, by successful wing-shooting with a rifle I do not mean that you can go out and bag as many birds with it as you could with a shotgun. This is out of the question. But it is more genuine sport for me to go out and get a brace of birds, killed with my rifle on the wing, than it would be to shoot a dozen with the shotgun. There is no reason why you cannot get so that you can shoot birds that fly more slowly and are steady in their flight, such as prairie chickens, geese, brant, pigeons when sailing, crows and hawks, and very likely you can get such ducks as mallards, which fly slowly and steadily."

Again the writer becomes back to the importance of watching the rifle as though it was filled with a spirit of innate wickedness and was always watching for a chance to make trouble. His remarks apply well to every man who has a gun or rifle, and we quote:

"The first thing I would impress on your mind in taking care of a gun is to always handle it as though it were loaded. That is the only safe rule to follow, and if any of my readers have ever been so foolhardy as to point a gun at any one in fun I hope it will be my good fortune never to meet them, for I should hold them in utter contempt and not be slow to express it.

"At some time in your life, if you handle a gun much, you will probably have it discharged accidentally in your hands, and if this ever occurs you will see the force of my advice when it is pointed where you would naturally point it if you expected it to go off, no damage will be done; but if you are pointing it at some friend or your wife or mother, the result will be quite different. The longer I handle a gun the more afraid I get of it, and the more disposed I am to hunt alone, or with only one or two others. This is not a temperance essay, but I will say right here that I would not under any circumstances go out in the field with a man who got drunk. If a man thinks he has lived long enough, let him 'shuffle off decently and in order,' but for heaven's sake don't let him be killed by some fool that thinks he is a sportsman and goes out so drunk that he can't tell his friend from a jacksnipe.

"There are several positions that are all safe and good to carry a gun in when in the field. I usually carry mine over the right arm with the muzzle down, and can always get it to my shoulder in time, and in this position the triggers and hammers are protected from brush, etc. Always carry it with the muzzle pointed well up in the air or down toward the ground. And if you are walking and fall, pay more attention to your gun than you do to yourself. You had better take the risk of getting a few bruises than shoot some one ahead of you, or than to jam the muzzle of your gun in the snow or mud, and fire it off and ruin it.

"Another thing. In these days of breechloaders there is not the slightest necessity for carrying your gun loaded when you get into a wagon, or in keeping it loaded about the house, unless you keep it so for burglars, and then keep it where the idiot who 'didn't know it was loaded' can't get hold of it.

"Perhaps it may seem foolish to some one who reads this that I should take so much space to say something that every one ought to know for himself, but I think all those who are quite familiar with a gun will join me in saying that it doesn't do any harm to keep this question of safety always prominent, and that it is not space wasted in a book like this."

The care of the gun Mr. Bliss does not give much space to, but he uses that space well, and says: "In taking care of a gun you can't keep it too clean. If it once gets spotted inside it will be likely to remain so. In shooting a .22-cal. rifle I use a magazine gun. I clean it out after emptying every magazine, if I am shooting right along. If I am going to lay the gun aside for a few hours, I clean it even if I have only fired it once. A good many will tell you that powder is a good thing to leave in a gun. If you fall into that habit you will find it the best excuse in the world for not cleaning your gun some time when you are too lazy to do it, and the gun will stay with powder in it for a month.

"Many good sportsmen say that you should never use water on a good gun to clean it. If you will use hot water, and then dry the gun thoroughly afterward and put on a good oil or rust preventer, if will not injure it; but if you leave it damp you had better not use water at all. Turpentine and oil, about half and half, are used by some to clean with, and answer very well. Always use a nice, clear oil that will not gum; a good jeweler always has it on hand.

"I usually carry with me for my .22-cal. gun a brass rod, with notches cut in it, that will just go into the gun with a patch about ¾ of an inch square of canton flannel on the end of it, and oil a lot of these patches and carry with me. The end of the rod is square, and notched back about an inch, half of the notches pointing one way and half the other. In the other end of the rod is a ring, and I fasten a snap on my vest well back toward the left arm, and as high as I can, to snap the rod into; in this way it does not interfere with my shooting, and is always convenient. While your gun is still warm with firing it is an easy matter to clean it with from the three of these patches.

"If you use a larger caliber gun, I would recommend for all field-cleaning the regular field-cleaner, which is made of a strong cord, with the wiper at one end and a heavy 'sinker' at the other, so you can drop it through the gun and then pull the wiper through.

"No matter how dry a place you have for your gun, it is always well to put a tompkin or an oiled rag in the muzzle, and an oiled rag in the breech, and, if possible, keep your gun where the temperature is even. You can readily see that if the gun gets very cold, and then the room where it is kept is heated to a high temperature, the gun will 'sweat,' and, of course, the moisture will rust it after awhile.

"If you want a gun to hang up in your room on a pair of antlers for an ornament, get some old Queen Anne arm that was used in the Revolution. It will answer every purpose, and be a great deal better than ruining a fine gun."

Tutor Bliss is wary over the question of a gun when it comes to recommend the purchase of one. He is, of course, an advocate of small bores, and cannot forego the opportunity of having a mild fling at the muzzle men He expresses his opinions thus:

"I think for your first lesson a singleloader will perhaps do you as much good as a magazine gun, and by the time you get tired of that, as most people do of the first gun they buy, it will be easier to decide whether you care for a magazine gun or not.

"If you go out after birds a magazine gun will of course afford you a deal more amusement than a singleloader, as you can always get two or three shots at a bird, and it is needless to say, you will require them for a long time.

"There are plenty of men even now who will not use a breechloader, because they think they can do so much better work with a muzzleloader. If you hold the gun right and have good sights, and it is in good condition inside, you will be able to do work that you will have no reason to be ashamed of with a breechloader, and the advantages more than compensate for the supposed inaccuracy.

"There is no doubt in the world that the round ball gives much better results than the slug, unless the latter is very carefully loaded, but the trouble is to get the round ball. I think that they are now made, I mean the .22-cal. with a round ball, but cannot recall the manufacturer's name, and have never had an opportunity to try them. With a round ball you could use much more powder and get better results than you can with a long or short .22 with a slug. Of course you cannot use them with a magazine gun, but I hope the day will soon come when we can get a good magazine .22-cal. gun that will shoot a cartridge with a round ball and a good charge of powder; for all practice shooting at close range, if you shoot a .32-cal. or larger gun and care to reload your shells, I think you will be well pleased with the result if you fill the shell with powder, have a good wad that will fit it tight and press it home, and then send a round ball on top of that. You can usually get the balls already made that will fit most of the calibers.

"You should accustom yourself to a pull of not less than three pounds on the trigger. The old-fashioned hair trigger is one of the things of the past, and is of no earthly account except to jar off and kill somebody unexpectedly, and it has been proven over and over again that you can do fully as good work with a three-pound pull.

"By all means have a shotgun breech on your rifle; never mind the looks. If you are going to do good work, and do it quick, you don't want to spend two or three seconds valuable time adjusting the old-fashioned nuisance to your shoulder, and when you do get it adjusted it will receive and transmit to the barrel every tremor of the muscles of the arm. Don't buy such a gun, and if you already own one and cannot get the stock altered over, get a saw and cut it off; it may not look quite as handsome, but you can shoot with it."

Next comes the question of sights, and to this Mr. Bliss gives a long chapter with illustrations to make his text plain. Incidentally he throws in valuable advice as to shooting in various conditions of light and position. Judge Van Dyke, an old FOREST AND STREAM correspondent, is quoted from the abundance of his knowledge on all matters of rifle in the field. Mr. Bliss maintains his modest way of expressing his conclusions, and from this chapter of his work we quote fully: "I have for a long time been studying rifle sights, and expect to be for a long time to come, and any man who says he has arrived at perfection in the matter, and can make a perfect sight for all kinds of shooting, is simply theorizing about something that he has never tried.

"In your snap-shooting the question of the point blank, at which your rifle should be sighted, does not cut much of a figure. You will probably do most of your snap-shooting at close range, and your point blank should be at close range. If you are going to shoot at game or objects up to 100yds., don't sight your rifle at over 75 or 80yds., and use a gun that will give you as flat a trajectory as possible.

"I think that there is nothing worse in the line of rifle sights than a combination of a glittering sight in front that comes up to a knife edge at the top and the old-fashioned buckhorn sight for the back sight. Take such a set of sights as this and shoot five shots toward the sun, and as many at each of the other points of the compass on a bright day, and compare the targets and note the result. One way you will shoot over, another under, another to one side, and so on, all owing to the reflection of light from your sights. When a boy I used such a set, and I could get a 'bead' as fine as the point of a cambric needle with them. At least it would appear so, but I always had to make so much allowance for which side the light struck that my shooting was very uncertain.

"You will probably get used to some set of sights and do good work with them, but keep your eyes open and be ready to adopt what is clearly proved to be in advance of what you have. A front sight should be broad, and especially in all quick shooting should you accustom yourself to a broad, large front sight. You can do just as fine shooting, and in quick shooting you can catch it much quicker.

"A good sight is made from a piece from a silver quarter or half dollar filed down smooth on the sides and edges. The height will have to be determined entirely with regard to the shooting of your gun. Try the sights that come with the gun, and make your sights either the same height as these or higher or lower, as may be necessary. The sides of this sight want to be perfectly black, so that the light will not reflect from them. This you can probably get a jeweler to do for you cheaper and better than you can do it yourself. Then the top wants to be bright. Do not burnish it, but have it white, I mean. If you were going to shoot on the snow all the time, a sight of the same shape made of pure copper would be much better.

"For your back sight put on in place of the 'crotch' or 'buckhorn' sight a plain oblong bar of dead black iron, nearly as long as your gun barrel is wide, and about three-sixteenths of an inch deep and wide. Into the back side of this should be set a piece of platinum wire. It can be dovetailed in and flattened, coming to within a thirty-second part of an inch of the top, and running down to the bottom of the sight. The width of this sight will have to be governed entirely by the width of your front sight and the length of your gun barrel. It must, of course, be narrower than the front sight, as the intention is to have them appear just the same width when you look over the barrel of the gun at them. The line of dead iron at the top of the bar will always enable you to keep the two sights distinct, and they will never appear to be one and the same piece. The advantages of having a rear sight that is flat on top are manifold. One of the most important things in shooting at any distance is to have your gun level and with a flat sight to look over, it is much easier to accomplish this than with a sight that is notched. It is also much easier to tell just how much front sight you are using than with the old 'buckhorn.'

The sight is a combination of the platinum wire and a sight that Judge Van Dyke uses. His rear sight is simply the iron bar, say half an inch long, and he has no notch in it, and no wire on the back to aid in finding the center. I have tried this sight a little but must admit that I have not tried it enough to say that I could not get used to it; there are certainly great advantages about it. Judge Van Dyke is one of the most thorough students of rifle shooting living, and has adopted this rear sight after much careful research and experimenting, and it is well worth your while to give it a thorough trial. For his front sight he uses an oblong sight that is composed of iron in the center, gold, brass or silver at one end, and ivory, bone or agate at the other. If shooting on the snow he would turn the end with the gold toward the eye; if shooting on bare ground, the other end; and if he wants to use the iron in the center, he can easily take off the ivory. The aim is to get a sight that will appear the same under all conditions of light, and you will never realize the difficulties in the way of doing this till you actually know from experience how much difference there is between shooting on a bright sunshiny day and shooting the same distance when it is cloudy, or between shooting in the woods and open fields. Whatever sights you have, try to get used as fast as possible to shooting toward the sun, away from it, sideways, and in all kinds of weather. Practice will do you much more good than books, but even practice will not always enable you to judge just how to hold. This, of course, applies more to shooting at some distance than to close work; but you will go out some day when it will appear to you that the conditions of light are precisely the same that they were the day before, and will find that your average at, say 100yds., will be inches higher, or further to one side, than it was the day before, and the only way to account for it is the atmostphere.

"You will also find that few people see things alike, when it comes to the matter of gun sights; and when your rifle is sighted just right for you, your friend who shoots it will very likely find it all wrong for him.

"Then another thing that you will find is, that shooting at a target on a range is a very different thing from shooting at game in the woods and fields. You will soon get used to the ordinary changes of light on your range, but you will never get entirely used to the changes of light that you will find in actual hunting. According to the old theory, a good shot was what was called a line shot—that is, on a line with the bullseye, up and down—even if it missed the bullseye 6in. at 100yds. Don't let any such doctrine spoil you. A little practice will demonstrate to you that it is much easier to make a line shot at an unknown distance than it is to make a shot that is level with the bullseye at a known distance. Now just remember that you do not need to waste time over shots that you can easily make; put in your practice at shots that bother you.

"Whether in shooting up to 150yds. you should have your rear sight fixed or raise it, or whether you should make an allowance by shooting high or low, or again, whether you should vary the amount of front sight taken, is a great question with riflemen. For my own part, I have of late years found that I could do better work to have my rifle sighted for ordinary shooting in the field to about 60yds.; then if I want to shoot 100yds., as I often do, I can use a little more of the front sight, or, what is better, can hold a little higher, and if I want to shoot 30 or 40yds. I hold a little lower.

"A good many make all manner of fun of a man who thinks he can tell anything about the amount of front sight to use to shoot 125yds. when his rifle is sighted for 75yds. I must beg leave to differ with them. I think that practice will enable you to not only estimate the distance quite accurately, but will also enable you to estimate the amount of front sight to use, and I think you will find it much harder to estimate the distance than the amount of front sight. You should always practice this when out in the woods and fields, if you care for rifle shooting. Look at some object ahead of you and estimate the distance, and then as you walk it count the steps; you will find the benefit very soon. You should also learn to step correctly a yard. When measuring distance, I can, with a little practice, step off 100 paces and not miss its being 100yds. more than 3 or 4ft.; but you will be surprised to find how much out of the way estimates of distance usually are in hunting. When you come to close work with a rifle it won't do to say 100yds. when you mean 40, you must have some idea of the distance and hold accordingly.

"There are dozens of sights patented, but I think you will find those spoken of better than the majority. One thing you ought to be able to do, you ought to be able to give any gunsmith (unless he is a practical rifleman and used to shooting your gun) the dimensions of a set of sights much better than he can get them up himself. If you do not take interest enough in the subject to do this, your rifle shooting won't amount to much. Study the subject, and have reason that is good for whatever you do. And don't do it because some old antediluvian tells you it is the way, and the only way.

"Shooting with both eyes open is strongly recommended by many good riflemen; while I do not think it absolutely necessary, I do think there are great advantages about it. If you will get in the habit of shooting in this way you will soon find them out. Don't say you can't do it, or decide you can't after trying half a dozen shots. What do five or six shots amount to? Try a few hundred and then you can judge better. When you use both eyes you see things just as you usually do, and when you shut one eye you do not, unless you have had the misfortune to lose one eye. Now, to illustrate this, look at some object that is quite small, say as large as the point of a lead-pencil, or as large as a No. 5 shot, from a distance of six or eight feet, and then shut one eye and step rapidly forward and try to put your finger on it. A little experimenting of this kind will prove to you that you can see your target much better with two eyes than with one.

"Recollect also that the target is not the only thing that you want to see distinctly. A target with its clear cut outlines is a very different thing to see from a rabbit sitting in dead leaves 60yds. away, or a bird's head at half that distance, and when you begin to draw down fine on such an object you will need all the eyesight that you have, and not only this—you will need a sight that you can depend on. You will be apt to fall into the belief that your game will look like your target until you get out in the field to hunt, and for this reason get out as soon as possible, as I have said before, where you will get a natural light to shoot by, and shoot at natural objects. Select some old knot on a tree at a distance that you do not know but can only guess at, and fire five shots at it as rapidly as you can, or shoot at something that blends so with the surroundings that you can scarcely see it when you

look at it over your rifle-barrel. This kind of practice will do you more good than anything else when it comes to practical work."

"You will find another tendency also, to shoot over in shooting down-hill and under in shooting up; and your tendency to over-shoot up-hill will be aggravated in quick shooting if you do not attend to it, but that is the very essence of quick shooting. If you are accustomed to the slow, deliberate ways of the ordinary target shooter, and get out after game that is watching you and liable to bid you adieu in about two seconds, you will naturally get rattled, and not shoot nearly as well as usual, but if you are used to shooting in one-half a second, you will feel confidence in yourself, and know that the two seconds are ample time—not that I would advise you to always shoot at game that quick. If you have a long shot to make, and your game cannot escape you, take care to calculate the distance carefully and arrange your sights, but if you have to make a quick shot, and the time may come when your life will depend on it, you will shoot quick at any ordinary distance just as well as you would if you took a minute for the shot, and better."

The concluding chapters of the little brochure are given up to matters more interesting to the author than the general reader. He takes up the thankless task of exposing the humbuggery which surrounds much of the professional exhibitors of marksmanship, and then with some talk about fancy shooting the book closes. An honest desire to succeed and a faithful observance of the direction which Mr. Bliss lays down, will make the majority of beginners better than average shots, while all will gain health and recreation from their endeavors to use a rifle in quick shooting.

RANGE AND GALLERY.

THE CANADIAN WIMBLEDON.

OTTAWA, Aug. 30.—The Dominion Rifle Association meeting opened this morning at nine o'clock. Heavy rain showers a few hours previously made the prospect rather poor, but the clouds had largely cleared off by the time firing commenced. A heavy wind accounts for the low scoring in the Nursery, the first match fired, which was at 500yds., five rounds each, and the leading prize winners were as follows:

The Nursery Match.

Trooper Duncan	21	Corp H Langstroth, 8th Cav	21
Lieut Dimock, 77th Bat	20	Capt Sims, 3d Bat	20
Gunner Faulkner	20	Pvt Bellingham, 5th Bat	20
Sergt Hunt, Montreal Eng	19	Pvt Henderson, 25th Bat	19
Lieut McElwon, 74th Bat	19	Pvt Taylor	18
Pvt Bent, 93d	18	Pvt Bartlett	18
Pvt Shaw, 3d Bat	18		

There were seventy-five prize winners, and there were fifteen 12's counted out. The total number of entries in the Nursery match was 158.

In the afternoon the Macdougall match was completed, being interrupted when about half through at 600yds. by a heavy shower and a mist obscuring the target. It was at 400 and 600yds., 5 rounds at each. Private Bartlett, Q. G. R., and Capt. J. J. Hartt, St. John Rifles, tied for first place. They divide the money prizes, getting $22.50 each, and will shoot off for the Macdougall cup. The other leading prize winners were as follows:

Pvt Mailene	41	Pvt Clark, 53d	38
Pvt Gamble, 46th	40	Capt Wright, 43d	38
Sergt King, 45th	39	Capt Brown, 54th	38
Lieut Dimock, 78th	39	Pvt Graham, 13th	38
Sergt Ashall	39	Pvt McCowan, 5th	38
Capt Adam, 13th	39	Lieut Fiske, 63d	38
Capt Hood, 5th	39	Pvt Kimmerley, 49th	38
Trooper Beatty, 8th Cav	39		

There were four 33's counted out after 61 prizes had been won. The number of entries in the match was 317.

In the Manufacturers' match, fired mainly in the rain and concluded about 5 o'clock, there were 321 competitors entered, this being three more than ever before entered in any Dominion Rifle Association match, 318 in 1884 having been the highest until now. The match was at 500yds., seven rounds each, and the prize-winners were as follows:

Capt Sylvester, 85th	33	Sergt Miner, 71st	29
Staff-Sergt Bell, 12th	32	Pvt Stanton, 90th	29
Staff-Sergt Wynne, 5th	31	Sergt Henderson, 62d	29
Col-Sergt Mitchell, 90th	30	Staff-Sergt McAdam, 3d	28
Lieut Mitchell, 32d	30	Pvt Huntingdon, 66th	28
Capt Harris	30	Lieut Thompson	28
Lieut Knox, 37th	30	Capt Hughes, 45th	28
Pvt Morris, 13th	29	Pvt Hutcheson	28
Pvt Robertson, 13th	29	Pvt Thompson, 12th	28
Capt Sparham, 42d	29	Staff-Sergt Browne, 12th	28
Pvt Clark, 53d	29	Sergt Purcell, 25th	28
Lieut Conboy, 30th	29	Pvt Scott, 6th	28
Staff-Sergt Wilson, 35d	29	Col-Sergt Dalrymple, 5th	28
Corp Carrol	29	Sergt Proud, 37th	28
Corp Crowe, 1st B F A	29		

There were 5 scores of 25 counted out after a prize list with 81 names.

Aug. 31.—Fine weather favored the competitors at the Dominion Rifle Association matches this morning, and some good scores were made. The only match finished was the Rideau, 7 rounds at 500yds., the top prize winners out of 68 were as follows:

Capt J T Hart, St John Rifles	32	Pvt Swaine, 13th	29
Q.M.-Sergt Ogg	32	Lieut McMillan, St John Rifle	29
Sergt McMurray, 67th	32	Lieut Hooper, 82d	29
Capt Bruce, 10th	31	Pvt Morris, 13th	29
Sergt Dover, 78th	31	Sergt Fenton, 50th	29
Corp Langstroth, 8th Cav	31	Lieut Blair, 78th	29
Staff-Sergt Clarke, 15th	31	Staff-Sergt McAdam, 3d	29
Pvt McCarthy	30	Capt Tipp, 78th	29
Sergt Mumford, 63d	30	Staff-Sergt Margetts, 13th	29
Sergt Doyle, 63d	30	Mr D O'Leary, Ottawa R C	28
Capt Bishop, 63d	30	Staff-Sergt Ross	28
Pvt Taylor	30	Sergt Currie, 6th	28
Sergt Proud, 37th	30	Capt Kinnear	28
Corp Taylor, 63d	30	Pvt Russell, 60th	28
Pvt Wilson, 6th	30	Lieut Hora, 14th	28
Capt Corbin, 63d	30	Sergt Marks, 6th	28
Sergt Lordly, 62d	29	Pvt Gillies, 90th	28
Lieut Crockett, 82d	29	Staff-Sergt Brown, 12th	28
N Robson, Huron Rifle Ass'n	29	Mr I J Trapp, N W Rifles	28
Lieut Mitchell, 32d	29	Sergt Pink, 43d	28
Staff-Sergt Duncan, 12th	29	Sergt Reardon	28
Capt Barnhill, 78th	29	Pvt Lordly, 62	28
Pvt Robertson, 13th	29	Pvt Clarke, 53d	28

The Minister of Militia match, fired at 500 and 600yds., seven shots at each range, was concluded in the afternoon. The prizes offered were for teams and for individuals. The team winners, it is thought, are as follows, though the correct official list is not yet out, some team tickets having been sent in after the supposed complete returns had been made up and posted:

Guelph Rifle Association	137	Kingston Rifle Association	136
P E I Association	135	Bowmanville Rifle Ass'n	135
12th Battalion	132	7th Battalion	132

The leading individual prize winners were as follows:

Pvt Sands, 45th	56	Sapper Hunt, Montreal Eng	53
Asst-Surg'n McLaughlin, 45th	52	Lieut Crocker, 82d	52
Lieut Hooper, 82d	51	Capt Cox, 7th	50
Major Blaiklock, 5th	50	Piper Clark, 5th	50
Pvt Huntingdon, 56th	50		

There were four 45's counted out after fifty-eight prizes had been given.

The Quimet match, 7 shots at 600yds., was finished soon after 6 o'clock, but the list was not made up. The shooting was rather poor, especially at the last when darkness came on.

The annual competition meeting was held in the Drill hall, the president, Lieut.-Col. Kirkpatrick, in the chair, there being a very large attendance of competitors.

After a long discussion a motion by Lieut.-Col. Gibson, 13th Battalion, seconded by Lieut.-Col. Jones, 83th Battalion, "That the Council be requested to give more prominence to the Martini rifle and a match with that weapon be included in the grand aggregate" was carried.

On motion of Capt. Hartt, it was recommended that in future the London Merchants' cup match be shot with the Martini rifle and that 200yds. be added to the ranges.

Sept. 1.—The following were the leading winners of prizes in the Quimet match, firing in which was concluded last evening, but the list was not made up until this morning:

Lieut Cartwright, 27th	32	Staff Sergt Mitchell, 15th	28
Sergt Goodwin, 13th	29	Piper Clark, 5th	28
Capt Abbotson, 5th	28	Corp Taylor, 63d	28
Lieut Gray, G.G.F.G	28	Pvt Mitchell, 13th	28
Sergt Lordly, 62d	28	Capt Perley, H.Q.S	28
S Corliss, 25th	28		

There were five 22's counted out, following 72 winners.

The Standing match, seven shots at 200yds., was fired the first thing this morning, the scores averaging high. The weather was fine. The following were the prize winners:

Major Todd	31	Pvt Cunningham, 51st	28
Staff-Sergt Armstrong	31	Staff-Sergt Gibson, 66th	28
Lieut Mitchell, 32d	30	Pvt Trapp, N. West'ster Rifles	28
Corpt Rennie	29	Sergt Goudie, 8th	28
Lieut Ross, 13th	29	Sergt J Chamberlin, 43d	28
Quartermaster Hiscott, 7th	29	Capt Delamere	28
Lieut Langstroth, 8th	29	Pvt Hall, 79th	28
Sergt Dewfall, 8th	29	Pvt Cook, 5th	28
Capt Zealand, 15th	29	Lieut Knox, 37th	28
Pvt Clark, 53d	29	Pvt Mitchell, 13th	28
Capt Brown, 54th	28	Lieut H C Chamberlin, 43d	28
Corp Case	28	Pvt Bartlett	28
Staff-Sergt. Bell, 12th	28	Pvt Russell, 45th	28
Pvt Kimmerly, 49th	28	Sergt McAdam, 3d	28
Sergt Mowat, 10th	28		

There were two 27s counted out of the 54 prizes.

The Dominion of Canada match, the last in the grand aggregate, was concluded late this afternoon. It was fired at 200, 500 and 600yds., 7 shots at each range, and the prize winners were as follows:

Team prizes for aggregate scores of five previously named members of any military corps: First, 82d Battalion and P. E. I. team, 389 points, $60 and a badge to each member. Second, 45th Battalion, 354 points, $50. Third, 13th Battalion, 343 points, $40. Fourth, G. G. F. G., 340 points, $30. Fifth, 63d Battalion, 340 points, $20. The individual prize winners were as follows:

Q M Sergt Ogg, 1st B F A	83	Lieut Mitchell, 32d	80
Corp Langstroth, 8th Cav	83	Sergt Works, 6th Fus	80
Pvt Kimmerly, 19th	82	Sergt Fairbairn, 43d	80
Sergt Johnson, 85th	83	Lieut Langstroth, 8th Cav	80
Sergt Davison, Ch Eng	82	Staff Sergt Spearing, 52d	80
Lieut Hooper, 82d	81		

Ten 68's were counted out following 83 winners.

The following sixty have won places in the grand aggregate, and to-morrow morning will shoot for the Governor-General's prizes and places on the Wimbledon team:

Pvt Kimmerley, 49th	265	Sergt King, 45th	239
Sergt. Marks, 6th Fusiliers	261	Staff-Sergt Ashall	238
Sergt Johnson, 85th	261	Pvt Sando, 45th	238
Capt Hartt, St. John Rifles	259	Staff-Sergt Henderson, 25th	238
Sergt Margetts, 13th	259	Sergt Gonder, 8th	238
Pvt Mitchell, 13th	259	Capt Thomas, 54th	237
Q M-Sergt Ogg, 1st B F A	259	Pvt Gillies, 90th	237
Sergt Proud, 37th	256	Staff-Sergt Wynne, 5th Royals	237
Lieut Crockett, 82d	255	Pvt Graham, 13th	237
Lieut Mitchell, 32d	255	Corp Taylor, 63d	237
Lieut Hooper, 82d	251	Pvt Morris, 13th	237
Lieut Gamble, 46th	251	Lieut Winter	237
Staff-Sergt Mitchell, 45th	248	Pvt Karnbery, 5th Royals	236
Capt Bishop, 63d	246	Pvt Clarke, 53d	236
Staff-Sergt Bell, 12th	246	Capt Panton, 20th	236
Corp Langstroth, 8th	246	Lieut Kincaid, 6th Cavalry	235
Sergt Fairbairn, 43d	244	Corp Carroll	235
Sapper Langstroth, Ch, Eng	244	Staff-Sergt McAdam, 3d Vic	235
Sergt Thomson, 8th Royals	244	Piper Clark, 5th Royal Scots	234
Lieut Grayburn	244	Lieut Dimock, 75th	233
Lieut Gray	243	Lieut Langstroth, 74th	233
Sergt Davison, Ch, Eng	242	Staff-Sergt Curran, 10th Roy	233
Lieut Smith, 71st	242	Lieut Thomson	233
Sergt McMurray, 67th	242	Capt Wright, 43d	233
Pvt Riddle, 5th Fusiliers	242	Major Todd	233
Sergt Loggie, 73d	240	Asst-Surg McLaughlin, 45th	233
Lieut Hoya, 14th	240	Lieut Langstroth, 8th Cavalry	232
Lieut Cartwright, 47th	240	Capt Corben, 63d	232
Sergt Short	239	Capt Kinnear, 74th	232
Col-Sergt Mitchell, 90th	239	Staff-Sergt Armstrong	232
Pvt Swain, 14th	239		

The first 5 each receive a medal in addition to a prize. The last four will have to shoot off at 600yds., 5 rounds, for the last 3 places in the 60.

Sept. 2.—In the London Merchants Cup match, between teams of 8 from the various provinces, the Quebec team won first place with 349 points, taking the cup and $80. New Brunswick took the second prize, $60, with 328 points. The scores of the other teams were as follows: Novia Scotia 321, Manitoba 321, Ontario 318, Prince Edward Island 281.

This morning the tie was shot off for the 3 last places in the Governor-General's sixty among the four men who tied at 232, 5 shots were fired at 600yds. Capt. Kinnear, 75th, scored 15; Lieut. Langstroth, 8th Cavalry, 15; Staff-Sergt. Armstrong, G. G. F. G., 14; Capt. Corbin, 63d, 7. The last was therefore out of the 60.

The Governor-General's match was concluded about 1 o'clock. It was fired with the Martini, 7 shots at 200, 500 and 600yds. Sergt. Loggie, 73d, won the first prize, $250, with 91 points; Staff-Sergt. Armstrong, G. G. F. G., won the second, $150, with 90 points; Capt. Hartt, St. John Rifles, won the third, $100, with 88 points. Sergt. Loggie won the Governor's prize last year also, on that occasion being first with 95 points.

The following 7 received badges for their scores in the Governor-General's match besides the 3 highest who also got the money badges:

Pvt Marris, 13th	86	Capt Bishop, 63rd	86
Sergt Goudie, 8th	85	Corp Langstroth, 8th Cav	84
Pvt Mitchell, 13th	84	Q M-Sergt Ogg, 1st B F A	84
Sergt Mitchell, 45th	84		

The standing of the 60, the first 20 of whom will form the Wimbledon team should they choose to go, is as follows, the scores in the Governor-General's match being added to their former grand aggregate:

Capt Hartt, St John Rifles	347	Pvt Swaine, 14th	315
Pvt Kimmerly, 49th	347	Pvt Kamberg, 5th R S	315
Sergt Marks, 6th Fus	343	Capt Kinnear, 74th	315
Pvt Mitchell, 13th	343	Lieut Grayburn, R L	314
Q M Sergt Ogg, 1st B F A	342	Lieut Hora, 14th	314
Lieut Mitchell, 32d	338	Pvt Clark, 53d	314
Sergt Proud, 37th	335	Corp Taylor, 63d	313
Sergt Johnson, 85th	334	Pvt Gillies, 90th	313
Staff-Sergt Mitchell, 45th	332	Sergt Fairburn, 43d	312
Capt Bishop, 63d	332	Lieut Smith, 71st	312
Sergt Loggie, 73d	331	Staff-Sergt McAdam, 3d Vics	312
Staff-Sergt Margetts, 13th	330	Lieut Dimock, 78th	311
Corp Langstroth, 8th Cav	330	Staff-Sergt Curran, R G	311

Pvt Marks, 6th	54		

WILMINGTON, Del., Sept. 6.—The Wilmington Rifle Club met for regular weekly practice this afternoon. At the first match teams were selected by Bacon and Simpson. Standard American target was used at 200yds. off-hand. E. M. Clark shot as odd man, alternating with each team, making a total score of 64. The following is the score out of individual possible 100 points, and team possible 550:

W A Bacon	5	6	6	4	8	6	8	4	1	4—47
C Heinel, Sr	8	8	9	8	10	9	6	9	5	9—81
H Heinel	8	7	5	8	1	7	6	8	7	5—62
S J Newman	5	8	8	7	7	8	9	7	8	4—71
W O'Connor	7	3	3	6	5	6	4	4	10	5—53
E M Clark	9	9	9	9	9	10	9	3	0	0—37—351
H Simpson	7	5	5	4	6	3	5	3	4	0—41
W H Haines	9	6	7	3	5	6	10	7	9	8—70
J Manz	6	4	7	6	5	7	4	5	3	3—54
J Carleton	4	5	5	3	9	9	4	4	10	9—62
J B Bell	9	4	6	3	6	8	8	4	9	3—57
E M Clark	0	6	0	5	0	5	0	2	0	9—27—311

A team was then selected to shoot the "telegraph" match with the Topeka Rifle Club, who shot their score last Thursday. Following are the scores out of individual possible 100 points and team possible 800:

Wilmington Club.

C Heinel, Sr	9	8	6	5	7	3	7	6	7	5—63
J B Bell	9	4	6	8	5	9	6	6	8	3—64
W H Haines	5	5	5	9	8	9	6	5	3	3—58
H B Seeds	4	6	5	8	4	5	5	6	5	4—52
S J Newman	6	5	5	7	5	6	2	5	7	5—53
C Carleton	4	9	8	6	7	7	8	4	5	3—54
J Marz	4	5	8	6	5	7	4	7	3	3—53
H Heinel	8	5	4	6	5	7	6	6	5	7—59—471

Topeka Club.

J T Williams	6	7	7	4	4	8	7	6	7	4—60
F H Martin	5	3	9	3	9	3	7	6	9	7—61
E W Sherman	9	4	6	5	6	4	9	6	6	8—63
Reed McCarter	5	4	4	6	4	8	5	9	9	6—60
A F Hilton	6	4	8	10	6	6	4	5	4	7—60
R Thompson	9	7	9	5	8	10	6	6	9	9—78
C C Trimmer	3	9	6	10	8	6	6	5	5	7—65
J L Paine	10	7	10	5	6	9	10	6	8	10—77—524

The second match of the series will be shot with the Topeka Club in a short time. It is expected to shoot a match with the West Chester Rifle Team at Schuetzen Park, on Thursday, Sept. 16.

BOSTON, Sept. 11.—The range at Walnut Hill to-day was occupied by a large number of shooters. Mr. D. L. Chase made a clean score in the rest match and Mr. A. C. White in the State Militia match, completed a full score. Capt. J. B. Osborn completed his score for the gold badge in the State militia match, and R. B. Dawson and C. E. French have won the bronze badge in the same match. Following are the records of the day:

Rest Match.

D L Chase, F	10	10	10	10	10	10	10	10	10	10—100
J B Munroe, F	10	10	10	10	8	9	10	9	9	10— 95
N H Oler, A	10	10	9	10	9	10	8	9	10	8— 93
Burley, A	7	8	8	10	10	9	9	8	10	6— 85
A S Brackett (mil.)	10	7	6	10	7	6	6	9	9	8— 78
Hancock	6	0	7	10	7	9	10	9	6	6— 70

State Militia Match.

C C W						19	18			

ALBANY, Sept. 7.—Officers of the Third Division Rifle Association met in regular session at Gen. Parker's office to-night to arrange a programme for the ninth annual fall meeting at Rensselaerwyck. The condition of the association was reported as excellent and the outlook for the present season as unusually good. It was decided to hold the ninth meeting on Thursday and Friday, Oct. 14 and 16, beginning in each case at 9 A. M. The programme prepared provides the following matches for the first day of the meeting: Match No. 1, directors' match, open only to directors' of the Third Division Rifle Association, 200yds., 7 rounds, standing, army rifle.

Match No. 2, short range continuous match, open to all comers, 200yds., 7 rounds, Remington military rifles, the highest aggregate of the best three scores to count, entries 50 cents each, unlimited, no competitor to win more than one prize, absolute ties to be divided by lot, cash prizes will be paid in this match as follows: First prize $12, second $10, third $8, fourth $6, fifth $5, sixth $4, seventh $3, eighth $2.

Match No. 3, short range continuous match, open to all comers, 200yds., 7 rounds, any rifle, the highest aggregate of the best two scores only to count, entries 50 cents, unlimited, no competitor to win more than one prize, absolute ties to be decided by lot, com-

petitors making the three highest scores will receive as prizes 30, 20 and 10 per cent of the entrance monies.

Match No. 4, champion marksman's badge match, open to members of the national guard of the State of New York who have qualified at 100 and 300yds. in the marksman's qualification match or with the organization to which they belong, and to members of the Third Division Rifle Association, 200yds. at third class and 500yds. at second class, 5 rounds at each distance, entries unlimited, scores not to be crossed, standing and off-hand at 200yds., prone at 400yds., Remington rifle, New York State model, entrance fee 50 cents each entry.

Match No. 5, tenth battalion match, open to all members of the tenth battalion; 200 and 500yds., rounds, 5 at each distance; position at 200yds., standing and off-hand; at 500yds., any, with head to the target; Remington rifle, New York State model. Unlimited entries, fee 50cts. each entry, prize, the champion marksman's badge of the tenth battalion, presented by Gen. Amasa J. Parker, Jr., president of the Association.

The programme for the second day of the meeting contains two events as follows: Match No. 6, open to teams of 6 commissioned officers or regularly enlisted soldiers, from any battalion or separate company of infantry in the Third division, N. G. S. N. Y., entrance fee $1 for each man; 200 and 500yds.; rounds, 5 at each distance; positions standing at 200yds., any with head to the target at 500yds., Remington, New York State model, prize to the organization whose team makes the highest aggregate score, a trophy valued at $100. Match No. 7, mid-range, open to all comers; 600yds., rounds, 15; position, any without artificial rest; weapon, any rifle; entrance fee $1. Prizes—To the competitors making the 3 highest scores, 30, 20 and 10 per cent. of the entrance moneys.

NATIONAL RIFLE CLUB.—Bellows Falls, Vt., Sept. 13.—*Editor Forest and Stream:* The National Rifle Club held their twenty-ninth annual meeting at Vernon, Vt., Sept. 7 and 8. The following were the prize winners: String No. 1, D. A. Brown, first, 11 1-16in.; W. Y. Lowe, second, 11¼in.; D. H. Cox, 12 7-16in. String No. 2, N. S. Brockway, first, 12 3-16in.; L. Park, second, 13in.; E. B. Stephenson, third, 14 15-16in. String No. 3, L. Park, first, 9 11-16in. N. S. Brockway, second, 12½in.; E. B. Stephenson, third, 12⅞in. The club medal was won by N. S. Brockway, whose 30 shots measured 37 1-16in.—N. S. BROCKWAY, Sec.

THE TRAP.

Scores for publication should be made out on the printed blanks prepared by the Forest and Stream, and furnished gratis to club secretaries. Correspondents who favor us with club scores are particularly requested to write on one side of the paper only.

TRAP-SHOOTING REFORM.

Editor Forest and Stream:

The several articles written recently on reform in tournaments have attracted my attention, and they demand the intelligent and positive action of those who give or manage tournaments.

For some unaccountable reason even first-class shots demur or get the "buck fever" as soon as they learn that Stice, Kimball, Tucker, Stark, Brewer and shots of this class are shooting or are to shoot against them.

It may seem arbitrary, but for the general good I think that a competent and unparticipating committee should state plainly by name, national and local celebrities with the gun who shall be classed by themselves in shooting for prizes at tournaments held in any locality handicapped by distance. PULL.

PHILADELPHIA, Aug. 27.

Editor Forest and Stream:

There is one point in particular to which amateurs have not yet had their attention called through your valuable columns, and that is that as a rule the professional "crack" shots usually enter into a combination of two elements: First, to divide their winnings, and secondly, to increase the latter by dropping into different classes by intentionally missing one or more birds, so that one of the combination will take first money, another second money, another third money and so on throughout the list. This was even done with reference to the Chamberlin Cartridge Co.'s prizes at Cleveland in 1885, and is attempted wherever there is "no shooter barred" and any one is invited to come and shoot with the local amateur. How long will any of the latter submit to such disgrace? HERALD.

ALBANY, N. Y., Sept. 4.

AN INTERNATIONAL CHALLENGE.

Reginald Herbert, Esq., of the Ranclagh Club, Bennett street, St. James, S. W., London, Eng.:

Sir—Knowing that the various clubs with which you are connected contain some of the best shots of Great Britain, I take the liberty of submitting through you a challenge to the sportsmen of Great Britain to the following effect:

First—That a team of 5 (or 10), with 2 alternates, the whole selected from the country at large, be formed in Great Britain, to be known as the British team.

Second—A similar team be formed in the United States, to be known as the American Team.

Third—That one similar team may be admitted from any other country.

Fourth—That said teams meet in friendly contest for the international shotgun clay-pigeon championship, at Boston, Mass., during the third international shotgun, wing-shooting, clay-pigeon tournament, under the auspices of the National Gun Association, to be held at the grounds of the Boston Gun Club, Boston, Mass., June 1, 2, 3 and 4, 1887. The Executive Committee are: Judge M. R. Freeman, Macon, Ga.; C. M. Stark, North Dunbarton, N. H.; James N. Frye, Boston, Mass.; W. S. Perry, Worcester, Mass.; O. R. Dickey, Boston, Mass.; E. A. Folsom, Windsor, Conn.; J. F. Fottler, Jr., Boston, Mass.; H. W. Eager, Worcester, Mass.; D. Kirkwood, Boston, Mass.; J. S. Sawyer, Cambridgeport, Mass.; C. W. Dimick, Boston, Mass.; William Read, Jr., Boston, Mass.; Dr. W. H. Vincent, Montpelier, Vt.; H. L. Palmer, Providence, R. I.

Fifth—That the conditions of the contest shall be that each contestant shall shoot at 100 Ligowsky clay-pigeons, viz., 50 singles and 25 doubles, shooting at one-fourth of same only on each of the four days of the tournament, the rules of the National Gun Association to govern (a copy of which can be obtained by addressing the undersigned).

Sixth—If desired, sweepstake purses can be subsequently arranged as per agreement between the teams when formed; ditto as to any change of the rules which may be mutually agreed upon.

Seventh—If the challenge is accepted, the undersigned guarantees, on behalf of the embryo American Team, to accept a return challenge for the year 1888.

Eighth—This challenge must be accepted, if at all, by notifying the undersigned prior to March 1, 1887.

Our brethren of the rifle have set an example worthy of emulation in the above regard. If your fellow-countrymen will deign to accept this challenge, we guarantee them a cordial reception, a pleasant visit and a royal *bon voyage* upon parting. All matters which tend to make the sons of John Bull and Uncle Sam better acquainted with each other individually will undoubtedly strengthen the *entente cordiale* between the nations collectively. Friendly meetings in contests such as the above can undoubtedly be numbered among such matters. It is, therefore, hoped that this challenge will result in a meeting which will prove the precursor of many future similar occasions. I beg leave to remain, yours faithfully, J. E. BLOOM.

No. 68 W. THIRD ST., Cincinnati, O., U. S. A.

SAN FRANCISCO, Sept. 5.—The open tournament held by the Golden City Gun Club at Bay View to-day was a success. The day was all that could have been wished, with the exception, of course, of the wind—a drawback that rarely fails to be felt at this sporting resort. Better records have been made, but the contestants were in a measure satisfied with the result, inasmuch as the defective or "out of trim" condition was a failing of all rather than of a few. Single birds, 18yds. rise:

First Match.			
Fanning	111101111111101—13	O'Brien	1100111010101110— 9
Dunchee	1111101101111011—12	Burns	1030011110011010— 7
Pegullan	0111111010111102—12	Brown	1101000011001110— 7
McCarthy	0011101110111111—11	Adams	1000000101011101— 6
T Fanning	1011100011111101—10		
Fanning	1101100111—8	Pegullan	1100101011—6
McCarthy	0101111111—8	Burns	1110001011—6
Dunchee	0010111111—7	T Fanning	1001100111—6
Brown	1111010010—6	Adams	0101101011—6
Third Match.			
McCarthy	1011111111—9	Burns	1011010110—6
Pegullan	1110011111—8	T Fanning	1101010101—6
Fanning	1011011111—8	Brown	1000011011—5
O'Brien	1100111110—7	Adams	1000111010—5

Pegullan	111011—5	Burns	000101—2
Brown	111101—5		

ST. LOUIS, Sept. 9.—The members of the Excelsior Gun Club held their monthly medal shoot to-day at Rinkelville. George Rinkel carried off the club medal and also the Trescher gold medal for average. It can be seen by the subjoined score that he made the good accounting of 24 birds in 25 shots.

Medal shoot, 10 live birds, 26 and 31yds. rise, plunge traps:

G Rinkel	1111111101—9	F Pohlman	1111100010—6
J G Schaaf	1011111101—8	Pettker	0111101010—6
Griesdieck	0101011111—7	Fisher	1100110000—4
Loerke	1011100111—7	T Rick	1000010011—4
Fink	1011110101—7		

G. Rinkel won gold medal, J. G. Schaaf silver medal.

Second shoot, 5 birds, 26yds. rise, two moneys:

G Rinkel	11111—5	Bradford	11101—4
Griesdieck	11111—5	F Pohlman	10101—3
Schaaf	01111—4	T Rick	11001—3
Loerke	11110—4		

G. Rinkel and Griesdieck divided first, Schaaf, Loerke and Bradford divided second.

Third shoot, same terms:

T Rick	11111—5	F Pohlman	11101—4
G Rinkel	11111—5	Bradford	11001—3
J G Schaaf	11111—5	Griesdieck	10100—2
L Loerke	11101—4		

Rick, Rinkel and Schaaf divided first, Loerke and Pohlman divided second.

Fourth shoot, same terms, one money:

G Rinkel	11111—5	L Loerke	11101—4
J G Schaaf	11111—5		

G. Rinkel and J. G. Shaaf divided.

Fifth shoot, 5 Peoria blackbirds, 21yds. rise, two moneys:

J G Schaaf	10111—4	Fink, Sr	00001—1
Griesdieck	01111—4	Fisher	00001—1
F Pohlman	00111—3	Rick	03w.
Pettker	00111—3	Rinkel	11101—4
Fink, Jr	01000—1	Bruno	10010—2
Bradford	00001—1		

J. G. Schaaf first, F. Pohlman and Pettker divided second.

Sixth shoot, same terms:

Schaaf	10111—4	Bradford	00000—0
G Rinkel	00111—3	Fink, Sr	00001—1
Pohlman	00001—1	Stroh	10100—2
Pettker	00100—1	Fink, Jr	00001—1
Griesdieck	00100—1		

Schaaf first, G. Rinkel second.

Seventh shoot, same terms:

G Rinkel	11101—4	Bradford	00100—1
Griesdieck	11001—3	Stroh	00001—1
Schaaf	11000—2	Pettker	00000—0

G. Rinkel first, Griesdieck second.

FITCHBURG, Mass.—The Climax diamond badge will be competed for by Worcester county sportsmen here on Sept. 21. The rule is that the Climax badge shall be shot for 12 times within 12 months, and the person winning it the greatest number of times in the contest will become the owner. H. W. Eager, of the Worcester Club, has won it in two out of four matches which have been contested.

FREMONT, O., Sept. 8.—Fremont Shooting Club's eighth weekly shoot:

John Gottron	1011110111110001001001110—15
A Moos	1001100011011111111100011—16

18. Brooklyn, Sailing Races.
25. Brooklyn, Challenge Cup.
25. New York, Sailing Trophy.

THE NEW YORK C. C. CUP.

FINAL RACE, SEPT. 8.

AFTER the failure of Monday the final race was set for Wednesday, at 2 P. M. There was a good breeze from the south with a flood tide running at that hour, but start was delayed as both the English boats had broken their deck tillers. Mr. Whitlock was quite ill and unable to race, so Mr. Vaux only started against Messrs. Powell and Stewart. At the line Nautilus had mizzen stowed and a single reef in main, for the beat down shore, while the Pearl and Lassie each carried a single reef in main and mizzen. At 3:02 came the preparatory whistle with the final gun at 3:07. Pearl made a pretty start as the smoke left the gun, going over on starboard tack, but standing out a little distance toward midstream. Nautilus was some 300ft. astern, but as she passed the buoy Lassie cut in on her weather very neatly. On port tack toward the new pier Lassie led with Nautilus next and Pearl last. Above the pier all tacked again, Lassie leading by some 200ft., with Pearl half as far astern of Nautilus. As the boats worked the short tacks inshore Nautilus gradually drew ahead until she took the lead from Lassie. They were not timed at the weather mark, but as they began the second leg, with booms well off to port quarter, Nautilus was timed in passing a vessel at anchor as 1min. 5sec. ahead of Lassie, and 4mn. 15sec. ahead of Pearl. On the reach Lassie soon drew up on the leader. At 3:52:30 she stowed mizzen, Nautilus doing the same, and a little later she passed the English boat. The times at second mark were:

Lassie	3 56 40	Nautilus	3 56 50
Pearl	4 00 45		

All jibed at the mark, Lassie turning inside of Nautilus. Both set their mizzens again and laid a course across the wind and a very strong flood for the home buoy. Lassie luffed out in every puff, and held to windward in spite of the tide, while Nautilus took a more northerly course. The latter held to her whole mainsail, but Lassie hauled in one reef near the mark. The round ended thus:

Lassie	4 06 39	Nautilus	4 07 05
Pearl	4 14 35		

The beat down was a repetition of the first leg, Nautilus again heading Lassie and turning as follows:

Nautilus	4 48 32	Lassie	4 49 02
Pearl	4 59 00		

The spectators in the club house were now greatly excited, as the result of the whole series of contests was seen to depend on Lassie making up her loss to windward on the remaining three miles with lifted sheets. Eagerly they watched the pair disappear behind the anchored vessels off Clifton and reappear again in a minute with Lassie gaining, and at 4:54 she passed to windward of Nautilus and headed her for the last time. Barring accidents, the Cup was safe for this season. At the last buoy the times of jibing were:

Lassie	4 59 11	Nautilus	4 59 48
Pearl	not timed.		

The last leg was soon covered, Lassie continuing to gain until she led by 1m. 2s. as she crossed the line amid a hearty round of cheers for her skipper. Nautilus soon followed, and her crew was cheered even more lustily as he sailed over to congratulate the winner. Pearl was far astern, the times being:

Lassie	5 10 12	Nautilus	5 11 14
Pearl	5 27 50		

It is due to Mr. Stewart to say that he sailed pluckily a losing race and covered the course though without any hope of winning.

The records show two wins for Lassie and one for Nautilus, so the Cup rests for the present with the donors, who have so well defended it. The honors, however, are very even, as Nautilus sailed a good race on Monday and would have scored a very creditable win had she finished in time. In the last race Mr. Baden-Powell tried the deck position in reaching and running, though lying below when on the wind, and since then he has tried his boat entirely without ballast and reports her as moving very fast. The entire tendency of British canoeing has been to throw men into one rut and to keep them there, and the competition that has lately taken place between the heavy craft and a totally different class of boat is just what was needed to show the evils of their methods. That the two gentlemen who have visited us this season will profit greatly by their experience here is very certain; in the interests of canoeing generally we hope their brother canoeists at home will accept as freely the lessons of the late races and so profit by them that the great skill and care they have devoted to their present craft shall be diverted into wider and less restricted channels. As to the American canoeists, they have learned much from the boats and rigs seen here for the first time, and we feel safe in predicting that, while no one of them will build a Nautilus or Pearl, their influence will be very apparent in our canoes at the next meet.

Our visitors both promise to be with us at the next meet and to bring new boats, which shall approximate more nearly to the American type. On our part we have seen what can be done in the way of light and neat rigging, while the wonderful turning and maneuvering powers of the Nautilus have made a deep impression on all who have witnessed her sailing. It is safe to say that next season our best canoes, and nearly all the racing men are ready for new boats, will be rigged and especially sparred better than they have been, and will turn more quickly, while Mr. Baden-Powell's 1887 Nautilus will be lighter to carry, will have less ballast and will run and reach better than the old. If our canoeing has gained much from the presence of the visiting boats, the A. C. A. has gained no less in the addition of two such true sailors and jolly companions, and we know that every A. C. A. member, from No. 1 to No. 1,020, will join us in wishing them a pleasant voyage now and a speedy one back next summer.

THE A. C. A. AND ITS DIVISIONS.

THE American Canoe Association is in the throes of reorganization. Now is come a time when the loyal friends of the fraternity look dubiously ahead and wonder what will happen next. There is a potentiality for surprises in the present state of things. How big the clan has grown! What progress it has made! What success it has achieved! And with its now established authority what possibilities it faces. But, alas! some of them say now the old times are gone and everything is at "sixes and sevens" At the meet just terminated many a handshake was given in the regretful belief that the 1886 camp would be the last of the grand ones. Even some of the steady hands that have held the tiller in the few years past and helped navigate even when off duty, tremble a little at the shoals and breakers around us and at the great stir in the crew—a splendid crew—but of such enormous proportions now and so full of life and action. Are the old chiefs afraid because the tribe grows big? It is young yet and still growing—and now is the time when we want their judgment and nerve. There are breakers ahead, and of course there are rocks in these breakers; and doubtless the vessel is overloaded for running such rapids. But after all running rapids is splendid sport, and as to the load have we not already equipped and launched one new bark and can we not repeat the operation? There are good deep channels between the rocks for a whole fleet. And this stir in the personnel is not mutiny, but only life, restless, energetic, but not insubordinate.

Now let us abandon metaphor and attack actualities by their proper names. The A. C. A. has grown so big that its members are spread over the whole country, the breadth of a continent; and its gatherings have reached proportions clearly as large as are compatible with the objects in view. This last fact need not be a troublesome one. It is becoming evident that our annual meets will be much larger than the recent ones. In '84, '85 and '86, the population of the camp did not vary very much, nor will it in the future. But there will be more camps. There's the rub. How to get more camps for the many more canoeists and still maintain the fraternal relationship. It must be done. It is wanted. The West felt the want first, and when they found expression did it so quickly that our answer came too late. The West answered the question for themselves, by themselves. But they will rejoin. Now look Down East. Was not that a surprise? Let it be a lesson. In a few months look to Canada and then to the sea coast, and then to the South. The division question is answered and more answers are coming. But need this bring ill to the A. C. A.? Yes, if we try to oppose it; no, if we meet it fairly and wisely.

One of the dangers is misdirected loyalty. There is just now (for a little while) a large division named the Central. It includes nearly all the "old guard" of the meets and camps and committees that made the A. C. A. what it is. There is a tendency to feel that the Central Division is the citadel of the old A. C. A.; that the allegiance is owing there; a tendency to forget that the A. C. A. still exists. But this must not be forgotten. The greatest evil that could befall the A. C. A. would be a powerful domination of one division. The divisions must be nearly equal and must be of geographical character. The present Central Division is a temporary arrangement. One real division—the Eastern—of legitimate size and origin and purpose has entered into existence, and this Central is the "remainder" waiting for another subtraction. Its continuance entire would be a menace to the A. C. A. This is the fact we must remember. The A. C. A. still exists, whole and alive, and F. S. Rathbun, of Deseronto, is still commodore; and when he ceases to be, another commodore will reign in his stead. The Eastern men have not deserted this banner and platform. Now, therefore, let us look to it that no one else does. There is a good committee ready for work. Let them elect a good commodore (by everything afloat, let them elect a good commodore; we never wanted him more than now), and then let the divisions organize for Ontario and for the St. Lawrence and for the South, each according to its real needs; and next year each shall get its charter and begin its career. But the A. C. A. will none the less flourish.

There is another course, one which leads over some of the rocks we discussed a while ago. Suppose the loyalists of the Association without concerted action follow their present bent. A great many would as members of the Central Division oppose further secession (as they would term it) in a hope to keep things together that way. This will not do. It will end in opposition of the Central against other divisions, Eastern, Western and Northern. (And by the way would not "Northern" be a better title than "Canadian" for the forthcoming fraternity.) Let us keep in mind that each one of us belongs now to two organizations, the A. C. A. first and the division for administration next. And always let the A. C. A. stand first, else we shall break up.

And now one other argument. It has been suggested that the division would arrange only spring meets, leaving the autumn camp to the A. C. A. This is a fallacy. The split began in the necessity of a Western autumn meet, a real vacation meet. It is well to stipulate that the general meet should take place at a given time (we ought to revert to the old customary time, the full moon in August) and that the division meets should not interfere; but it is useless to hope that the A. C. A. meet will be the only fall meet and the division meets spring meets only. The very beginning of this problem was the need of more meets in the fall to lessen the distance to be traveled to reach them. The spring meets are different, they are club affairs in the main, or of a few friendly clubs, and they will probably develop more into cruising than racing gatherings in course of time. But the autumn meet is the canoeists' long vacation and the divisions are demanded to enable the average A. C. A. member to reach it not without spending all his time and money in "getting there." On the other hand the A. C. A. organization for an annual meet must look for support (and must get support) from those who wish and are able to perpetuate its charming gatherings and their associations. What if it is at first ten per cent. or so smaller? What if there may have been, a week before, or is to be a week after, a division meet in New England or Canada with a hundred attendants? They will have been in the main men who could not have come to the A. C. A. meet, unless in the same neighborhood, and perhaps when that occurs they might be merged in one.

It is established that the divisions will organize, and that being so we should see that they do so in a way not to rival but to relieve the A. C. A., and above all things to keep it entire. So shall we have annual camps at which the veterans can fight their battles o'er again in very fact, camps which shall have still the same representative population from all points of the compass, without regard to State or national boundaries, and very little for divisional lines or limits. To sum up it is submitted that we want:

First—Such regulation of this unavoidable dividing as will insure fairly equal geographical divisions, none strong enough to claim domination.

Second—Such recognition of the demands of divisions as will retain them in allegiance with the A. C. A.

Third—Such distribution of A. C. A. officers and movement of the camp site as will give each division in turn the advantage.

In such a course as this there need be no fear that the divisions will break up the A. C. A. On the contrary, they, as feeders and schools, will make the annual meet more than ever the gathering of old friends and expert champions.

Let the divisions flourish and the A. C. A. will surely do so.

R. W. GIBSON.

IANTHE C. C.—At the annual meeting of the Ianthe C. C., of Newark, N. J., held Sept. 9, 1886, the following officers were elected for the ensuing year: Commodore, Richard Hobert; Vice-Commodore, F. L. Hatch; Secretary, H. S. Farmer; Treasurer, Frank Bowles.

THE MEET OF 1886.

BUILDING.

BEFORE proceeding to a consideration of the various methods of building now in use for canoes there is a question that is intimately connected both with modelling and building that has never yet been settled. The model of a boat, if one be made as a basis for the design, is perfectly fair and smooth and in the finest condition for a swift passage through the water. The boat itself when actually afloat approximates to this model, more or less, closely, dependent on the method of building and the skill and care of the builder. With some of the methods we shall describe later on it is possible to reproduce exactly the lines of the drawing or model, but with others, especially the lapstreak, this can only be done approximately. Now the question arises, supposing the main points of the model to be correct, the dimensions well chosen and the bulk distributed in the right proportion, how much harm is done by these local faults? In the lapstreak there are three kinds, first the laps or lands of the plank detroy the continuity of the surface and create a certain resistance. Second, the planks are often improperly shaped and laid on, so that lumps and hollows are found all over the boat. This is almost inevitable in the hands of a careless or incompetent workman and is seen at its worst, and most frequently in the garboards at each end, in a very perceptible "hunch," due to an improper spiling. The bevels on the planks too, are often so badly worked as to show quite an angle between the planks instead of an evenly rounding surface. A third cause of unfairness is seen usually in English built lapstreak boats where the moulds are so cut as to leave each plank flat, the midship section of the planking showing a succession of straight lines with marked angles between them instead of a series of overlapping curves, the latter being obtained partly by bending the planks a little and partly by using thick planks where the curve is greatest, and hollowing them out with a plane to the proper curve. Owing to these three causes a lapstreak boat is often very unfair, but it is as yet uncertain just how much if any slower it is on that account. Some of the fastest boats to-day are notoriously bad in this respect, and we could mention three which stand at the head of the A. C. A. and club records for the past six years, any one of which would be condemned on sight by a good boat builder, and yet they have won prizes repeatedly from smooth skin boats. In all of these boats the bottoms have been so smoothed and polished that the skin friction is really no greater than in those of other builds, but they all possess local irregularities, bumps and hollows of ⅛ to ½in. in depth, which are easily apparent to the eye. It would seem that these unfair spots should make the boat much slower; now, can anyone prove that they do?

The tendency this year is entirely in favor of smooth skins, and most of those present went home to consider which of half a dozen methods they would adopt in the next boat. The lapstreak boat has proved a good friend to most of us, and before we discard it let us consider well all its faults. When properly built it is certainly very strong, light and durable, three very important points, and that it is fast the records show. It is also as cheap as any, and can be readily repaired. Against it is urged the unfairness due to the three causes mentioned above. Now, as to the lands, with skill and care each plank may be beveled so that the projection outside is not over 1-16in. instead of a full ¼, as is usual; and this disappears also when well sandpapered. We have seen a canoe built by Messenger, of Teddington, many years since, in which the laps are barely noticeable. Any 15ft. canoe of ordinary model can be planked with five or at most six streaks, and it would not be difficult, as may be seen in the Nautilus, to reduce the number to four, thus leaving only three seams. These will be not across, but nearly parallel to the course of the water around the boat, and the extra resistance, at such speeds as a canoe travels, will be inappreciable.

Now as to the great fault of most lapstreak work. If absolute fidelity to the model is to be obtained the moulds must be close together, at least 2ft. at the middle and 1 near the ends, and must be very carefully made and set up. The spiling for each streak must be taken with a good staff, best made in two parts, as described in "Canoe Building," and care must be taken not to spring the staff or the planking and to make the latter exactly alike for each side. The lines of the planking should be laid off fairly on the moulds as soon as the frame is set up; the upper streak and garboard, the latter as wide as possible, especially at the ends, must be lined in, and then the remaining space must be divided into two or three planks. The nails should be fine, with heads ¼in. rather than ¼, as is too common, and evenly spaced, and in the wide plank they must be so close as to prevent any bulging between them, say two nails in each timber in a plank 4in. wide, besides the nails in the laps. With these points attended to a surface may be had that will be as good as the best smooth skin, but it can only be done by better workmen than we know of now, the best and fairest of lapstreak boats of to-day being heavy and clumsy in the laps. The most promising specimen of lapstreak work at the meet was the Curfew, a Spanish cedar canoe built by a young amateur. Not only was the planking well lined out, but the bands were fined down more than usual.

There is certainly an element of strength in the doubling of the plank at the lap, and various methods of combining it with a smooth skin has been devised. The Pearls from Toronto were built with a "ship lap," each plank being halved at the edge so as to make a flush surface inside and out. A peculiar plane is used leaving the inner edge of each plank tapered to a feather edge, while the edge which is outside is left 1-16in. thick. This method has been followed by Rushton in his sneakboxes and Joyner in canoes and boats, and the result is very satisfactory. The Mona is built in this way except that all the edges are reduced to a feather, and so are liable to split and crumble off. This latter method too requires a great number of tacks which are always objectionable. The best mode would seem to be to plank with ¼in. stuff, the upper or inner edge of each plank being beveled to a feather-edge, while the lower or outer edge is left 1-16in. thick and rabbeted in, making a flush outside. Copper nails should be used for fastening, spaced 2in. apart, the timbers being 4in.; and the seam should be laid with thick varnish before nailing and riveting. Such work will be strong, smooth, and the timbers may be quite small.

Still another mode of using the valuable qualities of the lap is the ribband carvel, or as it is sometimes termed, ribbon carvel. The former term is evidently the proper one, as ribband is actually a band over the ribs, while ribbon has no application to the case; and "rib and carvel," as it is sometimes written, would apply to any carvel-built boat. The method is not new to America, as whaleboats have been built in this way for many years, and canoes have been built in Canada by a similar method. Several years since the idea was introduced into our canoe building from England and some very good, smooth skin canoes were the result, but it has never become general here. The three English boats that have visited us this season are built on this plan, and it certainly gives a very good outside skin. It must be noted that all three leak considerably, though this is due, probably, to other faults, and is not attendant on this mode of building. In all of them the ribbands, of Spanish cedar, are about ¾in. wide and ⅝in. thick, which makes the lap rather small. In the mode followed here they were ¼in. thick and 1¼in. wide, thus giving a full ⅝in. lap for each plank. Tacks were used between the frames, but riveted nails would be much better. The main objection in the English boats is the depth of timber required, 1in. or more, and as this is greatly cut away where it is jogged over each ribband the timber is weak and splits in nailing.

Looking at the boats inside they do not compare with the light ¼in. timbers of the American boats. The planking on the Nautilus is very good, ⅜ Spanish cedar laid in wide strips, the upper strake, which is butted amidships, extending from the waterline to the deck. Outside the surface is fair and true. The stems and sterns of all three are open to criticism, being of straight-grained oak or mahogany, showing checks in some places, where a hackmatac knee would be lighter and stronger. The decks of the Nautilus and Pearls are of ⅜in. Spanish cedar over the middle of the boats, with thinner cedar at the ends. Nautilus has a fair sweep to all the deck beams, but in the Pearl no two are alike, the forward deck near the mast having an angle or lump rather than a fair curve. In all the floor ledges are so fastened as to do good service in strengthening the bottom, a point where most of our boats are weak. In two of the boats at least the centerboard trunks are badly built, and have so closed as to make it difficult to raise or lower the board. Much of this is doubtless attributable to the hurry in which the boats were built, and for it the builder is not entirely responsible. That he can do work of the best quality is shown in the Nautilus. The difficulty of easily and compactly timbering a ribband carvel boat is a great objection to the method. There is a way of avoiding it and putting in the light, bent frames of the lapstreak, but we prefer to make a practical trial before recommending it.

Another system of smooth building is now pretty generally known, that followed by Smith in the Lansingburg canoes a few years since, a number of narrow strips, each with one hollow and one round edge—nailed to each other and with few or no timbers inside. This method gave in most cases a strong tight boat, with the additional advantages of a smooth inside and outside. Messrs. Green & Bradley, of Watertown, N. Y., have been building boats on this plan for some years and this season they had at the meet a canoe. The boat was very handsome in finish with a hard smooth surface and some ribs inside. The deck was sprung from stuff 1in. wide. Their method is different from the others in that a powerful clamp is used, being applied to each rib in succession along the entire length of each strip as it is put on, thus forcing the strip firmly into place and holding it while being nailed.

Somewhat allied to this method is that of the Ontario Boat and Canoe Company, which builds under Stephenson's patent "cedar rib" canoes. These are built of strips 1in. wide and tongued and grooved together, the strips running either fore and aft, in the "longitudinal rib" or around the boat in the ordinary "cedar rib" canoes. The strips are steamed, bent over moulds, pressed to shape, dried in a kiln and finally put together under powerful pressure, making a hull that is strong, light and watertight. Lately the company is devoting more attention to the decked canoes and showed some very fine ones at the meet.

The method of building which deserves the most notice, both from the novelty of the idea and the excellence of the boats, is that introduced by Captain Ruggles of Charlotte, near Rochester, N. Y. The planks are very narrow, from 1¼ to 2in. wide, and ¼in. thick. They are laid edge to edge and nailed or screwed to the timbers as in a ship or yacht, and the seams are regularly caulked. With such thin plank, and the builder claims that it is practicable with still thinner, the operation is a delicate one and could not be done with a caulking iron and mallet in the usual way, but Mr. Ruggles uses a roller, first rolling in a cord of round rubber 1-16in. in diameter and following it with a strand of cotton lampwick. This makes a perfectly tight seam while the boat can be easily repaired. The garboards have been removed from one of these canoes for repairs, by taking out the screws and lifting them off afterward replacing them as before. The bent timbers are about ¼x⅜in. and spaced about 4in., making a very neat finish and occupying little room inside. With this method it is an easy matter to build very closely to the moulds, to obtain a smooth skin, and to make any repairs or alterations. The hulls are very strong and light and on the whole we are inclined to give it preference over any method of building yet introduced.

Some years ago a new style of building was introduced, the promoters of which endeavored to advertise it by an indiscriminate attack on lapstreak boats and those who built them. Last year two of these canoes were seen at the meet, this year none were present, while one builder who makes a specialty of lapstreak boats informed us that his business for a portion of this season aggregated over $25,000. Men are more alive now than ever before to the importance of having the very best boat possible. What the build and material will be it is impossible to say, but the tide is now setting in favor of smooth skin wooden boats. Only since the meet, however, we have heard of a tender for a canoe of thin steel, and who knows whether this or some better metal may not supersede wood. Just now there is a good opening for a first-class mechanic to work up the possibilities of a lapstreak boat in a way that thus far few are familiar with, and when this has been done and the boats tried it will be time to give up good cedar for metal.

C. B. VAUX.

WHEREVER the double blade is swung and sails are spread in Europe or America, the name of "Dot" is known and duly honored as one of the first of modern canoeists. Whether as sailor, paddler, cruiser, cook, writer or companion, the owner of the name, sometimes familiarly known as C. B. Vaux of the New York C. C., holds a leading position among American canoeists. Those who have seen him sail in the old days in the Dot and later in the Lassie are willing to accord him still the place he so long held as the first canoe sailor in America; those who attempt to keep up for a long time with the fleet Lassie under paddle or on a

cruise are apt to think that her crew has a steam engine hidden somewhere in his by no means Herculean frame, and those who have tasted his famous coffee and wonderful omelettes are ready to aver that as a cook he excels his record as sailor or paddler. To a still larger circle he is known as editor of the *American Canoeist*, as the author of the standard work "Canoe Handling," and as one of the oldest and most valued contributors to the canoeing columns of the FOREST AND STREAM. No camp-fire or meet is complete in his absence and he has enjoyed a popularity throughout the A. C. A. that few others have shared.

Mr. Vaux is the eldest son of Mr. Calvert Vaux, the well-known architect of New York, and was born many years ago in Ulster county in this State. After spending some time at Columbia College in the School of Mines, he entered his father's office for a time, meanwhile amusing himself at odd times as an amateur printer. After a time he abandoned the drawing table to take an important position in the publishing house of G. P. Putnam's Sons, since which time he has been connected with the publishing business. While at school at Plymouth, Mass., Mr. Vaux did his first sailing in the boats used about that port. In 1878 he went into canoeing in the old Nautilus Kaloolah, shortly after giving her up for the Dot, the third boat of the Shadow model built by Everson. Mr. Vaux was one of the first canoeists to adopt the balance lug, and many of the improvements in sails are due to his ingenuity. Beside many club prizes, he won the Challenge Cup of the N. Y. C. C. after two seasons' racing, and lately has added to his fame by his successful sailing in the international races of the N. Y. C. C.

TORONTO C. C. RACE.

A RACE was sailed on Sept. 11 for the Toronto C. C. challenge cup, Mr. H. Neilson being the challenger and W. G. McKendrick the holder. The following members entered: Com. H. Neilson, Boreas; D. B. Jacques, Yanewah; Colin Fraser, Una; W. H. P. Weston, Wanda; W. A. Leys, Allouette; Thos. Gibson, Madge; Will Mason, Evora; Will G. McKendrick, Mac. The first gun was fired at 3:30 and the starting gun one minute later. Yanewah got a good lead on the start, but lost it half way across the bay by his mizzen fouling, and Mac took first place, the finish of the first round being: Mac, Yanewah, Una, Boreas, Allouette and Wanda. On the second round the wind died away and the canoes made very little headway, with the exception of Boreas, who took third place. After half an hour's drifting a wind sprang up and the canoes bowled along again to the finish without changing their relative positions, Mac finishing with a lead of about one-quarter mile, Yanewah second, Boreas third, Una fourth, Allouette fifth, the latter taking the novice's medal for the second time this season.

After changing their rigs the paddling race for decked canoes was called; course, ½ mile straightaway along the water front, finishing opposite the club house. The entries were: D. B. Jacques, Yanewah; A. H. Mason, Evora 2d; W. H. P. Weston, Wanda; W. A. Leys, Allouette; Will G. McKendrick, Mac. Mr. B. W. Richards, Commodore of the Brockville C. C., kindly officiated as starter for the race. The water was very rough, a southwest gale blowing from start to finish, and the race was not so much a test of speed as of who could keep their craft right side up with care. When opposite the water works Allouette turned bottom up and Wanda staid alongside to assist her crew, leaving Yanewah, Evora 2d and Mac to struggle along for first place. After a hot struggle Mac got ahead and won by about one length, Yanewah second and Evora third. Mac thus has the three challenge cups of the club for the second time this season, and feels as big as a two-story house with a verandah all round it. There is no peace for the lucky holder, however, as Colin Fraser has challenged him for the combined for next Saturday.

REGATTA COMMITTEE CENTRAL DIVISION.

AMERICAN CANOE ASSOCIATION, Central Division.—The below named active members of the Central Division of the A. C. A. are hereby appointed Regatta Committee as directed in the Constitution, Art. VIII., and will be obeyed and respected accordingly:

C. B. Vaux, New York city (chairman); F. F. Andrews, Rochester; W. G. McKendrick, Toronto. ROBERT W. GIBSON, Vice-Com.

ALBANY, Sept. 13, 1886.

LINES OF THE CRACK CANOES.—During the past three years the FOREST AND STREAM has published the lines of all the leading canoes, making a collection that has never been equaled. This season, beside an elaborate drawing of the famous Lassie, we have given the lines of Vice-Com. Gibson's Vesper, and we shall shortly complete the quartette of racers that have been so prominent this season. Through the kindness of Mr. Baden-Powell we have taken the lines of his new Nautilus, while with Mr. Barney's consent the builder of the Pecowsic, Mr. Joyner, has furnished us the full sized plans of the boat. Both of these will appear as soon as the racing season closes.

MACHIMOODUS C. C.—Moodus, Conn., Sept. 9.—A canoe club has been formed in this place with a dozen members so far and a good show of increasing. We propose erecting a club house on the bank of Salmon River, a branch of the Connecticut, about thirty miles above Saybrook lighthouse. Officers elected for 1886: G. W. Rich, Commodore; J. A. Cone, Secretary and Treasurer. The club sails under the name of Machimoodus Canoe Club, signal, a bass drum.

THE YOUGHIOGHENY C. C. were in camp on Cheat River, W. Va., Aug. 16 to 30. They had two canoes built after Stephens's American racing and cruising model, and one light open boat built by a local builder and partly decked with canvas by the present owner. The two larger boats carry 90 sq. ft. sails in a Mohican settee for main and balance lug for dandy.—C. W.

BARNEGAT CRUISER.—Fruitland, Fla.—I built a Barnegat cruiser according to the plans published in the FOREST AND STREAM, have sailed her 500 miles, and find her a remarkably good boat in all weather.—H. R. S.

BIRCH BARK CANOES.—A correspondent asks the address of a builder of birch bark canoes; can any of our readers inform him?

TIPPY C. C.—On Sept. 7 the house of this club was broken into and robbed of $100 worth of clothing. The thieves have not been discovered.

The Forest and Stream Fables are for sale by all newsdealers.

DANGER SIGNALS from the Weather Bureau are not more significant of a storm than a cough is of consumption. Providentially we can cure any cough with Hale's Honey of Horehound and Tar. Sold by all druggists and country storekeepers. Pike's Toothache Drops cure in one minute.—*Adv.*

Yachting.

FIXTURES.

SEPTEMBER.

17. Toledo, Pen., Toledo.
18. Sandy Bay, Fall Regatta.
18. Newport, Open Races.
18. Chicago, Annual.
18. Great Head, Club, Winthrop.
19. Quaker City, Review, Cruise
20. Newark, Fall Regatta.
25. Buffalo, Club, Lake Erie.
28. Beverly, Club, Nahant.

YACHT RACE EXTRA.

THE yacht race extra published by the FOREST AND STREAM is on sale at all newstands, or may be ordered direct from this office. It is a 16-page review of international yacht racing up to the last races. Has many illustrations, the lines of Galatea, etc. Handsomely printed on fine quality paper. Price 10 cents.

THE AMERICA CUP RACES OF 1886.

AGAIN as was the case last season a series of important international matches has been sailed at New York, again the American yacht has proved the victor; and perhaps, as good and loyal Americans, we should toss up our hats, turn hand springs and add our voice to the general "hooray." As Americans, we can heartily rejoice in the great revolution which has brought forward such yachts as Mayflower and Puritan, boats that are so immeasurably superior to their immediate predecessors; but as the first and most consistent advocate of the modern British cutter as the embodiment of sounder ideas and more correct principles, we may fairly ask to be excused from adding our penny whistle to the din of bells, steam whistles and brass popguns that make uproar over the victory of the "American sloop," and to devote our space to a calmer consideration of the important issues involved.

While the work done by the two Burgess boats is in no way to be slighted, there is every danger that popular enthusiasm, especially on the part of the daily press, will take such a view of the matter as may mislead many and prevent a realization of the full benefits which should accrue to American yachting from the results of the two races; in fact, such a state of affairs is certain to follow the great outcry now being made in the name of the "American sloop" and the boasting of the present contests on the ancient quarrel of sloop vs. cutter.

In considering a purely technical and scientific question such as the elements of a yacht present, the first important point is to ignore completely any national prejudice and bias, and to weigh each detail, not by its origin, but by its actual value in the finished boat. To do this in the present instance is a wearisome task, a more than twice told tale; but it seems necessary to go over the old ground again in order to clear away the many misleading statements thrown about the question by interested parties whose only aim is to pander to public taste. A year ago, on the eve of the first Puritan-Genesta race, we discussed the boats and the issues at stake (FOREST AND STREAM, Sept. 3, 1885), and there is nothing which we said then that we now desire to change. Our views have been corroborated by the successful work this season of a boat that marks a distinct step nearer to the cutter than Puritan, longer, deeper and more lead on keel, with the same beam as last year's boat, which she has beaten. Looking at Mayflower it is very evident that she is even further from the true American sloop than Puritan, that with cutter rig, lead keel, less beam and greater draft, an English stern, a greater rake to sternpost and the many mechanical details of the cutter, she can fairly be classed as a centerboard cutter. Her distinctively American feature is the centerboard, and by virtue of this she is dubbed an "American sloop," ignoring a dozen important features. True, she has a fixed bowsprit, though if she or the others essay a race to Bermuda they may wish it was a running one before they see the Highland lights again, and she has a laced mainsail, but unless one admits that Galatea was a sloop when she laced hers this season, or that Clara becomes a sloop every time she runs in a lacing line in hard weather and a cutter when she casts it off as the wind lightens, this cannot be claimed as a distinctive feature. Both of the yachts then can only be termed centerboard cutters; but if the question of nationality must be considered, what is the summing up? Centerboard, bowsprit gear, laced mainsail, cotton duck, American. Beam, and depth, the former less than any American sloop, and little more than was customary in cutters not so many years since; the latter far deeper than any sloop and approaching the medium type of English cutters, so these two features may be rated as neutral. Of the purely English features there are the greater displacement, distinctly marked keel, with its attendant construction, the weight of lead carried outside, the plumb stem and round spar over it, the sheer plan with raking sternpost and long overhang,

the stepping of the mast, the two headsails, the details of masthead fittings, the runners and backstays and the general proportion of the rig. Can any one say that these are taken from American practice? If, then, we sum up Mayflower or even Puritan on this basis, the best that can be made of her is an Anglo-American centerboard cutter.

Now let it be distinctly understood that we do not claim that Mr. Burgess and those associated with him have made a servile imitation of English yachts, that neither Anglo-phobiac nor Anglo-maniac has any cause to criticise them. They have set to work carefully and intelligently to select the best features of naval design regardless of political geography or the great American eagle, and it is due solely to this liberal feeling that the famous bird has had a chance to flap its wings and crow for two seasons in succession. In connection with the two boats it is worthy of note that Mr. Burgess has never built a true centerboard sloop, that his earlier efforts were all keel boats, cutters of modified type; and that lately he has scored an important success, unnoticed owing to the large boats, in his 20ft. keel cats, their victories this season and last showing very favorably alongside of the fastest centerboard boats. Also another fact worth considering here: Mr. Burgess, whose boats have been so successful against the cutters, though a genuine American, has spent more or less time abroad in the home of the cutter. Two other Americans, both famous as designers of the old type of American yachts, have produced boats which have sailed side by side with Puritan and Mayflower with the results so well known. One is at best only a partial success and the other is laid up, a confessed failure, and the latter case is not bettered by the fact that her promoters rushed heedlessly into a field in which they had never trodden, and in trying a lead keel burned their fingers.

We desire to give every credit to Mr. Burgess, but must protest against the popular confusion of terms which may lead some to suppose that two victories in succession were due in any way to the established principles and practice of American yachting and not his individual skill and judgment, aided by competent associates. The victory is in every sense an American one, a victory for American enterprise, skill and perseverance, but not for the American "sloop." Perhaps some excuse may be made, however, for the ill-founded and extravagant claims of the press and a portion of the yachting world; it is a long time since they have seen a sloop of any size, that venerable relic has fortunately disappeared from American regatta courses, and their mistakes may charitably be laid to ignorance.

Whatever the title by which Puritan and Mayflower are designated, there is no doubt but that sufficient difference exists between them and the two Webb cutters to make a very interesting and instructive contest. They differ greatly in beam, draft, displacement, sail area and in the possession of centerboard and keel or keel alone. If we consider them, as must be done in this case, from a racing standpoint it must be admitted that the American yachts are ahead. Contrary to general expectation, considering that they were new yachts and of a size unknown for years, while their rig was one that Americans were not familiar with, both have been excellently sailed this season and last; and again to the surprise of most yachtsmen neither Genesta nor Galatea have shown up as well in this respect as was expected from their reputations, while Mayflower was sailed especially well compared with her opponent.

We have never considered that last year's racing proved the enormous superiority that some of Puritan's aherents claimed, but that, while she was undeniably faster in a drift, the difference was very much less in even a fair breeze, such as held outside the Hook on the inside course race; and while this season Galatea is undeniably beaten, the entire chances of the weather were in favor of the centerboard boat, and the figures at the end of the race are apt to mislead. Probably Mayflower and Puritan are faster not only in light airs but in a blow that will make a thin headsail bow bigger than the largest of clubtopsails did last week; but as to this year's races, while it may fairly be inferred, it is not yet proven.

The size and importance of the boats, together with the international character of a cup contest, lend a degree of weight to the results which they may not deserve, and the occasion is seized upon to back up the losing or rather lost side in the battle of sloop and cutter; but is this entirely fair? Whatever the results of the races may be, are they to be accepted as conclusive to the exclusion of all other evidence? Size tells always, and it is natural that every one should overlook Shona in watching Mayflower; but such a course can only mislead. What have been the circumstances in both of the races, 1885-86? Mr. Burgess's two centerboard cutters have beaten Mr. Beavor-Webb's two keel cutters; conclusion by the great American public, "The cutter must go, we will build American sloops."

How much of the result is due to the peculiarities of each boat and not to the general type no one can say, and just now nobody seems to care. Again, the British racing fleet includes three cutters of 81 to 86ft., Irex, Galatea and Genesta, while the American fleet possesses Mayflower, Puritan, Priscilla and Atlantic. Two of the latter have beaten two of the former, but does this affect the entire question?

What Irex can do is a pleasant matter of speculation, but just now has nothing to do with the case until after an actual trial; it is enough to know now that two of the three British boats in the class have been beaten by two American yachts, and the evidence goes to show that the new type is faster than extreme narrow cutter. After one is sure of this and has made a note of it for future reference he may be tempted to look a little further and to find that while 6-beam Galatea has been beaten by 33½-beam Mayflower; or if he believes the big head lines "Centerboard beats Keel," there is 6-beam Clara, as great an extreme as Galatea, with her unbroken string of victories in all weathers over every variety of American boat, including the new type, to be accounted for; and a little 6-beam Shona, lead keel and all, beating badly the pet centerboard Shadow.

The truth is that no general and conclusive deductions can be drawn from any one class, but for an insight into the broader principles involved the whole season and the entire series of races must be considered. The races this year have been more interesting than usual, and entries have been fairly large. What is the record? Bedouin has entered every race and never been beaten in her class, winning from the four large boats in the N. Y. Y. C. regatta, taking first prize in the Seawanhaka, first prize at Marblehead and a sweepstakes at Newport. Clara has won every race she has sailed since she came here, which means every race open to her, except the Bennett-Douglas cups last year and the Goelet cup this year, when she was classed with the big boats; but in each of these she has won a sweepstakes. Ulidia won the sweepstakes at Newport, sailed in the Marblehead race against Clara and Active, far larger boats; arrived at the start too late for the Larchmont race, but cut in and made a good finish with the fleet. These boats have carried the bulk of the racing outside the large class, and not one of them has been defeated by a centerboard boat, while but a few of the latter have done any racing this season. Without going into figures, which will follow later in our annual summary, it is certain that both in starts and wins the thoroughbred cutters outnumber the sloops heavily. These facts must be weighed before the value of the season's work can be properly estimated, and another important race is to be sailed before the figures are complete.

If we look solely at the large class, the conclusions must be that in moderate weather the new type is faster than the extreme cutter; but that the board is necessarily superior to the keel is disproved by too much evidence in all other sizes to believe it here, and some further reason must be assigned for the success of the American boats to windward. In a hard weather race, much less in a long ocean contest, the boats have never been thoroughly tried, and what they can do is purely a matter of conjecture. It may be that next season one of them will cross for the two challenge cups which Irex has potted in a rather wholesale manner, the ownership of the two being determined by the result of a single race, and that a drift, a method not greatly in accordance with the end for which the cups were given. In this event their seagoing powers are apt to be fully tested. Galatea has only been considered here as a racing craft, as was natural, considering her mission; but any one who has visited her will recognize that her real merits are very likely shown by the popular rating which places her half an hour astern of the Mayflower. Whatever her merits over a regatta course, she still shows to enormous advantage as a comfortable cruising yacht, capable of navigating any waters, and offering such accommodations as are only possible with a boat approaching her type. We shall publish shortly her accommodation plans, which, with the interior views already given, will show the extent of her cabins and hold.

Had the long and severe struggle in which we have taken part for seven years ended in a victory over Galatea by such a boat as an enlarged Fanny or Gracie, we should have felt that all our labor had been in vain and that there was little hope for better things; but the triumph of the Anglo-Yankee sandwiches—a cutter rig and cutter keel, with an American centerboard between—is in itself a triumph for the essential principles that we have advocated, the differences being mainly in subordinate details. Further than this we know, as do those concerned in Mayflower and Puritan, that they can beat both of these boats with vessels still narrower and deeper than they are, and probably without the centerboard; and that some day soon, when British designers are released from the iron vise that has so long restricted them, and allowed to choose their elements as freely as Americans now are, they will have to meet the challenging cutter with a yacht differing but little from her in all particulars.

SECOND TRIAL, SEP. 9.

Whether satisfied or otherwise with the result of the races, all yachtsmen will regret that they were not sailed in better weather, and that drifts and flukes have robbed these most important contests of a part of their value. While such weather as that which Genesta and Dauntless sailed in for the Brenton's Reef Cup last year would not have been acceptable to the admirers of the American boat, and even such a day as the Goelet Cup race of 1885 might have savored too much of cutter weather, all would have rejoiced to see such a breeze as the three yachts had at Marblehead on June 29, or at Newport for the Goelet Cups this year. The results would in all probability have been the same, but the lessons to be drawn from them would have been of far greater value than in the present case. In neither of the three races was the wind such as to insure a fair trial, and while in every case Mayflower led both in light airs and drifts, as Puritan did last year, her superiority in not of necessity a howling gale, but a good lower sail breeze, while it may be very safely assumed has not been decisively proven. On neither of the three occasions has a strong steady wind prevailed for more than a very short time.

As Tuesday's race resembled closely that over the same course on Sept. 14, 1885, so the failure of Thursday is similar to that of Sept. 11, 1845. As then the course was E. by N. from the Scotland Lightship, the wind was moderate at the start, the English boat doing rather better than previously, but the American boat soon picking up and leaving her. A calm as they neared the outer mark, the American yacht rounding and finally failing to make the course in time, while her rival gave up without making the turn. Even the little incident of a carrier pigeon on Puritan's gaff was repeated this year, as two birds lighted for a time on Galatea's spreaders. The weather last year, however, a warm, hazy, lazy September day, was far different from the miserable fog and drizzle that brought Monday and even serious danger to the large fleet in attendance on the yachts.

Early in the morning there was a light east wind with rain, but the Luckenbach and Scandinavian, the latter in charge of Mr. Hyslop and Neils Olsen, armed with two patent logs and the large raft with flag and red ball, left Pier 3 and ran to Bay Ridge, the judges' tug picking up Galatea, while the Scandinavian passed her hawser to Mayflower. Down the Bay the weather cleared a little, but the breeze held strong. Evidently anticipating more of it Galatea lowered her jib, already set in stops, took one reef in her bowsprit and sent up No. 2 jib, while off Buoy 10, also setting working foresail. At 10:35 the tug was abreast Scotland Lightship, the wind then blowing fresh with rain and a thick haze coming in. About her was a large fleet of yachts, tugs and huge excursion steamers, all loaded to their fullest capacity. Mayflower had set her mainsail inside the Hook, carrying her jibheader above it. At 10:48 Galatea's crew ran aloft and rode down the halliards, her gray canvas slowly rising wet and sodden and sitting badly. She also set a jibheader. The course, E. by N., was given and the mark tug sent out into the fog, and at 11:20 the first whistle blew. During the 10-minute interval both boats were to the southward of the line, but as the second whistle blew, for the start, they came up on starboard tack, Galatea was to leeward, but a little distance ahead. As they crossed the line diagonally, however, it so happened that Mayflower was timed first.

Mayflower.....11 30 50 Galatea.....11 30 32

The distance between them was small, and as Galatea had sheets hard in and was jammed close as possible, it was but a short time before Mayflower, with a draught to her canvas, went by her to windward. At 11:50 Galatea made the first tack, Mayflower following at once. Lighter and lighter dropped the wind, the leading boat still gaining steadily. At 1 P. M. she went on starboard tack, but Galatea did not follow, and at 1:10 she was on her old tack again holding it until 1:38. Just before this Galatea had shifted to clubtopsail, and at 1:41 Mayflower did the same, going about at the same time. What with rain, fog and calm, the prospect was an interesting one; but it continued to grow worse, until after a feint at clearing, the fog was so dense that the Luckenbach could not make the markboat. After sounding for a time she came up with it about 4 P. M., Mayflower being dimly seen astern. At 4:26:22 the latter turned the mark, luffing round with spinnaker boom ready to port. Out came her spinnaker from the stops and she started home. The Luckenbach waited for Galatea until the fog grew still thicker and then ran ahead to time Mayflower. No more was seen of the yachts, and when she finally made the Scotland at 6:30 nothing was visible in the fog, so she started cautiously home.

Still out at sea was a large fleet of vessels trying to find their way in, and it is a matter for general thanksgiving that no serious calamity marked the day. Many of the steamers were overcrowded, in some the boats at the davits were full of men. In the event of a collision or other accident a fatal panic would almost inevitably have followed. As it was a large number were seasick, all were tired and hungry and utterly miserable, but with few exceptions they reached New York by 10 or 11 P. M. The most notable exception was the large steamer Empire State, with a numerous party of Bostonians on board. She ran ashore below the point of Sandy Hook, fortunately in calm water. After some confusion and mismanagement on the part of her officers all her passengers but those who chose to stay by her were taken ashore by the life saving crew and sent to New York by a special train, arriving at 2 A. M. Another very sad case was that of a party on the tug Edson, which ran aground in Gravesend Bay and hung all night. The schooner yacht Republic also grounded but came off safely. Mayflower made the Lightship after the time had expired and took a tug for Bay Ridge. Galatea gave up the race in the fog and sailed in, anchoring off shore for the night. The committee on board the Luckenbach decided to make another trial on Saturday.

SECOND RACE SEPT. 11.

Friday morning showed little traces of the fog, but was bright and clear, and Saturday followed with the same weather. There was a good breeze from N.W., this time early in the morning, and for once the Luckenbach started on time. Running alongside of Galatea, Mr. Phœnix reported that Lieut. Henn was ill and confined to his bed and desired that the course be shortened to fifteen miles to insure a race within the time. The yachts were towed out, arriving at the start in good time, but the Regatta Committee had generously distributed itself over as many boats in the fleet as possible and much time was lost in bringing it together and starting the Scandinavian on a S.E. course. The decision of the committee was that they had no power to change the distance. Lieut. Henn finally requested that in the event of a calm a tug might be sent to tow Galatea in, as he wished to consult a physician. By the time that the mark boat was far enough away to make sure that she would outrun the yachts the breeze had fallen perceptibly and it was almost certain that the best part of the day had been wasted.

At 11:10 the preparatory whistle blew, both yachts then being in toward the beach, with spinnaker booms ready to port and clubtopsails set. At 11:20 the starting whistle brought Mayflower to the line, her spinnaker breaking out just above it and carrying her over with a good headway. Galatea came down more slowly with spinnaker at her masthead, and as she cut the line it was sheeted out in a moment, the maneuver being beautifully executed. The times were:

Mayflower.....11 22 40 Galatea.....11 24 10

Mayflower set her balloon jibtopsail in place of her working headsails, and it helped her considerably. Galatea held to jib and balloon foresail until 11:55, when a small jibtopsail went up. A yacht race of this kind is a commonplace, every day matter, and just now the judges' tug had important work in hand, no less than a race with a rival tug, so her jingle sounded and off she went, leaving the two yachts almost out of sight astern, and finally lying at the mark for half an hour while they came up.

The two yachts held very evenly for a long time, while Priscilla, who had crossed to leeward of the Lightship at the start with spinnaker set, was doing as well as the leader. All the time the wind was falling light, and as it lessened the big sail area of Mayflower began to tell, and she ran far ahead of Galatea, her gain being mainly in the latter half of the run. As she neared the mark at 1:40, her balloon jibtopsail came down, then at 1:45 her spinnaker followed and the boom was stowed on deck, and at 1:54 she jibed a little distance north of the mark, then luffed neatly around it, and was away on starboard tack with jib and staysail set and clubtopsail aloft. The entire business was well done from the time her balloon jibtopsail came in until she was away on the wind. Priscilla was not far from Mayflower though obliged to keep out of the way. She came for the mark also, leaving it on port instead of starboard hand. Galatea dropped her spinnaker at 2:02 and jibed at 2:07, going off on starboard tack. The times at the lockmark were:

Mayflower.....1 55 05 Galatea.....2 10 20

The former had made 13m. 45s. on the latter in the 20-mile run, nearly all the gain being made in the latter part.

At 2:10 Mayflower went on port tack, only holding it for 10 minutes. At 2:23 she lowered her clubtopsail, the working topsail being set at the time, not because she could not easily carry it in the light wind, but because it was not sitting properly.

The three were now heading on a long tack in toward the Jersey shore that would bring them near Long Branch. The capricious Luckenbach had started direct for home and the racers were soon left far away and only visible plainly through the glasses. In the light wind she might safely have held close by the yachts and observed their actions closely, and why she did not is one of those mysteries known only to regatta committees.

From the time she hauled on the wind Galatea had begun to do much better and showed more life than at any previous time. She was now making up a good part of her loss, and though there was no prospect of her winning, it seemed that she would not finish far astern. At 3:20 she sent up a small jibtopsail, and Mayflower at the same time set her jibtopsail and clubtopsail. The wind was decreasing rapidly, and some doubt was expressed as to the possibility of a race being made. At 4:10 there was hardly a breath, and a little later both yachts were becalmed, Mayflower being then well in toward the land, with Galatea further off shore. Close in a light breeze could be seen on the water, while further off, beyond Galatea, Priscilla had a breath, but the racers were lying entirely motionless. At 4:21:30 both swung about very slowly to port tack, and a minute later a nice land breeze struck Mayflower and she put her scuppers under and laid up the beach for the finish. Dead and motionless on the water, her canvas slatting idly, Galatea lay for twenty minutes, while her rival was rolling along at a good pace, and it was not until 4:40 that she filled away on starboard tack. Beaten she was before this, but pure bad luck stepped in to make a defeat of a few minutes into a rout of half an hour. From the mark in until they struck the calm Galatea had done her best sailing in all the races, and had earned a far better place than she finally got.

Now there seemed some chance of Mayflower finishing in time, but above Sandy Hook she struck a calm streak and slowed down, though she had just set a big jibtopsail. The light breeze held, however, and at last brought her to the line in fair shape and with 10 minutes of the 7-hour limit unused. Galatea, further off shore, still had very light breezes and came on slowly, finishing 20m. 9s. later. The full times were:

	Start.	Finish.	Elapsed.	Corrected.
Mayflower	11 22 40	6 11 40	6 49 00	6 49 00
Galatea	11 24 10	6 42 58	7 18 48	7 18 09

Though not in the race and obliged to keep out of the way all day, Priscilla had done some good sailing and held her own very well with Mayflower.

The Luckenbach waited to time Galatea, while Mayflower held on through a lane of saluting vessels crowded with a shouting multitude. Near the Hook the tug Harry Roussel, chartered by Mr. N. G. Stebbins, of Boston, came alongside and offered to tow her, which was accepted, and by 8 o'clock she was at her moorings off Bay Ridge, her season's work well ended.

LIEUT. HENN'S BERMUDA CHALLENGE.

DURING the past two seasons yachtsmen in both hemispheres have watched carefully the trials of a new type of vessel produced by the necessity of building a yacht to meet the narrow cutter in the races for the America's Cup. For this purpose the new yachts have been so well adapted and have proved themselves so fast that the cup remains here yet and both of the visitors have been defeated. The trials of the new boats have been completely successful as far as they have gone, but the racing has been done almost entirely in light weather and much is still in the dark as to the ultimate possibilities of the type. That they are very fast in light weather is a great deal, but the day has gone by when it is all, and before they can look for acceptance as a national type they must undergo a much more severe test. Unfortunately none of them accompanied Genesta on the race around Brenton's Reef Lightship last season, and neither last year nor this has any opportunity occurred for a thorough test of their seagoing powers. Such a test is necessarily imposed on a visitor that crosses the Atlantic twice as Genesta did in order to race; and it is not too much to ask that before more of the large yachts are built and more money expended on them a thorough test shall be made of their seagoing qualities. There was a time when the fact that they could win races about New York would have been all-sufficient and no one would have thought of questioning their abilities any further, but American yachting has reached a much higher plane since then; and the yacht of to-day must not only be capable of defeating any visitor in her home waters, but must be capable of going as far, as fast and as safely as the adventurous challenger. Probably either Mayflower, Puritan or Priscilla can do so, possibly they cannot; but the point just now is the necessity of a settlement of this important question by a trial at sea. If they are as safe, comfortable and speedy as Genesta and Galatea, then their position is assured. If they are not, no amount of speed in light weather will justify American yachtsmen in adhering to them instead of looking further, and the sooner the test is made the better for all.

For a month past an opportunity has been offered by Lieut. Henn's challenge to race around Bermuda and back, a distance of 1,200 miles, but the New York Y. C. have declined to accept the challenge, the owners of the yacht have taken no action in the matter, and it has finally been withdrawn by Lieut. Henn. The reasons advanced for this action have not been very conclusive even here, and will be received still less favorably abroad than at home. A good deal is known here after two seasons' racing of the build and behavior of the boats; but abroad much rubbish has already appeared concerning flimsy build and racing machines which would at once be disposed of by a race; but which, in the event of all our boats declining an off-shore trial, will carry a certain weight with yachtsmen who have paid no attention heretofore to the *Saturday Review* and the others who have decried Puritan.

The view that the more liberal and fair-minded of British yachtsmen will take is well set forth in the following letter from one who is favorably known here through his visit last year on Genesta:

Editor Forest and Stream:

I see it stated that Lieut. Henn has challenged any single-masted American yacht to race the Galatea from Sandy Hook round the Island of Bermuda and back. It is also stated that the challenge will probably be declined on the ground that long distance racing is out of favor, and on account of expense entailed in fitting out a yacht for such a race.

I hope, however, that the challenge will be accepted. The first reason for declining is merely a sentimental one; and as to the second, surely some of the gentlemen who have so chivalrously spent large sums in building such splendid specimens of naval architecture as the Puritan, the Priscilla, the Atlantic and the Mayflower, in order to defend the America's Cup, will not hesitate to come forward with the comparatively trifling amount necessary for fitting out one of those vessels for an ocean race. Such a race would be watched with much interest by all yachtsmen.

No further proof than we have already had as to the great speed of the American single-sticker is required, but no proof has as yet been given as to their having combined with their speed good seagoing qualities. I mean by this that they are vessels upon which people may make protracted voyages in comfort and safety, and at the same time maintain a fair rate of speed.

The Genesta was no doubt decisively beaten by the Puritan, but then the Genesta had to cross and re-cross the Atlantic, the return voyage being accomplished in a little over nineteen days, during the equinox, with a gale of wind and a heavy sea the whole time, and Mr. Saunders, who navigated her from New York, told me that he never wished to sail in a better sea boat.

As to the Galatea, whether she win the America's Cup or not, I feel sure she will make a good fight and I also feel sure she is every bit as good a sea boat as the Genesta has proved herself to be.

What I claim then for the English cutters sent to race for the America's Cup is that though fast they are no racing machines, and I fear should Lieut. Henn's challenge be declined, many people will regard the American single-stickers as only fit to sail races in the summer zephyrs on the smooth waters of New York Bay and good for nothing else. I trust therefore, that this opportunity for proving what American single-stickers can do over an ocean course will be taken advantage of. WILLIAM LEVINGE.

ROYAL VICTORIA Y. C., RYDE, Aug. 24.

That Mayflower is a faster racing vessel than Galatea must be admitted from the meetings that have taken place, but at the same time it is evident that the light and paltry weather has been against the cutter, and while the races have been perfectly fair, the chances of war have favored her rival. All have sympathized with Lieut. Henn in his plucky continuance of a losing battle when disabled by sickness, and all would be glad to see a trial under different circumstances from those of the Cup races. The Newport race will give Galatea another opportunity, probably in very light weather, but in any event all yachtsmen will feel better satisfied if she goes home, whether victor or loser, after such a long and thorough trial at sea as will gauge accurately the value of the latest efforts of American yacht designers. If either of the yachts are capable of holding Galatea in the open sea, so much the better for American yachtsmen. Though the Bermuda match has fallen through, another has been proposed in its place by Gen. Paine, that both yachts should lie at Provincetown until a N.W. gale strikes in, and then race across Massachusetts Bay to Marblehead. This proposition has not yet been accepted by Lieut. Henn, pending a final decision on his Bermuda challenge. Now that the latter is off, it is probable that a shorter match will be arranged.

THE RACES AT NEWPORT.

A MEETING of the regatta committee of the New York Y. C. was held on Monday night, Com. Gerry being present, and the following telegram was sent to Newport:

Frank G. Harris, Secretary, Newport, R. I.:

Race to be sailed Saturday, 18 inst.; 40 miles or more, no time limit. Course to be announced morning of race. Four cups—one for schooners, one for sloops 71ft. and over, one for sloops 55ft. and under 71ft., one for sloops 55ft. and under. Details by mail.

ELBRIDGE T. GERRY, Commodore.

The entries thus far are: Schooners—Montauk, Miranda and Sachem. First class sloops—Mayflower and Galatea. Second class sloops—Bedouin, Stranger and Thetis. Third class sloops—Clara, Cinderella and Bertie. Entries will be received up to 8 o'clock Saturday morning on board the flagship Electra, which is to be used as a committee boat, and from which all signals will be given, the start will be made at 10 o'clock.

Mayflower left on Monday for Newport in charge of Captain Stone. Messrs. Paine, Richards, Bryant and Burgess returned to Boston on Sunday night. Gen. Paine was to sail for Europe on Saturday last, but has changed his plans and it is probable that he will remain for another match with the Galatea. Priscilla has not entered for the Newport race but it is probable that she will do so. Puritan has been at New Bedford where a netting has been added to her rail and some other changes made that look like a preparation for rough water. She will probably enter at Newport.

SLOOP VS. CUTTER.—SOME PLAIN FACTS.

SO much nonsense has been published in regard to the present status of the "American sloop" that it is refreshing to find a sensible view of the matter in a daily paper, and to see the real facts presented without any patriotic prejudice. The following from the Brooklyn *Eagle* is a corroboration of the views we have so often expressed:

There are a good many worthy people even in Brooklyn who take a lively and patriotic interest in the forthcoming races between the Mayflower and Galatea for the America Cup, and who are willing to back the sloop against the cutter, yet who would be somewhat puzzled if they were required to stand off-hand a Civil Service examination in regard to the differences between the two vessels. It is true that some of the newspapers are telling them every day that this is a contest for the purpose of deciding which is the better, the English or American model, but without some further information as to what the American model really is, the unfortunate landsman will be apt to be as much in the dark as before. Under such circumstances it may not be out of place to describe the differences between the yachts that are to contend against each other a few days hence. The following comparative statement will show at a glance the principal dimensions of the English and American champions. Those of the Galatea are official and differ from those heretofore published:

	Mayflower.	Galatea.
Length over all	100ft.	102.7
Length on waterline	85ft.	87ft.
Extreme beam	23.6	15ft.
Depth of hold	8.10	13.3
Draft	9.6	13.6
Mast, deck to hounds	63ft.	53ft.
Topmast	46ft.	45.6
Bowsprit, outboard	38ft.	36.6
Boom	80ft.	75ft.
Gaff	50ft.	44.6
Tons of ballast inside	11 tons.	nil.
Tons of outside ballast	37 tons.	81½ tons

Here the reader will observe that as regards length there is but little difference between the Galatea and the Mayflower; nor is there any practical difference in regard to the proportion of length over all to length on the waterline. The Galatea has an overhang at the stern of 15½ft., the Mayflower one of 15ft. When the Galatea arrived at Marblehead, a Boston yachtsman remarked that she had the Mayflower's stern, but as the cutter was built first it is just possible that he ought to have said the Mayflower had the Galatea's stern. Such extreme overhanging sterns are certainly a novelty in this country and have been copied from cutter models. Their object is to give greater stability in a reefing breeze and more deck room to handle the immense mainsail.

When we come to look at the next two dimensions, beam and depth of hold, we see the first sign of the radical difference between the English cutter and the American sloop. The extreme beam of the former is not much more than one-seventh of her length over all, while that of the sloop is not much less than one-fourth. The cutter's depth of hold is not much short of her extreme breadth of beam, while that of the Mayflower is not much less than one-half her beam. So also with the draft of water, that of the Galatea being just 4ft. more than that of the Mayflower. The two styles of yachts which are supposed to be represented by the Mayflower and Galatea have been developed out of the character of the pleasure boats most suitable to the water of the respective countries. In the British Islands, where the harbors are deep and the seas frequently stormy, the deep keel boats have always been in favor and centerboards have been discouraged. Here, with our shallower harbors and smooth inland waters, we have adopted the centerboard boat, broad and shallow, or as some irreverently call it, a skimming dish. Such a yacht was the Mohawk, which capsized when at anchor some years ago. When it is remembered that this yacht, which was as long as the Mayflower, drew but 5ft. of water, our readers will see that the designer of the latter has made a wide departure from the typical American sloop. The Mayflower is much narrower and also much deeper than a typical American sloop would be, these changes being in the direction of the deep and narrow cutter type. With her long overhanging stern, decreased width and increased depth, she is, in fact, a compromise vessel, about half way between the pure British type and the American, and, if anything, rather more British than American. This is a point which it is well to keep in mind, for, as Jack Bunsby observed, "the bearings of this observation lays in the application on it." If the wide, shallow sloop had been all that was claimed for it, the model would not have been departed from so greatly as it has been in the Mayflower. Those who desire to see an American sloop of the old type, and one of the best, should look at the Gracie, and they will see how wide a departure has been made from that type in the Puritan and Mayflower. The experience of Mr. Burgess, the designer of both these vessels, seems to have led him in the direction of greater depth, for the Mayflower draws 13in. more water than the Puritan, although less than 4ft. larger on the waterline. The Mayflower, with her 9½ft. draft of water and her lead keel, is very far from being a skimming dish.

The lead keel is another cutter device which has been adopted by the designers of the Mayflower. Such things as lead keels were utterly unknown in the old skimming-dish days which some innocent-minded people fancy still exist. They were looked upon as a British device, and a great many powerful arguments were published for the purpose of proving their absurdity. But Mr. Burgess put a lead keel on the Puritan last year which weighed 27 tons. This year he gave the Mayflower a lead keel weighing 37 tons, and only 11 tons of inside ballast. If he builds another big sloop he will probably have no inside ballast, but put all the weight in the deep lead keel. The Galatea has no inside ballast, but a lead keel that weighs 81½ tons. She, therefore, carries much more ballast than the Mayflower, but that is because she derives all her stability from it, while that of the Mayflower is partly derived from her superior width and partly from her centerboard, which extends 16ft. below the keel. It is hardly necessary to explain to the readers that the Galatea has no centerboard. The novelty in the cases of the Puritan and Mayflower consists in the fact that they have both a keel and a centerboard.

With regard to the difference of rig there is practically none between the Galatea and Mayflower, at least none that a landsman would appreciate. Nearly all the features of the cutter rig are to be found in the Mayflower, including the long bowsprit. Many a good yachtsman would be puzzled to tell the two vessels apart, judging by their sails alone. The Mayflower carries more sail than the Galatea; her masts are loftier, and her bowsprit, gaff and boom longer, but the differences of detail are slight so far as the shape and arrangement of the sails are concerned. The Mayflower's mainsail is laced to the boom, while that of the Galatea is not, and that is the principal contrast between them in respect to rig.

The reader will be able from a perusal of the foregoing to form a fair idea of the essential differences between the Mayflower and Galatea. He will find them less than he perhaps imagined, and he will see, also, what a change has come over American ideas of what a fast yacht should be by contrasting such sloops as the Fanny and Gracie with the Puritan and Mayflower. The modern American yacht is, in fact, a compromise between two extreme types, and probably, as compromises sometimes are, better than either. But it would be folly to pretend that the type of yacht we rely on is the same as it was ten, or even two years ago.

CORINTHIAN Y. C.

ON Sept. 3 the postponed regatta of the previous Saturday was sailed over the club's regular courses Nos. 1 and 4 in a fresh S. E. wind. The times were:

	Length.	Elapsed.	Corrected.

MOSQUITO FLEET.			
Juno, Roads	15.00	0 44 00	. . ..
Bismark, Cloutman	15.06	0 44 12	. . ..

Bessie takes the championship pennant for 1886. The other winners were Atlanta and Eugenia of first class centerboards, Bessie of first class keels, Sprite and Petrel of second class centerboards, Witch and Fad of second class keels. Peri and Myrtle of third class centerboards, and the Alert and Vera of third class keels. The judges were A. S. Brown, C. A. Benjamin, C. H. Richardson and H. S. Hodgkins.

On Sept. 11 the ninth regatta of the Corinthian Y. C. was sailed off Marblehead, the course for first and second classes being ten miles, and for third class six miles. There was a good N.W. wind all through the race. The times were as follows:

	Length.	Elapsed.	Corrected.
FIRST CLASS CENTERBOARDS.			
Atalanta, J. R. Thomas	28.01	1 50 17	1 21 20
Eugenia, J. S. Palmer	26.00	1 56 15	1 25 45

SECOND CLASS CENTERBOARDS.			
Sprite, C. P. Wilson	22.08	2 04 53	1 30 05
Louette, L. M. Haskins	21.08	Withdrew.	
Petrel, H. H. Paul	21.09	2 09 45	1 33 45
SECOND CLASS KEELS.			
Witch, B. B. Crowninshield	23.01	1 59 51	1 25 34
Beth, Jameson		Withdrew.	
Carmita, C. H. W. Foster	21.02	2 17 05	1 40 20
THIRD CLASS CENTERBOARDS.			
Tartar, C. L. Duane	19.11	1 11 40	0 48 33
Myrtle, C. R. Poor	21.06	1 04 53	0 50 55
Pixie, F. W. Chandler	19.10	1 17 06	0 53 55
Josephine, Dexter Follet, Jr.	18.08	1 20 32	1 02 15
THIRD CLASS KEELS.			
Vera, Paine & Randall	19.09	1 15 01	0 51 54
Nixie, A. L. Cochran	20.02	1 17 44	0 54 50
Mona, Herman Parker	19.06	1 18 24	0 54 52
Alert, R. Saltonstall	18.10	1 19 40	0 53 03

The winners were Atlanta, Bessie, Sprite, Witch, Tartar and Vera. Carmen lost her topmast but sailed the course without it. The little cruiser Fad made a very good race, beating the crack centerboard Eugenia again. In second class the keel boat Witch beats all the centerboards easily. The judges were Messrs. Semons, Doolittle and Whitcomb.

CATBOATS AT NEW LONDON.—On Sept. 8 a match for $100 a side between the Gem and Aileen was sailed over a course from Mystic Island wharf to the Spindle, off Flat Hummock, thence around White Rock, twice around; distance about 20 miles. Aileen won by over 10m.

QUINCY Y. C.—The last championship race of the Q. Y. C. was sailed in a strong E. wind on Sept. 3. The times were:

	Length.	Elapsed.	Corrected.
FIRST CLASS.			
Echo, E. L. Burwell	25.05	1 52 30	1 24 03
Posy, R. G. Hunt	22.01	2 02 20	1 30 32
Erin, John Cavanagh	27.02	2 02 20	1 35 29

Nereid, C. F. Colby	20.07	1 50 20	1 22 10
Elf, W. P. Barker	20.03	1 51 40	1 23 10
THIRD CLASS.			
Victor, S. A. Freeman	17.07	1 25 30	1 00 08
Rocket, H. A. Faxon	16.07	1 26 55	1 00 28
Mirage, G. E. Jordan	17.10	1 26 20	1 01 14
Nitro, E. L. Linton	17.05	1 32 55	1 08 22

The judges were Peter B. Turner, H. H. Sheen and John Cavanagh.

HULL Y. C. SAIL OFF, SEPT. 11.—The sail off for the winners in the previous championship races of the Hull Y. C., took place on Sept. 11, in a moderate N. W. wind, there being 9 starters. The course for second class was 11 miles, and for third and fourth classes six miles. The times were:

	Length.	Elapsed.	Corrected.
SECOND CLASS CENTERBOARDS.			
Rambler, J. J. Henry	27.00	1 57 31	1 24 31
Folly, J. F. Sheppard	26.09	2 02 17	1 29 00
FIRST CLASS KEELS.			
Lizzie F. Daly, Wm. Daly, Jr.	26.08	1 56 37	1 22 27
Echo, Burwell & Litchfield	25.03	1 59 12	1 24 13
THIRD CLASS CENTERBOARDS.			
Posy, R. C. Hunt	22.06	1 24 20	1 03 14
Nora, Boynton & McManus	22.00	1 29 11	1 07 48
THIRD CLASS KEELS.			
Kitty, E. H. Tarbell		1 26 52	. . ..
FOURTH CLASS KEELS.			
Victor, S. A. Freman	17.07	1 42 21	1 16 59
Wildfire, H. A. Keith	18.11	Withdrew.	

Nora lost her bowsprit but rigged a spar out and reset her jib, and made good time over the course. The old Transit, now the L. F. Daly, made a good race and beat the two centerboards in her class.

"THE PILGRIM CHALLENGED."—Mr. W. L. Bragg, in the Sept. 2 number of FOREST AND STREAM, calls in question the correctness of my statements about the race of the Pilgrim with the Lillian, published July 1. The only errors in my paper were in regard to the distance run and the draft, which I judged roughly. Of these I stand corrected, which makes it much worse for the Lillian, for I can prove she had no tender, and in the windward race she started upon my weather quarter and finished upon the lee quarter far astern of us. I have not raced with any other boat in Penobscot Bay; I do not know Mr. Holt or his boat, and have never been passed by any boat of the P.'s length or less in those waters. The statements of Mr. B. are "conspicuously inexact," not to use a harsher term, and the slur of his wind up is amusing. Now I am not a sporting man after shekels, but an honest yachtsman interested in the development of all kinds of small, safe, fast yachts, and I think I have proved the Pilgrim to be of this class. She is now at Belfast, Me., and is ready to meet all challengers in fair races this month. If the Rockland Club will get up one or two, we can soon determine the relative places of sloops and cutters, using Herreshoff's tables of allowances for the differences in size. I suggest a race from Rockland around Matinic Island and back, from Camden around Vinalhaven and back, and from Northport around Islesboro and back, as fair races for small yachts. Furthermore, I challenge the Lillian and Capt. Bragg for this latter race any day this month. Address, DR. W. H. WINSLOW, Belfast, Me.

AN AMERICAN PHOTOGRAPHER ABROAD.—Mr. N. G. Stebbins, the well-known Boston photographer, has lately returned from a hurried trip to England, in which he witnessed some of the principal matches of last month and secured a large number of views of English yachts. Mr. Stebbins was home in time for the Cup races, and was present with a special tug, from which he made a number of photos.

SANDBAGGERS CAPSIZED.—Sunday afternoon a violent storm swept over the vicinity of New York and did more or less damage. The open racing boat Martha Mumm, of the Columbia Y. C., capsized, and her crew of 15 were thrown overboard but rescued by the Police boat Patrol. A catboat from South Brooklyn was capsized off Robbins Reef, but her crew of five were rescued by the steamer Wyanoke. Several other capsizes are reported.

CATBOATS AT CITY POINT.—On Sept. 11 a race for catboats under 21ft. was sailed over a 6-mile course off City Point with four starters: Zoe, Capt. Martin; Crusader, George Hutchins; Tike, M. Handy, and Thrasher. Crusader won first prize, $20, and Zoe second prize, $10. The judges were Messrs. J. Golden and J. Berham.

YACHTS CHANGED HANDS.—The Boston sloop Gem has been sold by Com. Savage to Mr. C. S. Dinsmore, and the former has purchased the schooner Arethusa from Prof. Hyatt, who has used her for some time in cruises about Newfoundland and Labrador.

SANDY BAY Y. C.—It has been decided to postpone the regatta set for Sept. 11 to Sept. 18. The rule as to sails has been changed to read, "No restrictions as to sails."

NEWARK Y. C.—The fall regatta of this club has been postponed to Sept. 20.

The Forest and Stream Fables are for sale by all newsdealers.

SPRINGFIELD WATERWORKS.—The Springfield *Republican* reports "A Pitiful Drowning in the City's Midst." It is nothing less than criminal carelessness on the part of Springfield to permit water in the "city's midst." A midst is not in any proper sense a receptacle for water. The authorities should draw off the water from the city's midst and distribute it to the city's into, the city's among, the city's toward, the city's below, the city's between, the city's up, the city's from, the city's near, the city's away and the city's around. Then no one would drown in it.

OVER ONE MILLION OF MEN have held the accident policies of the Travelers, of Hartford, Conn., and *one in nine* have received cash benefits on them.—*Adv.*

The "Mayer" Minnow Casting and Trolling Rod.

This rod is made from specifications furnished by Professor Alfred M. Mayer, who with this rod and an Imbrie Black Bass Reel won first prize for black bass casting at the tournament of the National Rod and Reel Association, Oct. 23, 1884.

Its proportions were reached after a long series of experiments, the object of which was to obtain a round section bamboo rod of about 9 ounces that would feel light in the hand, be well balanced, not throw off a delicately mouthed minnow in making long casts, and finally, after striking the bass, would have enough spring and flexibility to afford the angler the same pleasure as that given him when playing a bass on a fly rod.

The rod has two tips, one 6 inches shorter than the other; the shorter tip is used for trolling and in casting when wading.

This rod has been thoroughly tested in both lakes and quick water, and anglers who have used it are unqualified in praises of its staunchness and the delicacy of its action.

Our rods have taken the highest prize at every tournament in which they have been used.

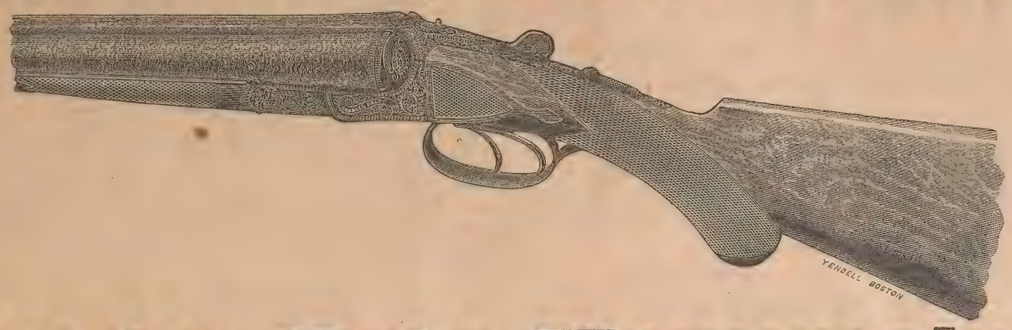
Pictures of the Field.

Phototypes of the Pictures by John M. Tracy.

MR. JOHN M. TRACY has won a reputation for his faithful portraits of dogs and his beautiful and sympathetic delineations of the incidents of the field. All the poetry and grace of a pointer or setter in the stubble have been caught with the eye of the artist and the enthusiasm of the sportsman, and transferred to the living canvas with a skill which has given Mr. Tracy a name above that of any other American artist in the same field.



We have for sale a series of admirable phototypes (photographs in printer's ink), of these paintings, which preserve with admirable fidelity the spirit of the originals. The phototypes are 15x20 inches. They are as follows:

Title of Picture.	*Name of Dog or Dogs.*
Quail Shooting in Tennessee,	Gladstone and Peep o' Day
On the Grouse Moor,	Emperor Fred
Prairie Chicken Shooting in Minnesota,	Dash III. and Countess May

Sent securely packed, postpaid, on receipt of price, $1.00 each.

SCHOVERLING, DALY & GALES.

Charles Daly Hammerless.

THE BEST HAMMERLESS GUN IN THE WORLD.

WHY.

THE PECULIAR SYSTEM OF BORING, CHOKING AND CHAMBERING gives the maxim result in closeness of shooting (this, however, can be done by any one), combined with PENETRATION. This latter is the great point. Ask any one who shoots a Daly and they will tell you they "kill dead."

THE GREAT SUPERIORITY IN ACCURACY OF THE FITTING AND CLOSENESS OF THE WORK makes the gun last a lifetime. Large numbers of DALY GUNS have been in use a score of years, and are as tight to-day as when first made. The workmen who make these guns are all "ARTISTS IN IRON AND WOOD." We confidently assert that no better or closer work can be found in the world, whether it comes from a Purdy, a Grant, or a Westley Richards.

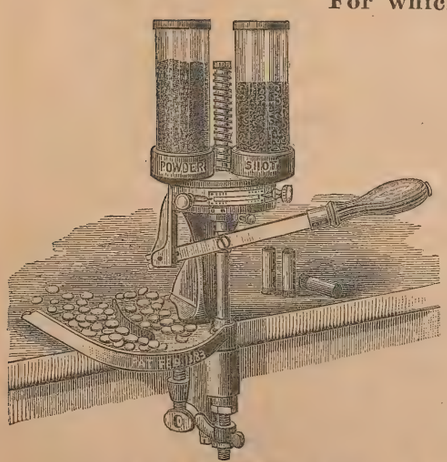
THE BARRELS AND LOCKWORK ARE MADE OF FIRST QUALITY MATERIAL. One of the great points in a gun is the accuracy with which the barrels are put together. It costs more to put a pair of barrels together properly than it does to make an ordinary gun out and out. DALY GUNS have no superior in this respect.

THE ANSON & DEELEY SYSTEM, ON WHICH THESE GUNS ARE MADE, is the best ever yet put on the market. It is the same system as used by Westley Richards, Harrington & Richardson and many others. The only objection has been that the forearm of the frame is rather short. We have, however, overcome this difficulty, and a DALY HAMMERLESS ANSON & DEELEY SYSTEM WITH LONG BODY IS THE STRONGEST HAMMERLESS IN THE WORLD.

THEY ARE BEAUTIFUL IN OUTLINE, ARTISTIC IN FINISH. THE STOCKS HAVE HANDSOME FIGURE. They are stocked for use, "come up" properly. It is a pleasure to handle them, and to look at them is like viewing a handsome picture. A DALY IS A "THING OF BEAUTY."

THE RIBS ARE HAND MATTED (not machine work which does not give the best effect) and give a perfectly dead surface to sight over.

PROOF.



While in sales every other Hammerless Gun has fallen off at least 50 per cent. this season (which has been a dull one in gun trade), the DALY has increased 50 per cent. Everyone who has one is enthusiastic in their praise.

The Kennel.

Eastern Field Trials Club.

EIGHTH ANNUAL MEETING

To be held at

High Point, North Carolina.

OPEN TO THE WORLD.

Commencing Thursday, Nov. 18, 1886.

Trials to be run on quail under E. F. T. Club Rules.

ORDER OF RUNNING:

MEMBER'S STAKES.

Open only to club members, each entry to be owned three months prior to closing of stakes, and handled by the member making such entry. First prize, cup, value $100, to be known as Eastern Field Trials Cup; 2d prize, the Sanborn Cup, value $75; 3d prize, a piece of plate, value $50. Entries close Oct. 1, 1886. Each member allowed one entry free; each additional entry, $10.

EASTERN FIELD TRIALS DERBY.

Open to all setter and pointer puppies whelped on or after Jan. 1, 1885. Purse, $700. First prize, $400; 2d, $200; 3d, $100. FOREST AND STREAM donates $50 to handler of winner of 1st. $10 forfeit; $10 additional to fill; nominations closed May 1, 1886. The club offers the Eastern Field Trials Breeders' Cup, value $100, to the breeder of the winner of 1st in Derby, the breeder to be the owner of the dam of such winning puppy at the time the bitch was bred to the dog.

ALL-AGED POINTER STAKES.

Open to all pointers, except any first prize winner of any All-Aged Stake, or winner of any special pointer cup in All-Aged Stakes at any recognized field trials. First prize, $300; 2d, $150. $10 forfeit; $15 additional to fill; Entries close Oct. 1, 1886.

ALL-AGED SETTER STAKE.

Open to all setters except any first prize winners of any All-Aged Stake, or winner of any special setter cup in All-Aged Stakes at any recognized field trials. First prize, $300; 2d, $150. $10 forfeit; $15 additional to fill; entries close Oct. 1, 1886.

CHAMPION SWEEPSTAKES OF ALL-AGED STAKES.

Open to all previous winners of first prizes at any recognized field trials. $10 forfeit; $15 additional to fill; entries close Oct. 1, 1886, except for winners of 1886, which are to qualify right previous to running at $25. Two entries to fill to make a race. Club adds $100 cash and American Field donates a valuable silver cup, value $100, all to go to winner of first.

NOTICE.—Any trainer or owner working or shooting over any dog or dogs entered for trials south of the track of Piedmont Air Line, for a distance of 7 miles above and below and back of Hotel Bellevue, from Oct. 1 until conclusion of trials, shall forfeit all entrance moneys, purses and cups.

Good board at hotels from $1 up per day. Transportation to and from the grounds at moderate prices.

B. P. WILSON, President.

For further particulars and all communications address WASHINGTON A. COSTER, Sec'y & Treas., Box 30, Flatbush, Kings Co., N. Y.

ANSWERS TO CORRESPONDENTS.

THE CREEDMOOR MEETING.

OUR full report of the results of the annual fall meeting of the National Rifle Association will show that it was a gathering of experts. The scores are capital in many of the matches, and go to prove that the art of rifle shooting is by no means in its decadence. Only one match lapsed for want of entries, but in the others the lists were well enough filled to make each winner feel that he has earned his honors. Massachusetts sent down a delegation of marksmen able to sweep all before them in the team contests. Pennsylvania was on hand with a strong team, but not strong enough to repeat her former successes. New York was represented, but not as worthily as could be desired; not, perhaps, as well as the material at the disposal of the selecting officer might have made it. Connecticut sent down a flying squadron of shooters. They came, they saw, but they did not conquer.

The weather during the six days of shooting was fair enough for the work in hand, and varied enough to bring out the capabilities of the men. There were days of rain, and the wind showed itself as fickle as ever on the old range. The visitors may have been a bit bothered by the fish-tail breeze, but they did not seem to show anything of the sort in their scoring.

How to run a rifle meeting is one of the things which the Association is gradually learning. Where there are so many men, each in keen rivalry for honors, and in some cases for something even more highly prized in the way of cash returns, it is very easy to provoke a storm of protests. The recent meeting passed off without a single one of any consequence. Even such an expert stickler for exact compliance with conditions as Farrow failed to find a single flaw into which to stick an objection. Lieut. Zalinski, U. S. A., made an excellent executive officer. He put in a week of hard work, and barely alighted from the saddle from Monday morn till Saturday night. While such good service was seen in the open, it seems a pity that the statistical department was so poorly handled. It is a great satisfaction to men who have been contesting in a match to see prompt, accurate returns made of the work accomplished. After such capital handling of the score tickets as Capt. Witthaus treated the Association to a year ago, the change to the slow and sure plan of this year was not an agreeable one. Some one, too, should have driven just a modicum of sense into the scorers. Where there are handicap allowances for certain makes of rifle, it would seem to be important to have an entry made of the sort of rifle used in making each score. Yet some of the stupid pencilers put down such memoranda as "Breechloader," "Military" or "Sporting," or even left a complete blank where the name of the weapon should have been.

This whole question of allowance for an inferior weapon when shooting against a supposed superior arm in the same match can be settled in no better way than by a compilation of statistics gathered at such meetings as these; but it is important, if they are to be of any use, to have exact data in the first place, and blundering scorekeepers cast the whole matter in doubt very readily. All manner of opinion now prevails on this handicap question. There are days, of course, when it is far more easy to make a score of a dozen consecutive bulls with a selected "gas pipe" than it would be on another day to get even an average of inners with the finest smallbore made. But the practical question is how to fix a penalty which shall fit the average weather of a continuous match running through a week to which to subject the marksmen using the finer grades of rifle. Looking back through previous meeting programmes, it would appear that each meeting committee had its own notion of what a fair handicap was; but the question will never be settled even temporarily until the full value of the results of large meetings is recognized.

The Association and its members owe their thanks to the donors who have come forward with prizes for the meeting. Such enlightened kindness as will prompt the giving of prizes for the encouragement of proficiency in rifle shooting, ought to be much more general than it is. Every State needs good marksmen, and any city may need a body of them very badly and at very short notice. From just such meetings as these just such marksmen come, and the meetings flourish in proportion to the attractiveness of the prize list. Lieut. Zalinski wisely put on a revolver match to the list of rifle contests. It turned out to be an attractive feature of the meeting, and ought to be a fixture to every annual gathering on the range.

The one clear and distinct lesson of the meeting is that those who practice with persistency and intelligence come out ahead in the long run. Massachusetts keeps up a number of ranges in lively use, and her team had a comparative walk over. The Zettler Club is a strong organization of men who love the pleasure of off-hand work, and it put the two leading squads in the short-range team match.

The officers of the Association report the meeting a satisfactory one, which would mean that the figures on the wrong side of the balance sheet are not very large. There has been a vast amount of very hard volunteer work done in the past by the officers of the Association, and those who carried out the meeting just closed deserve to take their place on the line of those who find their best reward in a good showing of good scores.

THE AMERICAN FORESTRY CONGRESS.—At the annual meeting of the American Forestry Congress at Denver, Col., last week, these officers were elected: President, G. W. Miner, of Illinois; Vice-Presidents, H. G. Joly, Quebec; Martin Allen, Kansas; H. G. Parsons, Colorado; R. H. Warder, Cincinnat, and Abbott Kinney, California; Recording Secretary, E. F. Ensign, Colorado; Corresponding Secretary, B. E. Fernow, Washington; Treasurer, Leo Weltz, Ohio. Congress will be asked to establish an agricultural and forestal experimental station on the unoccupied portion of land in the District of Columbia known as the Arlington estate, the station to be under the control of the Department of Agriculture. The resolutions also ask for the passage of a bill for the protection and preservation of the timber land now in possession of the Government, and for the establishment in office of a commission of forestry to provide means to prevent the destruction of forests by fire and the prosecution of persons setting fire to timber.

MR. LANMAN'S REMINISCENCES OF AUDUBON are very acceptable because personal memories of one who knew the great naturalist, and they will be read with special interest at this time by the thousands of AUDUBON SOCIETY members. It should be stated that the present paper will form a chapter of a forthcoming second volume of Mr. Lanman's charming "Hap-Hazard Personalities."

BONNET AND GAME BAG.

IN a recently published novel, as we are informed, the hero refrains from killing "a lordly sickle-bill," one of the prized game birds, to bring down instead a seagull for his lady's bonnet. The date of this occurrence was presumably remote, for at the present time the feminine fancy would be better pleased with the sickle-bill than with the gull. Feathers are still in vogue as adornments of woman's headgear, and the present fashion prefers game birds to others. All along the coast baymen and professional gunners are slaughtering the bay birds for their plumage. A New York physician who went down to South Oyster Bay, Long Island, last week, for some shore-bird shooting, found that the boatmen had advanced their charges for service fifty per cent., and even at these exorbitant figures were not eager to waste their time with sportsmen, since they could do much better shooting for the skin buyers. There is at South Oyster Bay an establishment where all bird skins are gathered in, dried with plaster of Paris and shipped to the New York millinery shops. Men, women and children too young to lug a gun, are hard at it, skinning birds and turning them in to this factory. For many varieties of shore birds the gunners receive at the skin factory a price equal to the retail price of the same birds in the New York market. There is, of course, no law to prevent the destruction of game birds in season, and the Long Island bird skinners have it all their own way. We are informed that a number of teal, which are not yet in season, have been taken in to the factory, and their skins are now held there to be shipped to New York when the season opens, Oct. 1. The law-breaking skinners are perfectly safe in this, however, unless Game Protector Whittaker, or some "malicious or greedy person," should have the temerity to interfere.

This Long Island bird skin factory is only one of a number of similar establishments along the Atlantic coast. For the sportsman, whose autumn shore bird shooting has been ruined, the only recourse is to put his hand into his pocket and pay over to the baymen something handsome.

A feather-bedecked bonnet makes a lean and hungry game bag.

GAME LAWS AND STATE OFFICERS.—The President of the New York Fishery Commission has taken the ground that it is not his duty to urge subordinates to enforce laws which happen not to accord with his own notions. We have characterized this as an extraordinary position to be held by a State official; and it appears none the less so in light of the letter which the Commissioner has sent to us and which is printed elsewhere. Mr. Roosevelt's somewhat flippant discussion of the merits of the law in question is not pertinent. We would be quite willing to consider that with him or any one else at another time. The point now at issue is not of the law's wisdom or lack of it, but of the duty of a State officer to enforce the statutes as he finds them. Mr. Roosevelt ought to know that his official delinquency is not to be excused by alleged legislative ignorance, though his letter betrays a lamentable failure to appreciate the spirit and intent of the laws, and his own duty as an officer charged with supervising their enforcement. It is a serious question whether a person holding such peculiar views should not have the courage of his convictions and refuse to occupy an office with whose duties he apparently has so little sympathy.

GAME BIRDS NOT TO BE TRAPPED.—The counsel of the Eastern New York Fish and Game Protective Association, in a compilation of the New York game laws, has ventured the opinion that the wording of the section, chapter 427, laws of 1886, forbidding the trapping of "any wild bird other than a game bird" may be twisted into a permission to trap game birds, the express statute to the contrary notwithstanding. We advise no foolish person to risk trapping game birds with expectation of escaping the penalty by any such lawyer's quibble as this.

SHORT LOBSTERS.—Deputy Fish Commissioner F. R. Shattuck, of Boston, Mass., is doing a good work for the New England coast States by bringing up with a turn the dealers in lobster "shorts." The economic value of this crustacean is far too great to permit of the sacrifice of the species to the pots of the fishermen. Mr. Shattuck displays energy, good judgment, vigilance and public spirit.

JOHN JAMES AUDUBON.

BY CHARLES LANMAN.

WHENEVER I recall the character, experiences and labors of John James Audubon, I mentally exclaim, "He was a man without a peer, and worthy of the highest admiration, as a man, an author, an artist and a Christian." During my residence in New York as a merchant's clerk, there were no writings that I more frequently borrowed from the Mercantile Library than those of the great naturalist; and nothing was further from my thoughts in those days than that it would ever be my privilege to come into his royal presence. That privilege was mine, however, in the year 1847, when, by invitation of one of his sons, I made a number of visits to Mr. Audubon's residence on the outskirts of the city, from which time I enjoyed his friendship until the close of his long and useful life.

The surroundings and associations of that memorable home, as I remember them, were all that could have been desired by its occupant. The dwelling was large and commodious and surrounded with a cheerful conglomeration of forest trees in whose shadows reposed a number of red deer, while a variety of other animals were domiciled in the vicinity of the mansion. Birds of several varieties were also chirping and singing in the branches of the trees, as if conscious of their special privileges on that particular domain.

Within the dwelling everything was comfortable and elegant and without any pretension, although the chief attraction was the room or study where the host carried on his intellectual labors with pen and pencil. It was filled with pictures and books connected with the studies of a naturalist, as well as with a great variety of specimens of natural history and the various implements that had been used in the capture of birds and animals, in all sections of the Union. And as to the family, it consisted of his wife, two sons and a daughter-in-law and two or three grandchildren, and between them all there seemed to be a feeling of sympathy and love which was simply delightful to witness by a youth who was then battling alone with the turmoils of life in a great city.

At the time alluded to, the plans were culminating in Mr. Audubon's mind for a new expedition in the far Southwest, for the further prosecution of his labors as a naturalist. His manner of depicting what he expected to see and hoped to accomplish fired me with a desire to join him, not as a student of science, but as a traveling secretary. My offer was accepted, and for about two weeks I was probably the happiest human being in Gotham. In the meantime, however, Mr. Audubon's sons came to the conclusion that their father was too old to venture upon a new expedition in the far West, and in spite of his hostility to being interfered with in his desires, he finally yielded his opinions, and the expedition was not carried out. This blow at my own ambitious hopes was hard to bear, and I have supposed that it was for the purpose of administering balm to my wounded spirits that Mr. Audubon presented to me at that time the letter press volumes of his great work on "The Birds of America," which has ever since been a leading attraction in my library. Up to that time the five volumes in question had never gone, by gift or purchase, into the possession of any man without being accompanied by the hundreds of colored plates intended to illustrate the volumes.

At the time that Mr. Audubon was making the preparations alluded to above, he was in the 67th year of his age, and apparently in perfect health. As I sat by his side on one occasion, and listened to his stories about the wilderness and its feathered denizens, I remember the fancy crossed my mind that he had the eyes and courage of the eagle, the tender feeling of the dove, the contentment of the partridge, the strong and comely form of the swan, the dignified bearing of the turkey, the innocent confidence of the wren, the frolicsome spirit of the mocking bird, a voice as replete with pleasant memories as that of the whip-poor-will and a love of the wilderness, allied to that of the loon. Aside from the foregoing fancy, it may safely be asserted that the feathered tribes won the affection and respect of their great representative while he was yet a mere boy; and then the task which nature gave him was fostered by an intelligent and affectionate father. That parent was an Admiral in the French Navy, who became a citizen of Louisiana, where his son was born on May 4, 1780. Although destined by Providence to lead a life of continuous adventure, yet the initial points of his career were neither conspicuous nor of special significance. When about 24 years of age he was sent to Paris to acquire a knowledge of art, and although he had the honor of studying with the painter David, his teachings could not make the incipient naturalist forgetful of the woods and the birds of his native land. On his return to the United States, his father presented him with a farm in the valley of the Schuylkill in Pennsylvania, where he settled in 1798. In 1808 he had the good sense to take unto himself a wife, whose name was Lucy Bakewell, and who proved to be a noble helpmeet for forty-three years. Not long after his marriage he sold his farm and removed to Kentucky, where he divided his time between the towns of Louisville and Hendersonville. For about two years he tried his fortune as a merchant, but was not successful. Finding that his heart was "in the Highlands" as well as in the Lowlands, with the birds that he so dearly loved, he began to prosecute with special avidity his studies in natural history. He explored the Southern and Western States, studying the habits of birds and making portraits of them, until 1824, when he revisited Philadelphia and where he conceived the idea of an extensive publication of his researches. And here, by way of illustrating his perseverance as a naturalist, I am constrained to mention the following incidents on the authority of one who knew the naturalist personally: First, that he once remarked to a friend that, with his wife and sons, he had chased a wren for fifteen hundred miles, and finally obtained it at a cost of $1,000; and, second, that while once dining with a friend in Roxbury, Mass., he chanced to hear the song of a bird he had long been trying to capture, when he excused himself, seized his gun and started after his game, which he did not secure until he had reached Cape Cod, and that after a tramp of nearly two weeks.

Believing that he could better accomplish his purpose in Great Britain than in the Quaker City, he went to England in 1826, leaving his wife in Louisiana, and having completed his arrangements, his work was eventually published in Edinburgh and London. The success which at once attended the enterprise was unprecedented, and of the 300 subscribers at $1,000 each whom he obtained, the majority came from France and England. This patronage came from the higher classes everywhere, and included the names of kings, queens, and of the nobility, as well as of many of the leading librarians of Great Britain and the continent of Europe. It was a bold venture for so young a man to make, and failure would have been most disastrous; but a good Providence was on his side and a firm support.

Prior to the publication of his work, and when the prospects were gloomy, some of his friends endeavored to dissuade him from trying so important an experiment; but his reply was that his heart was fully nerved and that his reliance was upon that Power upon whom all men should depend, and he felt that he would succeed. When success was fully assured, he expressed his heartfelt gratitude to the good Being who had guided his way and prepared him for a happy and peaceful old age in the bosom of his family. He returned to America in 1829, revisited England in 1831, and in 1839 he settled himself on the Hudson near New York city, where, after a mental illness, he died in perfect peace on the 27th of January, 1851.

Among the names that Mr. Audubon was wont to mention with kindness when talking about his travels was that of C. W. Webber. Their acquaintance took place when the two were traveling together on a canal boat in Pennsylvania. Mr. Webber's admiration for the naturalist was most enthusiastic, and an opportunity he had for securing a good berth for the man he admired he recalled as an important event in his life. For his act of politeness, however, he was amply rewarded, for he not only enjoyed the conversation of Mr. Audubon, but took long walks with him along the towpath of the canal, finding out that even as a pedestrian he was not a match for his companion, then in the sixtieth year of his age. "Ah," wrote Webber in 1852, "the grandeur of that man's life! Though it had filled my own with poetic yearnings in my youth, yet they have lost nothing in fire and earnest upward through my maturer age!"

And here, for the benefit of those who may never have seen the great work which placed Mr. Audubon in the front rank among the naturalists of the world, I would mention the following particulars: The work consisted of ten volumes, five of them of great size, *i. e.*, double elephant octavos, bearing the title of "The Birds of America," and containing 448 colored engravings with the birds represented as large as life; while the remaining five volumes, bearing the title of "Ornithological Biographies," were made up of the letter press, describing the characteristics of not less than 1,065 species of American birds, interspersed, at regular intervals, with desultory chapters or episodes, describing many of the personal adventures of the indefatigable author and artist and man of science. To me, these particular chapters have a freshness, interest and simplicity which are unsurpassed, and bring us into the closest communion with all that is charming and fascinating in the scenery and natural history of the United States. It was the literary part of the great work in question which I pondered with so much avidity in my more youthful days, and so the reader can imagine my delight when the author presented to me the precious volumes. In the Introduction to that work, as I remember, he mentions the fact that it always made him sad to deprive the beautiful birds of life, but of course this was a continual necessity. And he also mentions in the same place this curious incident: On one occasion, before leaving Kentucky on a visit to Pennsylvania, he packed up in a box two hundred of his drawings of birds and left them with a friend; and after an absence of months returned to find that they had been partly destroyed by vermin. "When I returned," to use his own language, "after having enjoyed the pleasures of home for a few days, I inquired after my box and what I was pleased to call my treasure. The box was produced and opened, but reader—feel for me—a pair of Norway rats had taken possession of the whole and had reared a family among the gnawed bits of paper which but a few months before represented nearly a thousand inhabitants of the air. The burning heat which immediately ran through my brain was too great to be endured without affecting the whole of my nervous system. I slept not for several nights, and the days passed like days of oblivion until the animal powers being recalled into action, through the strength of my constitution, I took up my gun, my notebook and my pencils, and went forth into the woods as gaily as if nothing had happened."

That the conversation of a man like Mr. Audubon was replete with the most interesting information need not be asserted. It was in no sense conventional but as fresh and delightful as the scenes he had witnessed, and the adventures he had experienced in his multitudinous wanderings. He was pre-eminently a simple-hearted child of nature, and hence the influence of what he uttered and put upon paper will be perennial. His descriptions had the effect of a continual panorama, and in fancy I was by his side when he sailed down the Ohio in a skiff propelled by two negroes and accompanied by his young wife, and when he was frightened by the mysterious howling of a Methodist camp meeting, which he mistook for an encampment of hostile Indians, and when exploring the wilds of the Lehigh and Upper Susquehanna, risking his life among the Indians and Regulators of the Mississippi Valley, battling with the floods of the great river, hunting for bears and other large animals, quailing under the influence of repeated earthquakes, hunting with and enjoying the hospitalities of Daniel Boone, and camping out in the lonely regions bordering on the Gulf of Mexico. It was while enjoying a little leisure in Louisville, Ky., that he first met his brother naturalist, Alexander Wilson. They compared notes, and although Audubon did not care, or could not afford, to subscribe for Wilson's forthcoming work, he offered him the use of many of his own drawings, but the friendship between the two men was not especially cordial.

On various occasions during his wanderings he tried to secure a little needed money for his daily support, by drawing or painting portraits, in which he was successful. When harbored in Natchez, Tennessee, a friend came to him and asked for a loan of money with which to buy a pair of shoes; he had not the money in hand, but he went to a shoemaker and negotiated for a pair of shoes for himself and friend and paid for them by painting the portrait of the æsthetic cobbler. During one of his visits to New Orleans, and when in want of money, he copied a picture of the death of Montgomery, which he valued at three hundred dollars and which his friends took in hand for a raffle, and when all the tickets were sold excepting one, Audubon thought he would expedite the business in hand and purchased the remaining ticket himself, paying for it in gold, when the picture fell to his lot as well as the three hundred dollars in money. After a trip that he had made through Western New York and to Niagara, which he did not look upon from Goat Island because he could not pay for passing over the bridge, he revisited Cincinnati, where he had to borrow money from an old acquaintance and went down the Mississippi in a flat boat; reached New Orleans during the prevalence of the yellow fever, and found it far more desolate than any spot he had ever seen in the wilderness; and on reaching the place, not far away, where his wife had been employing herself as a teacher, he not only found her in perfect health, but receiving an annual income of three thousand dollars. And it was with the money accumulated by this noble wife that he was enabled to visit Great Britain and engineer for the publication of his long contemplated work on the Birds of America. His success, as already stated, was at once most decided, and a large number of the greatest men in England, Scotland and France, gave him a helping hand, and his praises were proclaimed in print by such men as Francis Jeffrey, John Wilson, William Roscoe, Walter Scott, Sydney Smith, Basil Hall and Baron Cuvier. The cost of bringing out his work was not less than one hundred thousand dollars; so that with his three hundred subscribers his profits were very satisfactory. As we think of this prosperity, and then recall the fact that the same man had been compelled to paint a portrait for a pair of shoes, and had been prevented from fully studying Niagara because he could not pay for crossing the bridge to Goat Island, we may indeed begin to appreciate the vicissitudes of our humanity. But with Audubon it was impossible for any change of fortune to make him forget his manhood. As portrayed in his journals the reverses he met with were remarkable. An estate which was left to him in France by his father was taken from him, also the sum of seventeen thousand dollars which had been left for safe keeping with a man in Richmond, Va. At one time he was so poor that he could not buy the blank books necessary for his journals; but his wonderful courage and perseverance brought him out of all his troubles in the end.

Mr. Audubon's intercourse with the great men of Europe was generally agreeable, but there were some exceptions. For example, when, with first-class letters, he called upon Baron Rothschild, he was treated with marked indifference, and although the notorious Jew subscribed for the "Birds of America," he complained about the price, as the work was "only about birds." The human cormorant could not rise above his natural instincts. Another man who manifested an unwonted meanness was the librarian of an institution in Paris. When about to obey the order of his superiors to subscribe for the "Birds," he said to Mr. Audubon that it was customary to ask for a discount on such costly publications, whereupon the naturalist manifested his disgust and refused to let the librarian record his name, and departed. While it was true that Mr. Audubon's European subscribers outnumbered those in his native land, his personal admirers and helpers in the United States were very numerous, and among those who were glad to proclaim his praises were Fennimore Cooper, Thomas Sully, Edward Everett, Andrew Jackson, Washington Irving and Daniel Webster. The latter was one of the earliest subscribers for the "Birds of America;" and while the author was wont to express his gratitude for such a patron, I happen to know that Mr. Webster's admiration for the great naturalist was unbounded and most affectionately expressed at the time of his death, which only preceded that of the statesman by about one year and three months.

Mr. Audubon visited Marshfield a number of times by special invitation, and on one occasion when there he was presented by Mr. Webster with nearly a wagon load of miscellaneous birds, which the latter had ordered to be killed by his hunters all along the coast, and among them was the identical Canada goose which figures so beautifully in the "Birds of America." Mr. Webster told me that the naturalist studied the characteristics of that bird for an entire day, and that he spent three days in making the portrait.

Next to those of his native land he seemed to love the friends he had known in Scotland; and among his greatest pleasures when in that country was to visit the places sanctified by the genius of Burns and Scott and Wilson.

In this effort to depict the leading characteristics of Mr. Audubon, I must not forget his devotion as a husband. Of course, in the great majority of his wanderings it was impossible for him to have the companionship of his devoted and accomplished helpmeet; but when he revisited Scotland and England in 1830, he took her with him and caused her to participate in all the honors conferred upon himself. It was in Edinburgh that he wrote the first volume of his "Bird Biographies," and while it was passing through the press, a duplicate copy of the manuscript, to be sent to America, was written out by Mrs. Audubon, which fact, together with her industry as a teacher in Louisiana, proved her to be a remarkable woman. That he fully appreciated the manifold merits of his wife was proven by the loving manner in which he alluded to her and regretted her absence in his journals, and he evidently had her in his mind when he recorded the following tribute to her sex: "Women are always keenest in sight and perception, in patience and fortitude and love, in faith and sorrow, and, as I believe, in everything else which adorns our race." And from all that I have gathered, the children of this happy pair were in all particulars worthy of their parentage. There were two of them, John and Victor Audubon, both men of ability, and they did not little to help their father in his explorations and in bringing out his publications, the latest of which was devoted to the quadrupeds of the United States. One of these sons had a special fondness for landscape painting, and produced a number of fine pictures; among them a view of London, with the dome of St. Paul rising above a fog cloud, which was a great success.

In the closing volume of his "Ornithological Biography," Mr. Audubon gives us the following glimpse of the working of his mind: "Poverty at times walked hand in

hand with me, and on more than one occasion urged me to cast away my pencils, destroy my drawings, abandon my journals, change my ideas, and return to the world. At other times the red Indian, erect and bold, tortured my ears with horrible yells, and threatened to put an end to my existence; or white-skinned murderers aimed their rifles at me. Snakes, loathsome and venomous, entwined my limbs, while vultures, lean and ravenous, looked on with impatience. Once, too, I dreamed when asleep on a sand bar on one of the Florida keys, that a huge shark had me in his jaws and was dragging me into the deep."

"But my thoughts were not always of this nature, for at other times my dreams presented pleasing imageries. The sky was serene, the air was perfumed, and thousands of melodious notes from birds, all unknown to me, urged me to rise and go in pursuit of the beautiful and happy creatures. Then I would find myself furnished with wings, and cleaving the air like an eagle, I would fly and overtake the objects of my desire. At other times I was gladdened by the sight of my beloved family seated by their cheerful fire and anticipating their delight on my return. The glorious sun would rise and I would cheer myself with the pleasing prospect of the happy termination of my labors, and hear in fancy the praises which kind friends would freely accord. And now my task is accomplished."

Of all the hunting expeditions made by Mr. Audubon, perhaps there was not one which exceeded in romantic interest or better exemplified his characteristics than a certain voyage made by him in the Northern Atlantic about the time that his work was published in England, and the following particulars come to me from a friend and neighbor named William R. Fowler, who was connected with the expedition as a sailor. It was in 1833 when Mr. Audubon, accompanied by his son John and four young students, made his appearance at Eastport, Me., bound on a trip to the Northeast. He had chartered a schooner in Boston, called the Ripley, for a summer cruise through the Gulf of St. Lawrence to the coast of Labrador. He arranged to pay the captain and owner of the vessel the sum of $300 per month; and as he left the Bay of Fundy in June and did not return until November, the voyage cost him about $1,500. He considered himself on a regular hunt for the spoils of ornithology on land and sea; and while the captain of the Ripley was forever looking out for breakers and giving the coast a wide berth, the naturalist was constantly sighing to "hug the shore" and secure interviews with the birds in their lonely homes. The vessel was made to anchor in every prominent bay and inlet, so as to allow Mr. Audubon to visit the shores. On one occasion he chanced to discover, from the masthead, a sheet of water not far inland, which he thought would be to him an Eldorado. He thought it would be a good place to study the habits of what the sailors called the war loon. Nor was he disappointed, for he more than accomplished his purpose. In doing so, however, he had to use a small boat suited to the purpose, which was taken from the vessel, dragged over the intervening hills and launched upon the lake, whose shores were wild and desolate in the extreme. There did he spend two or three days in camp, and returned to his vessel freighted with specimens of many interesting birds, as well as other denizens of the wilderness.

At another time, when Mr. Fowler had killed a certain female bird, and had exhibited it to Mr. Audubon, the latter said that he would give the sailor ten dollars for a male specimen of the species, and that he had better try his luck again on the neighboring shore.

One day, on his return to the Ripley from an excursion, Mr. Audubon found the captain and men busily engaged in repairing their fishing tackle. "What's the meaning of all this preparation?" he inquired. The captain replied: "When we reach the codfish grounds I intend to pack away a big lot of the fellows in barrels which I brought for the purpose." "No, sir, that must not be," said Mr. Audubon. "I did not come into this region to catch fish, but birds, and no fish are to be taken excepting for our food." He considered himself the financial admiral of that expedition, and he did not relish the idea of having the freedom of his movements interfered with by the salting down of codfish. With the crew of the Ripley he was a great favorite, and as he was always ready to side with the sailors in any disputes with the captain, they fully agreed with him in his decision about the business of codfishing.

While speaking of Mr. Audubon's habits on board his vessel, Mr. Fowler told me that he was always at work and seemed never to manifest any fatigue. With the dawning of the day he was always on the alert to discover and study the habits of the sea birds, which happened to cross his horizon. When not taking notes or writing he was occupied with his pencil, and in his cabin he had an easel so arranged that he could fasten his specimens in the most favorable position, to be drawn or painted with the greatest care. The keenness of his eyesight for everything connected with nature was a striking feature of his character, but Mr. Fowler mentioned one incident to me which proved that he might fall into an error. He had noticed that the top of a rocky cliff presented an appearance resembling snow, and having expressed surprise at its continuance into the month of June, he was overwhelmed with astonishment to learn that what he had taken for snow, was an incredible number of gulls resting in their nests. This was a new revelation, even to the man of science, and resulted in a very complete examination of the northern gulls. In prosecuting that labor of love, he came in contact with the eggers of Labrador, whom he greatly disliked on account of their cruelty to the feathered tribes as well as their cupidity, and he was quite willing to believe a story that was told him to the effect that four men collected in two months not less than four hundred thousand eggs and sold them in Halifax at an extravagant price per dozen.

During his sojourn in Labrador, he not only studied the habits of birds and the formation of the coast, but took a great interest in the people, whom he pitied while commending them for many good qualities. After leaving Labrador, where he met and enjoyed the companionship of Admiral Henry Woolsey Bayfield, then on a surveying expedition in the Gulnare, he sailed along the western coast of Newfoundland, visited Pictou and the bays of Nova Scotia, and returned in safety to Eastport. Not long afterward, and perhaps with a view of getting his blood warm again, he went to Florida, where he obtained the materials for his charming episodes on the "Live Oakers," on "Deer Hunting," "The Wreckers and Turtlers and Pirates of Florida." He next turned his attention to the then unknown region of the Yellowstone where, with pleasant companions, he spent the greater part of a year, but without doing any work, and finally returned to his home on the Hudson.

During this twilight period of his life he rose early, visited his caged birds, painted and wrote in his library, walked in the woodlands for exercise, and retired to bed at an early hour.

He greatly enjoyed the manifold comforts of his home and the companionship, in tranquil happiness, of his wife and sons, daughters-in-law and grandchildren (which was the time when I had the privilege of knowing him in person), until his sight began to fail and a cloud fell upon his mind, when he had to be cared for like a child, and finally died in perfect peace and contentment.

It may be mentioned, in concluding this paper, that a very interesting 'Biography of the Great Naturalist, edited by his widow, was published in New York in 1869, and deserves a place in every library.

INDIAN ARROW MAKING.

THERE are in California two lakes named Clear Lake. One is in the Modoc country, the other in Lake county. The neighborhood of the latter lake was inhabited by a race of Digger Indians. Of the three islands in the lake, viz., Alem, Oc-koy-em and Kam-deit, the first named, situated at the extremity of the east arm of the lake was the most important. Its dwellers, called Alemvo or men of Alem, held the ground to be a chief place or capital camp of the tribe, and on this island was built the sacred dance house, a massive structure not unlike the joint-tenement house of the Mandans and Arickarees in plan, but dug out deeper and built more underground.

In the year 1875, or at least within a year or two of that date, for information on this point is not exact, there was a gathering of all the scattering bands of the tribe to the headquarters at Clear Lake. Prophets had been busy foretelling a great flood which was to drown the whites to a man. It does not appear that these prophets had a clear notion of the future fate of the Indians, but from motives of religion or to seek safety more than five hundred Indians came together at their chief camp. The white settlers finally combined and made the Indians, whose numbers and power were alarming, scatter back to the woods, but during their stay at the lake a chance was had of studying Indian life.

It was here that my friend saw the manufacture of arrow-heads carried on as a livelihood. Boxes full of spear and arrow points in all stages of rudeness and finish are in his collection. It appears that at the base of Mount Uncle Sam, on the west of Clear Lake, there is a tract two or three miles in extent covered with fragments of obsidian. Even brush cannot grow in some places on account of the abundance of black broken slag, and to walk over the bed cuts one's boots to pieces quickly.

With material so plenty, the Indians are careful to choose only those pieces best shaped by nature for their purpose, but at places distant from the source of the supply, the obsidian, which is often brought in large blocks, is chipped off in flakes from around a central core by blows of a rock.

The expert who showed my friend the secret of the art was an old man who had practiced this trade all his life. For division of labor is carried a good way among Indian tribes, and even at the date I write of it was hard to find a man who could make a bow, so much had that "mystery" declined since the introduction of firearms.

The old expert put on his left hand a piece of buckskin with a hole cut in it to let the thumb pass through, something like the "palm" used by sailmakers. This was, of course, to protect his hand while at work. In his right hand he took a tool of bone ground down to a blunt point. These tools, made often from the leg-bone of a deer, are assorted in size, large ones being used for coarse work and small ones for fine work.

A piece of obsidian of the right size was held in the left hand, then the right thumb was pressed on the top of the stone while the point of the bone was strongly pressed against the under edge of the proposed arrow head and a little splinter of obsidian worked off. The operation was similar to the opening of a can with one of the old-fashioned can openers that work without leverage. Often times material is spoiled in the sharpening. Around deserted camps piles of rejected fragments are sometimes found, either broken in putting on the edge or not being near enough the desired shape to pay for working up.

I took a tracing from a long slender spear head of moderately good finish, but this reproduction does no justice to the article.

A good deal of the sharpener's work, too, consisted in freshening up the edges of points blunted by use.

One arrow-head, weather-worn by exposure, was shown me with a border of fresh fractures extending from ¼in. to ½in. in from the edge where the sharpener's tool had been.

There results from this process a serrated edge which in the best specimens is beautifully fine and regular, but in rougher tools is often coarse. The old workman was careful of his stock in trade and rolled up the fruit of his industry in a bit of ragged blanket to prevent its being injured while in transit from place to place.

STA. BARBARA, Cal. H. G. DULOG.

A BLACK LYNX.—Calais, Me., Sept. 4.—*Editor Forest and Stream:* When in Minneapolis, Minn., a short time since, I saw in Mr. Tappan's taxidermist shop the skin of a black lynx (*Lynx rufus*). It was killed in South Florida the winter of 1885. I have seen very dark and nearly black wolf skins in Florida, but never before saw or heard of a black lynx. It is to be sent to the National Museum, Washington.—GEO. A. BOARDMAN.

RECENT ARRIVALS AT THE PHILADELPHIA ZOOLOGICAL GARDEN.—Purchased—1 red ouakari (*Brachyurus rubicundus*), 1 Indian antelope ♂ (*Antilope cervicapra*) and 2 upland geese ♂ and ♀ (*Bernicia magellanica*). Presented—1 black bear ♂ (*Ursus americanus*), 1 opossum and 10 young (*Didelphys virginiana*), 1 red fox (*Vulpes fulvus*), 1 bittern (*Botaurus minor*), 1 great-horned owl (*Bubo virginiana*) and 5 alligators (*Alligator mississippiensis*). Born—1 Virginia deer (*Cervus virginianus*), 1 common macaque (*Macacus cynomolgus*), 1 zebu ♂ (*Bos indicus*) and 1 naked-eared deer ♀ (*Cervus campestris*).

HUNTING IN THE HIMALAYAS.

Lights and Shades of an Indian Forester's Life.

X.

CAMP GANGES, Lower Gurhwal, Sewaliks, East India.—While for aught I know to the contrary, the tiger and the boar may have been renewing the deadly combat in the spirit land, we crossed the low ridge and entered the valley, the scene of the man-eater's last exploit. At the point we struck it the grass cover was low, and the valley not much more than a hundred yards wide, and we knew from the description that the beast had made his fatal spring from the high cover lower down. Eschewing the path, we went through the grass, starting several porcupines by the way. A quarter of a mile brought us to heavy cover. The valley was now wider, at least two hundred yards on either side of the road, and the cover being very dense and high, was not easily beaten with three elephants. Moreover, there was no chance for a shot unless the tiger took the hillside. G. took his elephant within thirty yards of the hill, the baggage elephant took a line ten yards from the road, and I kept on about midway between them. We had gone half a mile in this order when my elephant stopped and gave sign, and with rifle poised I tried, but in vain, to get a sight of the foe. If I had been alone I would have risked a shot. While I was meditating the grass began to wave, the elephant was pushed on, and the tiger went away with a rush, not crossing G. but making straight ahead as I feared he might if I fired. G. now motioned to me to hold back the two elephants while he pushed on down the foot of the rise; this I did until he had got about 150yds. start, when we once more started beating. Another 200yds. and G.'s elephant stopped, and following the direction of his rifle, I saw the tiger bounding up the hill about 150yds. in front of him and nearly double that distance from me. G. fired both barrels, but the tiger kept on his course, and I lost sight of him immediately. G. was seriously put out, but he had marked the spot and decided to go up and look for traces of blood, so taking our elephants a bit ahead, we left them at the foot of the rise, and arming our two followers went up the hill. The mountaineers found where one bullet had struck on a boulder and deciphered a tiger's track close below it, and after a long hunt the fragments of the other ball were dug out of the coarse pebbly gravel. G. displayed a deep undercurrent of repressed excitement and I endeavored to calm him by suggesting that the valley would surely be the constant haunt of one or more tigers and that there was nothing to indicate that it was the man-eater we had put up. "Sahib! sahib!" cried one of the mountaineers excitedly, and wheeling sharply round, we saw a tiger ascending the opposite bank about 300yds. off. "You can fire if you like," said G., seeing me sit down prepare to draw a bead, elbow on knee for a rest, "but it's useless." And I realizing the odds against a successful shot forebore to pull trigger. There might be yet another tiger in the cover and firing would only tend to drive him out.

Returning to our elephants, G. agreed that if we had started in the order we took up later, the tiger would probably have broken cover near him; and he proposed to me to take the advance. I waived all claim, and while G. was forging ahead I got the other elephants in position and recommenced beating. Another two miles took us to the end of the cover, which we reached without seeing sign, and as it was now past 7 o'clock, we dismounted and had breakfast.

While engaged in filling our pipes I saw a tiger step out of the cover we had lately come through, ascend the hill a few paces, and turn and look at us. Dropping knife and tobacco, I snatched up my rifle. G. followed my example, but the instant eyes met the beast sprang back into cover. We were soon in our howdahs, beating back the same ground, G. stealing ahead under the hill as before. We had gone perhaps five or six hundred yards, when I saw a movement in the grass between G. and me, and whistling him as a signal, I wheeled round, got backward and nearer the hill, and signaled to the baggage mahout to wheel round toward the tiger, while G. came straight down upon him. G. and I were not more than a hundred yards apart, and he lessening the distance, and if the tiger broke cover here one or both of us must get a good shot. My own elephant was stationary, and I was watching the spot at which I had last seen the grass move. G. was closing in rapidly, and I motioned the baggage mahout to move forward, when raising my eye for a moment I saw the beast put up his head on the hillside. Before either of us could fire he had turned and was coming with a rush right between us at the baggage elephant, which turned tail and let him pass. G. and I pushed rapidly across the pathway after him, but all was still again, and I made the pivot while the other elephants wheeled round to keep the tiger down valley, G. making a big sweep to get near the hill again. Letting him get a good lead, I put the other elephants in motion, and we once more beat back to the end of the cover without result, and after a short consultation turned and beat up the valley.

Another half hour took us nearly two miles up the val-

ey, when I saw G.'s elephant stop and himself evidently watching the grass and standing ready for a shot. Bang! went one barrel in the direction of the hill, and the next moment I saw him wheel round, evidently bent on a blind shot in the grass. Another shot, and I heard the rushing through the cover and saw the tall grass swaying in my direction; the tiger came on, the elephant grew excited as he came closer, for the beast came straight at us to within seven or eight yards, when he swerved. I gave him one barrel—at least the intention was good—and followed it quickly with a second, which elicited an angry roar, but he kept on his way, and G., who was coming rapidly up, now joined us; we pressed on at best pace after the beast, which was evidently making straight for the opposite hill. We had crossed the pathway when we saw him bound up the hill about a hundred and twenty yards off. Our four barrels were fired in quick succession, and while I was reloading G. poured in another two from his second rifle. The tiger was now near the crest of the hill, and as I raised my rifle I could see that he carried, or rather dragged, one hindleg; the next moment he had disappeared. Pushing on to where he had emerged from the grass, we soon sighted blood, and, dismounting and giving our followers our second weapons and a good supply of ammunition, we took up the trail. Presently it occurred to me to fire the valley, and, broaching the subject, we came to a halt. There was a light breeze blowing nearly down the valley, and our deliberations soon resulted in an order to the mahouts to go up to the head of the tall grass, fire it, and then crossing the range, keep along its foot until they came up with us. We then followed the trail to the crest of the hill, having plenty of blood to guide us, and looking down could see nothing but tree tops; descending along the trail we entered the forest which was fairly open, the area being about equally shared by trees and bamboo clumps; here it was necessary to advance with caution, so committing the trail to one man, the other three kept close to him with weapons ready for instant action. In this order we advanced a couple of miles, sometimes losing the trail and having to describe a circuit before we could pick it up afresh, when on the shady side of a bamboo clump we came on a heavy patch of blood, indicating that our foe had taken a rest there; beyond this we were unable to recover the trail. We went round and round in widening circles, and at length espied a clump of grass, to the right of the course we had come, and made straight for it, keeping close together. Midway from where we sighted it the trail was again struck, and now speaking for myself, my heart began to palpitate, for there was little doubt we were close on him; the grass was not high, two feet perhaps, and nearly as I could see about half an acre in area. Advancing slowly we reached the edge; I saw the grass move about twenty yards from us, and the next instant with a roar the tiger came straight at us. We all fired simultaneously and dropped him, but he still struggled to get at us, and made us open out. As he rolled over nearly close to my feet, I gave him my second barrel anywhere, and sprang back. By the time I had reloaded he was pretty well done for, for the other three had all fired; he was on his side and trying in vain to sit up, gnashing his teeth as he did so. A No. 10 at the base of the skull settled him, he arched his back outward, then inward, stretching his legs to their full spread, wagged his tail and all was over.

We found ten holes in his skin, one in his saddle, one just above the hock (an express shell, evidently, for it had torn the tendons to shreds without breaking the bone), one in the throat, two in the chest, one behind the right shoulder, one through the left shoulder, two in the left flank, and the finisher, which had entered the brain. The saddle shot was mine and admittedly the first hit, so the skin fell to me, and the mountaineers had got it nearly off by the time the elephants, guided by our shooting, had come up. As the work progressed, I got out the stomach and bowels, finding nothing but deer hair in both, and we had to submit to the mortification of knowing that the man-eater had again escaped us.

It was now half-past two o'clock; the roaring of the fire over in the valley was distinctly audible, so we determined to have lunch. Fortunately one of the mahouts had a water can with him, which enabled me to wash my hands, and both G. and I did ample justice to the cold venison, accompanied with bottled Bass. By the time we had finished, G. decided that it was useless returning to the valley; we might perhaps find the charred bones of the last victim, but *cui bono!* the tiger was gone, at least, unless this was the man-eater we had just shot. He didn't trust so much to the hair test as I did. The man-eater, he argued, probably killed other game at times, and was not likely to eat the hair of the head of man or woman. If there were no more victims he should conclude that we had probably killed the man-eater, although he must admit that the chances were at least two to one against the supposition.

The meal finished we started for the scene of the daylight conflict, about two miles off, and got off the skin, which was balanced against the first we got together. G. offered me my choice, and on my replying that I had none he selected the fresh one.

Our watches chronicled a quarter to four, and we made straight for camp, which was about five miles off. On the way G., who was about a hundred yards on my left, got a shot at a spotted stag, and half a minute later I saw another come out from behind a clump of bamboo and cross my path. I fired, but as I pulled the trigger I saw the beast fall, and my ball passing over him rattled against a tree beyond. G. came up on the blood trail and claimed a hit, and I explained what had happened. Another mile and G. bowled over a four-horned antelope, but so completely smashed up his hindquarters that we let him lie. I put up a boar, but reflecting that I could make no use of him I reserved my fire. As we neared camp another shot from G., followed by an angry growling, made me push on at best speed, another shot silenced the row, and coming up I saw it was a hyena, which was also allowed to lie where he fell.

A little further on we sighted the tents, but on getting closer we saw a second encampment which we recognized as ours, the first seen was the district officer's, and finding him at the door of his tent, we accepted an invitation to dinner, on the understanding that we might send over any game dish we might find cooked. We gave the gist of our day's adventures and proposed a day's pig sticking for the morrow.

A bath and a change of clothes, followed by a glass of sherry, were the first comforts we indulged in, and learning on inquiry that there was plenty of venison soup and a brace of jungle fowl on the spit, we ordered them over to R.'s camp and strolled over to enjoy a crack, while dinner was in preparation. R. produced a shoulder of mutton, which I attacked vigorously, having hardly had a taste since my mishap at Hurdwar.

We spent a pleasant two hours, and pleading fatigue retired at 9 o'clock, having first arranged for an early start in the morning, as R. would have to open court at noon. On the way home G. explained that he would not have spent another day with me if it were not to give the elephants and camels a needed rest, as he was anxious to start for Hurdwar and inspect his outlying division at Gorakhpur before Christmas. SHIKAREE.

[TO BE CONTINUED.]

CAMPING NOTES.

Editor Forest and Stream:

Will not some of your reader tell several other readers how to make a small A tent large enough to hold three persons with the smallest amount of dunnage consistent with the smallest amount of plain living, the object being to obtain a tent that will shed water and at the same time not be so heavy as to crack the hinges in one's spinal column when he totes it with the rest of his share of the outfit across a rough country? It should have flaps at both ends to insure ample ventilation; would be used only to sleep in and for shelter on rainy days. I have an idea that a ground area of 6x9ft. would suffice, allowing 6ft. lengthwise for the occupants and 3ft. at the foot for the kit. I notice some one in the canoe camp at Grindstone has a tent of oiled muslin; perhaps the oil would add too much to its weight, lightness, cheapness and homemadeness being the main consideration.

"D. R. B." in your last issue asks why some one does not put on the market a small silk tent and hammock of light texture. I presume it would be too costly for the majority of sportsmen who would have use for such a tent, that is for those who do their own toting. A silk tent would not long stand the wear and tear, especially that due to friction when on the back, and the sparks from the camp fire would so pepper it with holes as to make it very leaky.

It is true as he says, the hammock is safe from reptiles. I have slept on the ground over a great part of North America above latitude 15 and was never afraid of anything except scorpions and our little black wood spider, although I have sometimes been troubled by the black ant of the tropics. The hammock would not be safe from these pests and other good climbers. I camped at Tiadaughton (Round Island), on Pine Creek, Pa., years before "Nessmuk" paddled his canoe from that point of embarkation, on which voyage he had some experience with a rattlesnake, the reptile crawled over his wrist as he just waked up that dark night. I had some experience of that kind. This Pine Creek Valley and Huckleberry Barrens are densely populated with these reptiles. When we pitched our tents a large party of log drivers who preceded us told us they had killed eight large rattlesnakes during their stay of a few days. One came into one of our tents, where eight men were sleeping, on Saturday night and rummaged around until 10 o'clock Sunday morning, when she was frightened out by the rattle of tin plates made by the cook setting the table for breakfast. She went out the back door and did not give alarm until closely pursued by the cook, who killed her with an axe just as she was entering the brambles 40ft. distant. She made no attempt to fight. I have never had any fear, nor heard of a person being bitten by reptiles while sleeping, although I do not say that such instances have not occurred. Of course if one of the men had got up in the night and stepped on her, or had the hammock man got down, or had "Nessmuk" on that dark night grabbed his snake by the tail, swung it around his head six times, then with a quick jerk endeavored to snap her head off, they all might have been bitten. The reason N. did not do so was because he did not think of it until the next week. N. discontinued the voyage the next morning. Embarked on the cars. Went home.

TIADAUGHTON.

BOSTON AND MAINE.

THERE is quite an exodus of Boston sportsmen to the Maine woods and waters. The weather has been rather warm thus far, but the season is drawing to a close on trout, and a number of gentlemen, anxious to get a few days with rod and line and then a turn at the larger game, will time their departure so as to have a few days in September for trout and then a few days in October. Thus far even the hotel and steamboat men admit that the fall fishing has been very poor, but cooler weather, which is hoped for, is expected to improve it.

Mr. Mark Hollingsworth, a veteran in angling, though not in years, is at the Upper Dam, Androscoggin Lakes. He has been there many seasons, both fall and spring. Mr. Nutt, of this city, with ladies, is also there. Mr. Sprague is occupying the camp of the celebrated Whittier. At Moosehead Lake it is reported that the accommodations are crowded. Several Boston sportsmen are there.

Grouse shooting in Maine is still reported to be very poor. It is hard to hear of a section in that State where good shooting can be had. From some parts of New Hampshire the story is rather better. Mr. Bart Rollins, who goes shooting every fall with Mr. Green, his next neighbor in the produce trade, went up to Plymouth, in that State, for three or four days last week, and they report partridges more plenty than on the same grounds last year. They had good sport, but the non-transportation law did not permit them to bring home the birds. Some of their friends spoke for their year's supply of partridges, but they were disappointed when Bart and Green came home empty-handed. They say that the law that you can't bring your birds home has helped in one way. The other boys don't expect you to produce a bird in proof of every one you say you shot, for the law won't let you. It is easier to tell a—big story.

The arrest of the Puffers, father and son, well-known tradesmen, with a gentleman from Springfield, for violating the Maine game and fish laws, has created what may be termed a silent sensation here. They were arrested at Calais last week. Lots of sportsmen here are silent about the matter, for the reason that they know that they are guilty themselves. They listen to comments without remark. It seems that the Puffers, when arrested, had a part of a deer in their canoe, which the warden seized. The deer they offered to pay the fine for, but they were not allowed to escape so easily. The officer claims that they were illegally fishing with trolling spoons a few days before, and also that each man is liable for the full fine for killing the deer, making $150 instead of $50, which they offered to pay. It is understood that the parties will go to the Supreme Court before they will pay so much of a fine on the order of the lower court; but there they are sure to be beaten, for several such cases have been tried before the Supreme Court in that State and the parties have been found guilty, *particeps criminis*, and each has had the full fine to pay, though not having been even present at the actual killing of the illegal game. It is sufficient to convict if a person is one of a hunting party and sharing in the advantages of the hunt. The officer claims that the Puffers have been in the habit of bringing dogs into that region for several seasons, and that he has proof against them for hunting illegally in that way. The case is a wholesome one for Maine game, to say the least. Boston parties have been going too far in that State for a long time, and the sooner they understand that they are in great danger from the law the better. Had the earnest Fish and Game Commissioners the means to patrol the hunting regions, as they should have, it would be next to impossible to steal game from that State without detection and punishment, and the chances are that the next Legislature will grant the means to thoroughly do a work of so great value, not only to that State, but also to the whole sporting community. Commissioner Stillwell was here last week. He is growing old in service, but he feels that he has been rewarded by an increase of deer under protection. He justly complains of the unfairness—not to put it in a legal point of view—of the man who persists in coming into Maine and killing game or taking fish in defiance of a law made to protect and allow such game to increase—of the unfairness, the meanness, of breaking the game laws, when there is an open season, equally free to all. Even a hunting trophy is not of sufficient value to make it worth while to stain one's conscience. SPECIAL.

BOSTON, Sept. 20.

ROBERT O'LINCOLN.

Editor Forest and Stream:

You find fault with me in your issue of the 9th for "inviting game law violation," as you put it, and casting reflections on the Legislature that passed the last law prohibiting the "snaring, liming, poisoning, or killing" of certain small birds. I sometimes think that the cheerful and ubiquitous idiot, who has so much influence on human affairs, is preëminently prominent in securing the passage of enactments for the protection of game, but possibly the preparation of such statutes may be a more difficult matter than is generally supposed. It will be apparent to any one, however, after a slight examination of the last and worst statutorial folly, that the legislators had no idea of what they were doing when they made this bobbery over bobolinks, and created into crimes the shooting of pewees or tomtits, and were most likely tricked into the passage of the law. It is an insidious attack on the modern ladies' fashion of wearing feathers in their hats which the author did not dare attempt openly, or is only the crystallization of a mawkish sentiment that regards small birds as beautiful and tries to pretend that they are useful. That the feathers are a part of the bird, no one can dispute, and hence a lady who wears a feather of a wild bird in her head-dress is liable to imprisonment and fine. If the game protector of our district were to enforce this enactment literally, or should sue the dealers in feathers for the millions of dollars for which they may be liable by a strict interpretation, I should not only not urge him on, but I should urge him very strongly to the contrary, and should promptly recommend his removal from office, and yet the folly of punishing a man for selling feathers is not greater than that of fining him for selling birds of food which by no stretch of imagination can be regarded as birds of game. If you had read my last book as carefully as I had hoped, you would have noticed that the hero sacrificed the opportunity to kill a lordly sickle-bill, the largest and grandest of bay snipe, in order to shoot a sea gull for his lady's hat, and I am free to confess that I think he was right. We give the fairer and better portion of creation too much to deny them the wings of small birds if they hanker after them. Moreover it is a question still unsettled whether small birds are not of more injury than benefit to the world and especially to the farmers, a question that the ornithological department of the government is at this moment trying to solve. The counsel for the St. Lawrence Association, one of the most useful and powerful organizations of the State, condemns the law as strongly as I have and even suggests that as it forbids the snaring and poisoning of all manner of wild birds "except game birds," it may by inference permit the snaring and poisoning of game birds. Did not the Legislature merely suppose that they were passing a law to forbid the taking of the life of feathered songsters in illegitimate ways? Could they have intended that while there was a statute existing which allowed farmers to kill robins when destroying fruit and market-gunners to kill them when they were fit and proper for the table, to prevent their killing altogether and declare that they as farmers must sit by while the robin was stealing their grapes, strawberriers and cherries and while the crow was tearing up the corn or the hawk carrying off their chickens, for this statute not only expressly mentions certain birds but by a sweeping provision includes all others not game of which it gives a very learned if not accurate list. Wherein is the meadow lark of value except for his feathers in connection with ladies' hats or to serve as marks for youthful sportsmen, unless it be under a sentimentality of wisdom that confounds it with the lark of England. This law is indeed protection run mad and is the modern evidence of a mania for exalting trifles into crimes. The only bird which my agricultural experience convinces me is of use to the farmer, the miller-devouring sparrow, is expressly given over to unlimited and unrestrained annihilation. If we are to protect tomtits and pewees this year, why should we not protect humming birds, moths and beetles next, and make it a crime for the tiller of the soil to destroy the cut worm or the apple borer because they turn into such pretty butterflies.

As to your slur on the Association for the Protection of Game, that "its plethoric bank account has been swollen by fines," permit me to say that never has an association been managed with less greediness or with more disinterested regard for the public good. It has remitted

penalties in nearly half its cases upon declarations of ignorance or promise of amendment, and I doubt if its total receipts for prosecutions equal its expensss. It has on several occasions declared that it would not enforce unwise enactments, and has always considered the interest of the dealers and their customers, and enjoys, I believe, the general respect. Nor is this the first time that a Commissioner of Fisheries has expressed a decided opinion about ill-considered legislation. Notably was this the case when the law forbidding the sale of striped bass in the spring was up for enforcement. The Commission have been in the habit of trapping, snaring and killing in any surreptitious manner at the State hatchery the kingfisher, that arch enemy of fish fry, but hereafter they will have to let him severely alone or incur the disapproval of some of their own game protectors. In conclusion let me ask you how many of the Legislature do you think even knew that the bobolink was the reed or rice bird in his summer male habiliments?

ROBERT BARNWELL ROOSEVELT.

NEW YORK GAME AND BIRD LAWS.

Editor Forest and Stream:

The last Legislature made some remarkable changes in the law. As the public ought to know what the law is, I desire to call attention to certain points.

1. It is now unlawful to kill any crow, hawk, crow blackbird, bluejay or owl. So careful has the Legislature been to protect the eggs and young of song birds, game birds and poultry!

2. It is now unlawful to have in possession any wild bird (except game birds) or any part thereof. Any person who retains a stuffed bird in his possession, or wears any part of a bird, provided it is not a game bird or part of one, is liable to a fine not exceeding $50, and to imprisonment in a county jail or penitentiary not more than 30 days. This provision is certainly radical enough, but its effectiveness is another matter.

3. It is unlawful to kill, have in possesion, or sell any wild pigeons or wild doves.

4. It is forbidden to sell or have in possession, during the month of January, any ruffed grouse, pinnated grouse, or woodcock. This prohibition may or may not be a good thing in itself; but it is an outrage in view of the fact that quail are still allowed to be sold in January. The natural result is that a special premium is offered for the destruction of that one of our game birds most deserving of protection, and most needing it.

5. It is unlawful to sell venison or have it in possession from the 1st to the 15th of November. Before and after that period it is lawful, under certain restrictions. To search for the reason of this provision would imply gross flattery of the legislators. SAMUEL HUNTINGTON.

NEW YORK, SEPT. 16, 1886.

SQUIRRELS.—Point of Rocks, Md., Sept. 18.—Squirrels are quite abundant this season in the woods near the Potomac River in Virginia and Maryland. Several times while fishing this week I have heard the nimble climbers barking in the trees along shore, and a number of persons living here have brought in from five to ten as the result of a morning's hunt. For those who are fond of that sort of sport there is lots of it.—J. C. B.

THE PRESIDENT'S DEER HUNTING.—Several correspondents have written in protest against a supposed violation of the deer law by President Cleveland this year. So far as we are informed they are in error. The hounding season opened Sept. 1, and according to the reports in the papers the deer killed by the Cleveland party were hounded in the lawful season.

ADIRONDACKS.—Indian Point, Chateaugay Lake.—Three of my guides have just returned from a week's hunt at Wolf Pond, where they secured four large bucks out of seven deer that they ran into the pond with dogs. They report three deer killed at Elbow Pond, 3 miles above, and four killed 6 miles below.—R. M. SHUTTS.

HAVRE DE GRACE WILDFOWL.—In a stay at Havre de Grace last week we found bluewings, gray and baldpates plenty. Box boats killing 25 to 75 per day. Law allows shooting until Oct. 1; then close season until Nov. 1; then the regular season, three days in the week.—GEO. WILD.

LONG ISLAND.—Oakdale.—Mr. A. A. Fraser has leased the premises of Col. W. H. Ludlow (containing one thousand acres) for shooting purposes.

BAY BIRDS ON LONG ISLAND have been more than usually abundant this year, and the gunners assign it to the stopping of spring shooting.

All newsdealers sell Forest and Stream Fables.

IN SEPTEMBER MAILS.

Editor Forest and Stream:

I get your paper from a newstand regularly, and am well pleased with it, especially its cleanness. G. B. W.

SANTA ROSA, Cal., Sept. 7.

Editor Forest and Stream:

Have taken your paper for a long time, first by single purchase and later as subscriber. It is almost needless to add that I have derived much solid pleasure from its pages, although not a believer of many things that it has advocated. U. R. WILLIAMS.

SALEM, Mass., Sept. 20.

Editor Forest and Stream:

The FOREST AND STREAM is now quite as near perfection as human agency can make it. It is most carefully, enterprisingly and successfully edited, I take pleasure in saying, for I know that while editors receive many thumps, they but seldom receive merited kind words. D. H. BRUCE.

SYRACUSE, N. Y., Sept. 16.

Editor Forest and Stream:

I have been reading the FOREST AND STREAM for some time, and am very much pleased with it, and especially admire the bold stand you take at all times in advancing the law in favor of the protection of fish and game. Few seem to realize how necessary it is to protect and shield the fish and game at the proper time, and thereby save to ourselves and those to follow us the great pleasures of the woods. CASSIUS THAYER.

GRAND RAPIDS, Mich., Sept. 13.

Sea and River Fishing.

THE PORPOISES OF RIVIERE OUELLE.

BY J. M. LE MOINE.

Author of "Quebec Past and Present," "Maple Leaves," "The Chronicles of the St. Lawrence," etc.

RIVIERE OUELLE, seventy-nine miles from Quebec, is a flourishing village—with a port for schooners—forming part of the populous county of Kamouraska, for a quarter of a century famous as the arena of most turbulent electioneering campaigns.

Here, more than once, met at the hustings two sturdy champions—the Hon. Jean Charles Chapais, a Conservative, and the Hon. Luc Letellier de Saint Just, a Liberal—both Senator; the latter, as Lieutenant-Governor of Quebec, well remembered for the *coup d'etat* of 1878; and truly when they did meet, then began the tug of war.

Governor Letellier's residence may yet be seen at a spot called Les Coteaux, about a mile from the parish church. There devoted friends and loving relatives closed his eyes in the welcome slumber of death on the 28th of January, 1881. One mile and more past the bridge, on the banks of the St. Lawrence, occurs a well-known landmark for mariners—a promontory projecting in the St. Lawrence, styled La Pointe de la Rivière Ouelle, during more than a century a busy fishing stand for the capture of the lordly porpoise, found there in droves during the summer months.

Before describing this important industry, be it known that Rivière Ouelle gave birth to one of the most industrious and brilliant members of the group of savants and litterati, selected by the Marquis of Lorne in 1882 to constitute the Royal Society of Canada—the Rev. Abbe Henri Raymond Casgrain. Close to the parish church, on the river bank, still stands the antique manor of the respected Seigneur Casgrain, the father of the Abbe.

Rivière Ouelle, sung in prose and verse by its gifted son, is known far and wide, as much for its weird Indian legends as it was, until lately, from being the haunt and landing place *par excellence* of the white porpoises of the northern portion of this continent.

Among the innumerable papers penned by the learned Abbe, there is one on the Rivière Ouelle porpoise fishery, from which I intend to draw copiously. It would appear that this branch of industry dates as far back as the end of the seventeenth century—1680-1699—when King Louis XIV. granted M. de Vitry, a member of the Sovereign Council of Quebec, authority to place nets at this spot for the capture of the porpoise, together with a subsidy "in rope one or two inches thick, 10,000lbs. of cod line," and what was still more handy, "500 livres" in hard cash.

Though this munificent grant was repeated for M. de Vitry more than once, the venture failed. In 1705 another attempt was made; since that date weir fisheries for porpoise have always continued in use at this locality. The first regular grant of the right to fish at the Pointe at Rivière Ouelle, was registered by Intendant Raudot, on the 20th July, 1707, in favor of a co-partnership composed of six inhabitants—all neighbors, who were authorized to catch this unwieldy fish on the river frontage of their lands by the King of France, the seignior of the fief, *le Sieur de Boishebert*, consenting; the company was composed of the following: Jean Delavoye, Etienne Bouchard, Pierre Soucy, Jacques Gagnon, Pierre Boucher and François Gauvin. With the lapse of years, the fishery privileges of these holders became divided among so many descendants of the six original grantees that it became impossible to trace them all to their source; to obviate the misunderstandings and law suits likely to spring from such chaos, an act of the Legislature in 1870 was passed, constituting the representatives into a legal corporation.

The tenth part of the porpoise oil paid over to the seigniors of Rivière Ouelle since 1748, is not a seigniorial due; the first seigneurs having consented to divest themselves of the fishery right, *droit de pêche*, in favor of the first occupants of the soil. It is a voluntary tribute, paid under a special agreement between the tenants and Madame de Boiseherbert, the widow of the son of the first seigneur, M. de la Boutheilleris, in consideration of services rendered them by the said seignior in a contestation as to territorial limits which had arisen between themselves and the inhabitants of Ste. Anne, and also in consideration of a further promise on the seignior's part to continue to help them.

In June, 1752, Intendant Bigot published a singular ordinance, imposing heavy fines on any sportsman who would have the audacity to discharge his gun on the Point of Rivière Ouelle, and also on proprietors allowing their cattle to stray anywhere near the beach. The products of these fines reversible to the church fund of the parish.

On the 25th of January, 1798, Messrs. Lymburner and Crawford, leading Lower Town (of Quebec) merchants of the day, took a lease of the Rivière Ouelle porpoise fishery. Instead of looking after this important undertaking themselves, they intrusted it to careless agents, who, by their profuse expenditure, luxurious or riotous mode of living, entailed on their employers losses so great, that Lymburner and Crawford were glad to ask, in 1804, for a cancellation of the lease.

Marvelous and endless were the stories related touching the firm's magnificent mansion on the wild-wooded, some said haunted, point of Rivière Ouelle; the spot was also a favorite resting place for the canoes of the numerous Indians then ascending or descending the St. Lawrence. This, doubtless, gave rise to some of the most sensational legends of the locality; but history also furnished its quota of stirring traditions during the sieges of 1690 and 1759.

The oldest inhabitant could relate how some of the yawls and pinnaces attached to Admiral Phip's fleet in attempting to land at the point, in October, 1690, had sustained a withering fire from some unseen foes hid by the rocks on the shore—the youthful chasseurs of the parish, led on and placed in ambush by their warlike priest, M. de Francheville!

Who has not also heard of the weird old picture so gushingly described by the Abbé Casgrain, now existing in a lateral chapel of the parish church. Though valueless as a work of art, it is prized ex voto, presented to the church by the son of a French officer, charged by the Governor of New France to carry despatches in the depth of winter to the French posts on the Lower St. Lawrence. This youth had seen his aged parents succumb to the wintry blast after losing in an encounter with the Iroquois, his pocket compass and viewing his Indian guides shot down before his eyes; the aged warrior before expiring had made his son vow to present a picture to the first church he should meet, and he himself had been rescued from a most miserable death—starvation in the woods—by a traveling missionary, passing by. How graphically all this is told by the talented abbé.

"It was by mere chance," says Casgrain, "that the discovery was made how stakes could be utilized to arrest the progress of the gigantic fish—the porpoises." The apparatus is composed of a weir of stakes from 18 to 20ft. long, planted about one foot apart in the mud, about one mile and a half from high-water mark and which is dry at low water. Each spring 7,200 poles or stakes are used. Formerly these stakes were held together with ropes. The semi-circle forming the fishery is a mile and a third in length and ends in a curve, five acres from the extreme end of the Rivière Ouelle pointe. There lies the entrance, for the fish to come in—called *raccroc*. The weir is built out between the 5th and 25th April, when the caplin and smelt come to spawn close in shore. The spawning takes place at the flood. The hour of flood for the porpoise is his dinner hour, when he gorges himself on caplin and smelt. A meager, famished creature on his arrival, he becomes, after eight or ten days feasting, bloated with fat even to eight inches thick.

A wonderful guzzler he gets to be, with digestive powers which nothing will appall.

Caplin and smelts are a sleep-producing food; after a square meal on such, the porpoise naturally feels languid and sleepy—an easy prey to his captor.

In the school of porpoises there occur some cunning veterans, which the fishermen style *savants* or *coureurs de loches*. These sly old sea foxes have escaped from dangers innumerable, and can steer their way fearlessly through the stakes. Occasionally one may be seen stationed at the entrance of the fishery, warning his comrades to shun the treacherous stakes, and when they disregard his note of alarm, barring their passage. Should the giddy youths persist in entering, old reynard will show them how to creep out of the stakes. These veterans can only be trapped when a long course of overfeeding makes them fat, stolid and stupid.

Nothing more striking than to watch from the point of Rivière Ouelle a drove of porpoises, on a calm summer day, gulping down in myriads the small fish within a stone's throw from the beach, swimming in hundreds close to the surface and spouting from their air holes the briny surf, which falls back, in the sun like a glittering shower of pearls, into the sea.

It is while securing thus their prey that the porpoises, heavy and sleepy, rush heedlessly into the fishery entrance. Once inside, instinct tells them to seek deep water; they thus cross the fishery diagonally and meet the lofty stakes which look to them like a wall, whose points, set in motion by the tide, scare them. They then retrace their course and seek to escape in deep water, but the excursion takes them back to what is known as the *raccroc*, where the shallow water warns them of impending danger. They then appear like dazed and do not show themselves at the surface. After a few more attempts to escape they seek the deepest water within the stakes and swim round slowly; this is called sounding. During all this time the tide is running out and the huge creatures—some of them 25ft. long—remain an easy prey to the harpooners.

During the high tides porpoises occasionally drift ashore on the beach, but this does not happen during neap tides. As many as 500 have been formerly caught at one tide, and the catch of one season has reached the figure of 1,800.

In 1867 100 porpoises were killed in one night, this was considered remarkable; harpoons and lances are used to despatch them. The harpoon has projections which open out and the harpooner stands erect in the bow of his canoe or boat; the fish when struck rushes away, along with the boat, which is carried through the water with the rapidity of an arrow.

For some years past, the white porpoise seems to have deserted its old haunt at Rivière Ouelle; by some the frequent noise of the passing steamers is assigned as a cause. They have been pretty plentiful this summer at the entrance of the Saguenay River and on the north shore of the St. Lawrence—where they are not caught in weirs and harpooned—but shot with a rifle from a boat and harpooned.

Abbé Casgrain mentioned the curious human foot prints on the rock of the point, where also can be seen the indenture and marks of snow shoes, in the solid shelving rocks; another fruitful subject of mysterious surmise for the legend-loving dwellers in Rivière Ouelle. "The foot prints of the d—l," said one fisherman. "But why should Lucifer have left his warm home," said another, "to ramble in winter on snow shoes over the rocky shore?" Mystery! mystery! but all in keeping with the weird and tragical legend of Madame Houel, the widow of M. Houel, a *controleur general*, under the French régime who gave his name to the parish and furnished Abbé Casgrain the frame work for his fascinating legend "La Jongleuse," of which more anon.

POTOMAC BASS FISHING.—Point of Rocks, Md., Sept. 18.—I have spent a few days here very pleasantly catching black bass and an occasional eel, rowing over eel dams, and shooting the rapids on the way back, exploring islands, and otherwise filling out a brief outing. Have had good luck with the bass, notwithstanding moonlight nights and quite hot days. Have caught fifty, averaging something over a pound (none over two pounds), cels, fallfish, and a turtle. The fishing will be better in October, and any one can have a good time at almost any point on the Potomac, and fish weighing from one to four pounds may be caught. Bait, minnows and small catfish.—BURNETT.

BLACK BASS IN MAINE.—During August I successfully angled many days for black bass in Long Pond, situated on the boundary of Mt. Vernon and Belgrade, Me. When the black bass were dressed it was found that quite a large number contained spawn, proving to me very conclusively that the open season for black bass should not be extended in the State of Maine. The ice does not leave the ponds till late in the spring and the water is cold till well into the summer.—J. W. T.

FISH BY THE CARTLOAD.

AUGUSTA, Ga., Sept. 14, 1886.—The earthquake on the night of the 31st of August, which did so much damage to Charleston, broke the dam of the Langley Manufacturing Company, seven miles from this city. The waters of this immense pond came tearing down to another pond one mile this side, used by the Bath Paper Company, also carrying off a large slice of this dam, the combined waters of the two wrecking two trains and tearing up several miles of railroad.

Some idea of the immense quantity of water can be formed when I tell you that Bath Pond covered 900 acres of land, and Langley about 1,500 acres, the water in the deepest part about 20ft., with an average depth of about 8ft. These ponds are fed by a bold stream called Horse Creek, always noted for the quality and quantity of its fish. This creek empties into the Savannah River, just below this city, the water of which is perfectly clear and abounds with rock, trout, jack, bream, perch, etc.

After the break, immense numbers of the idle mill operatives about here lay along the banks of the creek day and night about the break, and the catch of fish has been greater than ever known. All kinds of devices are used—from the hook and line to the cast net—and it is no exaggeration to say that fully twenty wagon loads of fish have been taken. The writer has seen trout brought in weighing from 10 to 12lbs. Parties who have been over the track of the flood of waters tell us that the woods are full of fish, and that they had seen one trout left by the waters which would weigh as much as 20lbs. The hogs have been turned loose to fatten on the fish left in the swamp, as many were left stranded, and every little mud hole is swarming with them. The catch is not yet over, and daily parties are going to the scene of the break, always returning with good strings. J. M. W.

MAN, THE MAIL CARRIER.

I WAS cheated out of my long-expected fishing trip to the headwaters of the Connecticut River this year by untoward business engagements, which kept me in expectation of a summons to court as a witness in a "water case," and which has after all been postponed; so that I lost my fishing without any other practical benefit as yet.

However, my son Bob, whom I have mentioned in former letters, went without me, accompanied by a friend, Mr. B., of Hartford, Conn., and spent a couple of weeks in the middle of August with great success and pleasure to themselves. They went first to Second Lake to Tom Chester's cabin, where they put in several days, having, as they say, the best fishing they ever saw. One day they fished the east inlet, bringing in forty trout that weighed 30lbs., and two more days were devoted to the two branches of the north inlet, which comes down from Third Lake, with the result of full baskets every time. I have always been up in June, but am satisfied from their report that it is better to go later, after the larger trout have begun to run up from the lake in more considerable numbers; and they also report them as rising to the fly better than I have found them to do earlier in the season. They say that the east inlet has been swept out by the spring floods since the new dam on it broke away three years ago, so as to leave much more open water, with good pools, where they could throw a fly comfortably and successfully. From Second Lake they came back to First, and thence took a buckboard and "Shank's mare" over a tote road fourteen miles to the headwaters of Indian Stream, crossing Perry's Stream on the way.

Here they spent a week at Billy McCutchins's camp, and as they said, "had all the trout fishing they wanted." They propose to go again next year, and I hope I may be able to accompany them.

While at this camp, just as they were about starting out one morning, McCutchins came to them and asked them if they wished to write home, saying that the mail carrier was just going in to First Lake to the post office and they could have a chance to send letters. They had seen no mail carrier, but Mr. B. did want to write to his wife, and sat down at once and indicted a short letter which he handed to McCutchins who, wrapping it up in a silk handkerchief, called up a fine collie dog which lay by the door, and tied the handkerchief about his neck, saying, "Now, Man, it's time for you go to the post office," and opening the door and taking down a pistol from the wall fired it out in the direction of the road.

The dog immediately bounded away, and turning round, Billy said to the boys, "Now, if there are any letters for you at First Lake, Man will bring them back for you to-morrow night. The mail will get there at 8 o'clock in the evening, and Man will wait there for it and be out here about 11." (Be it understood, that the mail from Colebrook to First Lake and Pittsburgh goes up and returns on alternate days).

So the next night the boys sat up, and told stories and discussed their adventures until 11 o'clock, when a sharp bark was heard outside, and as McCutchins opened the door, in trotted Man with the bandanna round his neck, and being opened, it disclosed two letters for Bob, which had been sent to him at First Lake. As the boys said, "You had better believe that dog had a good supper before he went to bed!"

It seems that he goes in to the post office at the sound of the pistol shot, whenever any one wants to send a letter, and spends the night and next day at the Lake House, returning with the mail in due season. It is as good a dog story as I have heard lately, and Bob has asked me to send it to FOREST AND STREAM for him.

I have little to relate of my own experiences this summer. A few small trout from the impoverished streams, some of which are to-day (or were on Saturday, when I took a long drive over the hills with a friend from California) mere beds of gravel, with now and then a pailful of water in hollows, and promising no fish for another summer. I have botanized more than I have fished. The Connecticut River is reported full of black bass, but no one can induce them to take a bait.

I strolled out on the hills with my gun the other day, and sat down in an oak grove to watch for gray squirrels an hour or two. Though I saw none I was entertained for fifteen minutes by the operations of a great pileated woodpecker, who looked as big and black as a crow, and whose red crest shone in the sunshine like flame. Being a member of the AUDUBON SOCIETY I allowed him to depart in peace, after he had finished his investigations of an oak tree within 40ft. of me.

Ruffed grouse are very plenty, we put up a covey of forty by the roadside among the blackberry bushes while driving on Saturday.

A neighbor's cat has, within a week, left two flying squirrels on the door step of a house just at the end of the village and near a piece of woods which they were always known to inhabit. The cat never eats them, but kills them and brings them home to her mistress, who has sent one of them, a very large and perfectly white one, to a taxidermist to be set up. The other one she gave to me, and I have dressed and stuffed the skin for one of my little grand-daughters, who is delighted with it.

The various migratory birds seem to me to be packing very early, and I fear a long winter is coming, but the summer here in the Connecticut Valley has been one of remarkable beauty, and the wild flowers have been early and plentiful, but the fringed gentian is in full blossom now, fully a week if not two in advance of last year.

I am glad to see the author of "Uncle Lisha's Shop" in type again, with "Sam Lovel's Camps," and enjoy his admirable "Kanuck" lingo, as delivered by "Antwine," as much as ever, although I cannot make out what the fish is he calls a "bow-fin." VON W.

CHARLESTOWN, N. H., Sept. 13.

["Bow-fin" is a local name for *Amia calva*, which is variously called fresh-water dogfish, mudfish, lawyer, grindle, John A., and John A. Grindle. It is not used for food and is found in the Great Lakes and Mississippi region, as well as in Virginia Rivers.]

THE SUNAPEE TROUT.

Editor Forest and Stream:

I have neither the time nor the inclination to enter into a long controversy over the Sunapee Lake trout; and I should not trouble you again with this matter had it not been for the—I will draw it mild—erroneous and misleading statemens of Mr. J. D. Quackenbos, in FOREST AND STREAM of Sept. 2. The gentleman possesses at least one of the essential qualities of a good lawyer, and that is "when you have no case abuse your opponent," and he makes all he can of this privilege. His letter contains so many wild and unreliable statements that I will not attempt to follow him through them all, but will only call attention to a few of them; and as they are all of the same character, any one can see how much reliance is to be placed upon them.

He starts off with the statement that he does not claim that the *Oquassa* trout of Sunapee Lake are the result of the plant of blue-back trout made in 1879. He must have forgotten his statement in FOREST AND STREAM, March 18, 1886, in which he says, "The new trout are the giant offspring of the Rangeley blue-back trout, introduced a few years since as food for the large trout." Mr. Quackenbos has also published the following: "I thoroughly agree with Col. Webber that the new trout are the blue-backs he introduced in 1879, grown to an enormous size." Again: "The little blue-backs of Rangeley have here found the food and water to make them grow as large as their congeners of Disco Island and Labrador."—J. D. Q., in FOREST AND STREAM, April 1, 1886. From the above it will be seen that he has made the claim, and if he now denies it perhaps he is getting ready to accept my theory.

I still claim that it is only within a very few years that any one thought of fishing for trout in 70 to 90ft. of water. A few and very few did fish through the ice near the shores for trout and perch in water from 20 to 30ft. deep. His 3¾lbs. *Oquassa* was caught off the mouth of a brook when smelts were running up at that time, and near the bank or drop off where the depth changes from a few feet to 40 or 50, almost perpendicular, and while his fish may have been landed in 4ft. it was hooked in deep water.

Again he says, "the blue-backs of Rangeley are caught by the barrelful when spawning near the shores in October." He is careful not to say how near the shore or in what manner they are taken. The fact is they are caught with dip nets in the streams, and in the small streams one would not have to go far from the shore to get them.

In my letter of Aug. 5 I said that the blue-back trout seek the brooks and rivers for spawning. Mr. Quackenbos thinking that the readers of FOREST AND STREAM may have forgotten my statement made last winter in regard to the Rangeley trout very cooly says that last winter I "proclaimed them to be lake spawners." This is what I said last winter: "The blue-back trout of Rangeley seek the streams for the purpose of spawning. The Sunapee are lake spawners." See FOREST AND STREAM, March 11, 1886. In regard to the weight of these Sunapee trout, only four individuals saw them and each of them states that many of them would weigh from 8 to 10lbs. See statement of Fred Gould and Moses Gould, Aug. 5. A. H. Powers, in letter to Col. Webber, published in FOREST AND STREAM, Feb. 11, 1886, says: "I have no doubt that some of those we saw would weigh from 8 to 10lbs." These three gentlemen are men whose word would be believed by any one who knows them unless they were blinded by prejudice, yet Mr. Quackenbos says he "declines to believe them." Well, I know of no law in New Hampshire to compel him to, and if he believes these men to be untruthful others do not. The record of the Commission show that blue-back trout were planted in Sunapee Lake, Star Pond, Squam Lake, Newfound Lake, Connor's Pond and Lovewell's Pond in 1879, and I neither "take two years from the growing time," nor do I "add 4lbs. to the weight.

In regard to his attack on Mr. Gould I shall say nothing. Mr. Gould is a gentleman too well known in New Hampshire to need any defense from me; and his attempt to ridicule that gentleman's statements I consider unworthy of notice. He says "thousands"—he means hundreds—"cross the spawning bed in sleighs and boats every year." Who ever heard of any one taking a sleigh to look for a spawning bed? When the boats cross there it is months after the trout have left. I again make the statement that no one who now lives near the lake, neither "poachers" nor any one else, had any knowledge that trout spawned in that part of the lake; even the Professor himself did not know anything about it. He tells the truth when he says "he can give the names of anglers who have fished that shoal in years past winter and summer." They fished it for black bass in summer and caught a few perch in winter. I have caught bass there, but I did not at the time mistrust that trout came there to spawn.

In regard to the answers made to his questions by various parties, that they never saw the new trout previous to 1872 (I presume he means 1879), they put me in mind of the man who was being tried for an offense before a Dutch justice: three witnesses swore positively that they saw him commit the act, but he in his defense brought twelve who swore that they did not see him do it, and the justice found that the balance of testimony was in his favor, and discharged him.

I hope that Mr. Quackenbos does not think the readers of FOREST AND STREAM decide cases upon that kind of evidence. The names he presents are, as far as I know them, of parties whose fishing has been done with nets, spears, guns and clubs when the brook trout of the lake were entering the brooks, in October and November.

Without taking up more of your space I will say that Dr. Fletcher never planted any *Oquassa* fry from the lower St. Lawrence in Sunapee Lake.

I am surprised that Mr. Quackenbos should so show his ignorance in regard to trout as to speak of a male trout, because he has a hooked jaw, as a distinct variety, as "hawkbills" or "St. John River trout." E. B. HODGE.

PLYMOUTH, N. H., Sept. 14.

THE CARP AS GAME AND FOOD.

Editor Forest and Stream:

In your issue before the last, you say "you will be glad to have reports of any experience with carp, as fish to be taken with the fly, and also their edibility compared with native fish." I have had no experience in fishing for them with the fly, but know they will take almost anything thrown in, or on the water. I have frequently caught Them with a grasshopper cast on the surface of the water, though I usually bait with corn or wheat-bread crumbs, and can catch them as fast as the hook can be baited. They afford but little sport to the anglers—a 5-pounder will surrender after a few lunges when first hooked, and is but little more difficult to land than if he were dead.

As to their edible qualities, I have heard entirely opposite opinions, some characterizing them as first-class, and others declaring them unfit to eat. I have three ponds stocked with carp, have been raising them for four years and have been eating them freely for the past twelve months, and I consider them a most excellent and desirable fish. At least fifty friends have partaken of them at my table and all pronounce them excellent, the majority say they are inferior to trout and black bass, but some declare them to be the best fish they ever ate. All unite in the opinion that they are superior to perch, pike or catfish or any of the native fish of this region. I think the flavor and firmness of the carp depends greatly, if not entirely, on the character of the water from which it is taken. My ponds are supplied by a brook of pure water, and have a stream of fresh running water passing constantly in and out of them, and the fish are fed daily on corn and wheat dough.

Many carp ponds are made by simply collecting from the winter and early spring rains by means of a dam, a hole of water. As soon as the rain ceases there is no fresh water coming in, the hole dries up until the backs of the large fish can be seen above the water, it becomes as muddy as a "hog wallow," and is covered with a dirty green scum. If a mountain trout could live in such a mud-hole would it be fit to eat when taken out?

In preparing it for the table, a carp from 2 to 5lbs. and upward should be stuffed and baked; from 1 to 2lbs. they should be fried in an abundance of fat bacon grease. My experience is that the leather carp is superior to the scale variety, its flesh is firmer and of finer texture. The number of carp ponds is rapidly increasing, and in a few years almost every farmer will have one, and the larger majority who are unable for the want of means and time to go trouting, will bless Prof. Baird for having introduced the carp, giving them an abundant supply of excellent food fish at their own doors, and worth to the people more than all that has been appropriated to the Fish Commission since its establishment. P.

FREDERICKSHALL, Va., Sept. 15.

JAPANESE FLIES.

Editor Forest and Stream:

Dr. E. Sterling of Cleveland, Ohio, recently presented me with a copy of a well-known angling work which he has "revised" by making marginal comments, criticisms and corrections, by the insertion of original drawings and old and rare illstrations, newspaper clippings and other additions which give the volume a rare value to the lovers of angling. One newspaper clipping is from the London *Field* and contains the cuts of two Japanese fish hooks and a description thereof; but there is no means of telling the date of the paper, nor can I remove the clipping to show you the forms of the two hooks. They are both barbed; one is not unlike a Kinsey hook in form and the other looks like a cross between a Chestertown and a gravitation hook. The *Field* states that its samples were direct from Japan. I inclose a Japanese fly tied on a Japanese hook that is also direct from Japan, and was given to me by Mr. J. N. Magna of Boston. Please note that this is a barbless hook. The barbless hook is of comparatively recent invention and patent in this country, but a Japanese gentleman to whom I showed one of the flies tells me that the barbless hook in Japan dates back further than his memory. Under these circumstances I do not think that Wendell Phillips would have considered the making of barbless hooks a "lost art" that was re-invented by an enterprising Yankee. The gut is nearly two feet long, very fine and natural. I use the term natural in contradistinction to "drawn" gut, which is made fine by drawing through a small hole in metal after the manner of drawing wire. From the size of the fly and gut one can see that the Japs understand "fishing fine."

The body of the fly is peacock herl, chicken red hackle, and has a small gilt ball, evidently of metal, for head and tag respectively A. N. CHENEY.

GLENS FALLS, N. Y.

SALMON ON A LIGHT ROD.—Mr. G. B. Adams, of No. 11 Waverly place, New York city, killed on Aug. 30 a 9lbs. salmon, and on Aug. 31 a 32lbs. salmon measuring 44in. in length, girth 22½in. Both of these were killed on a 7oz. 8-section round bamboo fly-rod, 10ft. long, made by Abbey & Imbrie, of this city. He had 50yds. of "D" line on his reel. Time of killing, 30 minutes.—H.

KINGFISH.—Bridgehampton, Long Island.—Have had some fine kingfishing on Peconic Bay, got 61 one day of average weight of 1lb.—V. F.

SHORT LOBSTERS.—Deputy Fish Commissioner F. R. Shattuck has just been making a very remarkable seizure of short lobsters. Yesterday he had nine Boston dealers and boatmen before the municipal court, and they were bound over in the sum of $300 each for further examination. The names of the parties under arrest are appended, and they were found in possession of the number of lobsters less than 10½in. in length set against their names: J. A. Young, No. 79 Commercial wharf, 13; F. J. O'Hara & Co., 142 and 146 Atlantic avenue, 95; Andrew Ferry, boatman, 128; John Green, boatman, 230; William James, boatman, 74; W. A. Barber, 193; Daniel McDonald, 174; A. B. Cleverly, 144; A. F. Pope, 100. The total seizure included 1,151 short lobsters, and the statute makes the fine $5 for every such lobster had in possession. Hence the sum of over $5,700 is involved in fines alone. The arrests were made under the assistance of Harbor Master Gould and the harbor police, and it was a great surprise, to the boatmen especially. Commissioner Shattuck measured a great number of lobsters himself. He says that he is determined to see the law enforced. The trade is greatly alarmed. There was a good deal of excitement at the lobster wharves yesterday.—*Boston Herald, Sept. 16.*

Mr. Shattuck writes to the Boston *Traveler:* "Allow me to say that although the Fish and Game Protective Association paid from its treasury last year $225 for detective and court expenses, they received nothing in return to recoup same, invariably allowing the officers to pocket the fees. We are not by any means a rich association, and can ill afford to pay for the enforcement of the fish and game laws of the Commonwealth. We propose in future, however, to do as all other associations of kindred nature. New York city, for instance, uses the finesfor the further enforcement of the laws. Personally I have never received a cent, but have given my time, efforts and money freely to enforce the lobster law. This crustacean does not spawn until after 10½in. in length, save in rare instances, and is then, so far as our best naturalists are informed, five years of age. Any thinking person can readily see how long it will take to add its name to that of the dodo if the law as already on our statutes is not enforced. Either the law must be enforced as it stands or a close time of several years' duration enacted if we wish this almost indispensable crustacean an article of food—the poor man's ready cooked supper, the rich man's luxury, as salads, etc. I know it would not be caught and brought to market did it not find dealers ready to take the chances of being caught in the handling. There would be no thieves were there no 'fences' ready to purchase their ill-gotten property. The dealers in short lobsters stand in the same light as thieves' fences. The police capture both when they can. We propose to do the same with the handlers and fishermen. Yours truly, F. R. SHATTUCK (Deputy Fish Commissioner, Massachusetts; chairman for enforcing fish laws, Massachusetts Fish and Game Protective Association, Boston, Sept. 17, 1886)."

"SPANISH MACKEREL OFF MOREHEAD."—In questioning my calling the 15lbs. fish caught by me off Morehead City, N. C., "Spanish mackerel," your Cincinnati correspondent "Calumet" is right, but he is wrong in calling them the bonito. It was my first experience with that kind of fish, and I followed the popular language of the guests. The fish dealers both at Morehead and Beaufort called them, as does the editor of the FOREST AND STREAM, the cero; and I am now satisfied we captured on our various sailings of the wide ocean, bluefish, Spanish mackerel, and the cero. The confounding of the mackerel with the cero was by the guests of the "resort" and not by the native Carolinians.—G. C. CONNOR (Chattanooga, Sept. 20).

THE RANGELEY BIG TROUT SCORE.—A letter from Upper Dam, Me., Sept. 17, advises us that Rev. Jas. E. O'Brien, pastor of St. Peter's Church, Cambridgeport, Mass., landed on that day, with an 8oz. Nichols rod, a brook trout (genuine *Salmo fontinalis*) weighing 7lbs. Fly used, Hamblin. It was the largest fish caught with a fly in the Rangeley region this fall. Mr. O'Brien's companion, Mr. C. J. Bateman, formerly City Architect of Boston, landed two trout the same week weighing respectively 6 and 6¼lbs.

THE BLUEFISH HAVE COME.—Sayville, L. I., Sept. 20.—*Editor Forest and Stream:* A boat from this place went out last Saturday morning and found that bluefish had struck in. The party in the boat consisted of three anglers, and they took up a position in the west channel of Great South Bay. The fish came to the "chum" freely and they took 156 which weighed from 1¼ to 2¼lbs. each. —VIGIL.

BASS AT HAVRE DE GRACE.—Red Bank, N. J., Sept. 20. —Returning from Havre de Grace flats, Sept. 16, three of us took 175 rock bass, 2lbs. to 8¼lbs. each; fished three days. Small perch bothered us and made us use 16doz. sheddars.—GEO. WILD.

A VISIT TO WOOD'S HOLL.

THE summer station of the United States Fish Commission at Wood's Holl is perhaps the most favorable point on the Atlantic coast for collecting specimens of marine life, situated as it is, on the extreme southern portion of Cape Cod, where the northern currents bring many Arctic species into Buzzard's Bay, while the flow from the south does the same for our southern species, it is at once the southern limit for the Arctic marine fauna and the northern boundary of our more southern coast species, a sort of a middle ground, as it were, on which two very different sets of animals meet. After several years of collecting at different points on the coast from Maine to North Carolina, this spot was selected as the one which would give the greatest number of specimens of marine life to the nets and the dredges. Here the Government has a station well equipped for biological research second to none in the world. Substantial buildings have been erected for naturalist students, and all the modern machines and appliances known to science for the prosecution of the work are called into play. Adjoining the Government premises, or rather across a street, is the residence of Dr. Kidder, who owns a large vacant lot close by which he proposes to offer to some half a dozen colleges, on which they may erect dormitories for such of their students as wish to pursue natural history with the living or dead specimens before them instead of from the usual text book plates of the animals.

At present the buildings occupied by the Fish Commission are the "residence," as it is called, a substantial brick building with offices, sleeping and dining-rooms, laundry, etc. Professor Baird's office is a cozy little room, filled with books and maps, where after breakfast he is invisible to callers until 11 o'clock, devoting the intervening hours to reading his correspondence and dictating to his stenographer. The door is then thrown open and he is at liberty to give or receive information, or to be bored according to the disposition of his visitors. The caller finds a large blonde gentleman with rather a wearied look that indicates an overworked man, and if he is seeking information he finds one filled with it, ready to turn on any particular stream of it at the slightest indication of the particular brand required, and he is surprised not only at the amount of information upon this one subject, but at the wonderful memory which supplies names and dates without reference to the well-filled book shelves about him, and without the slightest appearance on the part of the Professor of having stated a fact not known to every school boy. If the case should be reversed, and the visitor be the one with the stock of information on any subject regarding the life history of any bird, fish or mammal, he finds an attentive listner, and one who, by an occasional question, helps him out to give some fact forgotten in detail, or one which he may have considered unimportant. A Fish Commissioner from an inland State may step in and announce his presence, and is at once surprised to know that the results of his work are well known, and many details of the same which he did not suppose had traveled beyond the boundaries of his State, are a great deal more familiar to Prof. Baird than they are to many citizens of his own county.

A further acquaintance with the head of the Smithsonian Institution and the Fish Commission surprises one with the lack of friction in the different departments and with the ease with which such inharmonious elements as a group of naturalists, each working in his own particular province and having an abhorrence of what is popularly known as "red tape," and a number of naval officers, thoroughly imbued with routine and naval discipline, are kept in daily contact on the vessels working for the Commission without the slightest jar.

The vessels now owned or employed by the Government in the explorations and other work are the following: The Albatross, a brigantine-rigged steamer, with twin screws, 234ft. long over all, is used in the explorations for marine life and deep-sea soundings, etc. The Fish Hawk, another twin-screw steamer, has a flat bottom, enabling it to go up rivers, and is used mainly in fishcultural work, hatching shad, etc. Both these vessels were built especially for their present service. The Lookout, built originally as a steam yacht and elegantly fitted and appointed, is the private property of Maj. T. B. Ferguson, the Assistant Commissioner, but is loaned by him to the Government. All these vessels are officered and manned by the Navy Department. The Lookout is at present engaged in visiting the different lighthouses and life-saving stations of the coast and teaching the men in saving and preserving aquatic specimens cast ashore, and instructing them to telegraph to Washington or Wood's Holl the stranding of any whales or other large marine animals. A sail vessel has recently been added to the fleet, the Grampus, designed by Capt. J. C. Collins, of the Fish Commission, a practical Gloucester fisherman. She is supposed to combine the elements of speed and safety to a greater degree than any other fishing vessel yet built, and is rigged with all the appliances for collecting and fishing. This vessel is manned by New England fishermen, and not by the Navy.

The building, which is devoted to the laboratory, fishculture and aquaria, is of the most interest to the visitor. In the lower portion there is at present a series of hatching apparatus devised by the late Capt. H. C. Chester, which is considered by fishculturists to be the most complete apparatus for the hatching of the eggs of the cod, lobster and other marine fishes, the action being a tidal one, with ten minutes between high and low tide. On the other side of the room there are fifteen aquarium tanks of slate and glass, from 18in. to 4ft. in length, which contain many inhabitants of Buzzard's Bay, such as pollock, ling, mackerel, etc. Perhaps the most interesting specimens were the species of squid, *Loligo pealii*, with a bird-like motion of their cartilaginous fins, and their quick backward darting when alarmed. This department will be greatly extended, and room will be made for observing the growth of the lobster from the egg to the adult form, cod and other marine specimens for practical biological study. The water from the harbor has been muddy at times from the work of the dredging machines, and several large tanks of 20,000 gallons each may be erected, and the same system which obtains in public aquaria of using the same water over and over again may be introduced. To this end hard rubber pumps and tubing may be used, and by this method perfectly clear water can be obtained at all times. In the stone basins which run out from the wharf, there are now several specimens of codfish of last winter's hatching which are six to eight inches in length, and which are living evidences that the codfish can be increased and multiplied by artificial propagation, as the fresh-water fishes have been, and if it can be demonstrated that by judicious planting in localities now barren of this, the most valuable fish in the waters on this earth, then the adage which calls the man blessed who made two blades of grass grow where but one grew before, may be changed in a foot note which will say: "for blades of grass read codfish."

Wood's Holl as a zoological station is one thing; as a place to accommodate a wayfarer or a seeker after information as to the methods of the Fish Commission it is another. There may be a hotel somewhere, and there is a rumor that there is one a mile and a half away from the Fish Commission, and the writer had been advised to go to Wood's Holl from New York by Fall River line, reaching the station by rail from Fall River or by boat from New Bedford, and thence by boat to a fashionable resort on Vineyard Sound called Cottage City; but this did not meet with approval from the home counsel, and upon consultation with a friend at headquarters rooms were secured at the Dexter House, which we found to be a quiet boarding bouse, where many of the married attaches of the Commission had their families, and where a good table could be found if the proprietor could be induced to lodge the visitor among the town's people.

Among the scientists there this season are Prof. J. A. Ryder, in charge of the aquaria and embryological department, who has been studying the metamorphosis of the lobster, the development of the mackerel and some other species. Samuel F. Clark, of Williams College, who is trying to pry into the family secrets of the batrachians. Prof. E. B. Wilson, of Bryn Mawr, Pa., is searching among the spider crabs for any indications of marital infidelity upon which divorce proceedings might be maintained; he is suspected of being in the employ of Pinkerton. Prof. Linton, of Washington and Jefferson College, is looking up the tape worms. Prof. A. E. Verrill is trying to pry into the structure of all the invertebrates, while Sidney Smith and Sanderson Smith content themselves with the scandals which may be developed in certain families of invertebrates. As a striking contrast to all this investigation of family secrets it may be mentioned that Mr. Richard Rathbun rises far above all this tattle, and occupies himself with tabulating the results of temperature observations obtained on the different voyages of exploration and in recording the curves or thermometrical variations upon a chart.

Few visitors were at the station last month, but I had the pleasure of meeting Col. E. B. Hodge, of the New Hampshire Fish Commission, there, and of talking over the mysterious Sunapee trout with him. The Colonel is still of the opinion that this fish is an old resident, and lived and loved before a fish commission was in existence. FRED MATHER.

THE OHIO FISH COMMISSION.—Cleveland, Sept. 17.—*Editor Forest and Stream:* The new commissioners are getting into shape for active work and are starting in for a vigorous fight with the gill and pound-net fishermen at and about Cleveland. These netters have persisted in violating the laws, and are surprised to find that action has been taken against them. Several suits are now pending for violation of the fish laws.—W.

FIXTURES.

DOG SHOWS.

Sept. 27 to Oct. 2.—Dog Show of Indiana State Fair Association. J. M. Freeman, Secretary, Bicknell, Ind.

Oct. 5 to 9.—Annual Dog Show of the Danbury Agricultural Society. B. C. Lynes, Secretary, Danbury, Conn.

Oct. 13 and 14.—Third Annual Dog Show of the Stafford Kenne Club. R. S. Hicks, Secretary, Stafford Springs, Conn.

Oct. 19 to 22.—Fifth Annual Dog Show of the New Brunswick Kennel Club. H. W. Wilson, Secretary, St. Johns, N. B.

Dec. 1 to 8.—First Dog Show of the Inter-State Poultry and Pet Stock Association, Cairo, Ill. A. A. Cowdery, Secretary, Cobden, Ill.

FIELD TRIALS.

Nov. 8.—Second Annual Field Trials of the Western Field Trials Association, at Abilene, Kan. R. C. Van Horn, Secretary, Kansas City, Mo.

Nov. 8.—Third Annual Field Trials of the Fisher's Island Club, at Fisher's Island, N. Y. Max Wenzel, Secretary, Hoboken, N. J.

Nov. 22.—Eighth Annual Field Trials of the Eastern Field Trials Club, at High Point, N. C. W. A. Coster, Secretary, Flatbush, Kings county, N. Y.

Dec. 6.—Eighth Annual Field Trials of the National Field Trials Club, at Grand Junction, Tenn.

Dec. 14.—Inaugural Field Trials of the Texas Field Trials Club. For members only. John F. Sharp, Secretary, Marshall, Tex.

A. K. R.—SPECIAL NOTICE.

THE AMERICAN KENNEL REGISTER, for the registration of pedigrees, etc. (with prize lists of all shows and trials), is published every month. Entries close on the 1st. Should be in early. Entry blanks sent on receipt of stamped and addressed envelope. Registration fee (50 cents) must accompany each entry. No entries inserted unless paid in advance. Yearly subscription $1.50. Address "American Kennel Register," P. O. Box 2832, New York. Number of entries already printed **4126.**

THE WAVERLY DOG SHOW.

THE dog show held at Waverly, N. J., last week by the New Jersey Kennel Club was very well managed and brought out a fine collection of animals. The show was held in conjunction with the New Jersey State Agricultural Society, who erected a spacious and well-appointed building for the purpose. The hall is 81 by 200ft., and one of the best ventilated rooms we have seen. There is ample space for benching over 500 dogs. The building is well arranged with convenient committee and waiting rooms, and greatly adds to the appearance of the fair grounds. There were 427 entries, of which over 30 were absent. There were, however, quite a number of puppies entered as litters, bringing the total up to nearly 450. The quality in many classes was above the average, and in some of them it has never been equaled at any of our shows.

The judging was nearly completed on Tuesday, and might have been easily finished on that day with a little more promptness in getting the dogs into the ring. Much of this delay was caused by the irregular manner in which the dogs were benched. Animals owned by one exhibitor were allowed to be benched together irrespective of class, making no end of trouble to the attendants and causing much perplexity to the seeker of knowledge to be learned by comparing the winners and non-winners in their respective classes. The floor of the building is bare ground; this was covered with refuse tanner's bark, which proved to be an excellent article for the purpose and too much cannot be said in praise of it. The dogs were fed by the Challenge Food Co., under the supervision of Mr. W. Tallman, to the entire satisfaction of the exhibitors.

The management spared no labor or pains to make the show a model one, and exhibitors and visitors united in praise of the arrangements made for their comfort and convenience. Three or four protests were made but none of them were sustained. One exhibitor protested a pug, owned by Mr. W. D. Peck, upon the ground that it had been faked by coloring when it was plain to the most casual observer that the color upon it came from the mat upon which it had lain, to say nothing of the absurdity of painting yellow a mask that is and ought to be black. Bench show committees should adopt the English custom of demanding a deposit with a protest, the same to be forfeited if the objection is proved to be frivolous. By adopting this rule they would save both themselves and honest exhibitors much annoyance.

The judges and the classes assigned to them were: Mr. Charles H. Mason, Brooklyn, N. Y., mastiffs, Newfoundlands, Great Danes, greyhounds, deerhounds, collies, dachshunde, pugs, bull-terriers, fox-terriers, miscellaneous and selling classes; Mr. James Mortimer, Babylon, L. I., St. Bernards, foxhounds, bulldogs, black and tan, Dandie Dinmont, Bedlington, Skye and toy terriers and toy spaniels; Mr. John Davidson, Monroe, Mich., pointers and setters; Mr. A. C. Wilmerding, New York, spaniels; Mr. N. Elmore, Granby, Conn., beagles; Mr. H. C. Glover, New York, acted as veterinary.

MASTIFFS—(MR. MASON).

There were twenty-five entries in the mastiff classes, with two absentees. Taken as a whole, the exhibit was about the best we have seen. Nearly all in the aged classes are well-known prize winners, and much interest was manifest as to the result. In the champion dog class, Ilford Cromwell, looking fairly well, was alone. This was his first win in the champion class, and he proved his claim to the honor by also winning the 10-guinea prize offered by the Old English Mastiff Club for the best mastiff in the show. He was sold, with his kennel companions, Debonair, Bal Gal and Lorna Doone, to Mr. A. Gerald Hull, of Saratoga Springs, N. Y. In the champion bitch class were four good ones, Bal Gal, Lorna Doone, Rosalind and Prussian Princess. All were looking well except the latter. She was thin and somewhat tucked up. The contest lay between her and Lorna Doone, who was in elegant condition. She is not so good in muzzle as Princess, but much better behind, and we thought that this would land her a winner; but after a very careful examination the ribbon was awarded to Prussian Princess. The open dog class was the best that we have ever seen. Dr. Perry brought out a new comer, Debonair, a two-year-old son of the famous Crown Prince, and landed him a winner. He is a very good dog, well formed, with an exceptional good

body and capital legs and feet. He is faulty before the eyes and rather heavy in ears. Second went to Ilford Caution, shown much too thin. Pharoah was placed third. He was not quite at his best. Boss, vhc., was looking well. Scipio, also vhc., was in fair form, but is too small and faulty in head to win in first-class company. Kaffir, hc., is bad in head and lacks character. Hector, also hc., was looking fairly well. He appears to have gone a bit off in front. Zulu II., unnoticed, was in too good company. The bitch class was small and not so good in quality as the dog class. Dr. Perry won first in this class also with a new comer Alice. She is a fair bitch with a small head and not enough bone. Her pedigree has not yet been received from England. Second and third went to the Winlawn Kennels' Queen II. and Hebe, both looking well. Nana, unnoticed, wat the only other entry in the class. Her narrow head and long legs did not appear to suit the judge. There were no wonders in the puppy class. Regulus, the winning dog, has a fair head, except that his ears are heavy. He is good in body and was in good condition. Percival, winner of second, is not quite up to him at any point. Ilford Hercules, vhc., is fair in body and legs, but is lacking in head and expression. Boss's Lady Clare, winner of first in bitches, is faulty in head, ears and expression, lacks character and is not of so good type as Daphne, placed second. This bitch should have been first or disqualified for her bad condition. She has a fair head, with body, legs and feet above the average. She is heavy in ears and was badly shown. She is the most promising puppy shown. Dido III., unnoticed, has developed more greyhound than mastiff character since we saw her last.

ST. BERNARDS—(MR. MORTIMER).

There were fifty-four entries in the St. Bernard classes with six absentees, three of them from the puppy classes. As a whole the quality was below the average. In the rough-coated champion dog class Duke of Leeds, in the pink of condition, beat Otho, who was looking better than we have ever seen him. First Choice was absent. In the bitch class, Rhona, looking fairly well, was placed over Miranda, who has just weaned a litter, and consequently was not in good form. Nevertheless, she should have won, as she is the superior of Rhona at nearly every point. In the open dog class first and second went to American bred dogs, both bred by the Hermitage Kennels. Bronze, winner of first, is a nice dog, with good body, legs and feet. He is faulty in head. Cyrus, winner of second, is but sixteen months old, and if he improves as he should he will be able to beat the winner next spring. He has a better head but is not so good in feet and pasterns, and is a bit light in bone. Third went to Rene, the most typical dog in the class, but he is too small. There was nothing else in the class worthy notice. St. Triphon, c., has not improved in head and has gone wrong at the other end. In the bitch class first went to Empress. Her plain head, light bone and bad markings should place her behind both St. Bride and Margery, although neither were quite at their best. St. Bride is as good as Empress in head and better at other points, and should have been first with Margery second. The latter is off in color, but a better bitch than the winner, who should have been content with third. Jeanne d'Arc, winner of third, is good in body, but she is very snipy and poor in head. La Duchesse, reserve, is of fair shape, but snipy and a bit too high on the legs. Sheila, hc., was looking fairly well. General Butler was the only dog puppy shown; he is somewhat stilty and faulty in head. He has plenty of bone and may improve. The bitches were a poor lot, the winner, Marchioness, being the only one worthy notice. She is faulty in head.

In the champion smooth-coated class for dogs Apollo just managed to beat his only competitor, Don II. Neither was in very good condition, Apollo having the worst of it in this respect. In the bitch class Leila, looking well, had a walkover. Kara, the only other entry, was in the wrong class. In the open dog class Hector, greatly improved, was an easy winner. He is a grand young dog and showed up in capital form. Eric, winner of second, is of good type and has a good head. He is small and not right in hindlegs. Third was properly withheld as there was nothing else in the class worthy a prize. In the bitch class first deservedly went to the small but typical Alma II. Girola, winner of second, is faulty at both ends. She should have been well-content with the three letters. Princess Louise should have been second instead of third. She shows character and has good color and markings. She is small and a bit fine in muzzle, and was not in the best of condition. For third place there was not much to choose between the reserve Apajune, Apollonaria and Thisbe, both vhc., neither are show dogs. There was nothing in the puppy classes that calls for special comment.

NEWFOUNDLANDS—(MR. MASON).

The well-known Bruno, looking well, was an easy winner in this class. Second went to Leo, just a fair specimen with an ordinary head and curly coat.

GREAT DANES—(MR. MASON).

There was only one entry in this class. He is faulty in head and bad in gait.

GREYHOUNDS—(MR. MASON).

There were ten greyhounds shown. All but three of them are well known. Mother Demdike, looking fairly well, was alone in the champion class. In the open dog class Pembroke, the winner, has greatly improved since we saw him last and bids fair to turn out a nice dog. He might be better in head and was shown too soft. Second went to Duke, not a good one. We preferred the vhc. Stormy Day for the place. He is quite a good puppy and promises well. In the bitch class first went to Sister in Black. She has improved and was in good condition. Hawthorne Belle, looking only fairly well, was placed second and Begonia, not at her best, was given vhc. The winning puppy was vhc. in the open dog class. Lady May, winner of second, is quite a fair bitch; not so good in head and legs as the winner.

DEERHOUNDS—(MR. MASON).

Mr. Thayer carried off all the prizes in the deerhound classes. Chieftain was alone in the champion class. Lorna II. the only other entry being absent. He was looking his best and in the competition for the prize offered for the handsomest dog among the prize winners he received the award. In the open dog class Highland Laddie was the only entry. He is a very promising young dog, much the best ever bred in this country and a great credit to his breeder, Mr. Thayer. If he goes all right we shall expect to see him turn out something grand. Ramona was also alone in ths bitch class, she is improving and if she continues she will take a lot of beating next year. First in the puppy class went to the winner in the open dog class and second to his litter sister Highland Lassie, also above the average, she is not so good as the winner in head and back and she is a trifle light in bone. The other entries were in too good company.

POINTERS—(MR. DAVIDSON).

There were 52 entries in the pointer classes, with 10 absentees. A few good ones were shown, but the average quality was below that of most of the shows the past year. In the champion class for large dogs Robert le Diable was absent. Beaufort, entered not for competition, was looking well. He won the sweepstake prize for the best pointer, beating Nick of Naso and Patti M. Mr. Munhall protested the award upon the ground that Beaufort was entered not for competition, but the managers very properly refused to allow the protest, as by the terms stated in offering the prize all dogs were eligible. In the open dog class first went to Nick of Naso, greatly improved since we last saw him. Capt. Fred, looking well, was second. His dew claws have been removed, which improves his appearance. Jimmie, looking his very best, was third. Dash, vhc., did not deserve notice. He has a fair head and good feet, but is very wide in front, has a bad neck and back and is shallow and leggy. Rugby, hc., is much the better dog; he has a good body, legs and feet; he is heavy in head and straight behind. Joe, c., is weak in head, coarse, too long coupled, and has bad feet. In the bitch class first prize was withheld and second given to Fan Fan. She shows age and has gone bad in front. Second went to Beauty, a nervous bitch that did not show up well. She is a nice color and fairly well formed. She is faulty in head, has light eyes and is light of bone. Polly Varden, vhc., was looking well, but was too fat. Lill, c., was also too fat. She is not a show bitch. In the champion light-weight class Robin Adair, looking well, was alone. He did not arrive until the judging was over, but as the express company was to blame for this, he was awarded the prize. There were no entries in the corresponding bitch class. In the open dog class, only two of the four entries showed up. Phelan, the winner, shows considerable quality but is not good enough to win in a fair class. He is rather plain in head, shallow and might be better in loin. Don Donald, winner of second, is not a show dog. The bitch class was better, but with the exception of the three winners there was nothing remarkable. Patti M., the winner, is a nice, taking-looking bitch of considerable quality. She is a beautiful color, and at first glance shows up for all she is worth. She has a good head except that her muzzle and eyes are faulty; a beautiful neck, good chest, legs and feet. She is faulty in back and has a poor tail; she could also be improved in shoulders. Dress, winner of second, is also a nice bitch, with good loin, quarters, legs and feet. She is rather plain in head and might be better in back. Third went to Rosa, looking well. Lady Snow, vhc., has improved since we saw her last; she deserved her card. Canadian Queen, hc., is not good enough at either end to make a winner. Jill, also hc., was looking well and deserved her card, notwithstanding her plain head and bad shoulders. Peg of Limavaddy, c., is a well-formed bitch in front but weak behind. Temptation, also c., deserved two more letters. She is better than anything in the class except the prize winners. She has a fair head with the exception of poor eyes, good body, legs and feet. She is a trifle wide in front and was not in good condition. Nearly all of the puppies were too young to pass judgment upon. Bang So, a very handsome Bang Bang puppy, was first in the dog class, and Mayflower, a very nicely-made Nick of Naso puppy, in the bitch class. It is mostly guess work in picking out a pointer puppy, and our guess is that Mayflower will not go back on the judge. We liked her best of the lot. There are several others by Nick of Naso that promise well.

ENGLISH SETTERS—(MR. DAVIDSON).

There were forty-four entries in the English setter classes, with six absentees. As a whole they were not quite up to the average of the shows this year; many of them were not in good coat, although, as a rule, they were better in this respect than we expected to see at this season of the year. In the champion dog class Rockingham again beat Foreman; neither was at his best. In the bitch class Liddersdale, not in good condition, had a walk over. In the open dog class first went to Knight of Snowden, looking well. Herz, winner of second, is a nicely put together dog, with good body, legs and feet, he is a beautiful color with evenly marked head. He might be improved in head and tail, and does not stand quite straight on his forelegs. Prince Dash, winner of third, was not at his best. Pendragon, vhc., was the next best in the class, he was all out of coat. Yale Belton, although not at his best, deserved his three letters. Royal Sultan, also vhc., was in good condition and fairly entitled to the place. Prince Jester, hc., was not in good form. Mark, wrongly entered as March, was worth his hc.; he is a fair dog, not very good in head, and was badly shown. Canada, c., was a bit lucky; he is not good at either end, nor is his middle first-class. General Arthur, also c., was shown too thin. Belthus was not for competition, he was looking nicely and had he competed would undoubtedly have been in the money. In the bitch class first went to Cora of Wetherall, not in good condition. Second went to Daisy Foreman, winner of first in the puppy class at New York last spring; she was looking well. Lassie, winner of third, is good in head and coat; she has a bad tail and might be improved in forelegs and feet. Passion, reserve, is just about as good as Daisy or Lassie; she has a fairly good head, is well put together and is the best mover of the three; she is rather small and might stand better on her forelegs. Princess Phœbus, Lulu and Hazel, each hc., received all they deserved. Helen Douglass, c., was heavy in whelp and not fit to show; she whelped during the next night. There was nothing else in the class for competition worthy of notice. The puppies were nothing extra. Forest Belle, the winning bitch, was the best of the lot; she is quite a fair puppy, a bit coarse in head and heavy in ears.

BLACK AND TAN SETTERS—(MR. DAVIDSON).

With the exception of Royal Duke and Nora the black and tan setters were a poor lot. These two were in the champion class and the decision was in favor of the dog. Nora has a trifle the best of it in head, but he beats her at other points. In the open dog class Bluff II., the winner, is fairly good in body, legs and feet and has a flat coat. He has a poor head, is light in tan and lacks character. Dash, second, is far from a good one. He is weak in head, flat-ribbed, long-coupled and lacks expression; he also stands too high on his legs. Tony, third, is not a black and tan and should not have been noticed. Of the other two, unnoticed, one was very bad behind, and the other was all black. Heather Belle, looking fairly well, was the only bitch shown. She received first. No puppies were entered.

IRISH SETTERS—(MR. DAVIDSON).

There were eighteen entries in the Irish setter classes with one absentee. Chief, looking well, was alone in the champion dog class. In the bitch class, Trix, looking fairly well, was placed over Hazel, shown thinner than we ever saw her. She was reduced, however, by hard work and was well muscled and hard. She was all out of coat and feather. Trix beats her in head and had a trifle the best of it in legs and feet, as well as in condition. In the open dog class first went to Gerald. He was looking fairly well, but should have been content with third place, as both Tim and Bruce, winners of second and third, are better Irish setters than he. It was nearly dark when the class was judged which will account for the mistake, as we feel sure that had there been proper light the decision would have been different. Tim was not at his best, but looking better than when we saw him last. He is of the proper type, has no serious faults, and is a very hard dog to beat when in good form. Bruce was looking fairly well. The reserve card went to Chief II., looking very well. Chip, vhc., was in fair condition and deserved his card. Glencho's Boy, hc., was good in coat and color. He appears to be growing coarse in head. In the bitch class Yoube was an easy winner. Ready, second, is very pretty, but too small. Dinah, third, is not a good one. She is very poor in head, was tucked up and not in good condition. Lillie Malone, although in very bad condition was clearly the second best in the class; were she in good form we doubt if Yoube could beat her. She is a trifle heavy in muzzle, which is her worst fault. Had it been light when the class was judged we have no doubt that she would have been placed over both Ready and Dinah. Cat-Foot was the only dog puppy shown, which was perhaps lucky for him, as he has reasons for being afraid of good company. Helen was also alone in the bitch class. She is quite a fair puppy, good in head, coat and color. Her worst fault is just behind her shoulders, but this may improve with age.

SPANIELS—(MR. WILMERDING).

There were thirty-six entries in the spaniel classes, with four absentees. Nine of the others were the property of the judge, and not for competition. In champion field spaniels, Compton Bandit had a walk over. He was not in his usual good form. Niven's Darkey and Lady Abbot were the only competitors in the open class. The first prize went to Darkey, looking well. Lady Abbot, in beautiful coat, deserved her second. In the champion cocker class, Shina, in elegant condition, was an easy winner. Her only competitor, Black Pete, was also in good form. Doc, looking fairly well, beat Ned Obo in the liver or black dog class. The latter is improving and was well shown. In the bitch class, first went to Miss Obo II., a trifle off in coat and not quite up to her usual form. Widow Cliquot, winner of second, is a very good little bitch, with a nice head. She lacks substance and stands a trifle high. Niven's Busy, the third prize winner, we liked better for the place. She is not quite so good in head, but stands lower, has more substance and is better in body, and, taken all round, is a trifle the better of the two, although there is not much to choose between them. Yum Yum, vhc., is a trifle leggy, light in muzzle and lacks substance. Bijou, hc., was too fat to show either good or bad qualities. She is light in head and was in bad coat. In the any other color class, first was withheld and second given to Sparkle, light in muzzle, lacking in substance and too high on legs. Rex, hc., is not so good as Sparkle. In the puppy class first went to None Such, a nice puppy with a good head, nice coat and plenty of substance. Will do to show again. Yum Yum, winner of second, was vhc. in the open class. Adonis, vhc., has a nice coat, but is poor in head and lacks substance. Montague, also vhc., is a fair puppy, but lacks substance and is a trifle high on his legs. Romeo, hc., was lucky. Miss Newton Obo and Miss Bend 'Or, owned by the judge and not for competition, were shown in this class. They have beautiful heads, good bodies and nice coats, and if nothing befals them they will be found among the winners when mature. In Clumbers, the well-known Newcastle, in good form, easily beat Tyne, who was tucked up and not at his best.

FOXHOUNDS (MR. MORTIMER).

Only three foxhounds were shown. Roxey in the champion and Ranger in open class are well-known. In the puppy class Ranger II., a very promising puppy, with good head, legs and feet, deserved his first.

COLLIES—(MR. MASON).

There were 32 collies entered, with four absentees. Rex, the only entry in the champion dog class, was not for competition. Lady of the Lake was also alone in the bitch class. She was not in good coat. In the open dog class first went to Scotson, a very nice, taking-looking son of Dublin Scot. He has a beautiful head, is well formed and has a good top coat. His under coat is a bit scanty at present. He moves well, but carries his tail too high. Nullamore, the second prize winner, was not quite up to his New York form in coat. He deserved the place. Third went to Kenneth, a nice dog with a good head. He was out of coat and not in good condition. Clipper and Bounce, both vhc., were out of coat. Blue Jacket, hc., would have a fair head but for his bad muzzle and heavy ears. He was not in good coat. Lady Ellis was clearly the best in the bitch class, although she was too thin in flesh and all out of coat. Second went to Gem. She is a nice, good-moving bitch and deserved the place. Her coat is short and soft. Rose, third, shows considerable collie character, she might be better in shoulders and is a trifle wide in front. Gypsey, vhc., is faulty in head and ears. We did not like her for the place so well as Miss Penelope, hc., a nice bitch badly shown, she is a bit long coupled and too full in eye, but a better collie than Gypsy. In the dog puppy class Scotson, the winner in the open class, was so far ahead of his only competitor, Tom Brown, that the latter only received hc., had he not been thus handicapped he would probably have received second prize or at least another letter, as he is a fair puppy with bad ears and faulty eyes. The bitches were poor, Madge, the best, received second prize, first being withheld. Jessie her litter sister received hc., both are faulty in ears and the latter is not good in shoulders.

BEAGLES—(MR. ELMORE).

There were twenty-six beagles shown, and all were present but one. The quality all through was of a high order and every beagle in the open classes received notice with the exception of My Maryland, the best one in the under 12in. class, disqualified for over height. Mr. Elmore is a careful, painstaking judge, and made no mistakes except that he should have withheld cards from Nellie and Rover in the puppy class. Both are nice dogs, but show too much basset hound to win in a class for beagles. All the winners except the puppies are well-known. Echo and Melody, the winners, are from the same litter. There is not much to choose between them. Echo has a trifle the best of it in body, while Melody has the best head. She is very good in muzzle. Tempest, vhc., is also very promising. She is weak in muzzle and was not in good form. There were no entries in the basset hound and dachshund classes.

PUGS—(MR. MASON).

There were ten entries in the pug classes, with one absentee. Bradford Ruby, looking well, was alone in the champion class, as was Ko Ko in the open dog class; he is a fair specimen, a bit faulty in head and ears and his tail does not curl close enough. Lady Cloudy, winner in the bitch class, is a recent importation; she is a noted English winner and a very nice little bitch; she might be better in muzzle and skull, and was shown too light in flesh; she is also a bit smutty in color. Tiny, winner of second, won in the puppy class at New Haven this year; she is of nice size, and is fairly good in head. She is smutty and not good in feet. Jessie, vhc., is much too big, except for this she is better than Tiny, although she has no trace and her eyes are too light. Ko Ko, the winner in the dog class, won in puppies with an unnamed one second. The latter is a fair puppy much too heavy in ears.

BULLDOGS—(MR. MORTIMER).

Only one bulldog was shown, a fair specimen.

BULL-TERRIERS—(MR. MASON).

There were seventeen bull-terriers entered, with three absentees. The quality was about the average. Count, looking fairly well, was alone in the champion class. In the open class for large dogs, first went to Grabber. He is quite a nice dog and was well shown. He is a bit weak in head and coarse in tail. Second went to The Baron. He was tucked up, which made his legginess more pronounced. The Earl, hc., might have received another letter had he been in good condition. Judas, also hc., is much too thick in head. In the bitch class, first went to Mr. Dole's recent importation, Lady Tarquin. She is a very nice specimen of the breed, with a capital head, except that she is a trifle undershot. She might be improved in body and tail. Rose, winner of second, is also a good bitch. She is too full in eyes and is faulty in tail. White Violet, shown too thin, was vhc. There were no entries in the class for small dogs. In the bitch class, first went to Venus, a fair bitch, too full in eyes and light in bone. The other entries were absent. The puppies were not good. Lill, the winner, is not good in head and is too long cast. Tuff, second, is too short and thick in head.

FOX-TERRIERS—(MR. MASON).

Of the thirty fox-terriers entered, twenty-four faced the judge, and a nice lot they were. Nearly all of the winners at Newport were present and are fully described in our report of that show. Belgrave Primrose, looking well, was alone in the champion dog class. Richmond Olive was also

alone in the bitch class. She was in elegant form. Her keeper informed us that she was two pounds lighter than when at Newport, and in consequence was looking much better. She beat Valet for the prize for the best in the show. It is due to Valet to state that when this special was judged he was looking very badly, having broken out during the night with sores on his back and was in no condition to compete. He won in the open dog class and was then looking well. Bacchanal, placed second, was looking fairly well. Shovel, third, was well shown, as were Earl Lycester and Raby Jack, both vhc. Raby Tyrant II., hc., was too thin. Lythern Ben, c., is faulty in head, feet and coat. Regent Vox and Stableford Joe were absent. In the bitch class Safety, looking well, scored another win. Marguerite, not at her best, was placed second, third going to Raby Belle, well shown. Diadem was in very bad condition and was not noticed. Nina was absent. All of the puppies were at Newport with the exception of Jersey Trix, who received a c. She is snipy and light of bone.

BLACK AND TAN TERRIERS—(MR. MORTIMER).

Queen, looking well, won in this class. Jet, winner of second, is a very promising puppy with good markings, coat and color; a bit full in eyes and a trifle round in skull, but will be heard from again if nothing happens. Victor, hc., is strong in head, cheeky and carries his tail badly.

TERRIERS—(MR. MORTIMER).

In Irish and rough-haired terriers, Erin, entered as Arion, won first. She was looking fairly well. Fly, the only other entry, was given second; not so good in head, legs or feet as the winner. Only one Bedlington was shown, Zulu. She is too low on her legs and not very good in head. She was entered as bred by Mr. Mortimer. This is a mistake as she was imported. In Skyes, Tanzie, all out of coat, won first. Lady Kate, winner of second, is the better bitch and should have won. She is a fair bitch, a little off in head. In toys, first was withheld and second given to Nellie, a nice little bitch of no particular breed.

TOY SPANIELS—(MR. MORTIMER).

Roscius was an easy winner in King Charles spaniels, second going to Princess, not good in face markings and bad in front. Gipsey, vhc., is faulty in muzzle and skull and light in limbs. Spark, hc., is a Prince Charles. King Victor and King Pippin, looking well, were the only Blenheims shown. The Yorkshire terriers were a poor lot. Lancashire Star, the winner, is short of coat and not good in color on head and legs. The others noticed were a moderate lot of puppies.

MISCELLANEOUS CLASS—(MR. MASON).

Marco, the winner in the class for large dogs, is a fairly good Leonberg of good size, with straight limbs. He is not massive enough. The only entry in the small class was a poor Mexican hairless, not quite hairless and faulty in head. With the exception of the Irish setter puppies in the selling class, there was nothing worthy of notice. The puppies were above the average. A list of the awards was published last week. Following are the corrections and a list of the specials:

In smooth St. Bernard bitches Hospice Kennels' Apollonia and Hermitage Kennels' Thisbe were both very high com. In Great Danes the prizes were withheld, L. Erb's Hector was high com. In champion pointer dogs, small, Robin Adair won. In pointer puppies Floyd Vail's Naso of Devonshire was very high com. In bull-terrier bitches, under 25lbs., F. F. Dole's Lady Tarquin was first and White Violet was very high com. In the selling class two equal firsts and very high com. were won by A. W. Pearsall's Irish setter puppies.

SPECIAL PRIZES.

Best kennel mastiffs, Ashmont Kennels; rough-coated St. Bernards, Hermitage Kennels; smooth-coated St. Bernards, Hermitage Kennels; pointers, Clifton Kennels; English setters, F. Windholz; Irish setters, Max Wenzel; spaniels, J. P. Willey; collies, M. Harrison. Best pointer or setter, F. Windholz's Rockingham; brace of pointers or setters, divided, F. Windholz's Rockingham and Corn of Wetherall and Max Wenzel's Chief and Tina; best get of Duke of Leeds, Hospice Kennels' Jeanne d'Arc; best get of Bonivard, J. W. Burgess' Reue; Old English Mastiff Club's prize for best mastiff, Ashmont Kennels' Ilford Cromwell; best cocker spaniel, J. P. Willey's (two) Shina; owned by a member of the American Spaniel Club, the same; field spaniel, same conditions, A. E. Rendle's Compton Bandit; best pointer, Reserve Kennels' Patti M.; rough-coated St. Bernard, Hermitage Kennels' Duke of Leeds; fox-terrier, J. E. Thayer's Richmond Olive; mastiff in open classes, Ashmont Kennels' Debonair; Newfoundland, D. O'Shea's Bruno; trick dog, J. Harding's black setter Rover; pug, City View Kennels' Bradford Ruby; in open classes, Lady Cloudy; black and tan setter bitch, H. C. Glover's Nora; rough-coated St. Bernard puppy, L. E. Wilmerding's Marchioness; retrieving dog, Max Wenzel's Chief; best get of Black Prince, E. M. Oldham's Lady Abbot; greyhound, C. D. Weber's Mother Demdike; Irish setter in open classes, Park City Kennels' Gerald; black and tan setter in open classes, J. N. Lewis's Bluff II.; spaniel puppy, A. W. Day's None Such; Beagle, W. S. Diffenderffer's Rattler III.; fox-terrier in open classes, A. Belmont, Jr.'s Safety; foxhound, D. O'Shea's Ranger; black and tan terrier, G. D. Woodill's Queen; Yorkshire, A. W. Cabot's Lancashire Star; best in selling class, A. W. Pearsall's unnamed; bull-terrier in open classes, F. F. Dole's Lady Tarquin; English setter under 18 months, G. W. Neal's Daisy Foreman; best collie, J. Van Schaick's Scotson; best get of Foreman, Plantaganet or Mack B., G. W. Neal's Daisy Foreman; get of Boss, J. L. Winchell's Boss's Lady Clare; get of Nick of Naso, G. L. Wilm's Mayflower; best English setter bitch, F. Windholz's Cora of Weatherall; handsomest prize winner, J. E. Thayer's Chieftain; St. Bernard brood bitch with two of her progeny, Hospice Kennels' Sheila with La Duchesse and Jeanne d'Arc. Best Irish setter, Max Wenzel's Chief; pointer sweepstake free for all, C. H. Mason's Beaufort.

THE SAN FRANCISCO DOG SHOW.

Editor Forest and Stream:

In response to your courteous request to give my opinion and a few notes of the recent bench show in this city, I beg to say that my Federal duties and the presence here of the National Encampment of the Grand Army of the Republic, to which I was a delegate, have precluded an earlier compliance therewith. Scarcely has there been a minute at my disposal and this is hurried off in an unusual hour of idleness.

Our city and our State gave glorious welcome to the soldiers. They were here in thousands. Some still stalwart and erect. Others wasted and worn, and crippled by cruel wounds for "Old Glory's" sake. The shot-torn and tattered banners they carried on that day of our great parade, made many a pulse to leap and many a tear spring to eyes of gentle women and of manly men. The children of the schools made the pathway of these veterans velvet with our garden flowers as they passed. Every street was rainbowed with flags to arch the marshal tread of those who had done so much for the Republic's life. It was a spectacle which inspired and instructed. The visit of these soldiers has done lasting good. It has made our people reflect. It has rekindled the fires of patriotism. It has created a grander love for our free institutions, and the principles of a free government and all that good citizenship cherishes in an undivided country. Long will it linger in California's book of remembrance.

First, before speaking of the bench show, let me thank your correspondent "Free Lance," who, in your journal of July 9, so gallantly couched his skilful weapon in behalf of my recently expressed opinions of *many* canine classes here. It was a generous letter and a truthful. Modestly may it be recorded that not only did "Free Lance" agree with your writer, but also did others whose experience and judgment are worth consideration. "Free Lance" came in to announce himself to me just after your paper arrived. His visor lifted, I recognized one of our most respected citizens, whose greyhounds have captured many a trophy on the coursing field, and whose spotless honor is as well known as his modesty is proverbial.

Take it all in all Mr. Editor, it never fell to my lot to look upon a poorer collection of dogs than were gatherd here for inspection last month. There were but three classes exhibited in which appeared any representatives worthy of notice or purchase by a critical judge. Frankness compels me to confess that the opinions written by your humble servant several months ago, were more than sustained. Inasmuch as another correspondent from this vicinage was prompted by his gentle spirit to differ with me, I beg to quote the following words from the San Francisco *Breeder and Sportsman*, an able, independent, and honorably conducted journal, linked with the interests of the best horses, the best dogs, plucky pastimes and high motives; "The non-sporting dogs, of which there were fifty shown in twenty-one classes, sustained Col. Stuart Taylor in the opinion that the non-sporting breeds have no first-class representative in California." I inclose the paper. Add to this the corroborative testimony of the very excellent gentleman who came here to judge, and you will discover that the undersigned did not exaggerate, or put the truth in masquerade. I will not repeat all Mr. Davidson said to me and others. It was very emphatic and indorses my views. A dozen or more, whose large hearts incline them to love good, typical dogs, and good children, (for the man who don't love the first, is cross to the household's darlings), unite their voices in chorus with these. Your learned lover of Latin who chose such a broad-brimmed name as "Vox Populi," over which to chastise any one who dared dispute the perfections of San Francisco's dogs, had not only frightened "lots of us" with the catalogue of indiscretions with which he charged us, but he had quite depressed the undersigned. And I turned from grief to gladness when, wandering about the show, I heard a woman's voice, whose music made the owner beautiful, say to her escort, "Why, Mr. ——, except that pointer Tom Pinch, and one or two more pointers and setters, and that lovely greyhound, and the dear little Yorkshire, there isn't a dog here that paralyzes me." I looked at the siren who beguiled, and thought of those lines in the "Beggar's Opera:"

"If the heart of a man be depressed with cares,
The mist is dispelled when a woman appears."

I braced up again. Where was "Vox Populi?" In vain I hunted him. I wanted to bring him face to face with this dashing creature, who, although she may not have had accurate knowledge of pedigrees and crossings, yet had eyes for symmetry and form and color, which made her words not despicable. She passed onward and away, and the frou-frou of her frock made most exquisite music for one who like myself had been almost entirely defalgrated by that modest man who signed himself "the people's voice." And so I lived again. Come out from thy shell, oh "Vox Populi!" and flaunt thy true flag now in the face of this observing paragon of her sex, "an' thou daresť!" From the corridors of thy long pedigree, the echoes of ancestral fame cry unto thee aloud, "be not ashamed of thy baptismal name, oh! 'Vox!'" Methinks I know thee, Judge!

The exhibition hall was not adapted to the purpose. It was very dark. The judge had too little light on the judging platform. Dogs should be judged in the open air if possible, where there is not only a strong light but plenty of space to walk, jump and run the competitors. They have just as much right to elbow room and a chance to display their points as have horses, or as have yachts to sea room. How otherwise can one critically analyze their forms, powers or characteristics? I never did approve of cramped quarters for a bench show. We should see mastiffs and St. Bernards and all the larger classes, and especially the sporting breeds, run as well as walk, so as to observe their movements in front as well as behind.

Mr. John Davidson, who was engaged to come from the East to judge, paid me the honor of a visit soon after his arrival. I was glad to take him by the hand and "talk dog" with him. For, indeed, it is gratifying to exchange opinions with a man who does not live in a rut and is not afraid to step over the local fence. I found him an honest, affable, impartial man, and a true lover of our canine companions. Mr. Davidson confessed to several of our citizens that with the exception of a few dogs in certain classes, ours exhibited were certainly lacking in quality.

There were seventy-two classes specified on the entry list. Not all were represented. Let us take a few in their order:

MASTIFFS.

Only two were entered. Neither was a good specimen. Both were faulty in shape of head, in ears, in muzzle and general make-up. Their jaws were not square enough, muzzles to long, and both heads lacking totally in mastiff character. Their bodies were too light, especially about the loins, where mastiffs should be strong, and hindquarters deficient in bone and muscle. The dog awarded second prize was too small and his coat too rough. Both were inferior in size, one weighing 123lbs., the other 110. A really good mastiff dog ought to weigh not less than 160lbs., and the grander and bigger he is the better. I mean he should be large-boned and muscular, built for strength and work. I cannot consider any mastiff up to the standard which stands less than 31 or 32in. at shoulder and weighs less than 160lbs. If we can produce dogs of this breed standing 33 and 34in. at shoulder and weighing 200lbs.—massively formed and free from cow hocks—so much the better. Neither of the dogs referred to measured more than 29in. at shoulder, one of them not that, and, deficient as they were in mastiff character, never would have been noticed by our friend Mason, or even by Mr. Davidson, in a class of mastiffs proper. In the bitch class there was only one entry, and she was by no means of true type, and too small. If the owners of either of these could see some of the "cracks," they would not censure Mr. Davidson or me for telling them the truth. It is useless to find fault, however, with dogs here until a No. 1 specimen arrives and we can place good and bad side by side.

ULM, OR GREAT DANE DOGS.

In Great Danes there were three entries, so-called. Only one was entitled to notice. The others were mongrels. The winner of first was a blue bitch of only medium size. Her head was fairly typical, her ears wretchedly cropped. Body strong, loins excellent, broad and deep, legs muscular and not too long for body. Dogs of this breed are often cow-hocked. She was not. I suspect a little cross somewhere. She was shown too fat and lacked character and stature. Great Danes (sometimes erroneously called Siberian bloodhounds) should never be permitted to make flesh, so as to impede activity. They should be lithe and agile, ready to do and dare for a man's life. And the males should stand not less than 31 or 32in. at shoulder, females not less 29in. I saw two or three grand specimens in Europe, in 1881. One at Vevey, Switzerland, was a nondescript animal, 33in. at shoulder. One brindled beauty in Vienna stood 34in. easy measurement under the standard. He was active as a tiger. In fact he was almost as beautiful as the jungle's king. His master, by a mere motion of his hand, made him clear a light pole placed on two uprights, 5ft. 6in. from the ground. He swam like a seal. The courteous gentleman was very proud of this grand fellow, and refused to let me take him from his Austrian home. Why don't we breed more of these splendid creatures? Not the kind the butchers and breweries in the East generally own, but the real typical Great Danes. When well reared and trained, they are not savage, and are worthy ornaments of country homes.

To return to our bench show, the other specimens of the breed here were wretched. Prizes should have been withheld. I may be too strict in my notions, but it seems to me, when a dog does not comply with the standard in any respect, he should be set aside or judged in the miscellaneous class. This is the only way for a judge to instruct exhibitors as to form and quality.

ST. BERNARDS.

In the St. Bernard class three mongrels were entered. Here Mr. Davis was frank enough to state that not one was a St. Bernard. He protested against giving any prize, but told me when I asked him how he could possibly award any of these dogs a ribbon, that the superintendent, Mr. Leavesly, had requested him to make awards. This was clearly wrong. No superintendent or manager has the faintest right to interfere with a judge or tell him to bestow prizes on unworthy animals. If that official states that the dogs shown in a certain class do not represent the breed the collars should remain undecorated. The superintendent goes out of his way to even offer a suggestion, and the judge should stoutly decline to comply with any. Why give a mongrel a badge of merit? Can we by doing so teach owners that their dogs are faulty? In this instance a first prize was given to a fair-sized (by no means large) black and white dog named Ben, with not one single attribute of a St. Bernard. In a country show in England, out of good nature, a judge might award such a dog hc., as a moderate form of Landseer Newfoundland. His head was somewhat like the head of that breed. He was simply one of the cross-bred dogs we used to see years ago, misnamed Newfoundlands. Doubtless he was intelligent and loved by his owner. But for all that he was a mongrel and should have been placed in a miscellaneous class. Who ever saw a black and white St. Bernard? Even the purely white are very rare. I believe the famous Hospice was all white. Now the owner of "St. Bernard Ben," as this California dog is called, imagines he owns a St. Bernard. There is not one in this city.

NEWFOUNDLANDS.

Nor is there a Newfoundland here. In that class two, so-called, were shown. One was only a big dog. Prizes were awarded, but should have been kindly but firmly refused. Only one bitch was shown. She was better than the dogs, but far from typical. If the gentlemen who own these could have seen old Mayor of Bingley or Leo in their palmy days they would know how far their dogs are from being true Newfoundlands, and would not feel hurt by this opinion. Mr. Davidson's heart, which naturally beats with generosity and kindness, prompted him to award prizes at the superintendent's suggestion to these larger dogs; but what is the result? No benefit effected. The same faults in form and quality will be perpetuated in breeding. Owners, jolly and glad to have walked off with honors and ribbons, will put their fingers to their olfactory organs and laugh at those who, in no unkind spirit, are bold enough and have knowledge enough to tell them the truth. My good friend the superintendent should never have suggested awarding first favors to inferior dogs, and my other esteemed friend, Davidson, judge, ought never to have let his kindness kill his conscience. We are forming a new kennel club now, and it's a horse against a hairpin that no superintendent of its bench show will ever be allowed to "run the thing" that way.

GREYHOUNDS.

Strange to say, in the greyhound dog class there was but one entry. This was the big, little red dog Tullamore, a really good specimen of the modern courser. His chief fault is that he is a trifle under size. Aside from this, a better made, stronger-bodied, grander-limbed, more typical greyhound it will be hard to find. We have a very few dogs here more "taking" to the eyes. It is true he has his faults. His neck is a little short, if we are guided by the old rule that the greyhound's neck should be like that of the drake. But it is wonderfully muscular, and not a bull neck. He is quick to kill and has won several courses here. He also has been beaten by larger dogs. His back is a trifle short, perhaps, measured from the setting of the neck on the shoulders to the last rib, but it seems as strong as iron. His back ribs are very deep and well spread, the loins broad and massive; his hindquarters all to be desired; stifles superbly developed. Greyhound men say there are dogs here which can leave him behind in a good run over a nice long stretch of ground, such as we have on the plains near Modesto. But, with the exception that he is a very small dog, I like him as well as any greyhound I ever saw in this country, next to Memnon, Mother Demdike, Friday Night, or old Speculation that was so famous in California a few years ago. His tail is just as good as his head, and with many greyhounds here this is not the case. And some of our best greyhounds have that abomination to my vision, prick ears. A greyhound's ears should be small and fall gracefully. There were certain reasons why in this city and State, where so many good greyhounds are owned and coursing is so popular, there were not more entries in this class. It is not my place to give them. Only two bitches were shown in their class—fair specimens. Suffice it to say that great surprise was manifested by the judge that so few greyhounds appeared. But let our Eastern friends send their flying beauties here, and they will find large, swift hares (larger and swifter than the English), grand coursing ground, and a great many marvelously speedy dogs. Let them come to race, and they will find added to all this a warmth of welcome, hearty as "our climate is glorious."

FOXHOUNDS.

The foxhound dog class was wretched. Not one deserved a notice. All were defective in head, in ears, and in quality, showing generous crosses. A fair bitch was shown, but in a really good class she would not be mentioned.

POINTERS.

In the larger class there was one dog, Tom Pinch, by Wise's Tom—Beulah, which was a very good specimen of the modern type of his breed. His head is not quite what it ought to be, lacking as it is, somewhat in character. His neck is good, body good, tail fair, not carried quite as straight as I like. He is rather leggy and light in bone, but take him all in all he is a clean cut, "taking" dog. If Beaufort and Tom Pinch were side by side, and I were judging, without a moment's hesitation the blue ribbon would decorate the former. He is a more muscular dog, with better loins, and looks as if he would last longer afield. Tom Pinch has a good deep chest, but might have more depth in the back ribs. He is doubtless a fast dog and a pointer, but I do not enthuse over him, only as he appeared better than any shown in same class. The judge spoke very kindly of most of those in this class. I cannot quite agree with him. They were to my eyes only a fair lot. Each had some glaring fault and a tendency to foxhound or sickle tail. In several the head was woefully deficient in occipital development, not broad enough and lacking in furrow, and the nose was too pointed. In others the lips were too long or had too much flew. I may seem hypercritical, but not one of those was to me the fulfilment of my ideas of what a pointer proper should be. And I always will maintain there were grander, more typical pointers twenty years ago than now. It is true they were heavier made, but they showed more muscle, more quality, more style. I don't care a penny for your long-nosed, slim-bodied, hound-tailed pointer. Give me more character and less speed. The famous old dog Don, owned by Mr. Vandevort, was shown. He is, I am told, a grand field dog, but he certainly is not a bench show dog.

Tom Pinch, winner in the large class, is a lemon ticked dog. My sense of color (very defective it may be) does not permit me to fall in love with lemon ticks. If I were a man of wealth, owning a large kennel, never would lemon and white pointers be bred therein. This color has to me a measly, wishy-washy look, like the faded calico frock of a freckle-faced chambermaid in a third class country tavern, where ornamental fly-paper hangs over the soiled table cloth. The first pointer of any fame I ever saw to show this marking was Sensation; and this color, together with his faults,

did prejudice me against him. I had been on this coast for many years, and my eyes were accustomed to the liver patches and white of the pointers left behind me. And I prefer that color yet. Apropos of this, I may say that Mr. Davidson quite agrees with my opinion of Sensation and Croxteth, long ago expressed in your columns. I had been much amused here to listen to the lavish praises of both these dogs, which he had never seen, by the owner of a Sensation puppy. He said he believed they were the greatest pointers alive. I told him what Mr. Davidson and what Mr. C. H. Mason (whom Davidson considers the best all-round judge he knows) said, but even this did not convince, and he "holds the same opinion still." Strange how some people take notions.

There were several other *fair* pointers shown. In the small class Climax (Bang Bang—Bellona) was awarded first. I cannot call him or his two companions "splendid," as does my friend the accomplished kennel editor of our *Breeder and Sportsman*. No particularly glaring faults, but a lack of quality and general style and character. I will frankly confess that many of these dogs were only looked at in their kennels. A glance is sufficient for any man familiar with pointer *character*. One man's vision or judgment may be harder to please than another's; and what I have said has been written almost with fear and trembling, lest I wound where it would be more agreeable to appease. Because I love my neighbor, or my neighbor's wife, is no reason why their dogs should be called perfect. Although I must confess one would be far more likely to find favor in the eyes of both could one give taffy instead of truth! We all have our ideas of form and color and style. Mine, unfortunately, are exacting, and unless I can gratify them I prefer to be minus the offending objects.

SETTERS—ENGLISH, IRISH AND BLACK AND TAN.

In these classes I prefer not to go into details. Mr. Davidson may not be hard to please. He judged the classes and made the awards, and I am certain was conscientious and correct, according to his vision and knowledge of form. But with all due courtesy and respect, I saw not one English setter quite abreast with a high standard, and capable of winning in first-class company. You ask me where the faults were. I respond, it would take too long to tell. They were many and can be summed up in the five words, lacking in quality and substance. There was not a stylish dog among the lot; most were coarse in make-up and coat, and off in form. As they went the judge, it seems to me, awarded properly: The field qualities of many of these dogs may be splendid, but we are not now talking of field qualities or pedigrees, it is their show features which are under discussion. An exhibitor said to me when I reluctantly, at his request, pointed out certain defects in his dog, "but he's got a grand pedigree and ought to win!" He did win a ribbon. But Mr. Davidson did not give it to you, Mr. Exhibitor, on account of his pedigree, but because he was better than many in same class.

In Irish setters, my good friend Mason would have withheld first prizes for dogs or bitches. That Mr. Davidson did not was owing to his desire, I believe, to place the best of a poor lot. This may be just, but it is not instructive. Give no dog a first prize who lacks the essential features demanded by the standard. Heads were bad, ears set on too high in many and very coarse, eyes of some were pale in color and of a gooseberry hue, some noses were black, some bodies were bad, loins tucked up, and in nearly all the flags were too bushy and carried with a curl. One of the prize winners, which I especially noted, was one of the coarsest-looking animals ever entitled to the name of Irish setter. Why, if such a dog as Elcho, Jr., Chief, Glencho, or even old Berkeley, were by chance to wander hitherward, you might *possibly* convince some of the good fellows here that, in comparison with them, their favorites were like water unto wine or palest moonlight to the sun's beams at noontide. Otherwise, if judges go on awarding honors to meager merit you cannot persuade owners they do not show clinkers. I think it would be a grand thing if the judges of setters and pointers could be accompanied by a No. 1 specimen of each of these breeds whenever he visits a place like San Francisco, so far from the great centers, and after he has judged these classes then let emerge from his hiding place the champion of either type he has brought and exhibit him in comparison. This would be a practical lesson, and with progressive men would effect much good.

The black and tan setters, of which seven or eight were entered, were so inferior that comment is uncalled for. The winner of first in the bitch class, Maud, was fathered by a Gordon and mothered by a white and liver English setter named Juno, she by Belton II. out of Belle. Great Cæsar! How could the owner, knowing this, enter her in this class? How could the superintendent allow it? How could the judge be so imposed on? Not one of these animals would have received even he, in good company. They ought to have been excluded. Faults were, lack of type, form, quality. They were not black and tan setters, but mongrels.

Of the remainder of the classes there were one or two fair (only fair) Irish water spaniels, not one typical bull-terrier, and only one good Yorkshire. His body color was not quite dark-blue enough for the standard, and he lacked in the rich golden tan about head and legs; but he was a handsome little dog and deserved his honors.

SPANIELS.

A poorer lot of cockers I never saw. There was not a single field spaniel, and yet my excellent friend Mr. Davidson gave prizes to one black and white and one liver and white so-called field spaniels. One of these dogs, Snipe, winner of first, weighed 55lbs. and was liver and white. The other winner was a black and white bitch, weighing 35lbs. Black is the true and only color for this valuable breed, and my kind-hearted friend, the judge, certainly was in error when he made any award in this class. If exhibitors would only read "Stonehenge," Dalziel, or Vero Shaw, they would never make such a mistake as to enter black and white mongrels in the field spaniel class. There is almost as much difference between the true cockers and these black favorites as there is between a St. Bernard and a Newfoundland—a difference in head, ears, nose, size, and in coat and color. A cocker is shorter in back, higher on the legs, and altogether of another conformation. I have never seen a genuine field spaniel in San Francisco, and I doubt very much if there is a true type of the cocker. If there is, the undersigned will be very glad to see him. There certainly was not one in our recent show deserving even a third prize.

FOX-TERRIERS AND PUGS.

The fox-terriers were simply third cousins of some fair specimens of this gallant little warrior.

The pugs were tolerable. The present champions of this useless and ugly breed have no reason to fear dethronement.

BULLDOGS AND BULL-TERRIERS.

Not a bulldog showed his pugnacious phiz. There is not one owned here. As for the bull-terriers, they were the measliest looking lot you can imagine. Not one typical. All but one were patched with yellow or brindled. The little bitch which captured the blue was the best specimen. She was short-headed, had brindled ears and a thick tail. Others were of the old-fashioned fighting stock, and would have been excluded from an Eastern show. But most of them are battle-scared warriors, and their fond owners are ready to back them against their more beautiful and longer-jawed Eastern or foreign prototype. Here again the judge could have refused prizes. I know that he wanted to decline awards in many classes, but was prevailed upon to make selections. Well, perhaps this was right. Many had gone to the trouble and expense of entering their pets, and thought they were clearly entitled to some recognition. But would it not be wiser and better at all our bench shows, where the standard is only half way reached, to bestow only second and third prizes or vhc.?

I like Mr. Davidson. He is a manly man. He takes great pains with his classes. I would like him all the better if only he will, in the interests of improvement, utterly ignore inferior specimens of dogdom, and refuse honors to trash. From his own standpoint, doubtless, he was right in thus handing out the ribbons. Even the most meagre merit in the midst of a bad lot deserves commendation. So a mildly mischievous boy in a school of miscreants deserves a prize for good behavior. In some respects this bench show has effected a benefit. In others it has helped to perpetuate error. Far better give only a dozen prizes in sixty or seventy classes, to the dozen which are true type than scatter favors freely as the sower sows his seed. Let us follow the standard in every case, and sift wheat from chaff. Never let us say, "this chaff is better than that chaff," or "this mongrel than that mongrel." So only can we forge ahead.

Again and still again, I beg to say that what my poor pen has written has been with no unkind spirit. It is with "malice toward none." It is as a lover of typical dogs my humble opinions are given, with no intention to worry or to wound.

It is with a sincere hope that others from all parts of our common country, wherever men love manly sports and merit, wherever they have enthusiasm for the highest type of animal life, may be induced to come to the front and champion the domain of doggy perfection and the expulsion therefrom of worthlessness.

Let us never let down the bars to nondescripts. Let us award first medals only to the meritorious. S. T.

SAN FRANCISCO, Aug. 30.

THE AMERICAN KENNEL CLUB.

THERE was a meeting of the American Kennel Club Sept. 15 at the rooms of the Down Town Club, 50 Pine street, New York, Mr. Elliot Smith the president in the chair. All of the clubs composing the Association were represented except the Cincinnati Sportsmen's Club, the New Haven Kennel Club and the National Field Trials Association. The delegates were Messrs. J. O. Donner, Westminster Kennel Club; W. H. Child, Philadelphia Kennel Club; W. Wade, Western Pennsylvania Poultry Society; T. C. Faxon, New England Kennel Club; C. M. Munhall, Cleveland Bench Show Association; C. J. Peshall, New Jersey Kennel Club; E. K. Sperry, Hartford Kennel Club; M. Seabury, Rhode Island Kennel Club; and James Watson, Hornell Kennel Club. The report of the treasurer showed a credit balance of $44.30. The president announced that the Hornell Kennel Club was a member of the Association. The application of the Wisconsin Kennel Club for admission was laid on the table and the secretary was instructed to request the club to forward a copy of their constitution and by-laws. The explanation of Mr. L. H. Whitman, relative to the non-payment of the special prize at Chicago, was accepted. The committee appointed to draw up a rule to govern action in cases of protest reported proigress and the matter will come before the next meeting. The committee appointed to confer with the proprietors of the A. K. R. and A. K. S. B. reported that the latter was willing to transfer its publication to the Club, and that the A. K. R. refused to do so. Messrs. J. O. Donner, T. C. Faxon and A. P. Vredenburg were appointed a committee to decide upon the advisability of establishing a stud book by the Club. It was voted to sustain the New England Kennel Club in disqualifying H. M. Perry at their last show, and Mr. Elliot Smith was appointed a committee to ascertain upon what grounds the disqualification was made and report the facts at the next meeting. The meeting then adjourned subject to call by the president.

THE AMERICAN SPANIEL CLUB.—The annual meeting of the American Spaniel Club was held at Waverly, N. J., on Sept. 15. It was well attended. Many important subjects were brought up and discussed, and the club bids fair to be one of our strongest specialty clubs. The officers elected for the ensuing year are as follows: President, Mr. S. R. Hemingway, of New Haven; Secretary and Treasurer, Mr. A. Clinton Wilmerding, of New York; Executive Committee—Messrs. S. R. Hemingway, A. Clinton Wilmerding, J. F. Kirk, J. P. Willey and James Watson. The finances of the club were found to be in good condition. The membership list foots up to twenty-five. The dues will not be increased this year. The subject of a specialty show, to be held this winter, was brought up and received with favor. The Committee on Standards for Field and Clumber Spaniels reported, and the standards will be printed and sent to members for approval.

EASTERN FIELD TRIALS CLUB.—New York, Sept. 15. *Editor Forest and Stream:* At a meeting of the Governors of the Eastern Field Trials Club held on Sept. 14, 1886, I was instructed to notify you of the following result of said meeting: 1. A number of new members were elected. 2. That Messrs. Bergundthal, Orth and Wilson have been requested by the Governors to judge the Pointer Stake, and that Messrs. Bergundthal, Orth and Smith have been requested to judge in all other stakes. 3. That the Members' Stake will close the night before the race instead of October 1, as now advertised, and that ownership of dogs is to date from October 1 instead of being owned three months previous to closing of stake.—H. E. HAMILTON, Secretary *pro tem.*

THE WESTERN FIELD TRIALS ASSOCIATION.—Kansas City, Mo., Sept. 18.—*Editor Forest and Stream:* In the absence of Mr. Van Horn, the secretary of the Western Field Trials Association, I am requested to write to you to announce the names of the judges for the coming trials, which are to begin at Abilene, Kas., Nov. 8. They are Arthur Merriman, of Memphis, Tenn.; G. E. Poyneer, of Williamsburg, Ia., and John D. Johnson, of St. Louis, Mo. The entries for All-Aged Stake close Oct. 9, $10 to nominate, $15 additional to start.—A. A. WHIPPLE.

THE ST. JOHN DOG SHOW.—St. John, N. B., Sept. 13.—*Editor Forest and Stream:* We have secured Mr. Chas. H. Mason, Brooklyn, N. Y., to officiate as judge at our approaching bench show in this city. Other judges will be appointed as may be necessary before the opening of the show. The premium lists and entry blanks are now ready, and intending exhibitors will be furnished with a copy and any other information they may desire upon addressing H. W. WILSON, Secretary.

THE COLLIE CLUB.—There was a meeting of the Collie Club at Waverly Sept. 14. The election of the officers chosen at the meeting Aug. 26 was ratified, and Mr. Thos. H. Terry was added to the executive committee. The by-laws were revised somewhat.

KENNEL MANAGEMENT.

☞ **No Notice Taken of Anonymous Correspondents.**

O. H. S., Exeter.—My dog is an English mastiff 7½mos. old and weighs nearly 100lbs. About two weeks since I noticed he began to lick one of the middle toes of his forefoot. Upon examination I found it looked red and inflamed. He continues the practice and grows worse. His paws are immense. Now do you think he drags it or hits it, he is so very large he is awkward and clumsy, or has he some humor or something of the kind. He has always been well and hearty? Ans. Get some balsam of Peru ointment and apply it night and morning to the sore toes. Give the dog five drops of Fowler's solution of arsenic in the food twice daily.

A. S. R., Ohio.—My 4mos. old pug puppy at times (more frequently after eating) tucks up her belly, shivers and acts as though in pain. Two years ago one died with the same symptoms. To that one I fed anything, cake, candy, meats, nuts, etc., and as much as she wanted. Thinking such treatment might have been the cause of her death, I have been particular in feeding my last one, giving her beef soup and bread, and a little soaked meat. What would you recommend as the most wholesome diet? What causes such symptoms? What book would you recommend on the subject of breeding and care of dogs? Ans. Your present method of feeding is good. The puppy very likely has worms. Watch the passages after giving a teaspoonful of castor oil to see if there are worms. The best medicine for a general tonic and stimulant to digestion is Fowler's solution of arsenic in three drop doses three times daily in the food. If you discover worms report to us. Ashmont's book on diseases of dogs is one of the best.

J. H. A., Saylesville, R. I.—An English pug has a very bad humor, caused doubtless by eating fat meats, etc., from neighboring swill tubs. About six weeks ago the hair all came off the middle of her back. She scratched this spot and it soon became very sore. I put on blankets, gave carbolic soap bath every other day and used cuticura ointment and it all healed over, except what might be called festers—places as big as a two-cent piece—under which there is evidently matter or water. Now, other sores seem to be coming. The hair has come off on one flank, one forward leg, the throat and a small place on back of neck which is now commencing to bleed and matterate. The tips of both ears have small sores on them. Ans. Keep the sores clean with warm water and castile soap. Apply the ointment of balsam of Peru night and morning. Protect the parts from scratching and biting. Give five drops of Fowler's solution of arsenic in the food, twice daily.

KENNEL NOTES.

KENNEL NOTE BLANKS.—For the convenience of breeders we have prepared a series of blanks for "Names Claimed," "Whelps," "Bred" and "Sales." All Kennel Notes must be sent to us on these blanks, which will be forwarded to any address on receipt of stamped and directed envelope. Send for a set of them Sets of 200 of any one form, bound, for retaining duplicates, sent postpaid, 30 cents.

NAMES CLAIMED.

☞ **Notes must be sent on the Prepared Blanks.**

Harvest Queen, British Queen and Rustic Queen. By Thomas W. Mills, Montreal, Can., for brindle bull bitches, whelped July 31, 1886, by Guillermo (A.K.R. 671) out of Patti (A.K.R. 2528).

Neptune. By F. C. Hand, Rome, Ga., for lemon and white pointer dog, whelped March 19, 1886, by Fritz (A.K.R. 268) out of Bird (A.K.R. 1658).

Flida. By F. C. Hand, Rome, Ga., for orange and white setter bitch, whelped March 11, 1885, by Bismark II. (Bismark—Nellie) out of Vic (Yankee Dan—Leda).

Helen. By I. H. Roberts, Moorestown, N. J., for red Irish setter bitch, whelped Dec. 4, 1885, by Bruce (A.K.R. 54) out of Hebe (A.K.R. 976).

Irish Laddie. By L. & J. Backer, South Glastonbury, Conn., for red Irish setter dog, whelped May 17, 1886, by Glencho (Elcho—Noreen) out of Tara (Nimrod—Sweetheart).

Prince. By H. A. Pratt, North Middleboro, Mass., for white and liver ticked pointer dog, whelped July 12, 1885, by Sir Philip Sydney (Fosco—Kit) out of Topsy (Jake—Bess).

Mayflower Mixture. By Wm. T. McAlees, Philadelphia, Pa., for white, black and tan fox-terrier bitch, whelped July 9, 1886, by Mixture (Spice—Fairy III.) out of Warren Lady (Brockenhurst Joe—Swansdown).

Harry A. By N. Wallace, Waterbury, Conn., for black, white and tan English setter dog, whelped Nov. 3, 1885, by Mack (Perry's Pete—Knight's Tip) out of Jennie III. (Foreman—Jennie).

Gladstone and Edelweiss. By the Hospice Kennels, Arlington, N. J., for white and orange St. Bernard dog and bitch, whelped March 31, 1886, by Knechtenhofer's Hector (Targg—Bassa) out of Amy (Prinz—Mino).

Laddie. By W. Stewart Diffenderffer, Baltimore, Md., for white, black and tan beagle dog, whelped May 25, 1886, by Bannerman (A.K.R. 1709) out of Trinket.

Forest King, Rowdy and Lady May. By W. Stewart Diffenderffer, Baltimore, Md., for beagles, one white, black and tan and one white, tan and black dog and one white, black and tan bitch, whelped July 20, 1886, by Rattler III. (A.K.R. 2708) out of imported Myrtle (Minstrel—Handmaid).

Leigh Doane III. and Betsey Lee. By Wm. H. Child, Germantown, Pa., for red Irish setter bitches, whelped Aug. 5, 1886, by Bruce (A.K.R. 54) out of Leigh Doane II. (Chief—Leigh Doane).

Editor Forest and Stream: I own Argus II., and as he took first at St. Johns, N. B.; first and special at New Haven, and second at Boston in puppy class in 1885, and also has served several bitches under that name, will Mr. C. T. Brownell, of New Bedford, Mass., please change the name of his dog to something else, and oblige—GEO. E. BROWNE (Dedham, Mass.).

BRED.

☞ **Notes must be sent on the Prepared Blanks.**

Bella—Teddie. N. V. Ketchum's (Savannah, Ga.) Skye terrier bitch Bella (A.K.R. 3351) to his Teddie (A.K.R. 3342), Sept. 16.

Passion—Belthus. W. Tallman's (Tarrytown, N. Y.) English setter bitch Passion (A.K.R. 3224) to H. F. Schellhass's Belthus (Rock—Meg), Sept. 16.

Lady Clare—Blarney. I. H. Roberts's (Moorestown, N. J.) Irish setter bitch Lady Clare (Elcho—Rose) to E. W. Clark, Jr.'s, Blarney (Bruce—Luray), Aug. 1.

Jessie—Blarney. I. H. Roberts's (Moorestown, N. J.) Irish setter bitch Jessie (Elcho—Norcen) to E. W. Clark, Jr.'s, Blarney (Bruce—Luray), July 24.

Little Nell—Bruce. I. H. Roberts's (Moorestown, N. J.) Irish setter bitch Little Nell (Elcho—Rose) to his Bruce (A.K.R. 54), Aug. 3.

Effie Deane—Nullamore. Dr. J. P. Gray, Jr.'s (Utica, N. Y.) collie bitch Effie Deane (A.K.R. 3817) to Chestnut Hill Kennels' Nullamore (A.K.R. 3717), Sept. 4.

Nora—Hero III. Jas. Rawles's (Bryn Mawr, Pa.) mastiff bitch Nora to Victor M. Haldeman's Hero III. (A.K.R. 1765), Aug. 31.

Lancaster Queen—Hero III. Jos. R. Trissler's (Lancaster, Pa.) mastiff bitch Lancaster Queen (Dread—Lancaster Lass) to Victor M. Haldeman's Hero III. (A.K.R. 1765), Sept. 11.

Nellie D.—William Tell. J. H. Jewett's (Worcester, Mass.) pointer bitch Nellie D. (Vandevort's Don—Beckworth's Daisy B.) to C. A. Parker's William Tell (A.K.R. 2640), Aug. 5.

WHELPS.

☞ **Notes must be sent on the Prepared Blanks.**

Belline II. The Hospice Kennels' (Arlington, N. J.) smooth St. Bernard bitch Belline II. (A.K.R. 3033), Sept. 5, twelve (six dogs), by their Hector (Apollo—Thyras); two dead.

Jessamine. I. H. Roberts's (Moorestown, N. J.) Irish setter bitch Jessamine (Killarney—Lill III.), Sept. 7, eight dogs, by his Bruce (A.K.R. 54).

Swallow. Wm. Eaton's (New York) Irish setter bitch Swallow (Rufus—Flora), Sept. 9, seven (five dogs), by E. B. Convers's Burke (Elcho—Noreen).

Jessica. Geo. E. Browne's (Dedham, Mass.) Gordon setter bitch Jessica (Bailey's Tom—Shattuck's Cremorne), Aug. 15, ten (eight dogs), by his Argus II. (Argus—Beauty).

Delph Viva. Beech Grove Farm Kennels' (Beech Grove, Ind.) mastiff bitch Delph Viva (A.K.R. 1632), Sept. 9, six (two dogs), by Geo. E. Townley's Ashmont Victor (Hero II.—Ashmont Lady).

Madge. P. H. D. Victor's (Ottawa, Ont.) Clumber spaniel bitch Madge (Ben—Joan) Sept. 13, five (one dog), by F. H. F. Mercer's Johnny (Ben—Joan).

SALES.

☞ **Notes must be sent on the Prepared Blanks.**

Davy Lindsay. Dark sable collie dog, whelped April 20, 1886, by Ben Nevis out of Lady Mac (A.K.R. 2715), by J. D. Shotwell, Rahway, N. J., to Houghton Farm, Mountainville, N. Y.

Madge. Sable and white collie bitch, whelped April 20, 1886, by Ben Nevis out of Lady Mac (A.K.R. 2715), by J. D. Shotwell, Rahway, N. J., to Rowland P. Keasbey, Newark, N. J.

Queen Bird. White, black and tan beagle bitch, whelped March 26, 1885, by Ringwood (A.K.R. 2202) out of Birdie, by W. Stewart Diffenderffer, Baltimore, Md., to E. W. Jester, St. George's, Del.

Touser. Black cocker spaniel dog, 1yr. old, by Doctor out of Mattie, by Dan O'Shea, London, Ont., to H. S. Lang, Corning, N. Y.

Grouse. Orange and white English setter dog, whelped January, 1885, by Prince Phœbus out of Rose, by Dan O'Shea, London, Ont., to H. S. Lang, Corning, N. Y.

Freda. Orange and white English setter bitch, whelped Oct. 16, 1881, by Goodsell's Prince out of Snip, by John J. Ohrt, Burlington, Ia., to G. Holdridge, Omaha, Neb.

Pendragon. White, black and tan English setter dog, whelped June 11, 1883 (A.K.R. 2360), by Reserve Kennels, Cleveland, O., to Col. G. T. Leach, New York.

Prince. White and liver ticked pointer dog, whelped July 12, 1885, by Sir Philip Sydney out of Topsy, by Robert Leslie, Lynn, Mass., to H. A. Pratt, North Middleboro, Mass.

Lead. Beagle dog, age and pedigree not given, by E. W. Jester, St. George's, Del., to Wm. Silvey, Philadelphia, Pa.

Pearl. Italian greyhound bitch (A.K.R. 758), by E. W. Jester, St. George's, Del., to F. L. Woodbridge, Newark, O.

Drive. Beagle dog, age and pedigree not given, by E. W. Jester, St. George's, Del., to Wm. Silvey, Philadelphia, Pa.

Cloudie. Black and tan collie bitch, age and pedigree not given, by E. W. Jester, St. George's, Del., to Tom Blythe, Peale, Pa.

Morning. Black, white and tan setter bitch (A.K.R. 41), by E. W. Jester, St. George's, Del., to J. C. Lassell, Smyrna, Del.

Prince. Fawn, black points, mastiff bitch, whelped June 8, 1886 (A.K.R. 3918), by Victor M. Halde man, General Wayne, Pa., to J. D. Freeborn, Cheyenne, Wyo. Ter.

IMPORTATIONS.

Gletscher and Edelweiss. White and orange smooth-coated St. Bernard dog and bitch, whelped March 30, 1886, by Knechtenhofer's Hector (Turgg—Rassa) out of Amy (Prinz—Mino), by Hospice Kennels, Arlington, N. J., from A. Knechtenhofer, Thun, Switzerland.

RANGE AND GALLERY.

THE CREEDMOOR MEETING.

CREEDMOOR, L. I., Sept. 13.—With a strong northwest wind blowing across the range and exercising a chilly influence on both spectators and contestants, the opening of the fourteenth fall meeting of the National Rifle Association at Creedmoor this morning could not be described as exactly cheerful. The arrangement of the programme was capital so far as the convenience of the shooters was concerned. There were several continuous matches for those who wished practice and pool target as well, while the important team contests were thrown to the end of the week when all the men who have been making a week of it ought to be in good shooting trim.

Notwithstanding the wind, which blew across the range at the rate of 20 miles an hour, the shooting to-day was good. The competitors were mainly men of the New York or Brooklyn regiments. The matches were, as stated, all continuous, with the exception of the Wimbledon Cup match. The cup is valued at $500, and was presented by the National Rifle Association of America. It is shot for at 1,000yds., any position without artificial rest allowable. Until 1884 it had never remained in any winner's possession for more than one year. In that year J. W. Todd won it, and also in the next, and again to-day with the score of 115 out of a possible 150. Gen. Geo. W. Wingate led in the Directors' match with 20 out of a possible 25. In the Governor's match F. G. Rabbeth lead with two full scores of 35. In the Judd match, which is shot over a 200yds. course with any military rifle, Capt. Ezra De Forest, the crack shot of the Twenty-third Regiment, lead with 33 out of a possible 35. T. J. Dolan, of the Twelfth Regiment; C. B. Pratt, of Pennsylvania; W. M. Farrow, of the Newport Artillery; and John F. Klein, of the Seventeenth Separate Company, of Flushing, each placed 32 to his credit. Another good record was made in the Steward match, over a 200yds. course, a sitting, kneeling, or standing position being allowed. Geo. Joiner, of the Twenty-third Regiment, led with a full score of 25, and H. T. Farrell, of the Twelfth Regiment, follows close with 24. J. G. Bordenstein, J. F. Klein and R. McMillan each have obtained 23.

Creedmoor, Sept. 14.—The second day of the fall prize meeting of the National Rifle Association, at Cleedmoor, was ushered in with a breeze which would have filled a yachtsman's heart with joy, but which was regarded with great disfavor by the marksmen. It was the worst sort of a wind to shoot in, technically called a "fish-tail" wind, blowing parallel with the range and varying a point or two almost every second. John I. Thompson, who keeps a record of the wind, the state of the thermometer and the barometer, and does many other useful things, reported that this particular "fish-tail" was passing over Creedmoor at the rate of from 10 to 14 miles an hour. Toward evening it moderated somewhat, and Lieut. Zalinski extended the time of the shooting to give the men a chance to pick up. Visitors to the grounds were more numerous than on the first day.

The event of to-day was the Shorkley match, open to all comers, any position allowed, shot over ranges of 800, 900 and 1,000yds., with any military rifle. There is a first prize of $20, a second of $15, five of $10 and five of $5. There were 14 entries. The "fishtail" wind was complained of more in this match over the long ranges than in the other matches, which were over the 200yds. range. F. J. Rabbeth, of Massachusetts, won the match with a score of 129 out of a possible 150. He shot lying on his back, crossing his legs through the sling of his rifle. Capt. Hinman was at first credited with the second prize. He discovered an error which placed him third and informed Lieut. Zalinski of the fact. The change was made, but Capt. Hinman received a compliment from Lieut. Zalinski which repaid him.

Not much was done in the continuous matches, although in the Steward match Capt. De Forest made the handsome score of 24 out of 25. Capt. Thompson and F. J. Rabbeth also made good records.

Creedmoor, Sept. 15.—The marksmen contesting for the National Rifle Association prizes at Creedmoor, who had begun to think they were to have nothing but cross-range and "fishtail" winds throughout the meeting, were agreeably surprised at the improved shooting weather of to-day. At no time did the wind blow more than six miles an hour, and it was a tired sort of wind, going to sleep altogether at times. The sun, too, was veiled with clouds, and did not make its appearance. At no time since the meeting began has Creedmoor presented such an animated scene. The 200yds. ranges, the 300 and the 500 were in use from the time John Thompson ground the hand-organ fog horn in the morning until its dismal note at 5 o'clock gave warning to stop, and at the extreme right of the field the 25yds. pistol range was a lively place. In consequence Lieut. Zalinski was in the saddle all the time, and his Adjutant, Col. Bridge, as well. The range officers for the day were Capt. Babcock, of the 13th Regiment; Capt. Holmes, of the 23d, and Capt. De Forest, of the 12th.

An important match was shot, that for the military championship of the United States. There were fifty-nine entries in this match, which was divided into two stages. There were twenty-three winners in the first stage and some remarkably good shooting was done. Out of a possible score of 70, C. W. Hinman took first prize with a score of 66 points, and M. W. Bull was second with a score of 64. The lowest score among the prize winners was 58. The winners in the first stage then competed for the championship, and represented regiments in New York, Massachusetts, Pennsylvania and Connecticut and the regular army. The championship fell to Boston, M. W. Bull, of the Second Massachusetts Regiment, winning the much-coveted prize with a score of 44 points out of a possible 50.

The Judd match was won by W. M. Farrow, of the Newport Artillery, who tied Capt. Ezra DeForest at 66 out of a possible 70, and won the shoot-off. B. R. Spellman, of the Tenth Battalion of Albany; J. F. Klein, of the Seventeenth Separate Company of Flushing, and G. B. Thompson, of Pennsylvania, scored 65 points, gaining prizes.

Creedmoor, Sept. 16.—There was a rainy spell to-day, but when the first drop of rain fell shelter tents were put up at all the ranges, and everything went on as gayly as if the weather had been the finest. The weather was not as favoring as on the day before, but good records were made nevertheless. Although the day was uninviting there were numerous visitors to the ground. Among them were Col. Litchfield and Maj. Shorkley, U. S. Army, Capt. Greenough from Fort Warren, Lieut. Smith from Sackett's Harbor and Lieuts. Allen and Brown of the Division of the Atlantic. These were all friends of Lieut. Zalinski. The interstate long range team match was down on the day's list, but without any entries it went over for the year. This would seem to show a great apathy among the small-bore men and perhaps our rivals across the ocean may take the hint and make a fresh bid for that Palma.

The only match finished was the short-range team match shot over a 200yds. range, standing position, with any rifle, and was open to teams of four from any regularly organized rifle club or military organization. Teams using the Remington State model rifle were allowed 20 points, and those using other military or special military rifles 16 points. The targets were the American standard canvas targets, which are being used this season for the first time at Creedmoor. The entries were the Second Massachusetts Regiment team, the Massachusetts Rifle Association team, the New York Rifle Club team, and teams No. 1 and 2 from the Zettler Rifle Club of New York. Every man in the five teams was a good shot and there was exciting work. The Zettler Club's two teams were in perfect practice, however, and carried away first and second prizes. The range officers for the day were Capt. Charles Burns, of the Twelfth Regiment, Lieut.-Col. David, of the Department of Rifle Practice, and Major Duffy, of the Sixty-ninth Regiment.

Lieut. Zalinski found time in the midst of a most active day to speak of the work in hand and said of the importance of rifle practice as viewed from the soldier's standpoint:

"The general public in these times of peace do not fully appreciate the value of the work which is going on here and in other places for the perfection of rifle practice. Its effect is only realized in times of danger. This, I presume, is natural, for when men are busy in peaceful pursuits they do not stop to think of the possibility of war, and it is only when war comes that we can demonstrate the usefulness of our work in that direction. Meanwhile it seems like boys' play. Skillful marksmanship is always an important adjunct in battle, and this can only be acquired by long practice. There are many young men whose tastes incline them to familiarity with firearms, and these are usually men who are among the first to enter the service of their country. Those who represent this class would, in the aggregate, equal in value an entire army corps. Their own knowledge of the skillful use of arms would incite them to the work of developing perfection in the ranks which they might command, and hence their value and power would be speedily felt in a hastily recruited army. We read in history of the great interest which always attached to exercises with the long bow in England prior to the introduction of firearms. In the present day rifle practice is of equal importance to the people.

"One reason, perhaps, why Creedmoor has not received more support and recognition is because of our comparatively remote location from the city and the absence of direct railroad facilities. It has been suggested that some more accessible site for our range should be selected, and the advantages of Staten Island have been presented. What this will result in I cannot now say. The advisability of making an appeal to the public for encouragement and substantial assistance has also been discussed. With all the wealth of New York around us it seems to me we should not appeal in vain for support, especially when it is remembered that there is no point more directly interested in the successful development of the science which we represent."

Creedmoor, Sept. 17.—The fifth in the meeting was an important day at Creedmoor. The wind was all that could be desired for shooting, and some fine work was done at the targets. In the New York State National Guard match teams of 12 from the 7th, 23d, 12th, 13th and 14th Regiments entered. The contest was remarkably close, for although the 7th Regiment won with a score of 495 points the 23d Regiment was only 5 points behind. In the First Division National Guard match, State of New York, teams entered from the 12th and 7th Regiments. The 12th Regiment won with a score of 476 points, in this case the 7th Regiment being 5 points behind. Teams of 12 each from the 23d, 13th and 14th Regiments entered in the match of the Second Division National Guard match, and some excellent shooting was done. The 23d Regiment won, with the 13th second.

In Gen. Sheridan's skirmishers' match the visitors were particularly interested. It embodied all the features of regular warfare, and the execution done was very fine. The teams were six each, and the Engineer Corps from Willet's Point, L. I., the Thirteenth Regiment and the Fourth and Fifth Artilleries, U. S. A., were represented. The teams formed in skirmish line at the 600yds. range and at the bugle call fell into double quick march to the 500yds. range, where at the bugle signal they fell and fired rapid volleys and repeated the maneuver at each 100yds. till the 200yds. range was reached. The trophy was won by the Engineer Corps, and the artillery men were much cast down, as they were confident of getting it. The winning team had just returned from seven weeks' practice at Niagara. The range officers were Major Fox, Col. Bodine and Lieut. Hamlin.

Creedmoor, Sept. 18.—The sun and wind combined to-day to make it a hard day for the marksmen at Creedmoor to finish their week's meeting in. The wind was blowing about 15 miles an hour and right down the ranges, a part of the day in "fishtails," but good records were made in all the matches. There were two important matches, that for the Hilton Trophy and the Inter-State Military Match. In both Massachusetts carried away the palm.

The winner of the All-Comers' and Marksmen's Badge match, over ranges of 200 and 500yds., is John F. Klein, of the Seventeenth Separate Company, of Flushing, who made 24 over each range—a total score of 48 out of a possible 50. Capt. Ezra De Forest, of the Twenty-third regiment, is second, with 22 over the first and 25 over the second range—a total of 47.

It is the verdict of all who are interested in the National Rifle Association's affairs that this has been the most successful meeting held in four years. Credit is given to Lieut. Zalinski, the executive officer; his adjutant, Col. Bridge, and the statistical officer, Lieut. Pickett, for the pleasant manner in which the meeting passed off. It is agreed that there has been less "kicking" and fewer complaints than in many a year past. Lieut. Zalinski has a quiet way of deciding disputes which has given general satisfaction.

No. 1. Director's Match.—200yds., open only to Directors, any military rifle:

Jas Duane, Sharps	55544—23	G W Wingate, Spg	44444—20

Scores of matches 16, 17 and the revolver match will be given next week.

BALTIMORE, Sept. 13.—A feature of the old defenders celebration to-day was a rifle match held at Darley Park, participated in by Grand Army men and by members of the 5th Regiment. The range was 200yds., with a possible total of 35. The first prize was a handsome gold badge, the second, 10 per cent. of the entrance money, and the third, 5 per cent. There were 21 entries. Mr. J. S. Weaver, a Grand Army man, won the first prize with a score of 29. Mr. Frank Owings, of the 5th Regiment, and Mr. J. A. Miller, of the Grand Army, tied for second place with a score of 28. Mr. Owings was given the second prize and Mr. Miller the third.

THE MINNESOTA STATE SHOOT.

FORT SNELLING, Sept. 13.—The opening of the second annual rifle tournament of the National Guard of the State of Minnesota at Fort Snelling to-day was a decided success, so far as the attendance of the riflemen of the regiments interested and the weather could combine to make it so. The morning was cloudy, and just before the firing began, there was a light sprinkle of rain, but the northwest wind springing up soon dispelled the clouds. The light was good and the air cool and comfortable. The only serious drawback was wind, which was strong and gusty, varying from 9 to 11 o'clock. The shooting, however, was excellent and shows a marked improvement over that of last year. But few spectators were present during the day; among them were Col. Bend, of the First Regiment; Col. King, inspector general of the State, and Lieut. W. Fish, of the Fourth U. S. Artillery. Lieut. C. C. Tear, of the Twenty-fifty Infantry was selected as range officer and will continue to act in that capacity during the tournament. The first match on the programme was an individual match at 200yds. off-hand, 10 shots each, the number of entries was 30, 3 prizes were offered, the first awarded to Private J. W. Wright, of Company F, First Regiment, on a score of 43. Following is the score:

Pvt J Wright, Co F, 1st Regt	43	Lieut A E Chantler, 1st Regt	42
Sergt Shanks, Co D, 2d Regt	43	Pvt N F Revell, 1st Regt	40
Lieut J E Cowie, 1st Regt	42	Lieut T C Clark, 1st Regt	40
Pvt C Maudlin, 1st Regt	42	Pvt R W Carpenter, 1st Regt	40

For Match No. 2 no entries were made on account of the high wind. This is the newspaper match, so called because the prizes are one year's subscription to certain leading daily and weekly journals. It is a continuous match, remaining open throughout the tournament. Private C. Maudlin, of the 1st Regiment, won the first prize in Match No. 3, with the excellent score of 43 out of a possible 50. This was an individual match, open for all, 5 shots at 200yds., standing, and 5 shots at 300yds., kneeling or sitting. Third-class targets were used at both distances. There were five prizes, the winner being allowed the choice. The score was as follows:

Pvt C Maudlin, 1st Regt	43	Pvt Falk, 1st Regt	39
Pvt J Wright, Co F, 1st Regt	41	Pvt N J Martin, 1st Regt	38
Pvt Revell, 1st Regt	41	Pvt Goddard, 1st Regt	38
Lieut J F Cowie, 1st Regt	40		

Sept. 14.—The second day of the tournament of the Minnesota National Guard at Fort Snelling was marked by a larger attendance, both of the riflemen and interested spectators and an improvement in the quality of the marksmanship. The day was almost a perfect one, the light being excellent and the wind quite steady and regular. It blew gently across the range from the southwest. In the morning on the newspaper match target Pvt. Maudlin, of Company B, 1st Regiment, made 47 out of a possible 50, and Pvt. N. E. Revell, of Company H, 1st Regiment, 46. The first event of the day was the individual match, with standard American targets, 10 shots each at 200yds., all comers, with a possible 100 points:

Sergt B Shanks, Co D, 2d Regt	72	Lt E W Bird, 2d Regt	63
Sgt J N Bacon, Co H, 1st Regt	65	Lt J F Cowie, 1st Regt	63
Sgt J V I Dodd, Co I, 2d Regt	65	Pvt W E Cook, 1st Regt	62
Pvt C Maudlin, Co B, 1st Regt	64		

The principal feature of the day was the regimental team match between teams of ten men each from the First and Second regiments. Five shots were allowed at the 200, 300 and 500yds. ranges, the possible being 75. The prize was the State trophy, valued at $250, and it was won by the First Regiment after a close and exciting contest by 18 points.

Pvt N C Martin, Co H	60	Lieut E W Bird	63
	623		605

Sept. 11.—The third day of the tournament at Fort Snelling opened dark and gloomy. The clouds were lowering and heavy with rain, and when the firing began in the morning, the wind was strong and changeable; as the work progressed the conditions improved. During the morning a meeting of the Rifle Association of the National Guard was held for the election of officers to serve during the ensuing year, resulting in the election of Lieut. A. E. Chantler, of the First Regiment, President; Lieut. E. W. Bird, of the Second, Vice-President, and Private E. H. Whitcomb, of Company C, First Regiment, Secretary and Treasurer. The first business of the day was the completion of the Fairmont match which was left over from the previous day. The conditions of the match were 10 shots at 200yds. standing, 10 shots at 300yds. kneeling or sitting, with standard American targets, and ten shots at 500yds. on second-class Creedmoor targets, with an Illin. cartoon in the center of the bullseye counting six. The possible maximum was 260. Following is the score of the winners:

Lt A E Chantler, 1st reg	172	Pvt W E Cook, Co K, 1st reg	156
Pvt C Maudlin, Co B, 1st reg	168	Sgt A R Payne, Co D, 2d reg	152
Sgt J V I Dodd, Co I, 2d reg	166	Lt E W Bird, 2d reg	152
Sgt J N Bacon, Co H, 1st reg	165		

Upon the completion of the Fairmont match the firing began for the gold badge, presented by Maj. Reeve, which was won last year by Lieut. Bird. This match is open only to the commissioned officers of the guard, five shots being allowed each competitor at 200, 500 and 600yds. The badge was won by Lieut. J. W. Castle, of the First, with a score of 84, and must be held by him in two more matches before becoming his personal property.

The third event of the day was the Stillwater match, open to all. Five shots were given to each at 200, 300 and 500yds—at 200 off-hand on Creedmoor third-class targets, at 300 kneeling, and at 500 lying down, with Creedmoor second-class targets. The possible was 75:

Lt I W Castle, 1st Regt	68	Sgt Carpenter, Co I, 2d Regt	64
Sgt A R Payne, Co D, 2d Regt	67	Pvt N Martin, Co H, 1st Regt	64
Sgt J Bacon, Co H, 1st Regt	67	Pvt E G Falk, Co A, 1st Regt	64
Lt A E Chandler, 1st Regt	66	Sgt J V I Dodd, Co I, 2d Regt	63
Pvt W Chandler, Co I, 2d Regt	66	Corp S Walker, Co D, 2d Regt	63
Pvt C Maudlin, Co B, 1st Regt	66	Corp G M Lee, Co A, 1st Regt	62
Asst Surg F C Clark, 1st Regt	65	Sgt E B Shanks, Co D, 2d Regt	62
Lt E W Reid, 2d Regt	65		

The chief feature of the day, and indeed of the tournament, was the contest for the Pillsbury Cup, which ended at nightfall. This trophy was presented by Geo. A. Pillsbury to the guard a year ago, and was first won by Company D, 2d Regiment, who have since then been its custodians. Five teams of 6 men each entered the match, representing Company A (Minneapolis), Company C (St. Paul), Company H (Litchfield) and Company K (Stillwater), of the 1st Regiment, and Company D (Fairmont), of the 2d Regiment. Seven shots each man at 200 and 500yds. The aggregate scores of the several teams are as follows: Company C, 347; Company D 335; Company H, 333; Company K, 301, and Company A, 270.

THE CALIFORNIA GIRL.—Erastina, Staten Island, N. Y., Sept. 2.—*Editor Forest and Stream:* Inclosed you will please find one of my photographs, also a little notice which I would like you to insert in your valuable columns, if you would like to, and oblige, yours respectfully, LILLIAN F. SMITH, "The California Girl," Champion Rifle Shot of the World. This is the notice: "Miss Lillian F. Smith, 'The California Girl,' Champion Rifle Shot of the World, stands to-day without an equal in her unapproachable skill with the rifle. She made an unparalleled success in the principal cities of the Pacific coast, giving exhibitions of shooting, and won many laurels and well-deserved comments from the press and public. Her season with Buffalo Bill's 'Wild West' will close Sept. 25, when she will visit New Bedford, Mass., the birthplace of her parents, and show the people of that city an exhibition of skill and science never equalled. She challenges the world to compete with her for one thousand dollars ($1,000), as she acknowledges no superior."

SEA GIRT, N. J., Sept. 18.—Lieut. G. Maurer, of Keyport, Company G, 3d Regiment, was to-day declared the winner of the Governor's badge that has been contested for at the State rifle range at Camp Mott since August last. It was open to the whole National Guard of New Jersey. Maurer's score to-day was 35 out of a possible 50. He had previously made a score of 40, but tied with Lieut. T. A. Curtis, of Long Branch, and in shooting the tie off Maurer's best was 35, Curtis making but 33. The badge will be presented by Governor Leon Abbett, the donor, and is one of the handsomest prizes that has ever been contested for in the guard.

CONLIN'S GALLERY, Broadway and Thirty-first street, this city, is in its twenty-third season. A continuous series of matches began Sept. 17, to run for ten days and then to be renewed.

GOULD.—The fall meeting at Creedmoor has been carried on under the personal supervision and watchful eye of A. C. Gould, of Boston. He has had the pleasure of writing up the victory of his townsmen, and sent on diagrams of the target made by them, but the Boston *Globe* printer did not take kindly to the cuts.

WILMINGTON, Del., Sept. 16.—Bullseye match, nothing but bullseyes were counted, Massachusetts target, 200yds., off-hand, bullseyes out of 5:

C Heinel, Sr.	3	I W Seeds	0
J B Bell	2	J B Seeds	2
E M Clark	2	S J Newman	0
W F Seeds	2	W O'Connor	0
H Simpson	0	W A Bacon	0
J Manz	1	J E Newman	0
H A Heinel	1	C Carleton	0

The Creedmoor target, 200yds., off-hand, possible 15:

W A Bacon	13	H B Seeds	14
J R Seeds	12	G B Walton	13
J B Bell	14	H A Heinel	12
W O'Connor	11	T W Taylor	13
J E Newman	12	W C Seeds	13
H Simpson	11	F A Bachus	11
W F Seeds	14	F M Clark	13
S J Newman	13	C Heinel, Sr.	14

The tie between Bell, W. F. Seeds, H. B. Seeds and C. Heinel was decided in favor of the first, who made a fine score of three straight bullseyes, or 33 points out of possible 36, thus earning as well as winning the rifle.

The match with the West Chester Rifle Team was then opened. It was soon apparent that the West Chester boys were not in their usual good condition for shooting, for the Wilmington team led on every round from the start. Massachusetts target, 200yds. off-hand, individual possible 120 points and team possible 480:

Wilmington Team.

C Heinel, Sr.	12	12	12	10	10	10	10	11	9	12	—108
J B Bell	11	10	9	10	10	10	9	11	12	10	—102
J Manz	12	11	8	7	9	11	7	9	6	8	—88
W F Seeds	7	11	10	11	10	10	8	6	7	7	—87—385

West Chester Team.

F H Eachus	9	11	11	7	5	10	10	10	10	9	— 92
George Walton	10	8	9	9	10	9	6	11	8	11	— 91
T W Taylor	9	7	8	11	12	8	6	7	8	12	— 88
M B Jackson	11	9	5	7	11	10	8	7	6	9	—83—354

Wilmington team won by 31. Another match will be shot Oct. 5.

FITCHBURG, Mass., Sept. 16.—At the recent visit of the Leominster Gun Club to the Fitchburg Rifle Club, there was a team shoot at the Silver Street Range:

Fitchburg Five.					Leominster Five.				
B M Pitts	74	80	73	80	—307	A B Small	72	76	75	74	—297
E M Rockwell	75	74	72	69	—290	F A Whitney	75	73	72	71	—291
G W Foster	65	80	66	75	—286	F H Ridcout	71	67	76	71	—285
E N Choate	72	62	58	68	—260	E A Joslin	67	66	76	69	—278
C H Brown	56	54	70	60	—240	W V Lowe	59	59	60	82	—251
					1383						1402

GARDNER, Mass., Sept. 16.—Regular meet of the Gardner Rifle Club at Hackmatack Range, standard American target, 200yds. off-hand:

D Nemo	71 81—152	C N Edgell	66 73—139
Geo E Warfield	75 77—152	C Leland	67 68—135
G C Goodale	73 77—150	Chas Crabtree	57 62—119
F E Nichols	69 72—141	F Parker	56 61—117

Members of the Heywood Guards, Co, F, 2d Regiment M. V. M., Creedmoor coast, 200yds., 5 shot score:

C H Hartshorn	19 19—38	F White	15 16—31
C O'Neil	17 17—34		

Seven Shot Score.

G W Bishop	29 30—59	E B Taylor	28 29—57
C A Hinds	29 29—58	C N Edgell	27 29—56
A E Knowlton	27 30—57	S T Chamberlin	27 28—55
H J Black	28 29—57		

HAVERHILL (MASS.) RIFLE CLUB.—Sept. 18. Record match:

A Edgerly	6	7	4	7	9	6	6	8	5	8—66
F Merrill	8	7	9	5	7	7	4	5	6	8—66
J Munroe	8	4	7	4	7	5	8	5	10	8—66
C Bliss	8	7	8	6	8	7	6	5	5	5—64
J F Brown	3	5	9	9	4	5	8	6	7	4—60
W Worthen	8	5	5	7	5	4	6	8	5	6—59
J Burke	4	9	6	6	4	5	9	5	3	5—56
L Jackson	4	8	7	5	6	6	6	4	5	4—55

NEWARK.—The present indications are that very few matches will be shot in this city during the coming season. The only rifle clubs now in existence are the Frelinghuysen, Essex and Domestic. The number of men in the association are about 200 and no doubt by the first of the month another club will be lost. It seems as if all interest was lost in this direction. We are having at present individual matches and they are meeting with great success. The remaining clubs would like to hear from the boys in New York and no doubt some interesting matches may be brought about before the close of the season. Mr. Alexander C. Neumann, secretary of the Newark Rifle Association and the Frelinghuysen Rifle Association, returned home last week from a three months' trip to the continent. Mr. Neumann is connected with several other organizations, one of which tendered him a reception, about 50 members of the Newark City Camp No. 21, Fraternal Legion and also a number of his friends assembled at Lehman's Hotel on Market street, Newark. They united in making the reception a notable one. Mr. Neumann, who is a member of the National Guard and also Division color bearer, returned on the steamer Phoeti. He was in possession of letters of introduction from Maj.-Gen. Joseph W. Plume and other prominent New Jersey national guardsmen, which gave him the entrée into military circles in England and France. The supper was given by the officers of the lodge under the supervision of Supreme Vice-Commander Otto and Wm. Greathead, N. H. Root, S. S. Feldman, Geo. Ballard, A. C. Stivers and others. Toasts were given and speeches delivered by all the gentlemen present.—X. Y. Z.

ZETTLER RIFLE CLUB.—The 12th annual shoot of the Zettler Rifle Club will be held at Morrisania Schuetzen Park, 170th street and Boston road, Tuesday, Sept. 28. The programme includes the usual three targets.

Ring Target—Open to all comers; tickets, 3 shots for $1; tickets unlimited, but only one prize obtainable by any one shooter; 15 prizes, aggregate value $100.

Bullseye Target—Open to all comers; 10 shots for $1; for the best bullseye on this target, 12 prizes, $61.

Premiums—For the most bullseyes, $5; for the second most bullseyes, $4; ford third most bullseyes, $3; for the first and last bullseyes, $1 each.

Target of Honor—3 shots, open only to members of the club, for all the prizes presented by judges and members. Two gold medals and one silk umbrella to be shot for by the judges, 3 shots on ring target.

TO SEE A FLYING BULLET.—You can readily see a bullet in its flight without the aid of a telescope (as described in FOREST AND SERBAM of the 9th inst.) by placing yourself behind and a little above the marksman, with a clear sky for background and the sun behind on your head. As the bullet is invisible to the naked eye at a short distance, the observer will only be able to see it in the first portion of its upward flight.—D. E. STERLING (Cleveland, Ohio, Sept. 14).

THE TRAP.

Scores for publication should be made out on the printed blanks prepared by the Forest and Stream, and furnished gratis to club secretaries. Correspondents who favor us with club scores are particularly requested to write on one side of the paper only.

TRAP-SHOOTING REFORM.

Editor Forest and Stream:

I have read with great interest the several communications on "Trap-Shooting Reform." In your issue of Sept. 9 "Cracker Crumbs" and C. M. Stark strike the nail square on the head. It is hard work to please a poor shot and very unsatisfactory attempting it. Having had some little experience in our little club here in Exeter, N. H., I will venture to give the results. At our first club shoot, held some ten years since, the fact was demonstrated that some of the boys were better shots than others, and in a short time, when prizes were offered for competition, the question of handicap came up. As one of the pioneers, and of course greatly interested in the club, I suggested that the poorer shots be put on an even footing with the better ones. For several years I labored on this problem, and to my mind finally succeeded. Now note the results. In a contest for a prize cup, 100 balls per man, one of the third class men, "Uncle Phinney," so-called, and one of the best fellows in the world, shot and broke 96 balls; he was entitled to 15 broken balls added to his score (let me add he did not need them) and took the cup, while among the first class shots Capt. Cooper and myself broke 95 each. I was very glad the old man won the cup, because at the meeting, when we voted him a third class shot, he protested against it, and stated then and there that he considered himself as good a shot as any in the club, which caused so much fun and commotion it nearly broke up the meeting. During the shooting of the matches he said if he could not win it on even terms with the other members he would not take the handicap or the cup. If I remember right we had no more handicapping in our club, while one of our oldest and best shots said to me, "You must not forget one thing, Doc, encourage our poor shots all you want to, but don't discourage the best ones." I was forced to these conclusions, and have seen no good reasons for changing them. If you must give a poorer shot odds, don't add to his score as "Nor-East" suggests, but make him shoot at five or ten birds extra and score the result with the regular match; don't give him alms. As to club tournaments and association shoots, make your entrance to sweeps small, then your poor shots won't lose much nor your best shots get rich, and it seems to me that this one condition will regulate the whole business. I think the methods of handicapping as suggested would not please the majority of shooters. The poorer shoots will not be satisfied with anything. They are not with themselves nor their shooting. They stand no show in the brush, nor yet very much at the traps; but if made of the right stuff, possessing any sand, they will go to work in the right way, practice and perfect themselves in the art of shooting, and finally take rank among the best shots, who have attained to their royal position not by having dead birds added to their scores, but diligent, persistent work, some cussing and lots of hard cash. LITTLE DOC.

OSWICHEE TOURNAMENT.

EDITORS Waddell and Guerry, of the Scale (Ala.) *Register*, are members of the gun club of that town, and this is the way they do up the last tournament:

THE BARBECUE AND SHOOTING CONTEST AT OSWICHEE TUESDAY—FOUR CLUBS MEET; A REGULAR FIELD DAY—THE BEST SHOOTING, THE WARMEST RECEPTION, THE FINEST BARBECUE AND THE MOST COMPLETE FILLING UP OF THE HUMAN SYSTEM THAT EVER OCCURRED IN RUSSELL COUNTRY—THE SCORE.

On Tuesday last, the 6th of August, at the invitation of the gentlemen of the Oswichee Gun Club, four clubs including the home team, assembled at the park of the Oswichee Club, five miles from the M. & G. R. R., to engage in a shooting contest at glass balls; and we among the number bright and early roused ourselves from the arms of Morpheus, enticing though he was, and hied us to the call of the god of day, and with his early sunbeams and through the courtesy of "999" started in his chariot to attend the shooting. How bright were our anticipations as the fiery steeds flew Pegasus-like along, and, in fancy, we had a ready beaten the rival clubs. Enjoyment is usually half expectation, not so in this case, for imagination had not painted a scene half so fair or an occasion half so joyous as this proved to be.

"Man never is, but
Always to be blest."

Let me beg leave to differ from the poet, for on that day that assertion proved false. We were blessed in the cool delightful day, blessed in the sight of a beautiful and appropriate place to shoot, blessed in a "goodly company," blessed in the sight of beautiful women, blessed in everything good to comfort and stay the inner man, blessed in seeing good shooting, blessed in shooting splendidly ourselves, and blessed right then and there. But we must come to the contest, which began about 10 o'clock with the following clubs entered: Columbus, Southside Columbus, Seale and Oswichee. Each of these clubs had 12 men, supposed to be the best shots in the Clubs, and each man had 20 shots. Columbus shot first, then Seale, then Southside Columbus and then Oswichee. Seale and Oswichee began well and kept this up during the entire contest. After several rounds had been fired it was soon discovered that the contest was between Oswichee and Seale for first place. Seale led Oswichee till the second or third round, when the Oswichee boys commenced hitting them hard, and caught up with Seale and were fast pushing her for the first place. The excitement was now intense. Both clubs were hitting the balls hard, in fact nearly every ball that was thrown from the trap was broken. Oswichee had now gained on Seale two or three balls, but Seale soon caught up again and it was nip and tuck throughout the entire contest, though the score below will show that Oswichee beat Seale six balls.

Oswichee.—J. Alexander 15, F. Bradley 15, Ed Patterson 18, J. Alexander 11, J. Cheney 14, R. H. Bellamy 15, W. Nuckolls 9, R. H. Pitts 18, G. L. Sallas 14, J. Cantey 18, O. P. Fitzsimmons 13, S. Cantey 14; total 174.

Seale.—B. Jenning 15, J. J. Ware 16, R. E. Lindsay 14, A. S. Waddell 16, W. C. Guerry 18, W. H. Holland 5, R. A. Strong 15, I. C. Evans 15, R. W. Waddell 17, W. R. Wilkerson 13, W. A. Bellamy 11, G. B. Young 13; total 163.

Columbus.—C. E. Hochstrasser 12, E. J. Rankin 11, O. C. Johnson 11, E. F. Golzen 8, C. E. Beach, 14, L. C. Frazer, 11, M. H. Tuggle 14, T. W. Tuggle 9, S. Eberhart 12, A. S. Mason 8, F. J. Jenkins 12, H. Moshell 14; total 146.

Southside of Columbus.—M. T. Lynn 15, P. H. Burrus 11, J. C. Turner 12, C. D. Preer 11, J. Fletcher 16, C. Schomberg, 8, C. Eberhart 10, S. French 12, J. A. Roberts 14, C. L. Torbett 11, E. H. Jenkins 11, R. W. Ledsinger 6; total 137.

By Teams.—Oswichee 174, Seale 163, Columbus 146, Southside 137.

After the contest the dinner was served, and such a feast it would take an epicure to describe it, or a North Carolinian or Virginian, who, you know, never have forgotten how their mother's and grandmothers baked, cooked, and who say no such dinners are now served, as in those good halcyon days when waffles and wafers were baked in the coals, and no soda put in biscuits or cakes. The fried chicken was just like good old North Carolina fried chicken; the barbecued pig such pig, its ancestors must have come from "old Virginny" or else the cooks had relations in that good old state, for nothing could surpass it, indeed, such a dinner one seldom sees, and all appetites and tasts must have been satisfied. To make it more inviting the table was set in a beautiful grove, where it was shady and pleasant. We wonder if the Oswichee people fully appreciate their beautiful surroundings? No wonder the Indians held their councils here. In imagination I could see these sons of the forest sitting under those tall oaks (truly monarchs of all they surveyed) smoking their pipes and listening to the eloquence of some of their famous chiefs.

My grandfather attended an Indian council at or near this place, and perhaps right here. Col. Crowell was the Indian agent at that time, and interpreted the speeches of the Indian braves, and the writer's grandfather said, such graceful gesticulations and such eloquence he never heard before from human lips. I think it was at that council they determined to kill Chili McIntosh, as they were angry then because he had ceded their lands to the whites. I don't blame the redskins for wanting to keep such a country, and perhaps some of their spirits still linger about, and who knows but what the ghost of some Indian brave did the shooting for each one of the Oswichee boys that day; and that's the reason perhaps they beat us. May the victorious club live long to enjoy their happy hunting grounds and at last depart to their Fathers in peace.

POUGHKEEPSIE, N. Y., Sept. 18.—The long-looked for shoot of the Poughkeepsie Gun Club came off on Thursday, Sept. 16, and in spite of the unfavorable weather proved quite a success. The day opened with a steady downpour which continued all the morning, but nevertheless about noon the rendezvous of the shooters (L. B. Stanton's gun store) presented a busy spectacle as the marksmen and their friends from all the river counties commenced to arrive, and the store was soon crowded. About 1:30 P. M. we all proceeded to the grounds and were soon hard at it. On account of the darkness of the afternoon and the lateness of beginning, it was decided to reduce the score from 25 clays to 15 per man, each shooter stepping to the score with 5 cartridges and shooting 5 shots in succession. The first match was for three prizes, and was won as follows: W. H. Pierce, of Peekskill, took first, Parker shotgun, value $55, score 10; M. Jones, of Poughkeepsie, second, F. & W. single gun, value $12, score 9; E. Decker third, gun case, value $10, score 8. In the miss and out match A. Thorne, of Poughkeepsie, took first; E. Decker, of Poughkeepsie, second; H. Gardener, of Albany, third. Everything worked smoothly; we had no kicking, and taking the meet as a whole, it was a very pleasant affair. We have learned several new things from this match, one of which is to be sure and examine the cartridges of each man and see how much shot he has in them next time, as on opening some of the miss-fire cartridges we found that all of them contained more than 1¼oz., and some of them nearly 2oz. The moral is: Never trust to a man's honor, but make sure of his load. Another thing is, that we find on inspection that hardly any two of the shot measures in our club agree, some of them being too much and some too little. What is the proper thing to do where a man buys a shot measure in good faith and loads with it, must he be ruled out because he has too much shot? In our next match, in which we will probably offer better prizes than in the last, we will make sure of all cartridges, and the man who has too much shot will lose his entrance. We would like to get up a team of from 4 to 7 men to shoot against any club between New York and Albany, and will try and make them work to win.—POUGHKEEPSIE GUN CLUB. [If the shot measures differ, the only recourse is to adopt some one as a standard, and let it be understood in advance.]

NEWARK, N. J., Sept. 18.—Third and last match of the series of three between the Nimrod Club, of Newark, and East Orange Club, of East Orange, N. J., at pigeons, on Erb's grounds. The Nimrods won, 38 to 34. Teams of 10, 5 pigeons apiece, 25yds. The first match of the series was shot at glass balls, 15yds. rise, 9 men each, and won by the Nimrods by 6 balls. The second match was at bats, same number on each team and yards rise as in first match, the result being a tie.

NEW BEDFORD, Mass., Sept. 15.—Match for silver water pitcher, offered by Hon. Charles S. Randall, for members of gun clubs in this part of the State. There were six competitors from New Bedford, three from Acushnet, one from Fall River and two from Falmouth. Match shot at 25 doubles, 1 blue rock and 1 bat, 15yds. F. J. C. Swift, of Falmouth, took the pitcher.

Ferrett	1011011—5	Bohmcke	1111111—7
Manning	1111101—6	Sims won badge and money.	

LA SALLE, N. Y., Sept. 9.—Niagara River Shooting Club for club gold medal, Niagara Falls black birds, 18yds.:

Shirley	111001110011111—11	Jewett	1110101101011101—10
Hopkins	0011011010111110— 9	Taylor	1111110111111111—14
Howard	0101111000060000— 6	Best	1110111111111111—14
Barker	1111111110110110—13		

Ties at 3 for first: Best 3, Taylor 2. Sweepstakes, 7 blue rocks:

Barker	1111111—7	Taylor	1110110—5
Howard	1110101—5	Best	1101110—5
Smith	1111110—6	Hopkins	0110000—2
Shirley	1100110—4	Jewett	1111111—7

Ties divided. Match for club badge, 15 Niagara Falls blackbirds:

Hopkins	111110111111111—14	Best	1101011010111111—11
Barker	1111001001111100— 9	Smith	1111011110111100—11
Taylor	1111101100100110— 9	Jewell	1101110010111111—11

Hopkins wins badge for first time. Small number present on account of some of the boys after game of a different feather. The Port Colborne badge was not shot for. G. Barker and E. H. Smith will represent this club at the Cleveland Target Co. Tournament.

LEOMINSTER, Mass., Sept. 18.—The Leominster Gun Club have arranged for a tournament at their Mechanic Street Range, on Tuesday, Sept. 28. There are to be 15 events, also team shooting, bats, clay-pigeons, blue rocks. Clay birds and clay-pigeons will be used. An unusually pleasant time is anticipated.

STERLING, Mass., Sept. 16.—At the tournament this week of the Sterling Junction Gun Club, there was an unusual amount of interest.

The Forest and Stream Fables are for sale by all newsdealer

Canoeing.

Secretaries of canoe clubs are requested to send to FOREST AND STREAM their addresses, with name, membership, signal, etc., of their clubs, and also notices in advance of meetings and races, and report of the same. Canoeists and all interested in canoeing are requested to forward to FOREST AND STREAM their addresses, with logs of cruises, maps, and information concerning their local waters, drawings or descriptions of boats and fittings, and all items relating to the sport.

FIXTURES.

SEPTEMBER.

Mohican Races every Thursday through the season. 25. Brooklyn, Challenge Cup.
25. New York, Sailing Trophy.

THE MEET OF 1886.

MATERIALS AND CENTERBOARDS.

BEFORE leaving the subject of building, a word is in order as to materials. We have this year seen several boats of Spanish cedar at the meet, and an opportunity has been afforded to compare them with white cedar. Certainly for a canoe's bottom the domestic wood has not suffered by comparison with its more expensive rival, and when it can be had clear and of good quality there is no equal to it for strength, lightness and wearing qualities. It is often difficult to obtain first quality cedar, but it can be had in small quantities by paying a little more for the privilege of selecting it, the cost even then being less than one-third that of Spanish cedar. The latter wood seems more brittle and liable to check in nailing or from rough usage. Oak has long since gone out with use, the early canoes only being planked with it in imitation of the original English ones, but it is entirely too heavy. One of the Pearls was planked with 1-12in. oak, but it warped and buckled so that the canoe was useless in a few days. This is partly due to the thinness of the wood, but oak is not the wood for planking.

Both Spanish cedar and mahogany are now used for decks, and samples of each were seen at the camp, but the latter seems preferable, if the right kind is selected. The furniture mahogany should never be used; with its twisted grain it is pretty, but it weighs more and is very hard and easily split. An inferior grade of mahogany, with a straight, open grain, is very strong and durable, shrinks and swells little, is easily worked, and the weight in an ordinary deck is little more than cedar. The thickness should be a scant quarter of an inch, laid with plenty of light carlins and beams under it, and screwed to all of them, the screws, ¾ brass, No. 4, being spaced 3in. apart. The deck is then firmly held, with little chance to warp or split. In the three English boats the stems and sternposts were of straight-grained stuff, either oak or mahogany, and signs of checking were visible in places. They compared badly with the clear-grained, light crooks of hackmatack used in most American canoes. Tough, light, very durable, and easily had in curves of any shape, there is no wood equal to hackmatack for stems, knees and similar parts, the only objection being its liability to warp unless carefully seasoned.

Unlike American practice, the keels of the visiting canoes were of white pine; but for weight, strength and wearing power in the best proportions an oak keel, as is common here, is much to be preferred, even though the actual weight per foot is a little greater than pine. Another point worth considering is the width of keel. Most of the models now common can be built as well as not with a flat keel 4in. or even more in width outside. This makes a capital runner on which the canoe may be dragged about with little injury, as the wearing surface is so great. The usual material with us for bulkheads and trunks is white pine, while the English boats have Spanish cedar for all interior work. The former, especially if well soaked with linseed oil, is fully as durable and of about the same weight, of course being much cheaper. Fittings, such as gratings, floors, ballastflaps, etc., of Spanish cedar, mahogany and teak make a very handsome appearance, but in many cases the latter two are far heavier than pine or cedar, and no better.

The great changes and developments in canoeing within three or four years should warn any one of the uncertainties and possibilities that surround the future, and yet we will venture two predictions—first, that the keel canoes will never displace the centerboards, and, secondly, with all respect for the great genius of American inventors, that for speed and simplicity the solid plate board will always be prefered to any folding one. The present board, hung at the fore end and raised by a line, is a very simple and perhaps crude invention, and will, no doubt, be improved in time; but the solid plate possesses advantages that no folding board can offer.

Judging from the many inquiries that come to us there is a prevailing idea that some fixed formulas exist for placing the board and sails in a boat, and that when a man writes, "My canoe is 20ft. long and 30in. wide, where shall I place the centerboard, what size sails shall I use and where shall I step the mast?" it is a very simple matter to the expert to grind out a correct answer in feet and inches. On the contrary, there is no simple rule governing every case; and the only guides are certain general principles to be applied with experience and judgment and with a full knowledge of each individual case. In general terms the center of effort of the sails, the center of lateral resistance of the hull and rudder and the center of lateral resistance of the board or boards should be very nearly in the same transverse plane, or over one another, to secure a proper balance. For instance if the center of effort and the center of lateral resistance coincide, the canoe will balance on a wind; now if the board be far forward, as soon as it is lowered the center of lateral resistance is moved forward in proportion, the center of effort still occupying its old place, so that

the balance is destroyed, the boat comes head to wind, and will not pay off. The board may be placed very far forward and a large mainsail and small mizzen used, so that she balances with board all down, but as soon as it is raised for shoal water or any other purpose, the center of lateral resistance moves aft, the head pays off, and she cannot be luffed without a much larger mizzen. In most canoes the draft fore and aft is nearly the same and the cutting away of fore foot and rake of sternpost balance each other, so the center of lateral resistance is very near the center of the load line. If a single board is used the proper place for it is with the after end a little aft of the center of lateral resistance, at least this is as near a general rule as can be given. Now this will bring the board and case with the after end 8ft. from the stem in a 15ft. canoe. At least 3ft. 9in. is required as sitting room for the crew, so the backboard must be placed 12ft. from the fore end, or within 3ft. of the stern. By this arrangement the crew is too far aft to paddle with best advantage, his weight with that of the board must trim the boat by the stern, he cannot reach the forward deck, and there is no room for sleeping, for carrying an extra man at times, or for moving about easily, while the steerage arrangements are very bad, owing to the bow being almost inaccessible.

It is evident, then, that this plan, of placing the board as in most sailing boats, is not applicable to the canoe, and some other must be adopted. The crew must occupy the center of the canoe, and the board must be so placed there as not to be in his way, or it must be moved elsewhere. The first plan has been effected by the use of folding or "fan" boards of various kinds, which occupy little space above the floor boards, and for a cruising boat these answer very well. One of the oldest of these, the Atwood, has been successfully used in canoes and skiffs for half a dozen years, and has proved an excellent board. The trunk is about 3in. above the floor-boards, and sleeping on board or carrying an extra passenger is quite practicable, while the boat holds well to windward. The board is raised by a lever at the fore end, and in an improved form now made, by a second lever attached by rods and placed at the after end of the trunk within easy reach.

Another board of similar construction, but differing in detail, is the Brough Folding Board made in Gananoque, Canada. This board has also a low trunk and five leaves like a fan, the lowest one being a box 5-16 to ⅜in. thick, and open on top, the other leaves folding into it. The five work on one pivot at the fore end, but are raised and lowered by an arm within the case working in a slot in each leaf, so that all retain their relative positions in raising or lowering. The arm is operated by a detached wrench, which also serves to keep the pin tight on the rubber washers and prevent leakage.

Another form of board was widely advertised a few years since, an iron plate pivoted under the keel and swung up close to the bottom when in shoal water, but it has never come into favor. Some canoes have been fitted with the Joyner oscillating centerboard such as was first used in the Atalantis, but though it is claimed as very effective, none have been tried in competition with other boards at the meets, and we cannot speak definitely of their merits.

The Radix board has become an established favorite for cruising, though now in little favor with racing men, and for the former use has much to recommend it. While entirely within the boat, it is still below the floor, the only space required being for the handle, a hinged brass rod working through a stuffing box. This, to be sure, is sometimes in the way, but much less so than in any other folding board, and does not necessarily interfere with a full use of the well by one or two. All of these boards must be made of brass or they are useless in salt water, and even in fresh it is preferable to iron.

Three methods of using the solid plate board are in vogue, first a compromise by which the board is placed as far aft as is consistent with the demands for accommodation; and the sail plan modified to correspond; second, a dagger board so shaped as to throw its center of effort very far aft compared to the position of the trunk, and third the double boards, a large one forward so as to leave a clear length of 5 or 6ft. amidships, and a small one far aft to restore the balance. The first plan was shown in two ways in the Pearl and Nautilus. In both of the former the single plates of 50lbs. were so placed as to allow room for the crew abaft them; but the result was that while in neither was a proper balance of sail obtained, the mizzen being stowed frequently, the room was badly cut up. Sleeping on board was possible, as there was room for the legs on one side of the trunk, but the fore compartment was useless for storage and all the weights were necessarily aft, while the crew was also further aft than desirable. In one the Pearl board was 6in. further aft than in the other, but while it aided the handling it was worse for the crew, and on the whole the plan does not seem satisfactory. In the Pecowsic the plate is near midships but it is very small and in a position that would not be permissible in cruising.

The old Venture came out in 1879 with a trunk about 8in. high amidships and only about 1ft. long, through which slid a "dagger" board of wood, shaped like a scimeter and sliding aft as it dropped so that its center was well abaft the trunk. With this, a metal board being substituted at times, she has raced very successfully, but the trunk is much in the way in cruising. The same plan, but with the trunk further forward, has been tried in the Princess canoes first built for ex-Com. Longworth, of Cincinnati, in 1880. These boards are of cast iron and quite heavy, and while they are effective when in place and the trunk fairly out of the way, they are unhandy to raise or lower. There is a suggestion in these boards for some brilliant inventor—a solid plate board in a case as long as necessary up to say 4ft., but with its after end not over 6ft. 6in. from the stern in a 15ft. canoe, the board to raise and lower on a plan similar to a parallel rule, so as to throw aft as it goes down. To be practicable it must be stiff enough to resist all lateral strain, it must be raised freely on grounding, and the mechanism must be direct, strong and simple. A plan the nearest of this was illustrated some time since in the London *Field*, a centerboard housed in the deadwoods and run down and forward at the same time by cords.

A very ingenious and peculiar arrangement of the single board was that of the new Nautilus. The board was placed forward, the greatest draft of hull, about 7in., being abreast the center of the board. From this point the keel rockered up rapidly until it cut the sternpost at the waterline. Of course the center of the board was far forward, but the center of lateral resistance was brought near to it by the depth of forefoot and rounding up aft, while a large mainsail and small mizzen brought the center of effort over the board, a very large and powerful rudder helping to keep her on the balance. Certainly the boat proved very good to windward and was maneuvered in a most astonishing way, turning about and twisting like, as one spectator remarked, a man cutting figures on skates. She proved wanting, however, in running and reaching, a fault due probably to her peculiar model, and no doubt too she would have been the better for a small after board in addition to her drop rudder. In the matter of room there was not space between footyoke and backboard for a man of average size to sit and paddle, while the entire arrangement placed the crew further aft than is desirable. Again, such a placing of the centers necessitates a sail plan different from that which we believe best for such long and narrow boats. For the Thames in such and narrow mainsail is evidently the proper thing, but most sailing in America, especially the racing, is on fairly wide and open waters; what is evidently required then is a good distribution of sail fore and aft, with as long booms as prudence will admit, and a corresponding reduction of height, thus lowering the center of effort, lessening size and height of spars materially, and giving a fore and aft distribution of sail that will make the boat handy under any rig. If proof of this be needed the reader is referred to the Pecowsic and her rig, a careful study of which will repay him.

If no better plan for a single board can be devised than those given above the only resort is to the double board, a plan that has proved successful for some years in England, though of late the single board has been tried again in racing boats, as we have noticed above.

Certainly the double board has not shown up well in very quick turning, but this is partly due to the crew, and some of our sailors have yet something to learn in the art of handling two boards. One canoe had a pedal arranged so that the after board could be raised by the foot while sitting on deck, dropping by its own weight, thus leaving the hands free. While inferior to the single board in quick turning the advantages are so great when running as to compensate fully, while the canoe can be much better balanced under such sail as may be desirable. With a good rocker in the hull, a suitable sail plan and a rudder of sufficient size it only requires a proper handling to bring a double centerboard boat about quickly and certainly, a fact worth considering by those who are inclined to go back to one board after a short trial. Certainly the advantage of an unencumbered sleeping space of 6ft. or more, and of the afterboard when off the wind, are more than enough to compensate. The forward board, whether light or heavy, should be as far forward as practicable, leaving room for mast ahead of it, while the afterboard should be well aft, in fact it may easily be carried to within 4in. of the sternpost if desired, leaving room for mizzen mast and stowage forward of it. Both trunks should be open on top and the boards so hung as to lift out readily. If ballast must be carried this is certainly the best place for it, and 40 or 50lbs. in a centerboard will be much more effective and also less troublesome than two shot bags. If desired the foreboard may be of thin brass or even of mahogany loaded with lead to sink it. The afterboard should be as light as possible, not over ½in. thick, and both should be very smooth with knife edges where submerged, especially aft. Both trunks must be carefully made to prevent leakage, all joints being laid in white lead. One special precaution is very necessary. The headledges should be so thick as to leave the slot fully wide enough for the board, then when the trunk is made, pieces as wide as the slot should be placed up and down inside it and left there until the boat is planked, decks laid and all the work is completed. If this is not done the garboards are apt to close up the slot, as in the two Pearl canoes, the bulkheads and deck beams may aid to do so too, and finally the board will jam.

The attachment for the centerboard pennant or lifting chain should be very strongly made, as it may do serious injury if the board falls completely down. The point of suspension should be so far aft as to be within the case when the board is fully down, avoiding the drag of the chain through the water. The best chain is a flat link sash chain of copper, attached to the board by two flat brass links, with lifting gear and buffer on the upper end. The afterboard may be raised by a cord or a copper wire rope.

THE DIVISIONS OF THE A. C. A.

Editor Forest and Stream:

In relation to the division of the A. C. A., there are men who prefer some inland place like Grindstone for a meet, but they are the same who have gone year after year, while the greater majority cannot attend, and therefore they have had no voice in the management of the Association. The division will allow more men to take part in the business as well as in the pleasure of the A. C. A.

It is really wonderful that there are so many members, considering how few attend the meets; what will the membership be when all take part in the management and election of officers? not to say anything about the joy of attending a meet.

Let us have a division, or branches would be a better word, that will please the great majority. Say Eastern, Middle States, including Maryland, Delaware and the District of Columbia, Northern, Western and the Pacific Slope.

The meets should be arranged if possible so that if a canoeist cannot attend his own division he can one of the others.

I can understand how Western men would attend a salt-water meet when they would not one at Grindstone and also an Eastern one would go to the Great Lakes when he would not go to the St. Lawrence River; indeed it seems to me the division will do more to enable canoeists from far different sections to enjoy each others society, than the late one grand meet we have attended, or tried to convince ourselves we have.

Not one-fifth of the canoeists in the country are members of the A. C. A., and the reason is they have been unable to see any advantage in joining, but now each branch will work the matter up and the A. C. A. will have over two thousand members before the end of 1887.

PATERSON, N. J. L'AMOUR.

CAMP WHAT.

IN the latter part of August we started off on our much talked of camping bout. There were four of us, all jolly fellows: Jack, a young fellow who had graduated from college; Bud, a great big good-natured fellow, and Bony (an abbreviation for Bonaparte), a fellow forever fishing and forever lucky; lastly Jo, a brother of Bony, a fellow who, quite unlike his piscatorial relative, did not care much for fishing but took great pleasure in the chase.

Leaving Milton Island, a pretty little isle about four miles from Kingston, we rowed to the place destined to be our camping ground, situated at the head of Howe Island about eight miles down the river.

Landing about 6 o'clock in the evening at one of the prettiest little camping grounds that could be found anywhere near, and throwing our duffle on the bank we proceeded to make things snug for the night. Jack and Jo went for browse, Bud fixed a landing for the boats, while Bony began to get supper ready, for the pangs of hunger were gnawing at our vitals. Supper finished, a large camp-fire was built, and we did thoroughly enjoy lying on the bank in the cool evening air, watching the fire as it snapped and crackled, and listening to the water plash plashing against the rocks.

Next morning being Sunday it was decided not to get up very early, but lie abed—that is all save Jack, who was to be cook on that day. We awoke to find that Jack was still in bed, but Bud had been up for some time collecting driftwood for the fire. Jack said that for some unaccountable reason he could not get his eyelids to stay up, so he was forgiven. Sitting down we ate heartily, still we felt like the fellow who, having eaten a long while, said he was full up to his neck, but that his mouth was hungry.

"Say fellows," said Jo, "we must have a name for the camp; we'll name it camp what?" "Ya-as," drawled Jack from the tent, "very good name." Jack was given to being funny at times. "Good!" said Jo, "that's what we'll call it, Camp What." "Yes," said Bony, "Camp What on How(e) Island, just the thing." And so it was agreed upon. We passed the rest of the day sleeping and reading, the FOREST AND STREAM being in great demand, as we had just procured the latest number before starting.

Thus Sunday slipped away and Monday morning came bright and beautiful. Five o'clock found the cook hard at work getting breakfast. Then the fishermen started out to coax the gamy bass, but the gamy bass respectfully but firmly declined to be caught. After fishing half a day without great success, it was thought advisable to give it up until evening. But when evening came luck was not much better. We did not give it up yet, however, that is Bony didn't, but decided to try in the morning.

In the evening, while Jo was cooking supper, our ears were greeted by a sound something like the song of a dying hen. This noise seemed to issue from a small bay on the water. Gradually it grew nearer and nearer until we discovered that the sound proceeded from an accordion manipulated by a milkmaid, one whom we had accused Bud of making love to because it took him such an astonishing long time to get the milk when sent for it. The fair damsel sailed majestically by in her dug-out, squeezing out of her musical instrument "Home, Sweet Home," and then "Swanee River," one following upon the other in rapid succession. We considered it quite suggestive. She was evidently trying to make us homesick, but we were unmoved.

In the night a heavy rain threatened to drown us out, but a large camp-fire built in front of the beds while the tent shed the water like a duck, frustrated this design.

Tuesday morning we were up betimes and out fishing, luck was somewhat better, several fine bass made things lively for a short time. Consequently Bony brightened up.

"Bud," said Jack, "which way is the wind?" "North," replied Bud. "Humph! bad for fish." "Well, I would not be surprised if it came around into the S.W.," rejoined Bud, thinking to comfort Jack. "Would you be surprised if it came from the N.E.?" growled Jack. "No." "From the West?" "No." "South?" "No." "Well," said Jack, "you are an eternally queer feller; we can't surprise you anyhow."

This short dialogue amused the rest of us a great deal, since we knew that Bud was usually surprised at everything, at least he said he was.

"Dinner served!" came from the other side of the bay in the well-known voice of Jo. "Come on, boys, get some dinner, and fish this afternoon." This summons was obeyed with alacrity. Jo was found on the bank in a doleful sort of a mood. "What's the matter?" said Bony. "Oh, nothing, only that confounded coffee ain't clear." "How's that?" "Well, just you come and look at it. I put in a whole egg to make it clear, and it don't seem to work." Bony went to the coffee pot, lifted the lid, and broke out into a loud guffaw. "What the dickens you laffin at?" said Jo, waxing wroth. "Come here, boys," Bony shouted between his loud haw-haws, "the durned old fool has put the egg in whole and it's floating poached on top of the coffee." Jo did not say much, but ate his dinner in silence, nursing his wrath against himself.

Fishing again in the afternoon—very good luck—and then once more the shades of evening began to cause the shores of the little bay to disappear and to bring out against the clear, starlit sky the large trees in black outline; and the tree toads chirped to one another as the ha-ha-hoo of the loon came echoing from the water. Supper over, again we surrounded the camp-fire, stories began to fly thick and fast. Jo and Bony sat by the fire talking so long that Bud and Jack were compelled to go to sleep in self-defense.

There is a saying, "What is home without a mother?" We might put with this, What is camp without a camp-fire? I really think that more solid comfort can be gotten out of a camp-fire than can be extracted from a pipe, and that is saying a great deal.

On Wednesday we made a trip to the foot of Grindstone Island to view the canoe meet. Going and coming, and the time we spent there, made the day fly, and glad we were to tumble into our beds on reaching camp.

As there is an end of everything, so there must be an end of our pleasure camp on the St. Lawrence. Thursday morning was the time set when we should strike camp. Of course, nobody wanted to go, but it was useless to resist, for time and tide wait for no man, so if we expect to keep pace with them we must be up and doing. Thursday, 6 o'clock A. M., found everything packed and ready for a move. Although during our camp we had not been eminently successful as Isaac Waltons and Nimrods, nevertheless we had secured what we were seeking—quiet rest and enjoyment of camp life—and we felt that we had accomplished our purpose. As the boats were shoved out from the bank Bud proposed three cheers for our camp, and three hearty cheers rang out with a will. Hurrah! hurrah! hurrah! for Camp What. WHO.

SHATTEMUC C. C.—Sing Sing, Sept. 13.—At a regular meeting of the Shattemuc C. C. of Sing Sing, held July 26, Col. Franklin Brandreth was elected Commodore to succeed Rev. N. R. Everts, resigned (Mr. Brandreth has just returned from an extended trip and has now accepted the position). Mr. Brandreth has offered three handsome trophies to be contested for by members of the club in two sailing matches over a triangular course off the boat house. Each trophy to be won twice and then to become the property of the winner. The first and second are of gold and silver, handsomely engraved and ornamented, bearing the club signal; the third is of silver with a canoe under full sail engraved upon its face. The first race for these trophies was held on the 18th over a triangular course, three times around counting three miles. The next on Oct. 2d and 25th and so on. The fall regatta of the club will take place on Oct. 25, when a programme showing paddling classes two and four over half-mile straight course, sailing over triangular one mile course, tandem over same course as singles, also trophy race, will be carried out. Pennants and other prizes will be contested for. All races excepting trophy race will be open to members of other clubs.—J. H. CARPENTER, Purser.

A ROBBERY AT CAMP GRINDSTONE.—During the week following the meet, while Dr. Neidé was still in camp, the store was broken open and some articles, among them his trunk, were stolen. Regarding the theft he writes: "SCHUYLERVILLE, N. Y., Sept. 14.—*Editor Forest and Stream:* I find that an erroneous impression has gone abroad relative to the theft of my trunk at Grindstone Island. The trunk contained nothing but my personal effects, clothing, etc., together with some valuable papers, but none of the Association books or papers were in it except some notes taken at the meetings of the executive committee relating to the changes in the constitution and by-laws, and these I can get from a member of the A. C. A. who has duplicates of them. The prize flag awarded to Dr. A. E. Heighway and intrusted to my care for him was in the stolen trunk.—CHAS. A. NEIDE, Sec'y-Treas. A. C. A."

BIRCH BARK CANOES.—Waltham, Mass., Sept. 18.—*Editor Forest and Stream:* Your correspondent who desires a birch, may obtain one from the Indians at Oldtown, Me. We have a fleet of about thirty on the Charles, here, belonging to the Waltham C. C. They are about 18ft. in length, 50lbs. weight, will carry three or four persons, and cost $35 each in Oldtown. He may obtain further particulars of William Wallace, Oldtown, Me.—L. N. GURDY.

CANOEING AT WASHINGTON.—The Washington C. C. are holding a series of races, the first of which was sailed on Aug. 28 over a 3-mile course from the clubhouse around buoy 7 and return. Seven canoes started, beating down and running as follows: Whistlewing 4:41:50, Iola 4:52:00, Meteor 5:04:50, Petrel 5:05:05, Waterwitch, Mermaid and Belle not timed. Mermaid finished the course in 49m. 50s., Petrel 56m. 30s., and Waterwitch 1h. 1m. The canoes are rated by Tredwen's table.

OFF FOR ENGLAND.—On Sept. 16 Messrs. W. Baden-Powell and Walter Stewart, R. C. C., with Vice-Com. R. W. Gibson, sailed for Liverpool in the Celtic. At the wharf to see them off were Messrs. Vaux, Wilkin and Stephens. Mr. Gibson will be home by Nov. 15, and Messrs Powell and Stewart will return next season with new boats.

The Forest and Stream Fables are for sale by all newsdealers.

YACHT RACE EXTRA.

THE yacht race extra published by the FOREST AND STREAM is on sale at all newstands, or may be ordered direct from this office. It is a 16-page review of international yacht racing up to the last races. Has many illustrations, the lines of Galatea, etc. Handsomely printed on fine quality paper. Price 10 cents.

RACES FOR THE NEWPORT CITIZENS' CUPS.

NEWPORT certainly owes a debt to the yachtsmen, whose presence each year does so much to increase her attractions, and this season at least she has made a very appropriate return. Last month an offer was made to the New York Y. C. on behalf of the citizens of Newport, of handsome prizes for a race to be sailed off Newport after the Cup races were finished, which offer was finally accepted by the club, which consented to attend to the details of the racing. The citizens' committee, prominent among whom were Messrs. John N. A. Griswold, Anthony S. Sherman, Frank G. Harris and Major T. K. Gibbs went immediately to work and the sum of $2,000 was subscribed for prizes. It was decided to offer four for yachts divided as follows: One for schooners and one each for cutters and sloops of 71ft. waterline and over, 55ft. and under 71ft., and all under 55ft. As yet hardly any racing yachts have gone out of commission, and if might have been expected that the offer of handsome cups and the prospects of a good race would bring them all to the line, but considering the number of yachts in the New York Y. C. the entries were rather meagre. Besides the four schooners only nine single-stick yachts entered, and of these only one was a sloop. Four were thorough cutters, four more were centerboard-keel compromises, and only one was fairly entitled to be called a sloop.

This has been an active season in American yachting, but the point brought out more strongly than any other by the season's record is the disappearance of the American sloop, the real type. Gracie has entered several times with very poor success. Fanny has sailed but one race, the only one in two years, and the smaller classes have done even less, so that for all sport above the length of 35 or 40ft. yachtsmen have had only the cutters and their compromise cousins to depend on. In view of this state of things, too potent to be disputed, is it not time in all fairness to drop the word sloop and let it disappear with the vessels of a by-gone time, to which alone it properly belonged, and to mark the great advance in our yachting by some appropriate term? It need not of necessity be English any more than Chinese, but for the sake of truth, fairness and technical accuracy it should not be sloop. Another thought occurs here in this connection, the need of a special term for single-stick yachts or perhaps in place of the cumbersome "cutters, sloops, and yawls" in common use, the latter being classed with the single-stickers commonly. The term schooner has a general meaning in yachting as a two-masted vessel, irrespective of details of rig, but there is no similar term applied to all one-masted yachts, though one is much needed.

The entries for the race then were as follows:

SCHOONERS.

Gitana, K.	96.23	allows
Montauk, C. B.	94.06	1 16
Sachem, K-C. B.	88.47	4 44
Miranda, K.	85.79	6 31

FIRST CLASS SLOOPS AND CUTTERS.

Mayflower, K-C. B.	87.99	allows
Galatea, K.	86.87	0 44
Puritan, K-C. B.	83.85	2 48

SECOND CLASS SLOOPS AND CUTTERS.

Bedouin, K.	72.16	allows
Stranger, K.	67.50	4 51
Thetis, K-C. B.	66.69	5 07

THIRD CLASS SLOOPS AND CUTTERS.

Cinderella, K-C. B.	55.48	allows
Clara, K.	54.28	1 36
Bertie, C-B.	52.08	4 40

No better lot could have been brought together for a battle of type, except that as we have noted, the sloop champions as usual, of late, had let their side go by default. Montauk, the fastest of her class of centerboard, inside ballast schooners; Gitana, an American keel schooner with some outside lead; Miranda, an English keel schooner of narrow beam, and Sachem, of the new type, with beam, depth, lead keel and board. In the other three classes, besides the four narrow cutters were the four new boats, all with lead keels beside their boards, and cutter rigged, while Bertie represented the ideas once so sturdily maintained at Bay Ridge. America desired to enter the schooner class, but unfortunately the offer only included New York Y. C. boats, so her entry could not be accepted. The course and conditions were as follows:

The cups offered by the citizens of Newport, open to schooners and sloops of the New York Y. C. and the cutter Galatea will be one for schooners; one for sloops and cutters of 71ft. and over, load

water line measurement; one for sloops and cutters of 55ft. and under 71ft., load water line measurement; one for sloops and cutters under 55ft., load water line measurement; to take place at Newport, on Saturday, Sept. 18, 1886. The race will be sailed under the rules, with the exception of those applying to classification, and with the time allowance of the club.

The course for this race will be triangular and about forty-five miles long, starting from Brenton's Reef lightship or its vicinity, and will be announced by signal from flagship Electra on the morning of the race.

The letters K. V. of the international code will signify a course from the Brenton's Reef lightship to and around the buoy on the north end of Block Island, leaving it on the port hand; thence to and around a stakeboat or mark, displaying a red flag, anchored about 2⅝ miles west southwest from the lighthouse at West Island, leaving it on the port hand; thence to the starting line, passing to the southward of the lightship. At the start and finish the yachts will pass between the lightship and the flagship stationed to the westward of it.

The letters S. M. will signify a course from a line drawn between the buoy off Beaver Tail and the flagship anchored to the southward of it; to and around the Sow and Pig lightship, leaving it on the port hand; thence to and around the Hen and Chickens lightship, leaving it on the port hand; thence to Brenton's Reef lightship, passing to the southward of it and between the lightship and the flagship.

The measurement of yachts not already measured shall accompany entries.

Entries will be received by the regatta committee at the club house, No. 67 Madison avenue, up to Thursday Sept. 16, and on the flagship, addressed to commanding officer, up to 8 o'clock A. M. on the day of the race.

Owners are requested to send in their entries as early as possible to facilitate the labors of the regatta committee.

SAILING DIRECTIONS.

The preparatory signal will be given from the flagship at the starting point at 9:50 A. M., and the starting signal at 10 precisely, if possible.

The signals for starting will be as follows, viz.:

Preparatory Signal.—One gun, and at the same time the United States ensign will be lowered from the fore and a blue peter set in its place.

The Start.—Ten minutes later there will be a second gun, the blue peter will be lowered and the yacht club signal set in its place, when the time of each yacht will be taken as it crosses the line. Ten minutes later there will be a third gun, and this time will be recorded as that of any yacht starting in the race thereafter.

Note.—That before any signal is given the United States ensign will be flying at the fore; during the preparatory period a blue peter, and after the starting gun the yacht club signal.

If practicable, a short blast of the whistle will be given when each yacht crosses the starting line.

There will be no limit as to time of performance.

Yachts sailing the race will carry their private signals at the main peak.

In case the flagship from any cause is not at the finish line, yachts will pass close aboard the Brenton's Reef Lightship, each yacht owner or representative taking the time when the foremast of his vessel on a line drawn at right angles to the straight course from the last mark passes the bow at the lightship.

E. E. CHASE,
FRANK T. ROBINSON,
A. M. CAHOONE,
} Regatta Committee.

NEW YORK, Sept. 13, 1886.

On Friday most of the yachts were ready at Newport. Bedouin and Miranda arrived from New York, where they had docked, Puritan came from New Bedford, while Mayflower and Sachem had been newly potheaded at Providence. It had been agreed between the owners of Mayflower and Galatea that neither yacht should dock after Sept. 7, but as Puritan had cleaned bottom for the race, Mayflower decided to do so as well, and Gen. Paine notified Lieut. Henn accordingly. On Thursday Galatea towed back from Larchmont to New York and went on the dock, coming off Friday morning. The owners of the tug Sandford offered her a tow, which was accepted, and at midnight on Friday she anchored at Newport. All Friday afternoon and night a strong N. W. wind was blowing, and every one prophesied a fine race at last after the many disappointments of the season. On Saturday morning, however, the breeze was evidently dropping fast. The flagship Electra, with the Regatta Committee, Messrs. Chase, Robinson and Cahoone on board, steamed out to Beaver Tail in good time, with the signal flying for the Sow and Pigs course. The fleet had prepared for a blow and reefs were tied in and some topmasts housed, but before they were near the start all set their full working canvas in anticipation of a moderate breeze. Some took their places near Beaver Tail and did not observe that the course and signal had been changed, the orders now being to start off Brenton's Reef Lightship for a race around the Block Island course. Mayflower and Bedouin were among the last to discover the change and were both badly handicapped. At 10:15 the first gun was fired, with the start at 10:25. The times were:

Puritan	10 27 18	Gitana	10 32 24
Galatea	10 28 32	Thetis	10 33 03
Miranda	10 28 35	Sachem	10 33 31
Clara	10 28 44	Montauk	10 37 35
Bertie	10 29 27	Mayflower	10 39 19
Cinderella	10 30 39	Bedouin	10 42 09
Stranger	10 32 15		

Clubtopsails, balloon jibtopsails and spinnakers came out on the fleet, while the schooners carried their maintopmast staysails. Mayflower had both jib and staysail stowed, running under balloon jibtopsail. Her captain has been severely criticised for the tardy start, but the was in good company, as Bedouin is never among the laggards, and the fault this time seems to be with the change of signals, by which both were misled.

The wind was very light so they ran down toward Point Judith, Puritan well ahead. Astern of her was Galatea both with spinnakers to port. Miranda and Sachem were nearly abreast, the former with jibtopsail, maintopmast staysail and spinnaker, the white schooner with balloon jibtopsail and big maintopmast staysail. When clear of Point Judith Puritan was half a mile ahead of Galatea, Clara to the westward was coming up rapidly. Sachem was next in order, then Stranger, Cinderella, Gitana, Bertie and Thetis. Miranda was about half a mile east of Gitana and a little ahead, Sachem leading the pair by over one-eighth of a mile, Montauk was well astern near the shore with Mayflower abeam of hear and Bedouin last of all. The light wind was very uneven, Sachem holding a breeze while Miranda's sails were flapping and Clara and Cinderella to the west of the fleet were tolerably well favored. At 11:45 there were indications of a breeze from S. W. The water was perfectly smooth, without even a roll. At noon Miranda had dropped astern, there being little wind on the extreme east of the fleet where she had been thus far. Just before noon Puritan caught the first of a light westerly breeze and trimmed in sheets a little, holding to her spinnaker boom while her spinnaker was kept at the masthead ready to sheet out after rounding the mark. Gitana too had held on to a breeze on the extreme west and was now abeam of Sachem, the latter gaining at the same time on Galatea. The chances were now with the yachts tc the west and Miranda's were growing less and less.

At noon the Electra, Stiletto and Wanda, followed by the Pilgrim, Frances and other steamers, reached the buoy off the north end of Block Island. Puritan took in her spinnaker boom above the mark, as it became evident that she must jibe. Most of the fleet had taken in spinnakers when some distance from the mark, but Sachem and Clara set theirs again. Puritan boomed her balloon jibtopsail out to starboard to hurry her over the last quarter of a mile. Galatea and Cinderella sheeted out their spinnakers again. Sachem was leading Galatea at a half mile from the buoy, having passed on her starboard side. Just at the mark Puritan was left by the wind, and at 12:20 her balloon jibtopsail came down and she jibed over, breaking out jib and setting forestaysail as she did so. Within a half mile of the mark Clara was on Galatea's weather and in a line between her and Gitana. At 12:25 the wind was very light, but edging to the west so that the spinnakers ceased to draw. The tide was setting to the westward, carrying the yachts away from the buoy, there being no wind at all at 12:30.

The rear guard still held a little breeze and came up slowly on the leaders lying idle at the mark. At 12:35:22 Puritan turned the buoy and filled away on the port tack with a little wind. Miranda set her spinnaker near the mark. At 12:35 Puritan was running away slowly, while half a dozen of the others were drifting toward the mark. Galatea was leading Sachem a little, Clara was close on the schooner's starboard quarter, with Gitana and Stranger just astern and Thetis after them. At 1:37 Cinderella and Galatea took in their spinnakers, the white cutter drifting astern as the tide jammed her away from the buoy. The sun was shining out hot and bright from a cloudless sky, and there was not a particle of wind. At 12:44 Puritan went on starboard tack, with the wind about S.E. At 12:46 both Galatea and Sachem jibed, the others following.

Mayflower was now up with the leaders and ran up her headsails at 12:48. Miranda had also come up, and with the shift of wind was to windward of the rest. Galatea was to leeward of Stranger and Sachem, none having more than bare steerageway. Bedouin, the last of the third class, joined the fleet and a circle of ¼ mile diameter would have included all, even Puritan, as the latter was now starting in on starboard tack. With the calm and strong tide it seemed doubtful whether any but Puritan could turn the mark. Just at 1 P. M. the flags on the steamers began to flutter before a light south wind, finding the fleet in a close bunch on the west of the buoy. At the same time Puritan took in her jibtopsail and set her balloon jibtopsail. Miranda had drifted into second place and filled on port tack at 1:02 with Mayflower next. Under her lee was Stranger, while Galatea, on starboard tack was heading directly for her. The rest were heading in all directions, in about as regular order as as a heap of jackstraws. Miranda was first out from the pack with a lead of ⅛ mile, next came Bedouin, creeping from under the Mayflower, the latter setting No. 1 jibtopsail at 1:10. Meanwhile Puritan, ¼ mile to windward of the lot, had boom well off to port and headsails down. Next to follow Mayflower was Stranger with Montauk a little to windward. All of these were on port tack, the rest on starboard. At 1:14 Bertie, the last boat, and Gitana, to leeward of all, went on port tack. At 1:15 Galatea swung slowly round on port tack, Miranda tacked for the buoy at 1:17:30 with Bedouin at about 1:21 and Stranger 1:22:15. The wind now came out fresher for all but Miranda, she slowing down as she lost it. Mayflower tacked at 1:23, at which time all the rear boats were on port tack.

Stranger shaved so close to the mark that she seemed to foul it, turning at 1:27:35, nearly an hour after Puritan. Bedouin followed her closely to windward and a very pretty brush followed, as both stood for the next mark in a moderate breeze, Bedouin unable to pass her to windward, but holding her until both finally ran out of the breeze. Miranda, when on the last leg for the buoy, took the ground and hung for a time in spite of her crew's efforts, until a line was taken by the tug Geo. A. Dean, and she was hauled off. Clara rounded at 1:33:35. Mayflower made her last tack for the mark at 1:27, passing it at 1:34:52. At 1:40 Galatea went on starboard tack near the buoy, with Cinderella on her weather and so close that the white cutter touched the buoy with her port side. After Cinderella followed Galatea, Bertie and Gitana, while Sachem still lay becalmed. The times of all were:

Puritan	12 35 22	Montauk	1 36 20
Stranger	1 27 35	Thetis	1 36 55
Bedouin	1 28 00	Galatea	1 44 25
Clara	1 33 35	Cinderella	1 44 20
Mayflower	1 34 42	Bertie	1 48 38
Miranda	1 36 18	Gitana	1 49 45

There was a nice little breeze as they followed far in Puritan's wake, on a reach for the second mark, off West Island. The order was Puritan, Stranger, Bedouin, Clara, Mayflower, Miranda, Montauk, Thetis. Puritan and Thetis carried balloon jibtopsails, and Mayflower sent hers up, but most of the others had small jibtopsails. Galatea set her balloon foresa l before she rounded. At 1:50 the wind was very light and headed the fleet a little. Bertie sent up balloon jibtopsail at 1:53. It was 2 P. M. when the Pilgrim's engines started, after stopping at noon at the mark. The wind was still very variable, and over by Point Judith the vessels were running to the north with booms off to starboard under a N. W. breeze. Stranger, Bedouin and Clara evidently observed this, as they headed to the westward, as did Cinderella a little later. At 2:05 Gitana hauled down her balloon sails and set working headsails. Miranda then a mile to windward with Montauk ½ mile to leeward of the Harvey schooner, and Sachem far astern, not yet around the buoy. The puffs began to strike in from N. W. with more strength, and it became very doubtful whether a sudden shift would not put Miranda to leeward and help Sachem again, playing similar tricks in the other classes. Boats a little distance apart had the wind from different quarters, and no one could tell what the chance of the next half hour would be. At 2:15 Galatea, on port tack, began to move slowly under the N. W. wind, and Thetis followed, just astern, setting her forestaysail at 2:20. Both were heading about for Point Judith, while Puritan, a mile to the N. E., was on starboard tack for the mark. Stranger next took the new breeze, while Bedouin and Clara, less than ½ mile astern, were heading nearly in her wake, but with booms off port quarters. Miranda, Mayflower and Montauk had the same S. E. wind, while astern near the mark were Gitana, Bertie and Sachem, the latter becalmed and not yet around. Galatea walked quickly away from her neighbors with a light but fairly steady breeze that promised to increase. At 2:31 Mayflower set her balloon jibtopsail.

At 2:40 both divisions were becalmed, except Thetis, well in by the west shore, and Stranger in hot chase. Both held the N.W. wind, but Galatea was motionless and Puritan nearly a mile on her starboard beam, had her sails flapping too. Bedouin, Miranda, Mayflower and Clara, off in the S.E., were also doing nothing. At length Thetis lost the breeze, and at 2:55 went on starboard tack inshore. At 3 P. M. she was about again, still leading Stranger. Mayflower and Clara were side by side, both carrying spinnakers to starboard and balloon jibtopsails. Gitana, left for a time near the buoy, had at last caught the N.W. wind and followed inshore after Stranger. About 3:10 Puritan seemed to feel a little more of the S.E. wind, while Mayflower and those near her also came up slowly, Galatea being still becalmed. Astern of Gitana, to the westward, Bertie and Cinderella had caught the N.W. wind and the three were well in to the shore in the wake of Thetis and Stranger. The wind dragged very slowly with only an alteration of light puffs and calms. Galatea seemed to be better than before in such weather and drifted off toward Newport, where far away Thetis and Stranger were now heeling to a breeze.

Among other shifts Clara, once under Mayflower's lee, turned up at 3:40 on her weather. At the same time Galatea had jibed her boom in readiness for the same wind, and Cinderella was heeled well down under a good land breeze.

At 4 P. M., Galatea was becalmed by the red can buoy off Point Judith, with Puritan 1½ miles S. E. Bedouin, Miranda, Clara and Mayflower were within a half mile astern of Puritan, all four with spinnakers set to starboard. A little after 4 o'clock Puritan jibed and headed in toward the west shore, still carrying her balloon jibtopsail. Thetis, Gitana and Stranger were off Newport heading for West Island mark with wind over port quarters.

At 4:45 Bertie was near the Brenton's Reef Lightship bound for the second mark. Stranger was now ahead of the rest, and at 5:45 she rounded. Gitana came next, then Cinderella and Thetis, but it was dark before they turned. The rest were drifting about in the semi-darkness of the September night. Both Puritan and Sachem gave up and towed into Newport. The race ended in a general state of confusion as to fouls, protests and winners. Electra came in early in the evening and the Regatta Committee returned at once to New York.

On Tuesday the Regatta Committee met in New York and decided on the winners, giving the official time as follows:

SCHOONERS.

	Elapsed.	Corrected.
Gitana	11 22 10	11 22 10
FIRST CLASS SLOOPS.		
Mayflower	12 16 50	12 16 50
SECOND CLASS SLOOPS.		
Stranger	9 37 10	9 32 39
Thetis	11 24 32	11 19 25
THIRD CLASS SLOOPS.		
Cinderella	11 16 35	11 16 36
Clara	11 37 31	11 35 55

Galatea finished close to Mayflower, the question as to which was ahead being disputed; but she was ruled out for fouling the bell buoy. Stranger declared that she did not touch the buoy, so was given first in her class. No official time is given for any other than the above.

After the race Com. Hovey offered on behalf of the Eastern Y. C. three cups, one of $500 value for schooners, another for first class sloops, and one of $300 for second class sloops, to be sailed for from Newport to Marblehead on Monday. The Eastern yachts entered, but Galatea and the new York yachts declined to start, the cutter having her extra gear and boats to carry, which would put her out of racing trim, so the race was abandoned. A match was arranged, however, between Mayflower and Galatea, to be sailed in a breeze at Marblehead, probably over the triangular course of the E. Y. C. Lieut. Henn was desirous of waiting at Newport for a breeze and sailing there, rather than to go so far East for a race, but Gen. Paine preferred Marblehead. On Monday there was a fine breeze from the N. W., and at 11:15 Mayflower started for Marblehead and Galatea was under way half an hour later. Mayflower carried a single reef and her jib, while the cutter had two reefs turned in for the passage. Mayflower anchored at Vineyard Haven about 8:15 with topmast housed. At 5:50 Galatea, under mainsail and jib header, passed East Chop buoy, and at 6:50 was off Great Point, Nantucket. Galatea arrived at Marblehead at 3 P. M. on Tuesday, at which time Mayflower was not reported.

Thetis and Stranger had arranged a private match for $500 sweepstakes, from Newport to Marblehead, and at 10:15 A. M. both left Fort Adams under lower sails, tying in two reefs when outside. At 10:45 Thetis was leading off West Island. Thetis arrived off Marblehead Rock at 9:45:50 A. M. on Tuesday, and Stranger at 1:43 P. M. They will sail together again after Stranger is docked.

CAPSIZES.—The list this week includes two in New York Bay, one in Boston Harbor, the details of which are not yet known, and one off Gloucester, mentioned elsewhere.

A TIME LIMIT IN YACHT RACES.

A FIT ending to a most unsatisfactory and disappointing season was the provoking fizzle of Saturday last at Newport, a race of flukes, drifts, fouls, protests and all the evils which a yachtsman despises. Who have taken the prizes few care, as they mean absolutely nothing in such weather, and time and money have been wasted on every hand.

The desirability of a time limit is questioned every time that a race has to be resailed, and many oppose it entirely, but the present race offers a strong argument for its retention. It was specified in the conditions of the Newport race that there should be no time limit, and the result is that after a tedious drift of twelve hours, the expenditure of money for prizes and fitting out, with the accompanying loss of time, was completely thrown away, and there has been actually no race. It might have happened that Monday would have been a duplicate of Saturday, but it did not, and the vexation of yachtsmen is increased by the fact that a double reef breeze blew over the Newport course all day, giving the very opportunity that all have prayed for since May. Had the race been resailed then it would have been known by this time where to place the boats, and an entire year would not have been thrown away without decisive results.

If racing is worth following as a sport it is worth doing thoroughly, and every race, unless part of a set programme with other events closely following, should be sailed to a conclusion in at least a working breeze. It is true that the 7-hour limit does not insure this, but it is far better than such a miserable failure as the last race.

DISPLACEMENT AND RESISTANCE.

I HAVE been asked to "give my views" concerning the recent international matches so-called. I have no "views," but only know what passes before me and seek to advance the teachings of facts. The pointless drifts between Galatea and Mayflower, which the public accepts as regular racing, call for very few remarks, and these I prefer to postpone till time permits a complete review of the extraordinary performance of cutters in general in America this season. For, be it known that the sloop as a racing vessel is threatened with extinction. In every class of single-stickers, excepting the four big "sandwiches," the cutter has made a clean sweep of the course. Racing prospects for next year look blue for lack of any more willing to play victims to the cutter's triumphant Juggernaut in the 70, 65, 55, 49 and 30ft. sizes or thereabouts.

At present I prefer taking up an error into which many novices have drifted through loosely generalizing from one particular instance.

It is argued that large displacement and large resistance go hand in hand, and that the heavy cutter must always be at a disadvantage on this score opposed to the sloop of less weight or displacement. This is a fallacy, and a palpable one, which no thinking person will advance.

The heavier cutter has to move more water than the lighter sloop in going ahead. But the cutter, being narrow, has to move the water to a less distance than the wider sloop. Hence, equality in the work done may exist, and the balance may even be in favor of the heavier boat and actually call for less canvas to drive her.

Example: A wide sloop moves one ton 10ft. to enable her breadth to pass through. A cutter of half the width will move the water only 5ft. and for each ton will accomplish only half the work required of the sloop. Hence, the narrower boat can afford to move twice as much water as the lighter sloop without experiencing an excess in resistance.

It is not strictly true that a boat moves the water out of her path in passing ahead, but for explanation's sake the assumption may be tolerated. The true causes of resistance are fully discussed in "Small Yachts," pages 43 to 49. Neither is the work done by wide and narrow boats expressed by the proportion their beams bear to one another, but by the square, the cube or some intermediate "power" of the beams, the exact proportion being variable in different cases and still unknown.

A general law can, however, be deduced from extensive observation. This law can be stated as follows:

An increase of beam must be accompanied with a decrease in displacement and a decrease in beam with an increase in displacement to maintain equal resistance.

Example: The cutter Bedouin displaces 103 tons and sails as fast as the sloop Gracie of 65 tons displacement, both yachts having practically the same area of sail. The cutters Clara, Oriva, Ulidia, Madge, Shona, etc., etc., can be cited in support of the same thing.

It is manifestly absurd in the face of such testimony to seek the failure of the Galatea directly in peculiarities which in numerous other vessels are found perfectly compatible with the highest rate of speed.

The supposed failure of Galatea must be logically attributed to just the same causes which enabled our centerboard yachts to beat other centerboard yachts from Canada even worse than they are supposed to have beaten Galatea, viz.: Inferiority of form, of "lines," wholly without reference to cardinal dimensions or to the possession of keel or board.

A corollary to the foregoing is self-evident. It is possible to go to excess in displacement on a given beam, which would carry with it an excess of resistance as punishment. And unless that is met by correspondingly increased sail area, the yacht would of necessity be a failure in footing.

Example: A sloop moves one ton 10ft. A cutter of half the beam may move, say, two tons 5ft. without doing more work. Now, if the displacement of the cutter be increased to three tons without a decrease in beam, the work done may be represented, for argument's sake, by three times five=fifteen, against the sloop's work of ten times one=ten. In such a case the resistance of the cutter would be greater than that of the sloop, and without excess in sail area she could not cope with the sloop, so far as resistance is concerned.

A second corollary is also self-evident. It is possible to go to excess in beam upon a given displacement, the reverse of the first mentioned corollary.

Example: A sloop moves one ton 10ft. A cutter of half the beam may move two tons 5ft. with like resistance. Now if the sloop be increased to 12ft. without a decrease in displacement, the work done may be represented by 12 times 1=12, against the cutter's work of 5 times 2=10. In such a case the resistance of the lighter sloop would be greater than that of the heavier cutter, and unless accompanied by sufficient excess of sail area, the sloop could not cope with the heavy cutter, so far as resistance is concerned.

The foregoing comprises only a recital of elementary principles in physics with which every engineer or intelligent person is acquainted. It is about time that self-constituted critics learned that resistance does not vary directly with displacement, but that the *form* in which displacement is put is a factor in the estimate which must not be overlooked.

C. P. KUNHARDT.

QUINCY Y. C.—On Sept. 18 the sail off for the championship in the first and third classes of the Quincy Y. C. was sailed off Hough's Neck. The wind was strong from S.W. and the yachts had more than enough. Posy and Victor withdrew, Rocket lost her mast and Echo her topmast, but finished the course. Flora Lee carried away a stay but finally won. The times were:

FIRST CLASS.

	Length.	Elapsed.	Corrected.
Echo, E. L. Burwell	25.05	1 30 32	1 11 15
Erin, J. Cavanagh	27.02	1 48 00	1 24 08
Posy, R. G. Hunt	22.01	withdrew.	
THIRD CLASS.			
Flora Lee, D. H. Lincoln	17.03	1 20 55	0 55 12
Rocket, H. M. Faxon	16.07	dismasted.	
Victor, S. A. Freeman	17.07	withdrew.	

The judges were Messrs. F. B. Rice, P. B. Turner and J. E. Maxim.

KNICKERBOCKER Y. C. FALL REGATTA.

MONDAY was a real racing day, such a one as yachtsmen have not seen before this season when any important race was to be sailed. The Knickerbocker Y. C. was in luck, as the day had been set for its fall regatta over a 20-mile course around the Gangway Buoy and to westward of the Stepping Stones. The yachts started at 11 A. M. with topmasts housed and reefs turned in all around, only Culprit Fay carrying full mainsail in the larger class. The water was very rough over parts of the course and a number came to grief. John Demarest, Vida, Rosetta A. and several others gave up and anchored, and the little cat Maggie, though she went over the course bravely, put in to Throgg's Neck to bail out and start anew. Several of the boats had trouble at the mark, which was finally turned in the following order:

Mayotta	12 16 15	Annie E	12 24 35
Melvina	12 18 00	Rover	12 27 30
Elephant	12 18 45	Cosey	12 27 45
Culprit Fay	12 19 20	Whim	12 29 30
Flash	12 19 50	Maud	12 30 25
Wacondah	12 20 25	Black Hawk	12 34 45
Ida K	12 22 00	Mystic	12 36 20

Culprit Fay, when near home, was struck by a sand schooner, carrying away her shrouds on one side and nearly costing her a new mast. The times were:

CLASS NO. 1—CABIN SLOOPS AND CUTTERS.

	Start.	Finish.	Elapsed.	Corrected.
Annie E	11 10 00	2 02 45	2 52 45	2 50 50
Elephant	11 07 45	2 13 05	3 05 20	2 53 45
Flash	11 06 30	2 02 35	2 56 05	2 40 15
Wacondah	11 07 30	1 55 05	2 47 35	2 29 47½
Culprit Fay	11 07 08	2 00 25	2 53 17	2 35 12
Melvina	11 06 40	Did not finish.		
John Demorest	11 08 35	Did not go course.		

CLASS NO. 2—CABIN SLOOPS AND CUTTERS.

Rover	11 07 25	2 25 25	3 18 00	3 17 55
Black Hawk	11 07 10	2 34 10	3 27 00	3 24 10
Alice H	11 09 00	Did not go course.		
Lena	11 09 30	Did not finish.		

CLASS NO. 3—JIB AND MAINSAIL.

Rosetta A	11 02 10	Did not go course.		

CLASS NO. 4—JIB AND MAINSAIL.

Maggie	11 02 00	3 03 35	4 01 35	3 51 55
Vida	11 02 00	Did not finish.		

CLASS NO. 5—CAT RIGGED YACHTS.

Mayotta	10 57 00	2 04 55	3 07 55	3 07 55
Adele	11 00 00	Did not finish.		

CLASS NO. 6—CAT RIGGED YACHTS.

Maud	10 58 00	2 30 35	3 34 35	3 34 35
Whim	10 57 30	2 46 35	3 49 05	3 48 17½
Ida K	10 58 45	2 14 05	3 15 20	3 11 22½
Bubble	10 56 30	Did not finish.		

STEAM YACHTS—SPECIAL CLASS.

Cosey	11 09 40	1 56 15	2 46 35	2 46 35
Mystic	11 09 35	Towed in.		

Wacondah wins the prize for best elapsed time. The judges were Mr. L. Lefferts, J. R. Adler and J. F. Church, and the Regatta Committee, Mr. E. E. Brown and Mr. A. Varian.

NEWARK Y. C. FALL REGATTA.

THE small clubs have been lucky this year where the larger ones have failed and the Newark Y. C. was not the least lucky on Monday as a rattling N. W. wind gave them plenty of sport in their annual regatta and open sweepstakes. The course was triangular from Ulrich's pavilion to a stakeboat at the mouth of the Hackensack River, thence to a boat anchored off Maple Island and return, two rounds, making 10 miles. The entries were:

Class A, cabin sloops—Knight of Labor, 30ft. 6in.; Belle, 31ft. 3½in.; H.W. Beecher, 30ft. 1in.; Winnifred, 26ft. 10½in.; Alexander T., 31ft.; Vixen, 26ft. 1¼in.; Emma C., 26ft. 10½in.; Hattie, 24ft.; Lydia T., 21ft.

Class B, jib and mainsail, 19ft. and over—Martha Munn, 24ft.; Rambler, 21ft. 2in.; Cloud, 21ft. 11½in.; Just Woke Up, 21ft. 11½in.; Annie R., 19ft. 11½in.;

Class C, jib and mainsail, under 19ft.—Nellie, 16½ft.; Just Right, 17ft.; Maggie P., 16ft.

Class D, catboats, 19ft. and over—Only One, 25ft.; Un X-L, 23ft.; C. G. Woolsey, 19ft. 8in.; Frank Oliver, 21ft., Fedora, 19ft. 6in.; Snow 22ft. 3in.; Blair B., 20ft. 4in.

Class E, catboats under 19ft.—Dive, 15ft. 6in.; Comanche, 17ft.; Zeno, 16ft.; Triton, 18ft. 10½in.

Only 15 started as the Bay was quite rough and the wind very heavy. The yacht Duplex steamed over the course with a party of guests. The summary was:

CLASS A—CABIN SLOOPS.

	Start.	Finish.	Elapsed.	Corrected.
H. W. Beecher	2 23 10	4 18 48	1 55 38	1 55 38
Emma C	2 19 20	4 27 04	2 04 44	2 01 20½
Alexander T	2 23 18	4 30 11	2 06 33	2 06 08
Vixen	2 24 06	4 39 32	2 15 26	2 11 17¼
Knight of Labor	2 23 42	Withdrawn.		

CLASS C—JIB AND MAINSAIL.

Goodenough	2 16 50	5 00 00	2 43 11	2 43 11
Julia	2 17 15	Withdrawn.		

CLASS D—CATS 19FT. AND OVER.

Only One	2 17 53	4 21 55	2 04 04	2 03 32
Unexcelled	2 19 41	4 37 45	2 18 04	2 08 04
Arrow	2 18 23	Withdrawn.		

CLASS E—CATS UNDER 19FT.

Mattie C	2 20 28	4 35 07	2 14 37	2 14 24
Triton	2 18 18	4 31 48	2 15 30	2 15 30
Traveler	2 23 30	Withdrawn.		
Dove	2 18 10	Withdrawn.		
Zeno	2 16 20	Withdrawn.		

All of Class B withdrew. The H. W. Beecher won first prize for elapsed as well as corrected time, and the Only One won second on elapsed as well as first in her class. Julia and Arrow were disabled and withdrew. The judges were Col. Rudolph Puhlman, of the Pavonia Y. C., and W. M. Clarke, of the Newark Y. C. A. F. Adams, of the Newark Y. C., was timekeeper.

SANDBAGS IN THE EAST.—The shifting of ballast in races seems practically to have been given up in this season's races. The privilege of putting an extra man on board of a suspected yacht has accomplished the desired end. One thing more should be distinctly understood by the judges of races—that is the choice of men should rest entirely with the boat making the request, and by no means by the judges without the approval of such boat; otherwise the fairness of the judges might be questioned. In a boat where shifting ballast is allowed, the fleetness of yacht is of secondary consideration to the skill of handling ballast. Heavy live ballast can be easily procured where dexterity of throwing sandbags can only be acquired by years of practice, and does not show any part of seamanship as when handling sails.—*Boston Courier.*

GREENWICH Y. C.—The annual fall regatta of this club did not take place on the date announced and the club has disbanded.

A MATCH AT HAMILTON.—A match was sailed on Sept. 13 at Hamilton, Ont., under the following conditions, agreed to by the owners of the Rivet, Molly and Whistlewing: Lake Yacht Racing Association rules to govern, subject to the following alterations: Date, Monday, Sept. 13. Course, from between a buoy placed north of the little lighthouse at Hamilton Canal and that point to a buoy placed 15 miles to windward or leeward thereof, and return to starting point. Lake buoy must be turned to starboard. Start at 10 A. M. First gun at 9:55 for yachts to prepare and second to start at 10 o'clock, from which all the yachts' time will be taken. No limit to time of finish, but if after sundown yachts must carry proper lights. Corinthian crews must sail yachts. Time of allowance to be based upon tonnage and worked out on the basis of a 30-mile course according to the tables used by R. C. Y. C. previous to 1884. Each yacht must deposit $20 before 1 P. M., Saturday, Sept. 11. Referee, Mr. Frank Malloch, with whom all protests must be lodged and whose decision will be final. Winning yacht to take all money after deducting expenses. Rivet did not enter, but Coquette, a centerboard sloop, was allowed to come in, being finally beaten by the cutter and yawl. Another class, open to all boats in Hamilton Bay, was made up to sail at the same time. Coquette led to the leeward mark, but was beaten to windward by Molly and Whistlewing. The times were:

SWEEPSTAKE.

	Start.	Finish.		Start.	Finish.
Molly	10 27 03	3 04 15	Whistlewing	10 26 06	3 18 00
Coquette	10 27 20	3 39 00			

OPEN RACE.

Brunette	10 28 02	2 41 02	Greyhound	10 27 03	4 12 00
Cacique	10 27 15	2 55 00	Arth'r Murray	10 26 03	4 58 00

Mr. J. J. Stewart acted as referee in place of Mr. Malloch. In the evening a hop was given at the Ocean House in honor of the yachtsmen.

MOSQUITO RACE AT BOSTON.—Thirteen boats started on Sept. 18 over a 3-mile course from the Nautilus House, City Point. The summary was:

FIRST CLASS.

	Length.	Elapsed.	Corrected.
Lady May, W. J. Villey	13.09	0 59 37	0 39 28
Baby, C. A. Berden	13.02	0 40 17	0 23 47
Dot, G. R. Hutchings	13.03	0 42 19	0 41 52
Tot, James Bertram	13.08	0 45 24	0 45 12
Spot, J. F. Cassin	13.08	0 51 55	0 51 43
Iota, Powers & Paget	14.00	0 52 30	0 52 30

SECOND CLASS.

Egeria, W. A. Condon	12.01	0 47 18	0 46 40
Brinty, M. W. Ransom	12.11½	0 50 40	0 50 40
Etta R., T. F. Caldwell	12.01½	0 58 38	0 57 38
Little Dell, J. Weatherbee	10.05	0 59 50	0 58 54
Wasp, J. Carroll	12.10½	1 01 38	1 01 35
Clyde, E. B. Walbridge	12.08	Swamped.	
Mascot, W. C. Cherrington	12.02	Swamped.	

The judges were Capt. W. A. Andrews, Edward I. Young, Joseph Golden, Chas. Damins and John Bertram.

GREAT HEAD Y. C.—The final race of the season was sailed on Sept. 18 in a fresh N. W. wind. The summary was:

FIRST CLASS.

	Length.	Elapsed.	Corrected.
Fancy, J. P. Flagg	20.03	0 53 20	0 48 23
Zoe, A. A. Martin	19.00	0 54 28	0 48 35
Topsy, J. McGlinn	19.03	0 55 05	0 49 22
Frolic, L. K. Billings	28.11	0 52 15	0 52 15
Lotela, E. H. Bradshaw	22.00	0 59 39	0 55 49

THIRD CLASS.

Annie, R. H. Mitchell	15.03	0 39 05	0 38 47
Pair, Landy & Waggett	16.00	0 50 08	0 50 08

SOUTH BOSTON Y. C.—On Sept. 18 the tie in the second class keel yachts of the South Boston Y. C. was decided by a race between Raven and Breeze, Signet, also bolding a leg, withdrawing before the start. The course was 8 miles in a good breeze. The times were:

	Elapsed.	Corrected.
Breeze	1 35 45	1 13 47
Raven	1 39 30	1 14 54

ROYAL CANADIAN Y. C.—On Sept. 11 a handicap race for third class yachts of the Royal Canadian Y. C. was sailed over a course from the club house around the bell buoy in west channel and return. The wind was fresh at the start but fell calm later. The entries were:

Yolande, R. Baldwin....Scratch. Gladys, Percy Bath....4 min.
Maia, Gardner Boyd....Scratch. Brenda, R. Ball.....5 min.
Pixie, R. F. Stupart.....2 min. Elsie, C. Henderson.....5 min.
Scamp, E. W. Edwards..2 min.

Yolande crossed before gunfire and was ruled out. The winners were Gladys, Pixie and Maia:

Gladys	4 26 03	Elsie	5 27 00
Yolande	4 28 00	Brenda	5 34 20
Pixie	4 47 50	Scamp	5 55 10
Maia	4 51 38		

Messrs. Duggan and Robertson made the handicap.

RACE AT WEYMOUTH.—The Union Y. C. sailed a race on Sept. 18 over a 7-mile course in Elm Tree harbor. The summary was:

	Length.	Elapsed.	Corrected.
Diadem, L. Hayward	18.06	1 54 30	1 25 59
Maud, G. W. Lincoln	18.06	1 56 45	1 28 14
Helen Snow, Andrew Lane	16.00	2 02 54	1 31 14
Comfort, Benjamin Torrey	17.03	2 03 51	1 33 51
Nifti, E. F. Linton	16.09	2 04 26	1 35 26

A CRUISE OF THE JERSEY CITY Y. C.—*Editor Forest and Stream:* An invitation to dinner from the Columbia Y. C. to the Jersey City Y. C., brought together a pleasant party of yachtsmen at Englewood on the Hudson, on Sept. 19. A lively run before a strong wind brought us to the Columbia's boat house, then a pleasant sail to Englewood, where a substantial dinner awaited the hungry yachtsmen. A general good time was the order of the day. Coming home was a dead beat to windward for 18 miles against a strong wind. The fleet comprised Elsie May, sailed by Capt. Joe Elsworth; Beulah, Vice-Com. Smith; Wabasso, Capt. Joe Duncuff; Minnie T., Capt. Leib, who weighs 575lbs. (good ballast); Naushon and Eleanor, sailed by their respective owners and crews. Wabasso was the only keel sloop among the fleet, and the way she dropped one boat after the other was a sight worth going a long distance to see. The centerboards were compelled to stop and reef; Wabasso, housing her topmast, kept on her course, arriving at Jersey City a half mile ahead of Naushon, which is some 10ft. longer than Wabasso, the other boats a long distance behind. Wabasso is 26ft. waterline, 30ft. over all, and draws 5ft. with a lead keel, and is a credit to an honest type of boats and a pet of her owners.—H. C. W.

KITTIWAKE.—This fast boat, owned and raced by Mr. C. E. Cunningham, of Annisquan, has been sold to Mr. F. B. Beament, of Monument Beach.

PERSONAL.—While Mr. J. Beavor-Webb is generally known here in connection with the Cup races of 1885-6 as the designer of the two English yachts, he has come here for the second time with another object than yacht racing and designing in view. Mr. Webb has taken an office at 70 Wall street, New York, and will remain permanently in America as the agent of the Leeds Forge Co., the manufacturers of the Fox corrugated boiler furnaces, so largely used in land and marine boilers. For the present, at least, Mr. Webb will take no part in yachting or designing, but devote himself entirely to his new business.

NEW ROCHELLE Y. C. COMMODORE'S CUP.—On Sept. 18, the new Rochelle Y. C. sailed a race for the cup offered by Com. Pryer, 6 yachts entering. The course was from New Rochelle around Execution Light, Matinnicock buoy, and home over the same course, 17 miles. The wind was very light during the entire race. The starters were Arab, Letitia, Amazon, Nymph, Helene and Cute. Arab finished first in 5.34.20 and Letitia second in 5.46.25.

AMERICAN Y. C.—A second excursion of the American Y. C. will be given on Saturday next, the guests boarding the steam yachts Lagonda, Tillie and Radha at East Twenty-fourth street for a trip to Rye, where a clam bake will be held on the beach.

"RUDER UND SEGEL ALMANACH, 1886."—Under the above title the *Wassersport* has issued a neat little volume for the use of German yachtsmen and oarsmen, giving tide tables, lists of races, records of regattas and a register of German yachts, with many other interesting tables. The book is a very useful one, and will, no doubt, be highly appreciated by German yachtsmen.

CORONET.—On Sept. 13 the schooner Coronet, Mr. R. T. Bush, arrived at her anchorage at Brooklyn from Cowes, Isle of Wight. Her owner and his family returned from England by steamer. Coronet has gone out of commission.

A RACE OF FISHING SCHOONERS.—The success of the Eastern yachts has spread the racing fever to the fishing fleet, and now a race is proposed between a number of Boston's fast fishermen, to be sailed in a heavy breeze.

A MATCH ON LAKE ERIE.—Mr. Fred Whitney, of Detroit, has issued a challenge to any yachts on Lake Erie to race for a sweepstakes of $1,000 against his sloop Sylvia. The challenge has been accepted by the owners of the Fanchon and Alice Enright, and will be sailed over a 30-mile course, half to windward, on Sept. 30.

CORINTHIAN Y. C.—On Sept. 18 the last sail off took place over a 10-mile course, only Louette entering. The third class race was postponed.

LLOYD'S YACHT REGISTER.—We have received the first supplement to Lloyd's Yacht Register for 1886, containing alterations and additions up to July 1.

CAPSIZE AT GLOUCESTER.—The well-known yacht Silver Cloud, of Gloucester, capsized on Sept. 11, her crew of four being rescued by a passing schooner.

KEEL YACHT FOR SALE.—Yachtsmen will find in another column an advertisement of the keel yacht Altaire, now offered for sale in Boston. She is well built and a good boat in every respect.

The Forest and Stream Fables are for sale by all newsdealers.

Answers to Correspondents.

☞ **No Notice Taken of Anonymous Correspondents.**

J. D. E.—See game notes in this issue and last.

W. H. C., Washington, D. C.—See our article on centerboards in present issue.

S. D., Boston, Mass.—See FOREST AND STREAM for Feb. 9, 1882, for deed of gift of America Cup.

T. S., New York.—You will have to go outside of Coney Island or Rockaway Beach in anything larger than a canoe or rowboat.

OSCIOLIO, of Troy, N. Y., who contributed to the "Ajax" woodcock fund, will please send his address that the money may be returned.

E. H. M., Buffalo, N. Y.—Either canvas or wood will answer Most canoeist prefer wood, but canvas canoes have been used on long cruises.

HIPPIAS.—Bights are not necessary, but are usually preferred in a canoe sail. They should be 6in. apart. We cannot answer your second question.

W. C. H.—See "Canoe and Boat Building" for rules for measuring sails. The area of your sail is about 125ft., but the sketch does not give dimensions for an accurate calculation. You must decide on ballast by experiment; we cannot tell from figures given.

F. W., Newark, N. J.—The lead outside in a centerboard boat would not be materially lower than if well stowed on the timbers as low as possible, and probably the boat would be as fast as with the lead outside. The only disadvantages of the latter plan would be the increased friction and perhaps more pitching in rough weather.

E. A. A., East Providence, R. I.—Captain Crocker had the wheel on the Puritan last year and was her sailing master. Captain Ellsworth was pilot, and with General Paine and others was concerned to a certain extent in advising; but Captain Crocker must be considered her actual skipper rather than any of the others who worked with him.

W. A. N., Springfield, Mass.—1. Is the small pickerel found in trout brooks identical with the large pond pickerel? They say that the former never grows large. 2. Does the pickerel rank as a game fish? Ans. 1. There is a small pike, *Esox americanus*, which infests brooks, which seldom exceeds 10in. in length, while the pond pickerel, *E. reticulatus*, grows to 4 or 5lbs. The former is marked with dark bars, nearly vertical, while the latter is reticulated, *i. e.*, has a net-work on its sides. We cannot always identify fishes by local name. 2. Yes, the larger species.

DANGER SIGNALS from the Weather Bureau are not more significant of a storm than a cough is of consumption. Providentially we can cure any cough with Hale's Honey of Horehound and Tar. Sold by all druggists and country storekeepers. Pike's Toothache Drops cure in one minute.—*Adv.*

ALL DANGER FROM HANDLING POWDER IS AVOIDED by the use of these cartridges, and they are the safest form in which ammunition can be carried in stock or transportation.

Highest scores on record have been made with Chamberlin Cartridges. Persons who use them in the field are constantly speaking in their praise.

SOLD BY PRINCIPAL GUN DEALERS THROUGHOUT THE COUNTRY.

SMALL YACHTS.

Their Design and Construction, Exemplified by the Ruling Types of Modern Practice.

By C. P. KUNHARDT.

THE FOREST AND STREAM PUBLISHING COMPANY takes pleasure in announcing the publication of a magnificent quarto volume, bearing the above title. This book covers the field of Small Yachts, with special regard to their design, construction, equipment and keep. The opening chapters are devoted to a consideration of the model and the draft, their relations to one another, and the purposes which they subserve. Full directions are given for producing the plans of a yacht with reference to the chief points in design, and the method of taking off the lines of a boat already built is likewise described in detail.

All elements entering into design, such as Resistance, Stability, Balance of Rig, Handiness, Displacement, etc., are dealt with in separate chapters. The rules necessary for the mathematical computations, and a review of theory and practice close the first division of the book.

The second portion comprises the description of the Plates, covering the whole range of type in small yachts, from the shoal catboat and American centerboard sloop to examples of the narrowest and deepest British cutter yet built. These yachts have their lines, build and fittings depicted in the Plates, which are drawn to scale. With their aid and the specifications presented, the reader is placed in possession of accurate information concerning the mould, accommodations, rig and characteristics of all styles of yachts which have received favorable recognition. Sporting boats, combination row and sailboats, and various examples of special form are introduced.

The third division offers a comprehensive review of single-hand sailing, to which small yachts are especially adapted. Directions are given as a guide in selection of type and sail plan, and subsequent equipment and proper management.

The iron work of yachts, their gear, yawls, stearing apparatus, boat building and much other closely related matter is entered upon. The new International Rules of the Road, Signal Service, and a Bibliography appear in the Appendix.

The work is profusely and handsomely illustrated with 150 illustrations inserted in the text, besides the sixty-three plates.

A folio (size of page 14¼x12¼ inches), printed on paper specially manufactured for it, and with great beauty of execution and finish in every detail, making a volume vastly superior to any other work of the kind ever published. Pages 370, with 136 plate pages additional, or a total of more than 500. Price, postpaid, $7.00.

LIST OF PLATES.

D. BROWN, Olneyville, R. I.

STATEN ISLAND, N. Y., Sept. 10, 1886.

D. Brown, Esq.:

DEAR SIR—Yours is the *most complete* loading arrangement I ever saw, and if I could not replace it, it would take much more than the price you ask for it to buy it. It does the work well, is small and conveniently carried and something needed very much among shooters. Hoping you will have success with it, I am, respectfully,
ANNIE OAKLEY,
Of Buffalo Bill's Wild West.

KIMBALL'S SATIN
STRAIGHT CUT CIGARETTES.

People of refined taste who desire exceptionally fine cigarettes should use only our Straight Cut, put up in satin packets and boxes of 10s, 20s, 50s and 100s.

14 First Prize Medals. **WM. S. KIMBALL & CO.**

TENTS.

THE "CAMPERS' FAVORITE" TENT.

Eastern patrons are supplied from New York. Western patrons from Chicago, and extreme western ones from San Francisco, Los Angeles and El Cajon. All other kinds and sizes of tents in use supplied. Send order and money by draft with order to

MERRITT P. McKOON
El Cajon, San Diego Co., California.

Pictures of the Field.

Phototypes of the Pictures by John M. Tracy.

MR. JOHN M. TRACY has won a reputation for his faithful portraits of dogs and his beautiful and sympathetic delineations of the incidents of the field. All the poetry and grace of a pointer or setter in the stubble have been caught with the eye of the artist and the enthusiasm of the sportsman, and transferred to the living canvas with a skill which has given Mr. Tracy a name above that of any other American artist in the same field.

We have for sale a series of admirable phototypes (photographs in printer's ink), of these paintings, which preserve with admirable fidelity the spirit of the originals. The phototypes are 15x20 inches. They are as follows:

Title of Picture.	*Name of Dog or Dogs.*
Quail Shooting in Tennessee,	Gladstone and Peep o' Day
On the Grouse Moor,	" " Emperor Fred
Prairie Chicken Shooting in Minnesota,	Dash III. and Countess May

Sent securely packed, postpaid, on receipt of price, $1.00 each.

Eastern Field Trials Club.

EIGHTH ANNUAL MEETING

To be held at

High Point, North Carolina.

OPEN TO THE WORLD.

Commencing Thursday, Nov. 18, 1886.

Trials to be run on quail under E. F. T. Club Rules.

ORDER OF RUNNING:

MEMBER'S STAKES.

Open only to club members, each entry to be owned three months prior to closing of stakes, and handled by the member making such entry. First prize, cup, value $100, to be known as Eastern Field Trials Cup; 2d prize, the Sanborn Cup, value $75; 3d prize, a piece of plate, value $50. Entries close Oct. 1, 1886. Each member allowed one entry free; each additional entry, $10.

EASTERN FIELD TRIALS DERBY.

Open to all setter and pointer puppies whelped on or after Jan. 1, 1885. Purse, $300. First prize, $100; 2d, $200; 3d, $100. FOREST AND STREAM donates $50 to handler of winner of 1st. $10 forfeit; $10 additional to fill; nominations closed May 1, 1886. The club offers the Eastern Field Trials Breeders' Cup, value $100, to the breeder of the winner of 1st in Derby, the breeder to be the owner of the dam of such winning puppy at the time the bitch was bred to the dog.

ALL-AGED POINTER STAKES.

Open to all pointers, except any first prize winner of any All-Aged Stake, or winner of any special pointer cup in All-Aged Stakes at any recognized field trials. First prize, $300; 2d, $150. $10 forfeit; $15 additional to fill; Entries close Oct. 1, 1886.

ALL-AGED SETTER STAKE.

Open to all setters except any first prize winners of any All-Aged Stake, or winner of any special setter cup in All-Aged Stakes at any recognized field trials. First prize, $300; 2d, $150. $10 forfeit; $15 additional to fill entries close Oct. 1, 1886.

CHAMPION SWEEPSTAKES OF ALL-AGED STAKES.

Open to all previous winners of first prizes at any recognized field trials. $10 forfeit; $15 additional to fill; entries close Oct. 1, 1886, except for winners of 1886, which are to qualify right previous to running at $25. No entries to fill to make a race. Club adds $100 cash and American Field donates a valuable silver cup, value $100, all to go to winner of first.

NOTICE.—Any trainer or owner working or shooting over any dog or dogs entered for trials south of the track of Piedmont Air Line, for a distance of 7 miles above and below and back of Hotel Bellevue, from Oct. 1 until conclusion of trials, shall forfeit all entrance moneys, purses and cups.

Good board at hotels from $1 up per day. Transportation to and from the grounds at moderate prices.

B. F. WILSON, President.

ANSWERS TO CORRESPONDENTS.

REFORM IN OHIO.

A NOTEWORTHY change in public sentiment and regard for the rights of the community in fish and game has been achieved in some sections of Ohio, where in years past the poachers have had things all their own way—and a very bad way it was, too. This reform is largely due to the new system adopted by the State. At the last meeting of the Legislature a law was enacted giving the Governor authority to appoint five State Fish and Game Commissioners. These Commissioners were empowered to make such regulations as they might deem necessary for the more efficient protection of fish and game. The appointments were as follows: C. V. Osborn (President), Dayton; A. C. Williams (Secretary), Chagrin Falls; H. P. Ingalls, Huntsville, and Judge Sadler, Sandusky. The selections were made from both political parties, and, as will be seen from the addresses, the board covers the State. Soon after their appointment the Commissioners divided the State into districts by counties, assigning as nearly as possible an equal division of territory to each Commissioner; and appointed in each county a fish and game warden, with a warden also to each of the reservoirs. Each Commissioner then appointed for his division two or three policemen to assist the wardens. Thus, it will be observed, a machinery for executing the law was provided; and that the new order of things meant the law's execution very soon became evident. The good results are already to be noted in the abundance of fish for lawful taking in waters where formerly the net impoverished the supply. From the Lewistown reservoir, for example, where the netters have in times past had things all their own way, the Commissioners have taken over seven hundred unlawful nets; and as a natural result there is now some attraction there for those who fish in a manner legalized by the statutes. The bass fishing is now at its height, some fish weighing 8 and 8½lbs. having recently been taken there. Commissioner Ingalls visits this lake. On a recent excursion there he took with the fly a bass of 5lbs. 14oz. Anglers are attracted from a distance, and the residents in the vicinity are beginning to learn that it pays to protect fish for legitimate fishing.

Much interest is taken in fishculture, particularly in trout culture. Mr. Brad. Smith, of Zanesfield, has successfully stocked a number of ponds in that vicinity with trout, and some of the fish, having escaped in times of high water, have stocked adjacent waters, much to the satisfaction of anglers.

With respect to game the present outlook is also very encouraging. We are informed that in many portions of the State it is anticipated that the quail shooting for 1886 will be better than for any season within the past eight years.

All this points to a changed public sentiment favorable to game laws, without which sentiment the efforts of officials can be at best only partially effective. Ohio is on the right course to secure for the citizens of the State the most profitable use of this natural wealth of the fields and streams.

BEGINNING THE DAY RIGHT.

THERE is everything in a good start. Begin right in the morning with a clear head and a good conscience. This golden maxim applies to trade, business and moose hunting. To bounce out of bed betimes, swallow breakfast by candlelight, and get ahead of the sun on the hilltops is a rule of procedure approved by all successful hunters, and Boston sportsmen have the supplementary tenet that the early riser must carry afield a light heart, too. The belief they entertain is that if one's conscience be troublous and heavy its voice will jar in discord with the harmony of the woods. They believe in "Nessmuk's" dictum to "go light." No burden of conscience for them.

This philosophy has just had a very pretty illustration in practice. A Boston sportsman, who has been in the Maine woods in seasons past with a rifle, two years ago succeeded in killing more moose than he knew what to do with. It was on the West Branch of the Penobscot, a long way from civilization, and in the woods where according to the old order of things crimes go unpunished. So the dead-moose-burdened hunter abandoned the carcasses to rot; that is to say, he thought he left them there in the woods, but as a matter of fact he has been carrying them about ever since on his conscience. And for that size of conscience those dead moose have been a very large load.

Game Warden Allen, of Bangor, an officer whose special duty it is to discover unhappy sportsmen with moose-heavy souls, struck the track of the Bostonian, and for two years has been persistently following it. Last week the Massachusetts man started for his annual Moosehead Lake excursion. He woke up very early the other morning in his hotel bedroom at Kineo, not because eager to reach his journey's end, nor because the weight on his conscience cried sleep no more, but because Game Warden Allen, the conscience reliever, was pounding at the door. The interview was not prolonged. The awakened moose hunter then and there deposited with the officer of the law the whole amount of the fine, $100 for each moose unlawfully killed, and the probable costs of prosecution, as a surety for his appearance for trial at the proper time, or, if he did not appear, to be used as the law directs. Then, having begun the day aright, the moose hunter went on with an unburdened conscience and a lighter pocketbook.

THE GOVERNMENT OF THE PARK.

THE letter which Lieut. Wise sends us relative to the present government of the Yellowstone Nationa Park contains evidence good enough so far as it goes; but it is mainly of a negative character, and does not of necessity conflict with the positive testimony submitted by the special correspondent sent out from this office. It is quite unnecessary to reply to Lieut. Wise's intimation that the FOREST AND STREAM is "booming" the cause of the supplanted force of superintendents for the sake of regaining for those officers any personal advantage. Our interest, and, as we take it, the public's interest, is to have the Park well governed.

Our remarks were not meant to imply that vandalism was any new thing in the Park. There has always been more or less of it, and it was not totally suppressed under Col. Wear's administration. The unfortunate fact remains, however, that upon the dismissal of the Superintendent and his force an impression took hold upon the public that the Park was no longer under effective surveillance, and as a natural result visitors have this season committed depredations so extensive as to warrant us in characterizing the new order of things as "letting loose the vandals upon the Park." Moreover, while under the care of Col. Wear's trained force of assistants these vandals would have been compelled to perpetrate their offenses covertly if at all, there have been cases this year, where the troops in charge have actually given visitors express permission to commit unlawful depredations.

The reference to drunken soldiers, to which our correspondent takes exception, was based on these facts. In the last week of August a drunken soldier, one of the Park guardians, "held up" a stage load of ladies and gentlemen just within the Park, coming from Cinnabar, cocked his revolver, and with profanity and obscenity detained them until it suited his intoxicated fancy to permit them to go on. On the following day a sergeant and two enlisted men were dispatched by Captain Harris to arrest this soldier. In due time all four returned, every one of them drunk. This is not an isolated case, for our correspondent has been witness of drunken brawls among the troops in the Park. It was with a knowledge of these occurrences that we referred in the manner complained of to the present guardians.

Later advices from our correspondent, under date of Sept. 21, give information of fires still raging fiercely on the head of Blacktail Deer Creek, in the valley of the Yellowstone below and above Tower Creek, on the west side of Holmes Range and elsewhere.

Taking it all in all, the summer of 1886 may be set down as a most disastrous season for the Park.

THE YACHT CHALLENGER OF NEXT YEAR.

BEFORE the Galatea's racing is fairly over, the news comes by cable that another venturous Briton stands ready to challenge for the Cup, and we are once more face to face with the probabilities and possibilities of the near future. When Genesta and Galatea were built, three and two years since, the confidence of British yachtsmen in their rule was almost unshaken, and judging from the contests of the cutter and sloop there seemed every probability that Genesta would easily defeat any centerboard sloop that could be brought against her. The newcomer, however, from a totally unexpected quarter, beat her with her own weapons and opened up an extensive field to the yacht designer, intermediate between the existing English and American types. In spite of Genesta's defeat a similar model was tried again this year, and has been defeated by a newer Puritan. While we do not consider the tests thus far as conclusive, owing to the weather in which every race but one in two years has been sailed; and while the results in these two cases cannot nullify the conclusions on the other side which the races in the smaller classes have given, they will carry a great weight on both sides of the Atlantic, as foreshadowed in the extract from the London *Field*, on another page.

The movement abroad is strongly in favor of a rejection of the time-honored Y. R. A. rule and the substitution of a length and sail area rule similar to that in use by the leading American clubs. The next challenger has yet to be built, and a decision as to her elements and details will be made under very different conditions and with a much greater store of experience from those of two or three years since when the new type of American boat was unknown. If it is considered worth while to build a yacht to come here and race it is likely that the Y. R. A. rule will be of little weight, and that the designer will look rather to the future and to American conditions than to the past and British traditions. If he can build a faster yacht for our races and at the same time sacrifice no esssentials by taking more beam, it is hardly probable that he will reject it, especially as the question of "vested interests" has now disappeared entirely. In short, the whole course of events for the past two years has been such as to open up a new field to the British designer as wide as that which Mr. Burgess was the first to step into. While going back in proportions to the boats of half a dozen years since, of what may now be called moderate beam, the designer now has the benefit of an enlarged knowledge of the lead keel and its capabilities, as well as of improved methods of construction; and if these are utilized with the same skill that has been shown in working under the narrow limits of the Y. R. A. rule, Americans cannot afford to go to sleep this winter, secure in their dependence on the existing boats.

The Sportsman Tourist.

SAM LOVEL'S CAMPS.—VII.

THE bright and cloudless morning had a sharp chill in its breath, and the Slang was frozen from shore to shore, its waters smooth with ice of the regulation thickness of the first and last cold mornings of a year, namely, "as thick as window glass." Even in the wide expanse of Little Otter there was no open water but in streaks along the channel, marked by shimmering wavelets in their lines of blue and gold when the first rays of the sun shot across the landscape. All the hills and mountain ranges were hoary as they had been in midwinter, for snow had fallen on them while rain had fallen on the lowlands of the Champlain Valley. There could be no visiting of the traps before noon, for though the stout dugout—a shapelier craft, be it said, than Uncle Lisha had prophesied could be turned out by its builder's hand—might make its way unharmed through the ice, it would cost hard work, and the frail birch would be cut in shreds in making a passage through it. And so, when breakfast was cooked and eaten, and the slight task of washing the few dishes performed, there seemed not much but loafing to fill the forenoon with.

"We can't eat half o' them 'ere fish afore they spile," Sam remarked, after a long look at the hanging row of dressed pickerel; "I wish 't some o' the folks up to Danvis had t' other half. Say, Peltier, don't ye wanter take a walk an' see the country?"

"Honh! By gol, I d know 'baout it," with a blank stare toward the far-off hills of his birthplace, "I do' know 's I raly wanter hoof it clearn ov' to Danvis t'day!"

"Danvis! Shaw! nobody wants ye tu. I was a-thinkin' mebby, 't 'ould be a pious idee to take three four pickril up t' ol' Mister Bartlett, 'at gin us leave to camp here. A dreffle clever ol' gentleman he is, a forty-leventh cousin of Joels', an' a Quaker too, but t'other kind, Hicksite. He lives up there in that tew-story white haouse. 'Taint more 'n a mild, an' we c'n set ye crost in Antwine's canew, er you c'n go 'raound 'f you'd drauther. 'T aint fur t' the head o' the Slang, er to where you c'n cross on some lawgs. 'F you'd jes' livs not go an' take him a mess o' them fish I'd be 'bleeged to ye. 'N' Antwine, we're e'en a most aouten terbarker an' crackers. S'posin' you set Peltier acrost, 'n' go 'long up the store an' git the staffs o' life? 'N' say, Peltier, the's an' al-killin' slick gal up to Mr. Bartlett's!"

Pelatiah's blushes shone through the sunburn of his honest face. "Oh, you git aout, Samwill!" with a bashful guffaw, "I don't care nothin' 'baout no gals!" Then, with quick forgetfulness of his denial of such weakness, as he looked down upon his worn and outgrown raiment, turning his arms this way and that to inspect their covering, "By gol! I do' wanter go a-lookin' 's I du, where the's any —any young folks!"

"Wal, Ah don' care for me," Antoine said, getting promptly to his feet, "Ah guess Ah'll lookin' well 'nough 's Ah do, an' Ah'll geat ma close all pref-fume for go see de gal. Ah'll carry dat feesh, an' Peltiet go store for de *pro*-vizhin. Ah ant see homan so long ago Ah'll freegit what kan close he wore. Come, hoorah boy!" He cut a forked twig from a water maple, and stringing four of the nicest fish upon it led the way to the landing, whither Pelatiah presently followed after hatchelling his towy locks with the sparsely toothed and only comb the camp afforded, and vainly attempting to pull his trousers down into neighborliness with his boots. They launched the dugout, and boarding it, plowed and broke their slow way to the further shore, the ice crashing and tinkling and jingling along their course, and hissing in long fissures on either side. When they had landed, Sam noted that after keeping together through the first field, Antoine diverged to the right in the direction of the store at the corners, and Pelatiah to the left toward the big white house that shone among its gray locusts and against its dusky background of orchard. With his pleased half laugh and muttered "jes 's I 'xpected," came a faint sigh as he turned his eyes toward the white dome of Tater Hill, in whose morning shadow dwelt his buxom sweetheart. There was some comforting promise in the ranks of drying muskrat skins that brought a contented expression to his face after he had cast a slow calculating glance upon them. Then he gathered some turpentine from half a dozen boxed pines, and melting it with grease in a bullet ladle set about salving his canoe, which had got a grievous wound from a hemlock snag. He had the camp all to himself, for Drive had gone off hunting on his own account, and his earnest baying could be heard away upstream, mixed with the querulous whistle of the woodchuck he was besieging. But Sam was never weighted with any feeling of loneliness in the companionship of the woods. If, when among the patriarchal trees and their tribes of tenants and dependents, any sense of isolation made itself apparent, it was what he called "a good lonesome," and he enjoyed it to-day. Out of the woods came only its own voice and the voices of the wood folk: the sigh of the pines and hemlocks; the thud of the partridges' drum beat, beginning with measured strokes and ending in an ecstatic roll; the soft cluck and whistle of the jay's love-song intermitting with his more discordant cries; the woodpecker's note of mating time, as if he was sharpening his bill with a steel for the battles love might cause; and from far away, like the jingle of many discordant bells made almost melodious by distance, came the clamor of a convention of crows gathered to denounce some detested hawk or owl or fox. Near by a chipmonk clucked incessantly over his recent discovery of a new world wherein were sunlight and fresh air; and Sam's neighbor, the red squirrel, was in high spirits with such sunshine after storm, and flung at him a shower of derisive jeers and snickers from the trunk of the great hemlock where he clung with spasmodic jerks of feet and tail.

"You sassy little cuss!" said Sam, "what sorter names be them you're a callin' on me? I'm a dum'd good min' ter stop your chittercein' with a pill aouten the Ore Bed! You'll be a suckin' aigs an' killin' young birds wus 'n a weasel in less 'n a month, you little pirut! But you're hevin' lots o' fun livin', 'n' I d' know 's they're my aigs an' birds, so jaw away an' be dum'd." And Sam lit his pipe with a coal and continued the application of the plaster to the canoe bottom.

Now and then the ice fell along shore with sudden jingling crashes to the level of the falling water, and as the forenoon wore away and the shadows shortened it melted apace where the sunshine fell full upon it, and open water began to ripple and shimmer in the breeze and there was a prospect of making the round of the traps in the afternoon if Antoine returned in time. The rent in the canoe was mended, and Sam lay taking a lazy smoke beside the ashes, casting an occasional glance across the Slang for his companions, when a slight wake attracted his attention and he saw a small, dark object swimming past. "Naow, Mister Mushrat," he said, as he crawled into the shanty and brought forth the Ore Bed, "don't ye know 't aint healthy for none o' your fam'ly 'round here?" but as he crept to the shore with his rifle cocked and at a ready, he saw that the lithe, snake-like movements of the swimmer were not those of the muskrat. "Ah, Mister Mink, beg pardon an' make my manners," he said, speaking with the spiteful crack of the rifle. The silent wake ended with the spat of the ball, but before the first wavelet set the ice to tinkling along the shore, the mink slid to the surface feebly making the last struggles for his tenaciously held life. "That trouble in yer head is too much for ye," Sam said, as, after launching the birch, he picked up the yet writhing animal and gave it a finishing whack on the gunwale of the canoe, "you tough little cuss. What a hard-lifed critter an auter must be; julluk you, only cut to a bigger partern. By the great horn spoon! I wish 't I could git a crack at one on 'em jest onct! 'N' the' haint one left in the hull o' these tew cricks they give the' names to, I s'pose. Ho, hum! Haow many year afore the' won't be nothin' left, I wonder? Not till arter I'm a-sleepin' under a blankit o' sods, I hope." As he sighed and cast the vague yet scrutinizing glance of a hunter over water and banks, and it was caught by something, larger than mink or muskrat, swimming toward him, nothing was further from his thoughts than the old adage, 'The devil is nighest when you're speakin' on him.' "What's that 'ere ol' fool of a haoun' dawg comin' hum by water for? An' it col' 'nough to—Drive, you cussed ol' fool" beginning under his breath to formulate a rebuke; then as it became apparent that the swimmer was not Drive nor any other dog, quite holding his breath and reaching cautiously forward for the gun, which he was too experienced a woodsman to let long accompany him uncharged. His nerves vibrated with a slight tremor when the stock touched his cheek, but at the right moment the long barrel hung firm in his grip and the Ore Bed snapped out its sharp little voice. "'F that haint an auter the' haint none!" said Sam, looking anxiously over the vacant water as he arose and began to reload the rifle. "An' I'll be dum'd 'f I haint missed him! *Hev* I forgot haow to shoot just the minute in my hull life 'at I'd orter shot the clustest?" But now, a rod or more from where the beast had disappeared it broke to the surface again in a wild, writhing, flurrying struggle like a great fish in its death throes, and Sam having hastily but steadily finished the loading of his gun, fired with instantaneous aim at the dark center of the widening circles of waves, then laying hold of his paddle, with a few strokes sent his craft thither, and dealt the struggling otter a downright blow with the paddle's edge that took all the fight and nearly all the life out of him. When he lifted his prize inboard, the last otter ever killed in these waters, Sam was as full of happiness as Pelatiah had been over the capture of his big pickerel, but he raised no shout of triumph, he only heaved a great sigh of intense satisfaction and said, "There, gol dum ye!"

Not long after Sam had gone ashore Antoine appeared on the eastern bank. The unsteadiness of his gait and the loudness of his voice showed that he had more than tasted the storekeeper's "old Medford," and Sam watched his embarkation with some anxiety, for though a soaking was not likely to injure him, crackers and tobacco would be the worse for it. But he got himself and his provisions safely afloat, and then a few boats' lengths from shore, remembered Pelatiah, for whom he began to call: "Hey! Peltiet! where you was be? Come! Hey! Hoorah, boy! Mos' suppy ready. Bed tam for go sleep! Wal, you'll ant goin' come, va zu diab', go to dev'! On'stan' bose of it, hein?" Then resuming his devious way, he lifted up his voice, sonorous and tuneful in spite of its drunken huskiness, in English song after this wise:

> "'Hoa dear of ma heart was de screen of ma chilshood,
> When fon' reggylecshin' bring him up of ma view,
> De orchy, de middle hees deep tangly wil'wool,
> An' hitch bee-love spot of ma infant, he's new'—

"What was nex' of it Ah freegit for rembler—oh, Ah know:

> 'Hokeyhol' buckle, ha-ern bung buckle,
> Hol' cover moss buckle, he'll hang up de well!' "

Having got the better of this to his complete satisfaction he fell to murdering the words of another cold water song high in the popular favor of those days:

> "'Oh den r r re-sagn dem r r ro-sy wahn,
> Hitch smahlin son of a daugh-taa,
> For he ant so good for de useful blood
> As a col' of spahklin' wa—taa!' "

"Whoop! Hoorah for hoorah! Where was you goin' for go, can-noe? Ant you'll know it way for shanty? Probly you'll get start for Danvit, ant it? Gat sail on woggin, do dat!" He had become aware at last that the canoe, after making some uncertain progress toward the desired port, was now headed for the eastern shore of the Slang. "Here, Antwine, come here!" Sam shouted, becoming anxious again concerning the fate of the crackers and tobacco, then to himself: "Hear that dum'd Canuck, drunker 'n a bumble bee, an' a singin' temp'ance songs! What sets folks allus to singin' them when they 're full o' rum, an' ongodly sinners to shoutin' hymnes, I wonder? Kinder ev'nin' things up, I s'pose. An' there comes Peltier! If that dum'd fool ondertakes to bring him over, he'll draownd him, sartin. Peltier! don't ye tech to come acrost till I come arter ye! Come here, Antwine, wi' them crackers an' terbarker—I'm most starvin'."

"Bah gosh! M'sieu Lovet, Ah'll been mek it un petite voyage for ma healthy! Naow Ah'll goin' git Peltiet, sah," and he began to shape his course to the best of his ability toward the waiting passenger.

"Oh, come along here, Antwine," Sam called, coaxingly, "I've got suthin to show ye!"

"Bah gosh, M'sieu Lovet, Ah'll captins dis boats!" Antoine answered, still paddling on his way with blundering strokes, "Wen Ah'll get ready come dar, Ah'll comin'; wen Ah'll get ready, Ah'll don't comin'! bah gosh feesh hooks! On'stan'?"

"Look a here, Antwine," said Sam, in a different tone, and at the same time launching the birch and stepping into it, "you come ashore right straight off, er I'll come aout there an' knock ye gally west, an' tow ye ashore! I've go' done a foolin'."

"Oh, Sam, you'll ant gittin' mad, was it! You ant wan' leave you visity for roos' all naght on banks lak geeses, don't it? Ah'll goin' git it, me."

"You come here!" Sam said sharply, as he pushed his canoe afloat, and Antoine turning the prow of the dugout homeward was soon alongside. "Oh, Sam," he whined in maudlin tones as he tumbled ashore. "What you was talk lak dat way for? You'll know Ah ant wan' faght wid you, Sam. Dey ant fo' hond'ed t'ousan' man could scairt me, but Ah ant wan' leek ma frien' sah! Bah gosh, no!" and he made an attempt to embrace Sam.

"All right," Sam said, putting him aside, "I must go an' git Peltier. You look a' that 'ere annymil 'at I killed whilst you was gone, an' then lay daown an' take a snooze, for I know you're turrible tired with all 'at you've underwent."

As Antoine balanced himself before the dead otter and focused his vague stare upon it, he was at first almost overcome with wonder. "What you call dat, Sam? Panters? Bears? No, he ant bears, he'll got some tails! What he was be?"

"Auter," Sam anwered.

"Oh, yas, otty, yas, what we'll call it la loutre, yas, yas. Ah keel more as fave honded of it in Canada, some of it more bigger as you was, but dis one so small Ah ant know heem. Ah s'pose you'll feel pooty plump, Sam, prob'ly, but he leetly fellar, not much bigger as minks was. What for you ant let heem growed, Sam, hein?" But Sam was half way across the Slang, and when he returned with Pelatiah, the Canadian was snoring his way into the oblivious interior of the land of Nod.

"You needn't git nothin' for me t' eat," Pelatiah said, as Sam began preparations for a late dinner, "for they made me eat dinner with 'em. Oh, my gol! a heap bigger 'n I c'ld see over, they piled ont' my plate! They hedn't hed a fish this year, 'n' they was turrible 'bleeged to you, 'n' made me bring a hull ha' bushel o' apples, signofiders an' gillflaowers, they be. I'm goin' to take the bag hum some time. An' they thee'd an' thaou'd me jes' if I was a member 'mong Friends 's they say. 'N' old Mister Bartlett he wanter know 'f I knowed any stiddy feller 't wanter hire aout for six or eight mont's, an' fin'ly sez he, 'does *thee* wanter?' S'pose aour folks 'ould let me, Samwill, bein' 't I haint come of age, an' haow much 'd I orter ast him? Say," without waiting for an answer, "that gal haint their darter, she's their hired gal, but by gol! she's harnsome 'nough to be the President's darter. She's neater 'n any school marm! Oh! 'f I wan't 'shamed o' my darn'd ol' ragged duds, an' me a stickin' tew foot aouten both ends on 'em. Shouldn't s'pose sho' ha' spoke tu me, but she ast me a hull lot o' questions 'baout my folks, an' kep' a smilin' jes 's clever! S'pose she wouldn't look at me agin, would she, Samwill?"

"Can't tell ye, Peltier; the's no tellin' nothin' 'baout what women folks 'll du or won't du," Sam answered, rising and brushing from his tawny beard the crumbs of the crackers wherewith he had made his dinner. "Wal, I must be off an' tend to what traps I can, for that poor creetur won't be no use to-day. Peltier, don't ye never drink no sperits 'thaout ye raly need 'em, 'n' that'll be mighty seldom. When huntin' an' fishin' an' trappin' an' drinkin' goes together, the huntin' an' fishin' an' trappin' gits dreffle poorly 'tended tu, I tell ye. If he wakes up ugly, you kinder saunder off an' let him work it off alone by hisself, erless"—after a little consideration—"you'd druther swat him side of the head tew three times an' make him behave hisself. If he thinks you're the least mite afeared on him, he'll be meaner 'n tunket, arter the way o' all his dum'd breed."

Giving this advice, Sam departed, and during his absence Pelatiah comforted himself with apples and gum and pleasant waking dreams.

The sun had gone down behind the woods and twilight was creeping over the landscape, and the evening air was vibrating with the ceaseless pur of the toads and the shrill chime of the Hyla's vesper bells, before the light dip of Sam's returning paddle was heard, followed presently by the swish of the canoe bottom on the matted drift of rushes. He had as little to show for his voyage as was to be expected after such an unpropitious night for trapping as the last had been, and he had not had time to visit and reset nearly all the traps as he might have done with Antoine's help, and so Sam was not in his pleasantest mood when he stalked into the firelight with his light burden of muskrats. "Haint that dum'd peasouper come to his senses yit?" he said, pausing a moment to listen to Antoine's snores, "wish 't he'd crawled int' the Slang an' draownded hisself; but he couldn't—he haint one o' the draowndin' kind. Wal, Peltier, le's ha' suthin' t' eat—reckoned you'd ha' got some supper ready 'fore naow."

"Wal," Pelatiah apologized, "I did think on't some 'n' I went so fur 's to cut some pork, but I was feared I'd spile it a-fryin' on't; and went so fur as to wash some 'taters, but I didn't know whether no to put 'em in hot water or col', an' the same wi' the tea, an' I didn't know whether no it took a han'ful for a drawin', er less, er more, an so I didn't do nuthin sca'sely, an' Antwine he haint done much only snort and grunt. I'm sorry, but I guess my 'cumilary edication has been sorter mislected', as Solon Briggs says. Cumilary! what in J'rus'lem does that mean, s'pose?"

"Oh, wal," Sam said cheerily, "nev' mind, we'll ha' suthin' to right," and he soon had pork, fish and potatoes cooked and ready. "I b'lieve I'll call aour sleepin' pardner; he's hungry 'f he only knowed it. Antwine!" Getting no response but a grunt, he dragged the Canadian forth by the legs and shook him to such wakefulness that he sat upright and stared blankly at the smoking slab. "Bah gosh! where Ah'll was? Ah'll t'ought Ah was keel in de Papineau war!"

"You'd orter ben," said Sam.

"Oh Sam, no! Dis was gra' deal bettah for me. 'F Ah'll dead, Ah can' heat, but naow Ah show you, me!" And he did, while they ate their supper without much sauce of conversation.

"Naow then, Antwine," Sam said, as they prepared to turn in for the night, "I wanter tell ye one thing, if ye git drunk agin whilst we're here, I'll give ye the almightiest hidin' 't ever you hed in the best blue beech gad I c'n find —an' I know where the' 's some neat ones!"

"Me? Dronk! Oh bah gosh! Ah'll ant never got dronk ma laf tam fore, nor afty ward, nor dis tam, bah gosh! Ah was tire, an' sah, Ah was nat'rally seek!"

"Wal," said Sam, "it 'll be better for your health not to hev no more seeh fits o' sickness."

Then, lulled by the incessant, monotonous chorus of the toads and frogs, they went to sleep.

TRAVELS IN BOON GAH ARRAHBIGGEE

FROM THE DIARY OF JOSEPH GOATER.

EDITED BY F. H. TEMPLE BELLEW.

(Continued.)

ONE day when paddling up a narrow tributary to the lake, our attention was suddenly called to a loud smacknig and splashing some distance off. Steering the canoe noiselessly in that direction, we discovered a large specimen of the fist fish with his hand-like tail grasping the root of a tree by the water's edge, and thrashing the bank and water all around him with great violence. He was defending himself against the attack of nearly a dozen large water rats that surrounded him, showing their long white teeth and glittering eyes as they flew at him with the most determined ferocity. The body of one dead rat with its white belly turned upward floated past us as we watched, and the corpses of two others lay on the bank. Several were wounded and moved about with difficulty, still they continued to aid their fellows in the attack. Their chief object seemed to be to get at the grasping fin, and so make their fishy opponent let go his hold, though they not infrequently sprang for his gill fins, when, however, they were thrashed off as soon as they made a lodgment. One big fellow I noticed particularly, who was evidently the leader of the attacking party, displayed marked daring and energy. Several times he succeeded in getting a hold on the gill fins, only to be violently shaken off again. The battle was long and sanguinary, but after watching it for over twenty minutes I began to notice signs of weakness on the part of the huge eel. His blows were not so rapid nor vigorous as at first, while the rats fought on with scarcely any abatement of energy, perhaps for the reason that every now and then, when exhausted, two or three of them would withdraw from the field of battle and rest in the long grass, and then return to the conflict with renewed energy. Just after one of these resting spells, I noticed the captain rat crawl stealthily round to a good position whence, after watching motionlessly for some seconds, he made a sudden spring and fastened his white teeth in the throat of the fist fish. This time he was not shaken off so quickly as before but held his grip for a sufficient length of time to enable his companions to make an assault on the grasping tail of the fish. It was only for an instant, however, for the eel coiling itself up, sent the poor rodent flying in the air fully 12ft. off. Then the others were quickly scattered from their hold on the tail, which, being well protected with armored plates, offered but a poor hold for even the sharp teeth of the rats. Little daunted, however, by this repulse, the band of rodents collected together and seemed to hold a brief council of war.

What then followed truly caused me astonishment. The great body of the attacking force, leaving two or three of their number to harrass the enemy, retired into the underbrush, and remained concealed for some little time. Presently I saw them returning, dragging with them sprays of a peculiarly tortuous and thorny shrub, to each shrub there being detailed two or three of the rats. These branches they dragged up as close as they could to one side of the eel near the tail, while a body of fighters kept him engaged on the other. Then under the cover of this abbatis, they advanced on the vulnerable point of their foe, at the same time a general assault being made by the entire force. The commanding rat made a vigorous jump for the throat of the fish, succeeding, however, only in catching one of the fins, but to this he held on long enough to enable his companions to get at the tail, when he was sent off gyrating through the air as before. But this time the thorny abbatis served as a temporary shield for the assailants, the captain joining their numbers, and though his eelship sent the twigs flying about right and left, it was too late; the enemy had mutilated two or three digits of his fist and he was losing his grip. Never have I seen such fury displayed by any living creature as was now exhibited by this slimy monster. His form seemed absolutely to disappear, and in its place nothing but a gray mist filled with bits of leaves and grass was visible, so rapid were his motions. This exertion could not last long. In a few seconds he fell with a thud on the bank, and then drawing his body up like the letter S, made a bold dash for the water. In an instant all the rats were after him, and the game was apparently up. He could not thrash in the water, and was too much disabled to swim with any great rapidity. I could now see very little of what went on under the water save a confused, struggling mass, with occasional pale flashes from the white stomachs of the contestants. Presently the heads of the rodents began to appear one by one above the surface as they swam toward the shore, and shortly after the mangled and blood-stained abdomen of the vanquished warrior, like the white ghost of a note of exclamation, came floating toward us. True to the tradition that eels never know when they have been killed, this creature made several dissentient struggles as we dragged it into the boat. An autopsy at once revealed the whole cause of this bloody encounter. The monster had desolated the homes and firesides of a whole colony of hard-working and industrious rodents, for in his capacious abdomen I found no less than forty-seven young rats, some of them in the earliest stages of infancy, and others in the last state of decomposition. So ended one of the most fiercely contested battles that I ever witnessed. Four dead rats I counted on the bank, and others must have been carried away by the stream.

We have all heard the sagacity of rats made the subject of wondering admiration, but nothing can surpass the instance I have just narrated, and which I saw with my own eyes. Surely here was evidence of something beyond mere instinct, some process of reasoning so nearly allied to that which goes on in the human brain as to make it difficult to distinguish between the two.

Poptee, who had manifested more interest in the encounter than any of the rest of the party, to the extent even of nearly upsetting the canoe and pitching us all into the water, craved possession of the dead body, which being given him, he carefully skinned and stuffed, and subsequently forwarded to his wife as a trophy of his prowess, or a souvenir of affection, I do not know which. As no one at our encampment seemed to hanker after the flesh of the creature as a part of our *menu*, we restored it to the lake, minus its overcoat, and satisfied our appetites with roasted marble duck, wadda cakes and baked roots. That night, however, we suffered for our indiscretion in not removing the carcass to a greater distance by the snarlings and squabbling of a herd of khypates (a small carrion-eating animal) over the remains; these in turn arousing the ire of our dogs, they took a hand in the fray and made night pretty hideous until nearly day dawn. In vain did I drag myself from my cosy cot and call upon the dogs to withdraw from the conflict. In vain did I blow my loudest and most peremptory whistle, (an instrument by the way that we never allowed ourselves to be without in our explorations) until the muscles around my jaws and ears ached like the rheumatism. In vain did I use persuasive expressions and play the old Dickens with the Decalogue: the dogs would not be silent. So at last in a moment of desperation I seized one of my double barrel guns and let fly a dose of No. 8 in the direction in which the noise seemed thickest. For a moment there was a dead silence, broken, however, immediately by the guttural exclamation of the cowardly Loptee whose frightened face I could see by the light of the night fire peering out of an aperture in his tent close by. He thought I had been attacked by some dangerous monster and was defending my life. To the credit, however, of my Wang-brezzy, they came rushing out armed with the poles of their Khi-goorta and followed by the rest of the attendants. Then the valiant Loptee deeming things tolerably safe sallied forth and threatened deeds of daring against any possible foes. He had every virtue had poor Poptee and would, I think, have willingly laid down his life for me could he have done so without going through the process of dying. I bade my warriors make a raid on the noise makers who had renewed their disturbance, but though they did it right manfully they merely multiplied the clamor with no further effect than if they had charged a swarm of mosquitoes. So I ordered them all to their tents, and we made the best we could of the matter until the next morning. But the most extraordinary part of this little adventure was yet to come. I slept late the next day, and on drawing aside the curtain of my tent and looking in the direction of the previous night's fracas, the whole bank, trees, reeds and stones seemed covered with snow.

[TO BE CONTINUED.]

FLORIDA LAND, LIFE AND SPORT.

PONCE DE LEON'S voyage to Florida in search of the "Fountain of Youth" is noteworthy as the first of many journeys made to that balmy clime in the endeavor to realize the improbable and impossible. To the resident Floridian it is astonishing that the advertisements published by many unprincipled land companies should be read otherwise than with incredulity and indignation. Distorted facts, barefaced misstatements and deliberate falsehoods are common. Sorry am I to say they find many believers. Even for a fair-minded man it is difficult to give a comprehensive and just statement of the facts. You say there is not the fortune in an orange grove so generally claimed. At once an instance will be quoted, correctly, whose prominence is its exception. A pamphlet tells you of some one who made $300 from an acre of vegetables, possibly quite true, but a thing he is never likely to do again. And where one makes a success by hard work, good judgment and propitious weather, a score fail.

I have lived in Florida nearly seven years. I know something about it, but not as much as the average six weeks tourist. What little I do know, however, may be of use to my friends of the FOREST AND STREAM; and remembering how eagerly I sought information before I came here, I will mention a few things one ought to know ere he comes to Florida either to visit or live.

The atmosphere of Florida is not always the "breath of flowers." It wasn't on the 12th of January last. On that morning the thermometer registered 17° Fahrenheit, and things looked "puny." On Jan. 9 the thermometer marked 26°; on Jan. 10, 18°; on Jan. 11, 22°; on the 12th 17°, and on the 13th 24°. All the above records were taken about 7 A. M. each day, and from a registering thermometer. The newspapers North stated, "All orange trees killed and Florida nearly ruined." The Florida papers talked back, "No damage worth mentioning." Now in June, when the entire damage is visible, we hear nothing of it.

The injury is heavy. In the village where I am there are about seven hundred and fifty "old" trees. By "old" trees are meant those that came up from the roots of the trees frezen to the ground by the great frost of 1835.

This village is a very old one and situated near Jacksonville, being probably the most northerly of any large orange growing settlement. The "old" trees mentioned are all dead. Besides the fifty year old trees there is a class of from fifteen to twenty year old trees. When these last were healthy and had received fertilization sufficient to give vigorous life, they survived the cold with more or less damage. All trees lost their leaves.

The loss to this village is probably greater than to any other in the State. Being so old a settlement it has more "old" trees than most others. The new settlements of course have none. These old trees might be fairly estimated to average fifteen hundred oranges each, annually. In Northern Florida there will not be a one-eighth crop next season.

On the 20th of January I visited De Land, nearly 200 miles south of Mandarin. I was told the thermometer fell to 16 , but I doubt it. The leaves were mostly on the trees, green and unhurt, while at Mandarin everything was brown and withered and the groves looked as though a fire had passed through them. In seven years we have had three freezes severe enough to ruin the ungathered crop. This is nearly every alternate year.

The further north you can grow oranges the better their flavor is. The transportation is better. Healthfulness is greater. Other crops, strawberries and early vegetables are more easily shipped. The mails are more frequent and regular.

Orange growing is not as profitable as supposed. If you make your own grove, and by forcing make it bear at eight to ten years, it is an expensive piece of property. If you let it make itself it will not bear so soon by some years, but it is just as good, if not a better grove. Five years ago oranges sold for $15 per thousand. Now they sell for $8 and $9. The care orange trees require is continual and experienced. A recent disease known as "root rot" has proved very destructive. The crown roots are attacked and the tree girdled.

Vegetables are not the bonanza imagined. There has been much money made on tomatoes, cucumbers, etc., but we hear of the successes, never of the failures. Strawberries appear to survive as the fittest. The cost of raising is not great and they can be laid down in New York or Boston for about 16 cents per quart. When berries sell below 25 cents per quart the shipping stops. There were about forty thousand quarts shipped from here this season. I have known strawberries ripe on the 5th of January. Last season the first shipment was made on the 24th of March. With strawberries frost merely cuts off the bloom and decays them. It usually kills tomatoes. As in everything else experience is needed, but every one is obliging and readily aids a newcomer in the kindest way. So much for fruit and vegetable growing. Now I want to say something concerning game.

It is possible to discharge a gun and not kill something although I was told differently before I came here. Furthermore, it will soon be difficult to find anything to discharge a gun at. The lack of a game law is a disgrace to the State government. The deer are becoming very scarce. Ten years ago you were nearly certain of at least seeing deer on a trip into the woods. Now one considers himself very fortunate if he catches a glimpse of buckskin in a three days camp. Men who hunt on spare days thought nothing of killing a deer every trip. The same men don't kill two a year now. Not only do they shoot right through the breeding season but they kill fawns and does heavy with young. I have seen these things and know what I say. I have seen a fawn that dressed only 21lbs entire. I have seen a wild turkey offered for sale that only weighed 4lbs. I have seen many turkeys killed in April and May and I know men who would shoot a hen turkey on her nest. To prevent such things as these, laws that can and will be enforced, are necessary. With small birds it is the same. The negro traps and kills for the pot. Robins, thrushes, jays, flickers and even cardinals and mockers are game to him. The way quail are trapped is simple and effective. The old time "figure four" trap on a large scale usually takes in the entire covey. I have also heard of a bunch of quail being watched until they settled for the night and then the watcher approached and deftly threw a cast net over the entire lot. What makes a sportsman most angry is to see the half grown boys, each with a gun, prowling about and shooting everything visible. They tie the birds by their necks to a string and are not always careful to put an end to the sufferings of the wounded. A gasping and fluttering bird causes no feeling to a negro, while a humane man is indignant at such cruelty.

But there are pleasanter things in Florida than frosts and bird catchers. Florida has many facilities for hunting and camping that are wanting at the North. When you go on a camp you are generally sure to camp in a wild and unfrequented section. You are seldom near a house and seldom meet strangers. I think that a chief delight is to realize you are in a wild country and are leaving civilization behind. A stranger in a camp is unwelcome. There are exceptions, but that is the rule. You and your party go to be alone and instinctively resent the intrusion of the chance individual who comes to camp to see what he can, and comment audibly or otherwise. One beauty of Florida camping is, you can go so much by boat. And when one goes by boat many luxuries are taken that are never thought of on a tramp. Besides, you have the pleasure of managing the boat. Wood in Florida is unsurpassed. Lightwood is found everywhere. Fat pine knots, resinous splinters for kindlings, and after supper a big pine stump for an all night's fire that no rain can "out." Speaking of rain, "that reminds me." I went on a camp up Julington Creek in February, '85. The captain had not been on a camp since he arrived in this country, and selecting a promising day we went in a small "cat," with a Rushton 45ft. in tow. I usually go prepared for rain, but never having been caught I grew careless, and went this time without any shelter whatever. We made camp and had supper when, as we were laying in a stock of wood for the night, it began to sprinkle. We put up some poles and spread the captain's sleeping bag and my blanket over them. They kept off the sprinkle, but directly it came down heavily and began to blow. In ten minutes the blankets were soaked and the water came through in streams. It was wetter under the covering than outside. For a time we contrived, by kneeling close together, to keep dry all but our legs that extended behind us. We made a little fire close outside the shelter and put the coffee pot on, and for some time we drank coffee and smoked to keep awake. But at last small streams began to trickle down our backs. We shifted position. There were other streams. We moved again. Worse than ever. We gave it up and stalked out in the storm. We cut wood and made a large fire. The captain couldn't sleep. He stood back to the fire till he was soaked through in front. Then he reversed and faced the fire till he was soaked through behind. His comments were varied and free. I did not remark on the weather so much as I did on my stupidity in not bringing some shelter. I obtained some sleep of an uncertain kind, which, indefinite as it was, the captain begrudged me. It rained all night, but cleared in the morning. I am not likely to get left like that again. But, after all, what would outing be worth if all were fair and no mishaps gave zest to the trip, affording many a merry laugh afterward.

The manner of hunting deer here is by driving. It is probably the only way likely to be successful to any extent. During the day the deer remain almost entirely in the swamps, where it is impossible to approach them. At night they come out on the ridges to feed.

I went on a hunt on New Year's day last. Bill and I took a horse and cart and drove fifteen miles out east. On the road we were joined by Sam and his dogs. We had an early start and arrived at our camping spot at noon. The early start was not effected without an effort. Bill and I slept in the same apartment and I set the alarm for 4 o'clock. When it went off I mustered energy enough to tell Bill it was time to get up. Only a grunt in reply. I laid still awhile and then a rooster crowed. "Come, Bill, we must get up, didn't you hear that rooster crow?" "That's a 12 o'clock chicken," murmured Bill.

I swung out on the floor and pounced on him. A yell of terror as I dragged him out followed by a shiver and "Jucksnation ain't it cold." After reaching our destination we made camp and then put the dogs out. We jumped one buck that afternoon. He was so distant we had no chance for a shot. We did not start another, and returned to camp early as Bill wanted to try and "roost" some turkeys. I hadn't much faith in Bill's roost, but agreed to go along. When we arrived at the swamp, we separated to post ourselves about 100yds. apart. The swamp was skirted by a brier patch that would have worried a cat to crawl through. I am larger than a cat and it worried me in proportion. But "I had it to do," as Bill said, and I contrived to get through with most of my clothing. I cautiously made my way to a fallen log in range of several big cypresses, and there I seated myself up to my knees in water. I stayed till dark but no turkeys. Squirrels ran close to me and birds perched near by. Once a swish of wings made me cautiously glance upward, but it was a great blue heron flying over. Finally I hooted to Bill and on his reply proceeded to tackle the brier patch again. Sam had a good fire and supper ready, and after hanging our wet clothes where they would dry, we fell to and devoured everything within reach. After supper Bill and Sam proposed going "jacking." I said I'd keep camp and look after the dogs. Sam asked me to listen, and if a gun was fired and he whooped to turn the dogs loose. If he whooped and no gun was fired I would know they had missed camp, and I was to answer and give them the direction.

After they had gone I lighted my pipe and settled back against a big pine. The dogs curled themselves up near me and lay blinking at the fire. I don't think I ever enjoyed an evening more. Beyond the firelight it was pitch dark. We had brought no axe and merely piled large logs and knots for a fire. In every direction projected flaming arms and as some brand burned through and fell with a crash the dogs would lazily lift their head and blink sleepily, then with a glance at me curl themselves up for another nap. I knocked my pipe out and refilled it and knocked it out again; and stirred the fire and re-arranged the wet garments drying. No shot from the hunters, no whoop. I was very drowsy and at last fell asleep and, with the dogs, dreamed of the sport on the morrow.

"Hi, there, you want to burn up." I jumped and found Bill and Sam returned and the fire so close as nearly to burn my blanket. They had turned around in their tramp and whooped to me, but of course got no answer and after considerable work succeeded in getting their bearings for camp. They saw no deer sign.

We put the dogs out early in the morning, but for some time had no success. After a while it came on to rain and I, who had been ranging about 200yds. to the right, came over to the others and we consulted as to the propriety of leaving for home. While still undecided the dogs opened and presently an old buck came down the open, clearing the palmettoes in great style. We all treed and eagerly watched the approach. He diverged so as to pass at about the place I had just left. The ground was so open there was no way for us to intercept him without exposing ourselves. When he came opposite I gave him two shots from my Winchester, but did not touch him and he headed for a big swamp where the dogs lost him. Bill's look of despair was ludicrous. "Jucksnation, there goes our last chance." And so it was.

Alligators were formerly plentiful about here, but are now very scarce. I measured one, shot about two years ago, that measured 11ft. 9in. The stories of 16 and 18ft. 'gators are all fables. The largest I ever saw (being alive I could not measure) I estimated at 13ft. Quail here are very numerous and tame. You can start a covey almost any time, but if you drop one, your chance of bagging it in the palmetto is poor unless you have a good retriever.

There are many swamps in this country, and to them you should go for an experience curious to a Northener. Many of them are almost impassable, but familiarity and experience are great aids. I thoroughly enjoy exploring a swamp, and my lady relatives and friends suggest I'm crazy. "What you can possibly find to admire or interest you in a swamp is beyond me," said one. No doubt she's right. What would give me the keenest delight would pass unnoticed by them, and the satisfaction of exploring an almost impenetrable morass is comprehensible only to a born sportsman and lover of nature.

One April morning I started to visit a very large swamp near by, known as the "Bay." I particularly desired a great blue heron, and I knew a few frequented this particular swamp. I had been there before and knew the lay of the land pretty thoroughly. After getting about two hundred yards in I selected a likely concealment on a bit of dry ground about six feet square and made myself comfortable. Pretty soon a heron pitched on a tree about one hundred and fifty yards distant and began preening himself. I patiently awaited his pleasure in hopes he might soon select a perch within shot, but he seemed quite contented and continued his toilet, only occasionally stretching his long neck at some suspicious sound or to recognize a passing friend. I waited half an hour and then decided something must be done. Now the ground, or rather water between him and me, was a discouraging sight to view. Water, in depth from one to five feet, and dense brush and vines, much of it being dead and dry and lying close to the water. I decided to stalk him, and I knew the cracking of a dry stick would probably start him, so I reasoned, as it would be impossible to go either through or around the undergrowth I must go under. I put shells, pipe, tobacco and matches in a safe and dry place, and taking only the two loads in my gun I slid softly into the water and sank until only my head and right arm were out. I took nearly three-quarters of an hour in making one hundred yards. At times I would be nearly upright in the water, then lying at full length in a shallow place, all the while immersed to my chin. Many times I paused to cautiously cut or break a vine or branch that I could not pass otherwise, and several times I rested my gun in the bushes, for it was very tiring holding it clear of the water in so awkward a position. Two or three times I caught sight of the heron, usually quiet. But once the distant report of a gun made him wary and suspicious. When about fifty yards from him I came to open water. No undergrowth and consequently no concealment. I was close enough for a shot but his body was almost hidden by a branch and a bunch of Spanish moss. I deliberated and resolved to risk it. I missed him clean and he sailed away. I stood upright about waist deep and was watching him in hopes he might turn when a shadow passed me and another heron that my shot had startled flew over. I got sight on him about seventy yards away and let him have it and dropped him stone dead. It took me nearly half an hour to find him in that jungle.

Regarding the purchasing of property in land, in Florida, a word might be said. "Sandbank" towns are all the rage. Several persons buy a tract of land at from $1.25 to $5.00 per acre, and at once a prospectus is drawn up. A map is made and on it is shown the location of the *proposed* improvements. Broad streets and avenues give it a go-ahead appearance. There is a site for a church, a site for a school-house, a site for a town-hall, and a site for a dog-pound. It looks very nice on paper, but very different in a pine barren. The site for the church would dismay any denomination but the Baptists; for the same reason the site for the dog-pound is admirable, as to impound the dogs and drown them would be only one operation. Many persons buy property in Florida without seeing it, and are sadly disappointed afterward. I have neither time nor space to go into this matter fully; but be sure of one thing: Take nothing on hearsay or from an advertisement; go yourself and also get the judgment of some disinterested resident, because often lands that appear at times desirable are at other periods of the year overflown. Notwithstanding the setbacks Florida has had, and the false booming given her by unscrupulous speculators, she is a grand State and has a great future before her. CALUMET.

CINCINNATI, O., July 31.

IN SEPTEMBER MAILS.

Editor Forest and Stream:

I am glad your contributor of "Uncle Lisha" note is again to be heard from in your columns. We have never forgotten the former series and from present appearances shall not soon forget "Sam Lovel's Camps." The dialect of the mountaineers is remarkably well reproduced, and if a judgment based on several years' observation of the Canadian French-English combination of tongues is worth anything, I may venture to say that I have never seen it surpassed. By the way, cannot you publish again the bear story by the same writer which graced your columns several years ago? My copy of the FOREST AND STREAM containing it had so large a circulation that I never could get it back, and I want the story. The picture of Vermont life, the scenery, the dialect and the characters were so vivid and perfect that your old subscribers would be pleased and your new ones delighted to have them produced again. C. C. H.

PROCTORSVILLE, Vt., Sept. 9.

[Our opinion is that if "Uncle Lisha's Spring Gun" is to be reprinted, it should be in book form, with the other sketches.]

THE AUDUBON SOCIETY.

CINCINNATI, Ohio, Sept. 20.—*Editor Forest and Stream:* I have been advocating the AUDUBON SOCIETY'S ideas and am astonished at the opposition I meet with among my lady friends. They seem to consider the birds created for the sole purpose of adorning their bonnets. I still keep up the fight, though.—CALUMET.

Harper's Weekly says: "A correspondent calls attention to the fact that stuffed birds are again exhibited in the windows of the fashionable millinery shops, and it is announced that birds will once more be in fashion for hats and bonnets. This is a direct incitement to a cruel slaughter for the gratification of a false and morbid taste. The protest against it has not been unavailing, despite the reappearance of the monstrous fashion. The agitation has turned public attention to the subject, and the woman who wears a dead bird for ornament is in danger of being regarded by intelligent persons as they regard a fantastic barbarian. Savages wear the scalps of their enemies, but the birds have done the young women no harm that they should decorate their heads triumphantly with the birds' dead bodies. More than this, the law happily interferes, and at least attempts to protect the birds against the boys and girls. * * * This is a law in accord with the best sentiment of the community, and the existence of such a law is the severest rebuke of a repulsive fashion. The lady who wears a dead bird need not affect contempt of her fellow-savage who wears a nose-ring."

Only six months ago the AUDUBON SOCIETY was started. To-day it numbers 12,200 members. The expenses incidental to its organization and conduct up to the present time have been born entirely by FOREST AND STREAM. It invites to membership only humane and intelligent people. Donations from sympathizers with its work are promptly returned to the senders. Nobody is supplied with a good, easy office and fat salary by it. In several respects, as will be understood from these brief statements of fact, the AUDUBON SOCIETY is quite a unique and mildly surprising thing.—*New York Sun, Sept.* 26.

RATTLES AND FANGS.

Editor Forest and Stream:

A few weeks ago I, with a friend, explored for and found a gilt-edged pond in the mountains (our climb suggesting that we were on the direct road to the zenith) said to contain no fish under five pounds in weight—"there or thereabouts." We really did find a large rattlesnake in our camp, and as we had had two hours sleep the night before we did not feel particularly sleepy during the night that followed the discovery of its snakeship, and my friend, Judge R., and I sat up all night. The judge said he had no objections to a male snake (which was what we killed) seeking the hospitality of our chalet, but a female snake might glide in without ringing the bell, not knowing that it was highly improper, and politeness demanded that we prepare to give undisturbed possession. We were the more willing to do this, for aside from the pleasure of sitting on a log in the rain in a camp that looked as snaky as the serpent department of a zoological garden, we wished to make sure that the men kept the fire up to the illuminating point. We did not have all the conveniences of one of "Wawayanda's" camps, but even he never had a wetter skin than I had that night. Both of our men had killed snakes without number that carried rattleboxes, and the information that they gave us about them would be valuable if memory would retain it. One of the things that we learned was that a rattlesnake could not rattle when its rattles were wet from swimming, wet grass, rainstorms, etc. Recalling this statement this afternoon I put some rattles, without the snake, into a glass of water and soaked them for two hours; then I tried to make a noise with them. I must confess that the result was not as successful as I have known a snake to be with dry rattles, but it was sufficient for me in case I I should hear it, with such additional vigor as a snake would readily lend, to step about nine feet high without other orders. Experiment will at times knock legend higher than a kite. A. N. CHENEY.

GLENS FALLS, N. Y.

Editor Forest and Stream:

I note in issue of Sept. 16th an article on rattlesnake fangs and the multiplicity thereof. It is not uncommon for a large rattler to have more than one pair of well developed fangs.

Last season I sent two fine diamond rattlers from Tarpon Springs, Fla., to Williamsport, Pa., for mounting. They were sent to August Koch, who is an enthusiastic naturalist and skillful taxidermist, and who has the finest collection of any amateur I know of. Whoever will call on Mr. Koch can see a large, well-mounted specimen of the Florida rattler displaying five well-developed fangs, each about three-fourth of an inch in length, and looking like to bite. It is a yellow (or male) diamond-back, with a head 3in. broad. It measured 6ft. in length, with a girth of 17in. The other is a black rattler, measuring 6ft. 1½in. in length, with a head 2⅛in. broad, and with just one pair of fangs, three-fourths of an inch in length. It was of no use to measure the girth of this one, because her fair proportions were spoiled by a full-grown rabbit, which she had recently swallowed.

Being male and female, nearly of one size, and demonstrating, as they do, the fang question, I doubt if another such pair can be found in two cities. NESSMUK.

WELLSBORO, Pa., Sept. 20.

Editor Forest and Stream:

In February, 1857, I shot near Quincy, Florida, a rattlesnake that mounted 7ft. 6in. in length, and girthed 13½in. The "drag" or mark it left in the sand, when it had moved over the ground, was 5½in. in breadth. I was informed by several gentlemen in Quincy that it was about as long as most of them, 8ft. being the longest known, but that they had frequently found the "drag" which measured 13in. across; and Col. Stockton (the sportsman *par excellence* in Florida at that day, and who sometimes wrote for the old *Spirit of the Times* under the *nom de plume* of "Al Fresco") told me that he had taken full-grown rabbits from the inside of rattlesnakes. I have his snakeship properly set up in my library here; he had ten rattles and a button. OLD FOGY.

BIRD'S NEST, Virginia.

Editor Forest and Stream:

As your correspondent, Mr. H. R. Smith, states, rattlesnakes often have more than two fangs. I have never seen one with less than three, save in one instance.

Four days ago I was at a friend's house. There were several gentlemen in the party. One of them was inquiring about rattlers. A Mr. Pent made the remark that he had lived there eight years, and had seen two live rattlers; another one said, "I have been here four years, and have seen but one." About this time there was an outcry at the house, and upon investigation we found a large rattlesnake slowly crawling through the yard. It had as a body-guard three half-grown chickens, which were walking by its side, and apparently unconcerned. The snake did not seem to notice the chicks, nor, when surrounded, did it seem to notice us. The dog started to rush at it, but was caught and held back, and the snake was finally killed with a small stick, not having shown fight nor sounded his rattle. It was 5ft. long, with twelve rattles and one immense fang on the right side over an inch long. I could not discover any signs of more nor of any having been broken off. Query: Was the snake sick, or had he been fighting and expended his venom?

TARPON.

TARPON SPRINGS, Florida, Sept. 20.

Editor Forest and Stream:

The circumference of that rattlesnake was 13in., not 30in. The error was on my part. H. R. SMITH.

FRUITLANDS, Florida, Sept. 20.

ECONOMIC ORNITHOLOGY AND MAMMALOGY.

THE Division of Ornithology and Mammalogy of the U. S. Department of Agriculture has issued the subjoined circulars asking for information on the economic relations of birds and animals.

Circular No. 1—Food Habits of Birds.

It is well known that certain birds are directly destructive to farm crops, causing a loss of many thousands of dollars each year and that others are highly beneficial, preying upon, mice and insects which are injurious to vegetation, but the extent and significance of these effects and their bearing on practical agriculture is little understood. Moreover, great difference of opinion exists, particularly among farmers as to whether certain well-known species are on the whole beneficial or injurious; and many kinds which are really of great practical value are killed whenever opportunity offers. For example, hawks and owls are almost universally regarded as detrimental, while as a matter of fact most of them never touch poultry, but feed largely and some almost exclusively on mice and grasshoppers.

The wholesale slaughter of small birds has been known to be followed by serious increase of noxious insects; and invasions of insects which threatened to devastate large tracts of country have been cut nearly short by the timely services of some of our native birds.

In view of the above facts and many others which might be cited, it is clear that a comprehensive, systematic investigation of the inter-relation of birds and agriculture will prove of enormous value to farmers and horticulturists. Such an investigation has been undertaken by the newly established Division of Economic Ornithology of the Department of Agriculture, and the assistance and co-operation of persons interested are earnestly solicited.

The food of all birds consists either of animal matter or vegetable matter, or both, and its consumption must be serviceable or prejudicial to the interest of mankind. Therefore, according to the food they eat, all birds may be classed under one of two headings—beneficial or injurious. Many species are both beneficial and injurious, and it is impossible to assign them to either category until the percentages of their food elements have been positively determined and the sum of the good balanced against the sum of the evil.

In a very large proportion of our small birds the food varies considerably with the season, sometimes changing from vegetable to animal, or from injurious to beneficial. Furthermore, many birds feed their young upon substances which the adults rarely or never eat; and the young on leaving the nest sometimes greedily devour things which are discarded as they grow older. Hence it becomes necessary to ascertain the food of each species at different times of the year and at different ages. Information is desired on all questions relating to this inquiry, and special attention is invited to the following:

1. Has the common crow been observed to catch young chickens or to steal eggs? 2. Has it been observed to eat corn or other cereals in the field? If so, how long after planting, and how extensive was the injury? 3. Has the crow been observed to feed upon injurious insects? If so, what kinds of insects were thus destroyed, and to what extent?

4. Has the crow blackbird or grackle been observed to carry off the young of the robin or other small birds or to destroy their eggs? 5. When breeding near the house has it been observed to drive off small birds (such as robins, bluebirds, etc.) which had previously made their abode on the premises? 6. Has it been observed to eat corn or other cerals in the field? If so, how long after planting, and how extensive was the injury done? 7. Has the crow blackbird been observed to feed upon injurious insects? If so, what kind of insects were thus destroyed, and to what extent?

8. What birds have been observed to feed upon or otherwise injure buds or foliage, and what plants or trees have been so injured? 9. What birds have been observed to feed extensively on fruit? What kind or kinds of fruit have been most injured by each species, and how extensive have been the losses thus occasioned?

10. The bobolink (rice bird or May bird of the Southern States) congregates in vast flocks during its migrations and commits extensive depredations in certain parts of the South. The Division will be glad to receive detailed accounts of these depredations from persons living in the affected districts, to whom a special circular will be sent on application.

12. What birds have been observed to feed upon injurious insects, and upon what kind or kinds does each bird feed?

13. Do blackbirds (other than the crow blackbird already mentioned) commit serious depredations in your vicinity? If so, which of the several species of blackbirds are concerned, and what crops are affected?

14. Has any kind of birds been observed to feed upon the honey bee? If so, what species and how extensive has been the injury done?

When possible the exact date should be given of all occurrences reported. Persons willing to aid in the collection of birds' stomachs will be furnished with the necessary blanks and instructions.

Circular No. 2—English Sparrow.

The Department of Agriculture desires facts, from personal observation, in answer to the following questions concerning the European house sparrow, commonly called "English sparrow," in this country.

1. Is your locality city, suburb or country? 2. Is the English sparrow present in your vicinity? If not, what is the nearest point at which you know it to occur? If present, when did it first appear? 3. Is it abundant and on the increase? 4. Is it protected by law? 5. Is it artificially housed and fed? 6. How many broods and young does a single pair rear in a season?

7. Do any of our non-predatory birds habitually resist encroachments of, or attempt to drive off the English sparrow unless themselves first attacked and with what success? 8. Which of our native birds attempt to reclaim former nesting sites when these are occupied by the sparrows? State examples. 9. Has the English sparrow been observed to molest or drive off any of our native birds? If so, what species are so molested or expelled from their former haunts?

10. Does it injure shade, fruit or ornamental trees or vines? 11. Does it injure garden fruits and vegetables? 12. Does it injure grain crops? 13. Has any case in which it has been of marked benefit to the farmer or horticulturist come under your notice? If so, in what way has the benefit been derived? 14. Under what circumstances does it feed upon insects? What kinds of injurious or beneficial insects or their larvæ does it destroy and to what extent? 15. What means, if any, have been taken to restrict the increase of the English sparrow? 16. What is the prevailing public sentiment in respect to the bird? Information is particularly desired concerning the presence of the English sparrow in the Southern States and in the region west of the Mississippi.

Circular No. 3—Economic Relations of Mammals.

The Department of Agriculture desires information concerning the effects of mammals upon agriculture, and solicits replies to the following questions:

THE STOCK RAISERS ON THE FRONTIER.

1. Have you personal knowledge of one or more cases in which cattle, horses, sheep, or pigs have been killed or injured by bears, wolves or panthers (known in the West as mountain lions)? If so, give full particulars.

TO POULTRY FANCIERS.

2. Have you personal knowledge of the loss of turkeys, geese, ducks, chickens or doves from the attacks of predatory mammals? If so, how many and what kinds were killed on each occasion? In each case mention the animal by which you suppose the mischief was done, and your reason for this belief. 3. What mammals, if any, steal feed put out for poultry?

TO FARMERS, FRUIT GROWERS AND GARDENERS.

4. What mammals, if any, are injurious to fruit, and what kind or kinds of fruit are eaten by each species? Is the loss thus occasioned of trifling or serious consequence?

6. What mammals, if any, are injurious to vegetables, and what kind or kinds of vegetables are eaten by each species? Is the loss thus occasioned of trifling or serious consequence?

7. What mammals, if any, are injurious to meadows and pastures? In what manner are the injuries committed? Is the loss thus occasioned of trifling or serious consequence?

8. Are your fields subject to periodical invasions of meadow mice (*Arvicolæ*)? If so, can you give the exact dates of one or more of such invasions?

9. What mammals, if any, are injurious to forest, shade, fruit, or ornamental trees or shrubs? What kind or kinds of trees or shrubs are injured by each, and in what manner and at what season is the damage done? Is the loss thus occasioned of trifling or serious consequence?

10. Have you personal knowledge of an instance in which cattle or horses have been injured by stepping into the burrows of woodchuck, muskrats or badgers? If so, give particulars.

11. What mammals, if any, are beneficial to the farmer? In what manner are these benefits derived?

TO RICE GROWERS.

12. Are rats troublesome on your plantation? If so, are they injurious by feeding directly upon the newly-planted rice, or burrowing in the dikes, or both? Can you estimate the annual pecuniary loss thus occasioned?

13. Do any other small mammals affect the interests of the rice grower? If so, what kind or kinds, and to what extent?

TO HOP GROWERS.

14. What mammals, if any, affect the interests of the hop grower? In what manner and to what extent are these effects manifested?

MISCELLANEOUS.

15. Is the common mouse about dwellings, barns and outbuildings in your neighborhood the white-footed or the house mouse, or are both present? In the latter case, which is most abundant? If uncertain as to the species, please send a specimen (the head will suffice) to the Department for identification.

16. What mammals, if any, injure or deface buildings, household goods, books or papers?

17. What mammals, if any, injure canals or other embankments, dams, dikes or drains? Is the damage thus occasioned of serious or trifling consequence?

18. In your opinion, are moles beneficial or injurious? On what facts is this opinion based? (NOTE.—Meadow mice or "voles" must not be confounded with moles).

19. In your opinion are skunks beneficial or injurious? On what facts is this opinion based?

20. Do you know of one or more instances in which the increase of a species of economic importance has been limited by the abundance of its natural enemies? If so, give particulars.

In the Mississippi Valley, and the region between it and the Pacific, numerous small rodents called gophers do great damage to farms and crops. There are two principal kinds, *pocket gophers*, which live mostly under ground are characterized by external cheek-pouches and unusually large fore-claws (*Geomys* and *Thomomys*); and *gophers or ground squirrels* which live mostly above ground and have neither external cheek-pouches nor claws of unusual size (*Spermophilus* and *Tamias*). Of these, the common little striped gopher (*Spermophilus tridecemlineatus*) and the large gray 'Line-tailed' spermophile (*Spermophilus grammurus*) and its varieties are the most abundant and widely distributed, and occasion the greatest losses to grain crops. Numerous other species, more or less local, affect the farmer's interests very appreciably.

Detailed information is desired concerning the habits and ravages of all these gophers. Such information should be accompanied by a specimen (a rough skin will suffice) for positive identification.

The above remarks apply with equal force to the various small mammals known as kangaroo rats and mice, pocket rats and mice, wood rats and mice, etc.

In answering this circular, please mention your occupation. If a farmer, state the size and character of your farm, and mention the principal crops which you cultivate. Write your name and post-office address as plainly as possible.

Replies to any of the above should be addressed to Dr. C. Hart Merriam, Chief of Division of Economic Ornithology and Mammalogy, Washington, D. C.

A FAMILIAR SHRIKE.

Editor Forest and Stream:

I have been reading of "A Familiar Titmouse" in your last issue. Such an incident is a touch of nature that makes all true sportsmen kin. One stormy night last spring in Florida, I was quietly smoking and writing, when I heard a noise at the window behind me. I turned and saw a bird fluttering against the glass. I gently opened the window and he flew in and around the room. I stood quiet and raised my hand above my head, and he came and perched on my finger. I spoke to my friend in the adjoining room and he came in, which startled the bird and he again flew about the room. We remained quiet and presently he again alighted on my hand. Finally he flew and perched over the door, where we left him till morning, when we opened the door and he flew away. It was a shrike. The same day I related the incident to a very intelligent colored man, and he was horrified that I had not killed the bird. "You'll have bad luck sure. I tell you that's a mighty bad sign." I gave him my mind on such brutal superstition, which, although it failed to convince him, made me feel easier. CALUMET.

CINCINNATI, Ohio.

THE SEA SERPENT.—W. H. Winslow, M.D., of Pittsburgh, Pa., writes from his cruising cutter Pilgrim to the *Journal* of Belfast, Me., that on Aug. 24 off Cape Neddick he saw something that he thought was the sea serpent. "It looked," he wrote, "like a black log of wood, one foot in diameter and 8 feet long, projected from a boat-like body at the front, and above the surface of the water at an angle of about twenty degrees. The surface was black and shining, the angle between the neck and body was curved, and the general appearance was as if the part above water was continuous, with a very long subaqueous body. Before I could get the glasses to bear accurately the marine monster sank. Then he appeared inshore of us, upon the bow, upon the beam, upon the quarter, and then sporting in the breakers. He kept about the same distance from us and did not afford us any better view than that at first. The animal was lively and perfectly at home in the water. He was seen by all on board and all agree upon the above description. There was no inebriety, enthusiasm, or delusion about the case, but calm, careful, critical observation."

MIGRATION OF WOODPECKERS.—The Cedars, Oakdale, L. I., Sept. 20.—There was a big flight of birds of the woodpecker species on Saturday, Sept. 18. They were very beautiful. I do not remember seeing anything of the kind before. They looked very much like the bird called thehigh hole, only a size smaller, and their markings being pure white and jet black, with the exception of those I supposed to be the male bird, and those had a beautiful crimson head and neck. I was pleased to see so many pretty creatures left.—ALFRED A. FRASER.

DOMESTICATING WILDFOWL.—Cold Spring Harbor, N. Y., Sept. 20.—*Editor Forest and Stream:* I have recently purchased a few blue-winged teal, an old female and four young, hand bred and very tame. My wood ducks are getting their fall plumage, some drakes are in full feather and others have only a little pink on the bill and some green on the head to distinguish them. The mallards are dull yet and so are the pintails. Mating has begun with the wood ducks, if it ever ceases, and the males are fighting as in spring.—FRED MATHER.

THE TROOPS AND THE PARK.

Editor Forest and Stream:

As a constant reader and subscriber of your journal I note with interest your editorial of the 16th upon the "New Government of the Park," based upon the report of a special correspondent.

I have just returned from the Park, having spent about two weeks there, traveling with a pack outfit; and having entered it by the Clark's Fork trail to Cooke City, and traversing it to almost its southern border, camping off and on the traveled routes, I feel constrained to offer my personal testimony against that of your correspondent as regards the faithfulness with which the troopers of the 1st Cavalry are performing their duties as Park policemen.

I am not in a position to directly impugn the good faith of your correspondent, because, in the first place, I cannot from personal knowledge speak as to the "good way to which we have been accustomed under Col. Wear's superintending," as the soldiers had relieved the regular keepers when I arrived; and in the second place, my testimony would be the negative one, that I did not see the depredations which are said to be now occurring; but as we traveled along Soda Butte such testimony is good enough as regards the fires which are said to be now or recently raging there.

As it was a subject of general remark, however, that if the soldiers could be disparaged the old keepers would have a better "show" to regain their billets, your correspondent is "booming" that view of the new government. The following is the paragraph that compels me to offer myself in print:

"It is a huge piece of folly for the Government to let loose the vandals upon the Park, and nothing less than a national disgrace, that Col. Wear's force of assistants should be succeeded by soldiers who go off on drunken sprees, and in the people's pleasure ground 'hold up' stage coaches of tourists in regular old-fashioned 'road agent' style."

I was not a "tourist," but a camper with pack train from a ranch in the Big Horn Basin, and as such pitched my camp by preference alongside those of the troopers, who are scattered by twos throughout the Park, for the reason that leaving frequently our traps, grub and horses for visits afoot or ahorse to places of interest we believed that the soldiers would "have an eye to them."

Now, from what I saw, these troopers were performing their duties in the most conscientious manner. They are to be seen patrolling their districts from sun-up till dark; and from talks, when I met them, and around camp-fires, I judged them to be an unusually good lot of men—men who being off on detached service, with no commissioned officers directly over them, were doing their duty all the same and "right up to the handle." My experience is that the soldier and the sailor will generally act thus in like circumstances. Very likely there were vandals in the Park, but you would have us believe they are just coming in. By referring to Gen. Sheridan's report of his visit in '82 you will see that vandalism is no new thing. Every man who has been through the Park must know that even the "services of an able and energetic official, who commanded a trained force of competent and faithful men," can not, when that force is limited to ten, prevent depredations over an area of about 4,000 square miles.

Gen. Sheridan tells how the Park *can* be properly guarded, and from what I know from men who "have been there" as to the slaughter of game, I hope that Capt. Harris's force will be largely augmented.

FREDERIC MAY WISE, Lieutenant U. S. Navy.

NAVAL ACADEMY CLUB, Sept. 24.

MY BEAR HUNTING.

BEAR hunting possesses for the average hunter a peculiar fascination, and the killing of a full grown bear has long been supposed to confer a certain distinction, eagerly sought by many a youthful aspirant, ambitious of the honors of the chase. Many years of successful deer hunting, a great part of which was in a country much frequented by bears, had left me barren of the honors connected with the capture of bruin, and it is only of late years that the killing of two bears encourages me to lay claim to a prominent place among the vice-presidents of the United Association of American Bear Hunters. In the hope that the perusal of these lines may give a momentary pleasure even to the veteran members of the aforesaid association, and encourage the young hunter in his difficult search for one of the most wary and cunning of the brute creation, I hereby appeal to the patient editor of our own loved FOREST AND STREAM to chronicle the story of my success.

The details of my many previous disappointments, when upon several different occasions bears had been met with, and which almost in the very instant of anticipated triumph had cunningly eluded me, I will not dwell upon. The meeting face to face with a big black brute in a dense thicket some years since, which proved to be so much quicker than I that he sprang from sight before I could secure even a snap shot, together with the deplorable loss of another beautiful black skin, occasioned by the temporary disarrangement of a complicated gun sight; the inventor of which is, I hope, now serving a life sentence in some first-class lunatic asylum, only stimulated my ardor until I realized fully that I had "lost a bear," and that in the words of an acquaintance (a member of the "Jones family" of the name of Beard), "I couldn't dispense without him."

About a year since while one day engaged in work near my house, one of my little boys, mounted on his pony, came racing down the hill toward the house, plying his riding whip, while his eyes blazed with excitement, crying, "O, papa, papa; get your gun, quick! we've got a bear cub up a tree, and Lew Weatherwax and old Jack (the dog) are watching him until you come."

"Are you sure you've got him treed?"

"Oh, yes, we saw him up on the limb of a big pine."

Hastily grabbing my rifle, I mounted another pony standing near and away we sped up the hillside. Arrived at the spot, I found the boy and his dog at the foot of the tree on guard. "Where is he, Lew?"

"Up on that big limb," replied the little fellow, pointing upward.

I looked up, and a chubby black face, ornamented with a pair of bead-like eyes, projecting from the top of a horizontal limb a foot in diameter and thirty feet from the ground, confronted me with curious gaze. My first thought was that it was a very small cub for the latter part of summer. "Where did you find him, Lew?" said I.

"Just as we were coming up the hill here, Jack started him at the edge of that thicket, and we think there is another one near here for we heard a noise in the bushes, and after he had treed this one Jack ran back among the bushes and made a big fuss."

"Well, boys, I think there was an old bear and her cubs in the thicket, and now I want you to mount your ponies, lead mine along with you, call the dog, and stay entirely away from here; and as the sky is clear and the moon will shine all night to night, I will stay and watch for the return of the old one; I want her," I replied. Left alone, I lay down near the foot of the tree and began what promised to be a weary vigil. An hour passed quietly, when, after hearing considerable scratching above me, I rose and walked around the tree to assure myself that the cunning rascal was not playing me a trick, when nearly a hundred feet above me I saw him crawling out on a limb, where he turned slowly around, when I was amazed by the discovery that the tail of this very singular bear cub was more than a foot long! A rifle ball stretched him dead at my feet, with the customary "dull, sickening," etc., but the more I examined him the more I feared that some unsuccessful rival might insist that my beautiful cub bear was, after all, nothing but a fisher.

Six months after this business called me to the little settlement along the Columbia River, thirty miles west of my home, and mounting a cayuse pony and taking the rifle across the saddle in front of me, I set out along a lovely mountain trail, where only the house of a single settler interrupted the monotony of the forest for twenty-five miles. When about two miles along the trail I met an old man, who, with a strong English accent, inquired if I had seen any "'orses." After a moment's conversation, noticing the rifle, he asked, "Is that a good gun?"

"Yes, sir," I replied.

"Then I must tell you what I saw. I was 'unting my 'orses along the top of that mountain spur there to the north, when coming to the end of it about a mile from 'ere, where this road winds along at its foot (you will see it, sir, as you ride on, you can't miss it), and not finding my 'orses I crept down the face of the rocky bluff to get into the road below me, when just as I was passing a couple of big openings in the rocks, which you can see quite plainly from the road, I 'eard a strange noise. At first I though it was my dog, but glancing down the 'ill I saw the dog a quarter of a mile away. Again I 'eard the noise, when I stopped, glanced back over my shoulder, and there in the cave furthest to the west 'oo should I see but Mr. Grim 'imself!"

"What do you mean, sir," I said, "a bear?" "Yes," he replied.

"Are you sure?" "I saw 'im."

"Did you leave him there?" "Me! Wot would I do with 'im? I 'ad no gun; I got out of there as quick as I could."

"I mean did you see him run away after you left?"

"'Im? No; 'e's there yet."

Putting spurs to the pony the gallant creature soon covered the intervening mile, when far above me, on my right, rose a ledge of rocks about 50ft. high, while the steep hillside sloped from the foot of the cliff down to the trail, 300ft. below. Dismounting I tied the pony securely to a small pine, and slipping an express ball cartridge into the barrel of the .45-70 Marlin, and four solid ball cartridges into the magazine, I climbed laboriously up the steep slope to the foot of the cliff, keeping my eye fixed upon the western opening in the rocks, fearing that the bear might, on hearing me approach, dash out and give me the slip. At the foot of the cliff, a glance showed the eastern cave to my right to be empty of everything save the grassy bed of some animal. The western cave was deeper and consequently darker. A long stare revealed a wedge-shaped opening in the rocks, above and beyond a large fallen boulder at the back of the cave, and there in the gloom I could faintly distinguish the outline of some animal. The longer I stared the more I was convinced that this time at least there could be no questioning the fact that I had found *Ursus americanus* at last.

I observed that the bottom of the cave was very steep, and that if he jumped or rolled off the boulder he would be sure to come out into the open where I was in spite of himself.

I concluded to deliver my fire and then jump quickly to the right into an open spot free from stones and brush, reloading as I went, and then turn and face him with the reloaded rifle should he need another shot.

Aiming carefully at the center of the dark mass I fired, then sprang swiftly into the open space, hearing the fall of some heavy body behind me, turned quickly with the reloaded rifle presented and with my finger on the trigger. There he was. A cub evidently and apparently stone dead, as he rolled slowly downward toward the mouth of the cave.

When, however, the sunlight rested fairly upon the formidable looking quills that covered his back and shoulders, the distressing conviction forced itself upon me that my envious detractors, with the eagerness of malice, would hasten to assert that Uncle Fuller's bear cub number two was, after all, only what my old trapping chum, Jim Morehead, would call (with a tremendous accent on the second syllable of the big word) the "onhumanliest" porcupine in Washington Territory.

I am perfectly willing to acknowledge that the recollection of the two exciting hunts would be far more pleasant had the tail of the first bear been somewhat shorter, and the hair of the last one not quite so sharp. I do not wish to seem too particular, yet I must confess to a certain amount of dissatisfaction. The depressing dread of adverse criticism has until now betrayed me into delaying my application for admission into the honored Association of American Bear Hunters, yet I have concluded to rest my case upon the evidence in court. I can only refer to the very positive declarations of the two excited boys, and to the equally emphatic assertions of the veracious old Englishman; all of whom repeatedly insisted upon the identity of the aforesaid bears, and clamored for their destruction.

And if, after all, some captious critic remains unconvinced, I take pleasure in assuring him that if my kind of bear does not suit him, there are whole families of bears of the requisite brevity of narrative and any desired fineness of hair yet roaming the mountains that surround our little valley, and I venture to express the hope that he will come out here, and, after smoking the pipe of peace with the old uncle, proceed to hunt out, select and kill the bear of his choice. UNCLE FULLER.

THETIS, Stevens County, Washington Territory.

UNCLE KELLUP TAKES AN OUTING.

FOR a fortnight past he could think of nothing else. He has hurried home at night and swallowed his supper in indigestible bulk to overhaul his scanty paraphernalia and inflict one final burnishing on the already shining equipments. He has induced Aunt Susan to make him a brown hunting jacket after a design furnished by himself, with capacious pockets for game and miniature fobs for caps and ammunition. This to supplement the cartridge belt.

Soon after daybreak the livery team is left at the door, according to contract. A cold mist is slowly rising and rolling away; there is a suggestion of frost in the air, and the sidewalk under the maple is littered with variegated leaves. He counted on getting an early start and going off on the quiet before the neighbors were aroused, but Dodger has been careering up and down the street this last half hour cutting such noisy capers that more than one curious blind has been cautiously opening to see what an unwonted thing has been disturbing the equanimity of this usually so sedate canine. A moment ago he bristled and growled at a dog a half mile down the road and turned to bark at a pigeon soaring over his head. Then he sidled up to an old tree just to show how he would approach in case it was a large, fierce dog, and was having a sanguinary time grappling with the root when he espied a brindled terrier running down the street behind a man in overalls with a tin dinner pail. This reminded him that things must be nearly ready for a start, and he went in to see about it.

In the meantime Uncle Kellup has been hurrying back and forth with this, that and the other not-to-be-forgotten article, till at last the feed bag, lantern, lunch basket, etc., are all aboard, and Susan standing in the doorway to wave them off, so Uncle Kellup calls the dog and tries to induce him to jump in over the rear as a sporting dog properly should. Dodger approaches warily, and at length, placing his forepaws on the tailboard, is lifted ignominously in. The old fellow who lives just below and gets up before breakfast to smoke his pipe and putter in the garden, has been leaning on the fence the past half hour an interested spectator, regaling himself hugely at Uncle Kellup's expense.

They are very old jokes, very old indeed, but to his fond imagination they are excruciatingly funny.

He refers to the fact that railroads are scarce up there, and the facilities for moving large quantities of game at short notice are not good. He even calls over the fence advising Aunt Susan to run low on provisions, and for a parting shot, as the team rattled away, "Kellup! you want to keep a close watch on that dog o' yourn and not let the rabbits get a hold of 'im."

The ride through the early morning is delightful. At first they meet an occasional smart appearing milk wagon from the suburbs, a well fed farmer behind a hungry looking horse, and by the time the first village is reached the bell is tolling in the stragglers. While the horse is jogging along he can't help moralizing a little, getting a text from the acclivities that seem so insurmountable in the road ahead but vanish on near approach. He finds some amusement, too, in speculating as to what new vision may be presented around the bend or when the summit is reached.

Far away and below the meadows are white with hoar frost, and filmy clouds of mist have floated up a little way and poising there have set the familiar landscape all afloat in a sea of fantastic mirage. This pleases him, but when he comes to where a forest hillside has been stripped and left denuded with its rocks and stumps and stacks of cordwood he feels sorry. We cannot follow them through all the fortunes of the day, suffice to say it passed off happily, excepting in this one particular, a coolness sprung up between Uncle Kellup and the dog. It seems that when they had arrived in the middle of the woods where game was said to abound, and none appeared, it was naturally expected that some material assistance would be rendered by the dog. But he seemed to have no curiosity in the matter at all. There were no symptoms of anything like a burning desire to go and look for things that would have pleased Uncle Kellup so well, and when he even pointed out the exact spot where a partridge had alighted and run into the brush, Dodger only affected a well-bred interest in the discovery, until after a while becoming mildly enthusiastic, he seemed disposed to encourage the old gentleman to follow up the trail. When it dawned upon him that he was actually expected to undertake something in the way of a private exploration he lost all interest in the expedition.

Perhaps this was the reason the game pockets were not filled. Be that as it may, the old man had a glorious time stamping about and once, while crawling through the bushes with gun at half cock and nerves on the quivive, a partridge whir-r-red suddenly up in front. He stood lost in admiration until the bird was disappearing over the bushes and then conscientiously fired. No, he is not very truculent. It is glory enough for him if he only sees the pretty creatures, they will all count in the mental game bag at the close of the day.

It became dark very early in the woods and soon after we could just descry them for a moment making the best of their way toward the opening, Dodger trudging sulkily a long way in the rear. And so they disappeared in the gloom.

JEFFERSON SCRIBB.

HUNTING IN THE HIMALAYAS.

Lights and Shades of an Indian Forester's Life.

X.—CONTINUED.

THE day had well broken when we sat down to our coffee, which we did not linger very long over, and on coming out we found our nags ready, and saw R. at his tent door waiting our signal to mount. He came mounted on a likely looking Arab, and being but a lightweight, appeared to have a very good chance of first spear. G. too, strode an Arab, which at even weights might have proved the speedier animal, but G.'s weight weight exceeded R.'s or mine by a good two stone. My own mount was a country bred, about half Arab, and warranted to face a pig. The other two had two short Bengal spears heavily weighted, but I had been initiated in the sport in the Bombay Territory, and from habit, perhaps, I still give the preference to the 10ft. spear, and was no wise discomposed by G.'s mild allusion to my "lance."

The country was precisely that I had come through on my way from Hurdwar, but the annual fires had changed the whole face of it. The long grass was gone, and a fresh green crop was springing up between the charred roots—a grand level plain for a gallop as far as the eye could reach, just dotted at distant intervals with tree clumps shading a fairly dense undergrowth, or strips and spots of green in low lands, too green to burn when the fire passed over. Clump after clump of grass was ridden through, and nothing better than a sounder of young pig put up, until we had ridden four miles, when I, being on the right, put up a boar and got well away with him before the others heard my halloo and gave chsae. My pony showed a turn of speed, and although the boar had the legs of him in the first quarter of a mile, we began to shorten distance after, and before the half mile was reached, I was within 10yds. of him, and lessening the distance at every stride. But at this point R. was alongside of us, and seeing it was in vain to contend with him for first spear, I steadied my horse and gave him the lead. He soon went up alongside, and sent his spear down between the ribs. The boar turned on him so suddenly that the spear held between the ribs was wrenched from his hands, his horse saving himself with a dexterous leap, which well nigh cost R. his seat. The boar was now facing me, and fortunately the spear on the off side from me. I heard G. thundering along behind me, and bringing my arm down for an under thrust, I gave the pony one touch of the spurs and the next moment my spear entering his throat, passed right through him. I made no effort to recover it, but it was wrenched from me with a jerk as the boar fell over on his side. We were soon dismounted in a group around the fallen foe and indulged in a pipe, while our horses were breathing themselves. R. offered the best excuse he could for his *gaucherie* in losing his spear, but my own mishap wanted no apology; I had thrust underhand, as I always do in the rare cases in which I meet the boar in full charge, and to recovera long spear from a home thrust so delivered is impossible.

Another two miles and G. put up a boar and stuck close to him. I was about 50yds. from him at the start and having no thought of trying to ride him down, I kept on at a steady pace. R. came up at a rattling pace, getting alongside me in less than half a mile. I kept a steady pull on the rein and let him pass. G. was now close to the boar, riding steadily, and as he heard R. thundering up behind him, he rode in, delivered a thrust, which a sudden spurt of the boar rendered a few inches too far back, and recovering his spear neatly wheeled off, leaving the boar struggling on his haunches. R. was not far behind him, and delivered a thrust as he came up, which just grazed the boar's head as he wheeled round. G. had by this time brought his horse round, but seeing me coming up, held on a minute to give me a chance. It was an easy underhand thrust for me, but I wanted to vindicate my lance and carried it overhand; the point crashed clean through the shoulder, and the boar falling over on the off side I was able to disengage my spear and bending over and whirling it over my head recovered it neatly.

I got no first spear and had little chance of it against a couple of good Arabs, but I had my full share of pleasurable excitement and flattered myself I had done very well. We beat about for another hour but saw no more boars, and G. pleading that he wanted to march in the evening, we turned our horses' heads homeward, carrying with us at any rate good appetites for breakfast.

SHIKAREE.

NORTH CAROLINA DEER AND QUAIL.

THERE are other "tired nature's sweet restorers" besides "balmy sleep." There must be added to this a withdrawal from active labor. This view controlled my action, several days ago, when I left home to spend a few days at this place. I brought with me my little hammerless and a few shells loaded with buckshot. Besides ridding myself of my usual avocation—for I am a "laboring man," somewhat interested in and having charge of a cotton mill—I thought it possible that somebody having a good dog would take a notion to suggest that I might, while the dew was on the grass, place myself in the hollow just beyond the old grog shop or at some other well-known place, and get a shot at a deer as he was fleeing from the hound. I did not come here to sleep soundly; that I can do at home. Nor did I come to rest from my severe labors. At all events, that was not the only object I had. My view was to get into a cool place and drink delight and water impregnated with the sulphate of lime and the carbonate of iron, and take things in easy style, my coat laid aside and all "glistening griefs" and "golden sorrows" avoided.

And here I am sitting on the piazza of my summer house, looking down toward the bubbling fountain which has been discharging its sparkling waters from the "time whereof the memory of man runneth not to the contrary." The clouds in the southwest indicate the probability of a rainfall during the afternoon. I am thinking of the chances of my ear being gratified by "the horn of the hunter as heard on the hill" when morning has come. Turning to the right I see Jerry Green, "a gemman of color," with his old muzzleloader on his shoulder, followed by his hound. Now Jerry and I are old associates in the woods, and he approaches with a familiar salutation, "How dee do, Jedge?" I never was a judge of anything except shotguns, venison steak, coffee, soap, towels, and the like, but I have sometimes been given that title. "Tolerably well, Jerry; how are you?" "Jest sorter. I cut my foot a few weeks ago, and haint been able to do no work sence that time." "What are you doing with your gun?" "Well, I was at the Far Ground [Fair Ground, a well-known locality a mile south], and seed Mr. Caskill, who told me you was here and mout want to take a little drive. So I thought I'd come down, and ef you did, why I'd go with you. There's deer about, and I think ef we was out I could put you to a 'stand' where you could get a shoot." I told him that I had just seen John Joyberry, and we had made arrangements for the morrow, and how I thought it best to postpone the hunt. He agreed to this, and it is understood that at 7 A. M. he is to meet us with his dog at the old Crouch place, a mile or two east of the spring where I am sojourning.

Just north of my house is a covered arbor, about twenty-five feet long and fifteen feet wide, in which the elections in Mineral Spring township are held every two years. Near by are two hickory trees, to which a stout plank was once nailed, from which I once saw four fine deer hanging at the close of a day's hunting in the Sand Hills, which stretch eastward for many miles, and in whose wastes there are still quite a number ot these noble beasts of the chase. From the field just to my left I hear, now and then, the voice of Bob White, and cherish the hope that after the 1st of November I may have an opportunity to see whether my "right hand has lost its cunning" when Argo and Eck shall make a suggestive stop in their ranges through grass and stubble,

Dark clouds are overhead and soon heaven's artillery is heard. A gentle rain is falling. There is more of it in the east, and it is in that quarter we propose to go in the morning to see whether Jerry Green's and Foot Bostick's dogs can find a deer. So much the better. All appearances are favorable for a glorious morrow. Will the result be only another instance of the vanity of human wishes or shall it be as portrayed by the pencil of fancy? I do not know. But I am free to say that in my past life I have had far more joy in reveling in the luxury of an active imagination than in contemplating the fruits of a hard day's tramp or in the realization of the desires of the heart.

Early the following morning my friend John Joyberry makes his appearance on his mule and tells me that the dogs and hunters have gone on and we must hurry. My old horse Frank is hitched to the buggy and in it I get with my boy George who has a gun and also two other little fellows who go along only as "lookers on in Vienna," and who are gorged with the hope of seeing papa bring down a buck, or at the very least of looking at one as he makes his gallant bounds to escape his pursuers. According to the plan we turn to the left about one mile from the spring, and traveling north up the old Crawford road, go a few hundred yards until we reach the old Plank Road, which was constructed from Fayetteville in the direction of Albemarle, in the county of Stanly. At that point we turned to the right and followed the old road for about 100yds. Here we stopped, unhitched and secured the horse and went on. I left George with one of the boys at a chosen spot not far from where the buggy was stopped, while with the other I walked across the branch, up the hill and stopped at a well known inn. At this point I spent two hours in the vain hope of even hearing a dog. My patience was exhausted and I went to the Crouch house, about 300yds. off.

After remaining there for nearly an hour, the hunters came up and reported that though they had seen fresh signs they were unable to start the deer. Then I was told to go to another place not far from where the buggy was, and a drive would be taken in which it was certain there were deer, and one or more would surely pass by me. I knew it was certain that a deer had gone into that drive some time during the preceding night, for I had seen the tracks—but that I should see it was a matter of grave doubt. But I went. At that stand I waited until I was worn out, and heard nothing of either driver or dogs. And then I reached a wise conclusion. I determined to go back home. The plan was duly executed, and in less than a half hour I was at a spot where the joys of quiet, if no others, could be had. Thus ended a hunt so radiant in promise, so blank in result.

Late in the afternoon my friend John J. came up and reported that I had missed one of the opportunities of my life; for that soon after I left my stand, a fine deer had passed within 30yds. He said also that a fine buck had been started and had escaped one gun; that it passed him about 125yds., and he had shot it down; the others were then in pursuit, and he had heard had caught it. His description of what I had lost was graphic as well as prolix. But I knew his weakness. I had heard him talk on many previous occasions, and was well aware that what he said upon hunting matters must always be taken *cum monte salis*. I cross-examined him, especially about the distance he shot, and at last brought out the fact that he did not think the deer was hurt. My conclusion was that no deer had passed within a half mile of any point where I had been standing, and that it was even somewhat doubtful whether one had been seen by any one of the party.

John knows a great deal about hunting deer, and is better posted on all drives and stands within miles of this place than any one whom I know. I hope to have his company on several occasions during the present season, and think that on some of them we shall fare much better and have our hopes and labors rewarded by a nice piece of venison steak. Just now the weather is too hot for much pleasure in the effort to get deer. Besides, in the afternoon, the dogs find it difficult to follow the track.

Now, let no one upbraid me about hounding deer. This is not a mountain region, where sportsmen (?) place themselves on lakes where they have a convenient canoe, and get nearly every deer which is started. There are just a thousand and one places where the "hart" plunges into the "water brooks" and eludes his pursuers. The localities are so uncertain that no man ever thinks of waiting at one of them. Indeed, he could not find them if he so desired. With us, the plan does not drive off or destroy the deer more than any other plan, except that on a still-hunt (or stalk) no spit would exhale the odor of venison once in a twelve month. Even as it is, my nostrils have not enjoyed that perfume within the last two years. The great destruction here comes in the winter when we have snows which lie for more than a week. Then by stalking and hounding the poor creatures which, are too lean for food, are mercilessly slaughtered.

In our uplands all over the State the prospect for Bob White is dubious. The floods, it is thought, were very destructive of the nests and young chicks in the bottoms. It may be, however, that many escaped, that there will be late broods in these places, and that there will be some immigration from the adjacent hills. I have several trips in view after the 1st of November, in one of which my companion will be G. T. L., of New York, a native of this State, who has indicated to me more than once that he would be glad to have a trial of 14-bores with me, and would neither unduly rejoice in triumph nor sorrow in defeat. I think we would suit to hunt in couples. Neither he nor I claim all the birds which fall anywhere within a half mile of our guns, nor have we the ability to carry 10lbs. of gun iron, with shells loaded with 5drs. of gunpowder and 1½oz. of shot.

WELLS.

ROCKINGHAM, N. C.

AN OPPORTUNITY FOR DEALERS.

Editor Forest and Stream:

A number of the sportsmen of this State have united in a call for the formation of the "Virginia Field Sporting Association," and our meeting for organization will take place at Richmond, Va., Oct. 21, 1886. This is the time of the meeting of our State fair. We have secured a room on the fair grounds as headquarters for the sportsmen, and will have on hand a number of traps and birds for the amusement of the members. Much interest has been shown so far in our organization, and from present indications a large assemblage of sportsmen will be gathered here. The near approach of the shooting season will make them unusually keen for sport and anxious to provide themselves with sporting appliances. Our people are proverbially keen sportsmen and delighted with all that pertains thereto, especially the new inventions and conveniences, with which they have little opportunity to become familiar because they do not travel about much. It occurs to me that this is a splendid opportunity for some of the enterprising dealers in firearms and sportsmen's outfits to turn an honest penny by sending an attractive line of their goods to the State Fair. The Secretary, Mr. George W. Mayo, Richmond, Va., assures me he will reserve ample space for all such as wish to exhibit, and I will be glad to give further information to any who wish to inquire.

I feel sure that if the Chamberlin Cartridge Company, for example, would send down one of its machines and let it be operated on the grounds, it would sell enough of its cartridges to amply repay the outlay. So, too, any or all of the flying target companies could easily repay their outlay and make a profit.

Any enterprising dealer in sportsmen's wear, such as coats, leggins and cartridge bags, etc., will find it to his interest to send an attractive line of his goods here, for he will seldom strike a larger assemblage of sportsmen, and even if he does not sell much on the spot will introduce himself and his business. I would not suggest to dealers to send guns, or at any rate, not many; for as a rule men do not buy goods off-hand, and take some time for investigation and inquiry as to a purchase of that magnitude. But I feel certain this will be a first-rate chance for exhibitors of the lighter class of sportsmen's goods to introduce and sell their wares, and I hope they will not overlook it and give us an attractive display. Please give this a free insertion in your paper, and thereby help to make our first meeting attractive.

JOHN S. WISE.

RICHMOND, Va., Sept. 21, 1886.

OF COURSE it should read "over" shooting not "our" shooting in my item of Sept. 16 on Highgate marshes.—STANSTEAD.

GAME PRESERVING IN BRITAIN.

IV.—THE GAME OF THE WOODS.—CONTINUED.

THE capercaillie, wood grouse or cock of the woods (*Tetrao uragallus*) was in days gone by an extremely abundant game bird. The march of civilization, in other words the persistent persecution and the destruction of our woods forests, however, led to a rapid diminution in its numbers, until by the year 1780 it was entirely extinct in these islands. For nearly fifty years the capercaillie was not reckoned among the game of Great Britain and Ireland. Several attempts between 1828 and 1837 were made to reintroduce the capercaillie, but it was only in the last named year that the first serious endeavor was made. The previous ones were either on a too small scale, or the circumstances under which the attempts at reintroduction were made were not conducive to success. In the summer of 1837, however, Sir Thomas Buxton obtained, through the medium of Mr. L. Lloyd, a number of birds in Sweden, which were presented to the Marquis of Bredalbane, and turned down in the woods of his estate, Taymouth Castle. At the same period endeavors were also made to rear the bird by hand from imported eggs, but the experiment was in all practical respects a failure. Four years later additional assistance was lent to the project by the successful rearing by wild quey hens of eggs placed beneath them, and also by the subsequent successful hatching under fowls and hand-rearing of further numbers. This went on from year to year until in 1865 there were counted over 1,500 head of capercaillie upon the lands of Taymouth Castle. Various other fostering hands have been at work, and at the present time these birds are very plentiful all along the Tay valley as far as Dunkeld, the estates in the district being of a character peculiarly well suited to the tastes and requirements of this splendid game bird. In course of time I have very little doubt that we shall reckon the capercaillie a plentiful bird of sport, and with the aid of skillful preserving maintain it in its increased plentitude.

The haunts of the cock of the woods are such as its name implies. Thick pine forests are held in favorite estimation, and also the thickest and wildest parts of other fir and beech woods. Small covers or coppice never holds the capercaillie, and it is only the old forest land of our northern lands which harbor the birds. Although essentially a bird of the woods, it is by no means addicted to tree life, and by far the major portion of its existence is spent beneath the boughs. At night time, however, it perches upon the trees, and during cold weather, particularly when it is snowing, it will spend all its leisure time in the trees. This game bird is for the most part monogamous and usually found in pairs, except during winter, when the birds "pack" to a large extent, males and females in separate flocks.

April is the month when the preparatories for incubation are commenced, and like most of the Tetraonidæ, the wood grouse indulges—that is, the male—in a good deal of play, so-called. In a bird of this size and splendor, the play would naturally be very interesting, and in the case of the capercaillie it is unquestionably so. May is the usual nesting time in this country, the nest being generally formed beneath some bush or tree among some long sedge grass or heather. It is invariably chosen with due regard to the questions of shelter and security from observation. Some four to twelve eggs are deposited and the hen alone sits, incubation being completed about the thirtieth day, the male bird keeping guard over his mate. As soon as the eggs are hatched, both parent birds protect and provide for the young birds until such time as they can do this for themselves, when the male at first, and the female subsequently, leave the brood to its own devices.

The food of the capercaillie—which, by the way, it obtains under circumstances of routine similar to those of the black grouse, and these I shall detail hereafter—consists of various berries, chiefly among which juniper, black and cranberries, the shoots and leaves of various firs, the buds and tendrils of many trees, notably the willow and birch, and also of a large amount of insect life. When it can obtain them, many cereals will be consumed, and the young seem to require ants and worms to complete their dietary.

In its wild state ceiliog coed, as our ancient British forefathers used to dub it, is very hardy indeed; but reared in confinement it becomes much less so, and the process of hand-rearing the young is troublesome and difficult, more so than with any other British game bird, black game perhaps excepted.

Its general plumage and aspect is, of course, known to the great majority of my readers and needs no description here. I may mention that occasional varieties—hybrids—are met with, as also capercaillie feathered more or less thickly with white. The hybrids are results of crosses between this bird and the black grouse.

There is little more to add concerning this game bird beyond expressing our hope, and I am sure American sportsmen will join with us, that before long we may be able to count the capercaillie as a numerous and widespread bird of sport among us in Britain. MOORMAN.

ENGLAND.

[TO BE CONTINUED.]

FORT WORTH, Texas, Sept. 23.—Quail shooting has opened well with us; the birds are well grown and strong on the wing, and the bevies large. On account of the lack of rain during the breeding season, the birds have for the most part gone on to the creeks or kept near the tanks that are to be found throughout this section. Prairie chickens are also very fairly plentiful, and some good bags have been made in this vicinity. There are large quantities of acorns in the oaks, and if we have our usual supply of rain this fall, ducks are certain to stay with us in large numbers. Sportsmen have a very bright outlook this season in Texas as far as feathers are concerned, and, no doubt, deer and antelope will prove to be as plentiful as usual. I heard last night that quite a large herd of antelopes were seen not a hundred miles from this town. We have had an unprecedented dry summer. The genial rains have, however, at last found us, and the grass is growing rapidly.—ARTHUR STERT.

MASSACHUSETTS WILDFOWL.—A law forbids shooting wildfowl or shore birds from boats in the harbor and great ponds of Nantucket, and the waters in and around the islands of Tuckernuck, Muskeget and the Gravelly Islands. [Approved May 28, 1886.]

POACHING BRAGGARTS.—I think "Special" has "sized up" the Boston *Sunday Times* correspondent about right when he ventures the assertion that he has lied. That class of liars are too common, and the injury they do our game interests is nearly, if not quite, equal to perpetrating the mean crimes they would like to, but for which they lack courage. Many who listen to their senseless gabble accept it for truth, and are forever convinced that the game laws are a dead letter or are only made to preserve the game till the "city folks" can come in and take it. Every locality has its chronic grumblers who, when holding forth in the country grocery, give one the impression that they know of "lots of cases where game laws have been broken," but if carefully questioned it takes short time to discover what an experienced person would have known at the start, that it was simply gas escaping. There is another class who do know of violations of game laws and would like to see the poachers brought to justice but do not dare to give the information themselves, yet blame the wardens for not bringing the culprits to time, forgetting that it is impossible to accomplish anything without evidence; and a warden who acts without pay cannot afford to support a whole detective bureau. If all who are interested in protection would make themselves understand that the man who takes fish from the spawning beds or grouse and deer out of season has wronged the community as much as any other thief, and would give their testimony accordingly, then poaching would die a natural death. In our State any man, whether he holds a commission or not, can prosecute a game law violation.—BLACK SPOT (Sebago Lake, Maine, Sept. 20).

BERGEN COUNTY ASSOCIATION.—*Editor Forest and Stream:* At a regular meeting of the Bergen County Association for the Protection of Game and Fish, held at the residence of Edwin Ackerman, Hackensack, N. J., Sept. 21, the following officers were reëlected: President, Wakeman Holberton; Secretary and Treasurer, Edwin Ackerman; Counsel, C. W. Berdan. The counsel reported two cases having been settled favorably to the club, and the rewards were ordered to be paid. He also reported two more cases to be tried. These were all for shooting out of season. The papers for the incorporation of the club were reported to be nearly ready. The members present expressed themselves strongly in favor of repealing that portion of the game law which allows reed bird shooting five days before rail can be killed. A letter was read from the secretary of the Plainfield society urging the calling of a convention composed of the different protective associations for the purpose of rearranging and condensing the game laws. After considerable routine business had been transacted the club adjourned.—NEVERSINK.

WELLSVILLE, O., Sept. 21.—*Editor Forest and Stream:* The Amateur Sporting Club of this place have just returned from a two weeks outing on the Tuscarawas River, in vicinity of Trenton, O. They report having a splendid time, and an abundance of game; having secured all the squirrels, fish and ducks they could make use of. The country people there claim to have been imposed on by Bridgeport and East Liverpool clubs, but will treat all campers with courtesy that have the first principles of gentlemen, and charge them only fair prices for provisions. It is to be hoped that these two offending clubs will learn to be true sportsmen. At a regular meeting of the Amateur Sporting Club on the 20th inst. the following officers were elected for their fiscal year: President, C. R. McDonald; Vice-President, G. C. Shull; Secretary and Treasurer, J. Louis Burnett.—JO.

MISTAKEN FOR A GROUSE.—A Parish, N. Y., gunner of youthful years and impulsiveness, fired into a clump of bushes at what he took to be a partidge, but turned out to be his companion. The only moral is *Don't!*

Sea and River Fishing.

Address all communications to the Forest and Stream Pub. Co.

SHANTY LIFE.

THERE is a vein of selfishness in our natures, and some writer, not very religiously inclined, has declared that it is well that it is so; since if we do not love and look out for self, who will do it for us? But this little streak of selfishness crops out where we should least expect it, even in another, say nothing of our well-organized and well-governed selves. We take our annual outing to the trout lakes and streams every spring, never once thinking that our wives and children need the rest—the recreation—as much as we. It does not look selfish to us. But then it does actually save about half the expense, you know. We reason it out all right. Says one, and his answer will answer for all, "My wife wouldn't like anything of the kind;" or "My wife isn't at all adapted to anything of the kind." Well, how in the name of common sense should she be? Ten to one you have never invited her to share your annual trouting trip with you, and all she knows about it is involved in the pains you have taken to make her believe that it is too hard for her. Now it has been my happy fortune to organize several trouting excursions where the ladies have been included—in fact the camp around which the little adventures mentioned in this article cluster was not built for single gentlemen. The wife of the writer is always there when her husband can catch a few days off to catch trout. Friends invited for the first time invariably answer, "I should like very much to go, but I don't believe my wife would like anything of the sort." But several times I have urged that the wife be invited. What has been the result? In almost every case the doubting husband has returnrd the answer, "Why, she is perfectly delighted!" And the entire trip goes to show how actually delighted the lady proves to be. Then what can be more pleasing than to take our better halves over those old haunts and fishing grounds, and witness this keen enjoyment of what we have experienced before. Our word for it, she will take it all in. She will adapt herself to all the roughness of camp life in a way to surprise you, and ten to one you shall find that she has been reading up on the subject in FOREST AND STREAM and other publications which you never dreamed that madam deigned to notice.

The trouting trip, which is the freshest in the mind of the writer, was built upon the principles mentioned above. We started May 31 for—if you are a friend of the writer he will tell you where, provided you will agree to take your wife, but he has not the slightest notion of giving away any choice fishing grounds already deeded over to the ladies—of telling sportsmen who go single, where they may be found. There were three happy wives and three proud husbands of us. The babies were left with aunts and grandmas. Each of the husbands and one of the wives had been there before. A jolly crowd of six, we met in the railroad train in the morning. We met as staid Mrs. and Mr. But this was soon dropped for plain Anne, Grace, Emma, George, Omer and William. We might have worn the dignity of the Jeweler, the Apothecary and the Scribe, but dignity does roll off in the woods, especially when we all come to wash hands from the same dish, or all put on the same kind of tar to keep off black flies and mosquitoes. The railroad ride was pleasant; the rain had fallen the night before and there was an absence of dust, that great affliction of railroad travel. The stage ride among the green hills and along the winding brooks was charming. The buckboard creeping up among the hills and down beside the glistening mountain streams, with the taste of clear mountain air, raised the spirits of the women of the party to a pitch of enthusiasm which made the more experienced of us fear for the reaction. But no need of such fears. The string of pleasant surprises was continuous and the outdoor life and days of rest from the cares of home keeping were full of gladness. Up the lakes in the little steamer brought no particular adventure. But the beauty of the wooded and mountain-fringed shores was a continued source of pleasure.

Our camp was reached toward nightfall—a plain wooden structure, of lumber newly sawn, rough-boarded, but tight overhead and dry, qualities much to be desired in a camp. There were rooms enough for each couple and the cook, with a large sitting-room and a chance for a bright open fire. Such a fire is always a source of comfort in a camp, especially where there is a great abundance of wood. A nice little cook-room formed the L of the camp, and here Oscar presided. He is a good camp cook. His experience in that department of the lumber camp has been of much benefit to him in this direction, besides, he is the son of one of the best guides in that region. In short, he belongs to a race of guides, and is himself a thorough woodsman—enthusiastic and obliging. What more could be wanting in a cook and guide? The camp was opened. Not a living creature had been in it since we closed it—another happy hunting and fishing party, on the 2d of October, 1885—not a living creature except the mice, and they had been there in numbers too numerous for the good of our sleeping accommodations. The first night in camp! who can ever sleep except the old campers? Oscar snored, so did two or three other men, but they would hate to admit it and they don't want me to tell of it. The ladies of the party wore the night away listening to the humming of the mosquitoes and the occasional night cry of the loon. The mosquitoes made night hideous in a small way, but they could go no further, and that was what made them the more enraged. Each bed was covered with mosquito netting, with the musical pests outside of it.

The first morning dawned dull and calm, with a dense fog mantling the face of the waters, and hiding objects not fifty feet away. But fishing tackle was made ready about as early as the daylight came. The boats skipped away through the fog. What was the result? Several nice trout, one weighing 2¾lbs. and another 2¼lbs. We had trout for breakfast. To say that is sufficient. No need to go into ecstacies about their taste, in a publication like the FOREST AND STREAM; it is imposing upon the intelligence of the "old stagers" who have been there before. Every day afterward, till the end of the good time came, we caught trout; not by the hundreds—there were no trout butchers in our number—but we caught enough for the table, as Oscar can bear witness. The ladies did a good part of the fishing, and they made the most of it in the way of enjoyment. They were on the water every day, and grew brown as berries, and by the end of the third day two or three noses, red with sunburn, appeared at the table. But they brought with them considerable excitement, and such appetites! Oscar immediately doubled his exertions, putting on the full force of the lumber camp—ham and eggs, fried pork, doughnuts and all. The girls caught trout. Our wives were girls again by time they had been in the woods two days. They caught trout and lost the biggest ones, just as the men do; and had to tell of it at the dinner-table and at the campfire after nightfall. Annie caught a three-pounder; Grace caught a great number of lesser size; Emma caught a fit of seasickness—actual *mal de mer*—on the fresh water, when it was extremely rough, with a south wind, one afternoon.

But the sights and sounds which came to our lot on this happy trip must not be forgotten. It seemed almost as though nature put herself on exhibition specially because the daughters of Eve were there and the sights were new to them. The mountain storm rushing down the lake, with its line of rain pouring white with foam up to within a few rods of us before a drop fell upon our heads! The fleecy clouds forming on the lowlands and then climbing the mountain, as if to picture just how the storm is made. Then animated nature had some sights for us and some of the best of them were caught by Omer's camera, to be developed at home. The results we anxiously wait. Among the views caught by the instantaneous dry-plate process was the nest of the great blue heron. The bird had carried sticks and twigs, some of them as large as a man's arm, and placed them on the top of a lone and branchless dead pine 60ft. from the ground. In order to obtain a good view, the camera had to be put up another tree. The nest of the woodduck—or rather the hole where the bird entered, doubtless its nest—was also discovered and brought in range of the camera. A curious little loonlet, or rather the few-weeks-old young of the great northern diver, a bird very common in the lake regions, was caught alive and photographed. A funny bird he proved, absolutely declining to partake of any sort of food in captivity, though given a bucket of water to rest on. The poor little fellow died the second day. His capture cost a hard struggle and would have proved an impossibility but from the fact that he was driven ashore by being surrounded by three boats. He was found a short distance up a brook, where it was impossible to capture him. Though not bigger than a half-grown chicken, he would

dive like a full-grown senior of his species, and stay under water as long as he supposed danger was near. In the words of George, "He would pop under water like an eel and then swim like lightning!" A very curious bird, surely; and we tried hard to save him alive in order that the attempt might be made to domesticate him in some duck pond where the domestication of wild waterfowl is being tried. A wonderful little bird he was, with not a feather on him—not even a pinfeather. But he was covered with down so thick and soft that not a drop of water could reach his skin, though he soak himself in that temperance fluid all day. Indeed, there was not force enough to the breath to blow open the thick, fur-like down so as to see his body through the aperture thus made. Young and unfledged though he was, he had all the expert diving abilities of a senior great northern diver.

On the trip to the lake, George sincerely hoped that Annie might hear an owl hoot in the night, and Omer admitted that he should be satisfied if Grace could hear the loon's cry, the barking of a fox or the bleating of a fawn. Emma thought she should like to see a bear or a hedgehog. As we returned from fishing at dusk, on the second night of our stay, the doleful and startling notes of a laughing or barred owl suddenly rang out. On the instant George answered him in his own notos. The remark was made that this species of the owl may be called down very near to the imitator, if he be a good one, and George kept on calling. Soon his owlship began to near the camp, evidently expecting to meet his mate or a male rival. He did not come very near just then, and the calling was abandoned. But the owl was evidently interested. His hooting was kept up, much to the delight of the ladies. Soon Oscar, who had quietly been on the watch, came in, with a twinkle in his eye. "He is right up here in a great birch!" The camp is surrounded with birch trees, tall and ghostly. It took but a moment for Omer to seize his gun, and before all of us were outside the door there came a report and a thud directly on top of the camp. The body quickly slid off the roof, and Mr. Owl was picked up dead. Not so his mate; for that poor bird kept up its lone, laughing hoot the most of the night.

The owl adventure was but the beginning of surprises for the ladies. On the night following Oscar again came in excited. "There is a bear or a deer out here!" he exclaimed. Then grabbing a kerosene lamp—a curious weapon with which to fight a bear, by the way—he rushed into the woods, up hill, in the rear of the camp. He was followed by George with a candle and Omer with a revolver. The lamp flitted and darted among the trees, when, "Here he is!" came from Oscar. The revolver cracked, and crashing through the brush went the boys, over treetops and brush piles that would have been very difficult of scaling in the daylight. "Here he goes! There goes!" Then "thwack," "thwack" on something. "Oh, I've got him!" came from the earnest Oscar. The hedghog weighed almost a score of pounds. He had been followed by lamplight over brush and fallen trees a distance of nearly forty rods and killed with a club. With difficulty we threaded our way back to camp. The chimney went off the lamp and the candles went out. Fortunately Oscar had a supply of matches. This was not the last hedgehog adventure of the trip. On the second night after, to use the words of Oscar, "I could not sleep with that creeter gnawing and rattlin' round, so I got up. The first thing I saw was the axe." To judge by the blow, he did see the axe. The hedgehog, which disturbed his slumbers by gnawing the doorsteps, was cleft almost in twain.

But the prettiest sight of all did not come under the eyes of the ladies, much to the regret of the men of the party. We had wandered up a trout stream, after crossing a pond, for into the woods. We had tired of catching small trout, too small to be retained, and throwing them in again and had started for home by a spotted trail, a shorter cut. The sight was all the more curious since we were talking loudly about the trail and some spruce trees where we had been looking for gum. Passing an old spruce top there sprang up, not 10ft. from the party, a fawn about half grown. The beautiful little creature turned, gave one look, then bounded away. To say we gave chase would express the exertions put in to capture the animal alive but feebly. But the chase was in vain. The spotted creature quickly disappeared. No mother doe was seen; but the signs of deer in those woods are as numerous as the marks of sheep in a pasture devoted to their raising. Much of this is due to the enforcement of good game laws, such as Maine has reason to be proud of. Each one of us had a good view of the little deer, a sight hardly to be expected more than once in a lifetime. Somehow the theory of old hunters and guides and of some writers on the deer also, that the mother doe hides her young far from the sight of man has been somewhat weakened in our minds.

Such was a part what we saw and what we did on our pleasant trouting trip into the woads only a few days ago, and we leave it to the reader whether we ought to have been happy and a satisfied party. Were the ladies brown? Ask them, or better, their friends, who hardly knew them at the railway train on the evening of their return. But there was something better still. Annie went into the woods almost an invalid. For fifteen weeks she had been confined to the house. In fact, her husband hardly knew if she would be able to take the trip at all. But the result was one of the best appetites in the camp and a gain in flesh and spirits that any doctor might well be proud of. For tired nerves, a weary brain or bad digestion, give us the mountain air, joined with trout fishing, boating, woods adventures and a jolly company in a camp in the wilderness. SPECIAL.

THE PAGE FLY.—Stanley, N. J., Sept. 25.—*Editor Forest and Stream:* In the FOREST AND STREAM, 16th inst., W. K. P., Athens, Pa., requests a description of the Page fly and wishes to know where it can be obtained. Michael, the famous fly-tyer, for many years with Andrew Clerk & Co. and later with Abbey & Imbrie, designed it, partly through my suggestion, about twenty-five years ago, to be used specially in Rangeley waters. Many of my largest trout were taken on this fly. It has also proven very effective in black bass fishing. Abbey & Imbrie and A. G. Spalding & Bro., of New York, and H. O. Stanley of Dixfield, Maine, make it. I inclose specimen.—GEO. SHEPARD PAGE. [The fly is a very pretty one, with a yellow body, red ibis wing and the shoulder-bar of the wood duck on each side of the ibis].

THE HOME OF THE BIG TROUT.

I.

BENEATH yon tortuous root that clutches wide
The o'erhung bank above the eddying tide—
Like talons of some mighty bird of prey—
The monarch of the river holds his sway.
A fathom deep of shade and solitude,
Enwreathed and over-arched with root-claws rude,
Serene, impregnable—he views afar
The shimmering sunbeam or the elemental war.

II.

The spear of poacher or the fisher's lure
Appals not him—his fastness is secure;
And when the fleeing shoal of frightened fry
In frantic haste from danger hurry by,
Like the high Gods beyond the clouds and strife
And swift alarms that cloy a lesser life,
He dwells in his deep fortress, void of harm,
An autocrat, untameable, and proud, and calm.

III.

But as the glowing, charioted King
Of Day declines, in splendor westering;
And the soft-pluméd moths, amid the gloom,
Swarm on their downy wings, forth from his home
He sails the darkling stream, ambrosial food
To gather from the myriad fluttering brood.
Hark! to his swift spring on the floating fly
That rings sharp-sounding 'neath the silent starlit sky.

IV.

And now, alone, oh angler, canst thy wile
The dweller of that fortress fast beguile.
Strong be thy rod, and strong thy silken line,
Firm be thy nerve—strength in all things combine.
And if the piercing steel his bony jaw
Imprison fast, allow thy prey no law;
'Tis peck 'gainst peek—no quarter—to the death!
The monarch trout yields not to aught of meaner faith.

J. HARRINGTON KEENE.

FISHING IN ALASKA.

THE islands of southeastern Alaska abound in trout streams. By following up many of them, from where they empty into salt water, one often discovers small lakes nestling in the bowl-shaped depressions among the mountains. These lakes are fed by streams from the melting snows on the mountain tops. The land is for the most part high and the streams are swift, the obstructions in their channels forming rapids and waterfalls, near which it is customary to find deep, dark pools, where the big trout are usually captured.

In this letter I shall tell about Naha and what we saw there last year. It is on Revillagigedo Island, near the upper end of Behm Canal, and is a station of the Northwestern Trading and Fishing Company. Through some misdirected influence the name of this place has been changed to Loring, and it is so known in the post office

directory. In like manner the Haidah settlement, on the southern extremity of Prince of Wales Island, has been changed from Howkan to Jackson, after the king missionary of Alaska. It should be the duty of every one to studiously avoid the use of such names whenever it is possible to do so.

Naha possesses peculiar natural advantages as a fishing station, which I shall endeavor to make clear with the help of the accompanying topographical outline. From the outer bay an arm of the sea runs inland about a mile, with high land on either side. At its head this arm bends at right angle and communicates with a salt-water lake. This lake is the interesting feature of the region. Its outlet is contracted to about fifteen to twenty feet wide, and is so obstructed with rocks that at ebb tide the water stands higher in the lake than in the arm, and consequently there is a waterfall at the outlet running seaward. When the tide is running flood the water banks up in arm, the level of the lake is lower than the outside water, and the rapids are turned inward toward the lake. The trading and fishing company have erected a packing house over the rapids and haul their scines in the lake, where the salmon accumulate in great numbers. The way the salmon swarmed in 1885 in the fresh-water stream that empties into the head of this lake was one of the great sights of nature. During the active seining season the mouth of the river is obstructed by a wire trap held to the shores by a wire fence. This trap could be raised and lowered at will. I am going to tell no "fish story," though what I am about to relate has more than once provoked an incredulous smile from those to whom it was told.

We visited Naha twice. First in the middle of July, when the trap was down and there were no salmon in the stream. At that time I ascended the river by wading about a mile, and fished for trout at the foot of a waterfall about 8ft. high.* The second visit was a month later. The trap was then raised, and the river was full of salmon. The word full must be accepted almost literally. A few yards from the foot of the falls the bed of the stream is narrowed to about 20ft. wide and the water deepens to 5 or 6ft. Lower down it is broad and shallow, and can be waded. At the foot of the falls, and for some distance below, the salmon were packed so densely that the water was awork with them. Their dorsal fins and backs protruded from the water, and the progress of our canoe was materially impeded as we paddled through them. The purpose of our visit was to fish for trout in the river above the falls, but the efforts of the salmon to surmount this obstruction were so interesting that we sat down on the rocks and watched them for a long time. The fish were leaping from the water and falling back into it all the time; many were in the air at the same time. Where the body of the water is thick enough and not too vertical in its fall, a salmon can propel itself along it for several feet by its great muscular strength. I have seen this done; but it was not possible here, owing to the projecting rocks that broke the column of water. Occasionally one would fall into a pool behind some projecting ledge, and from there, as a vantage ground, after resting a while, would endeavor to overcome the remainder of the height. Once in a while one would succeed, but oftener it would be washed back by the rushing water, after having almost gained the top. I think I may safely say, that not more than one in a thousand succeeded in getting into the smooth water above. Cut and bruised by the rocks, exhausted unto death by their violent exertion, and smothered in the jam, the great mass of them succumbed to the struggle, or returned to the sea whence they came, and where they are lost to human knowledge until their next annual migration. The shores below were strewn with their carcasses to the mouth of the river, and all around the shores of the lake they lay, sickening the air with their decay. On one piece of flat river shore they were piled one upon another for twenty feet beyond the edge of the water. The water had fallen and left them there. The wire fence holding the trap to the banks at the mouth was broken down by the weight of the dead mass drifting against it. In addition to these which we saw great numbers must have been carried away to sea by the current and tide. The bears and eagles feed and grow fat upon the living, and the ravens and gulls upon the dead. I dwell upon the slaughter here, because I wish to emphasize the great prodigality of nature. All this sacrifice of life is caused by the blind instinct, which impells these fish to seek the sources of fresh-water streams to deposit their ova. Such sights as we witnessed have probably been repeated from time immemorial, yet every year sufficient numbers get above the falls to produce the swarms that come into the lake annually. I reason on the supposition that only those fish return to a stream that have been hatched at its source. When we see how few are necessary to produce the many, and how thoroughly exhausted are our eastern streams, we can appreciate how more complete are the devices of man than those of nature in the depopulation of the rivers. The season of 1885 was very dry, and the river was very low, and it is possible that in a wet season the salmon may have less difficulty in overcoming the falls.

After tiring at the sight of their struggles we caught several of the salmon by simply plunging our arms in the water and lifting them out. With the roe thus obtained we climbed above the falls and fished for trout. The water was still and we could not induce them to rise to the fly. Three of us caught, in about two hours, fifty as pretty trout, weighing from ¾ to 2lbs. each, as we ever carried back to the ship. They were pretty to look upon, but were not gamy; they invariably succumbed after a very short struggle for liberty. We captured at the same time several fish closely resembling the Eastern brook trout, if they were not identical with it. It is possible that they were sea trout that had gotten over the falls where so many salmon had failed; but they presented several noticeable differences. For instance, they were slender and of more graceful outline, and the spots were a more vivid red, but the marks that attracted my attention more than any other were the lines of color, black and white on the pectoral, ventral and anal fins. I have noticed only the white line on the fins of the sea trout. I captured trout with similar markings at one other locality, on Prince of Wales Island in a little stream emptying into what is called Niblack Anchorage, on the north side of Moira Sound. There is a waterfall a few rods from the mouth of the stream, which has a vertical fall of at least fifteen feet, and the trout were caught in the water above the fall in the first week of July. I met Mr. Charles Hallock when he visited southeastern Alaska last summer, and during a conversation with him I mentioned these trout. He considered it not improbable that they might be identical with the Eastern species, especially when I told him that I had killed the Canada grouse in the same region; "for," he said, "they seem to go together in their distribution."

To give another instance of the commingling of the life of the two sides of the continent at about these latitudes, I will mention how surprised I was to find the dainty little twin-flower (*Linnea borealis*) growing abundantly on the islands of the Prince of Wales Archipelago. I first became acquainted with this flower in 1877, in the vicinity of Halifax, Nova Scotia, where it was growing side by side with the dwarf *Cornus canadensis*. Here I found them similarly associated. The red-berried elder (*Sambucus pubens*), and the Northeastern species of sundews and butterworts are likewise common plants on the Northwestern coast. Such cases might be multiplied both from the animal and vegetable kingdom. T. H. S.

WRANGELL STRAIT, Sept. 2, 1886.

* E. A. Scidmore, in her book on southeastern Alaska, gives this fall a height of 40ft.

THE NIPISSING REGION.—One does not ordinarily "give away" a good thing when he has discovered it, but when he has found more of a good thing than he can use, it seems selfish not to tell the other fellows. That is my case. The good thing is a land where deer and bear are abundant, where there is a good chance to get a moose, where black bass are just waiting to take the first fly which is thrown to them. The place is the Nipissing region, Ontario. I have been there twice, and know whereof I affirm. Go to Toronto, then by rail on a new road, which has just been opened from the upper end of the Muskoka Lakes to Lake Nipissing, get off at Commanda and take to the woods. Before you go, write to Thomas Smith, Restoul, Ontario, and ask him to meet you where the beasties are. Then, if you don't kill all you want, it will be because you don't know how, and in that case Tom will kill them for you, and you need not mention that fact when you show the heads to your friends.—S. D. McC.

PAPER CASES FOR RODS.—Post Mills, Vt., Sept. 20.—I notice in the FOREST AND STREAM of Sept. 16 an article by "Fly Rod" which speaks of a paper cartoon as being the best to keep rods in in winter. Can "Fly Rod" tell me where, when and by whom such patent was taken out on these rolls, as I entered an application for a patent early in '82 for these cartoon rod cases and have been using them off and on ever since, and to-day I use them in mailing fishing Rods.—THOS. H. CHUBB.

THE VAGARIES OF FLY NOMENCLATURE

Editor Forest and Stream:

I noticed in your issue of Sept. 16 under the caption "Answers to Correspondent" that W. K. P., Athens, Pa., asks where a description of Lord-Baltimore and Page bass flies can be found, also the editorial reply, "We do not find these flies named or figured in any book or plate." Allow me to quote Dr. Henshall in "Fishing with the Fly" (Orvis-Cheney) anent the first named fly. "The Lord-Baltimore fly," he says, "originated with Prof. Alfred M. Mayer of the Stevens Institute of Technology, Hoboken, New Jersey, its formula being as follows: Body orange, hackle, tail and wings black, with small upper wings of jungle cock. Prof. Mayer and myself being natives of Baltimore, designed unknown to each other a fly to embody the heraldic colors of Lord Baltimore and the coat of arms of Maryland, black and orange. He named his fly Lord-Baltimore, while mine I designated the Oriole from the Baltimore or hanging bird which beautiful songster was named in honor of Lord-Baltimore, its colors being black and orange." Dr. Henshall's Oriole it may be mentioned is thus made: Body black and gold tinsel, hackle black, wings yellow or orange, tail black and yellow mixed.

The Page is a very well known and much esteemed pattern and is to be found in Orvis's No. 1 list. Its formula is as follows: Body yellow worsted wound gold thread, hackle brown, inner wings scarlet ibis, outer wings gallina or guinea hen. J. HARRINGTON KEENE.

[This letter adds another instance to the evils which we have complained of in fly nomenclature. Among other books searched for the flies named in order to answer our correspondent was "Fishing with the Fly." Neither of the flies were indexed nor illustrated in the work, and we did not read all the articles through in order to find it. This, applied to our library, would have been the labor of a year, and after searching the published lists and Holberton's plates we answered as we did. Now, it seems that the "oriole" is the same as the "Lord-Baltimore," while the "Page" is only to be found in the catalogue of one dealer, and not in any standard work. The fact is, that any person has the right to alter names and to quote a fly as "well known and much esteemed," when it only appears in some dealer's catalogue.]

NEPIGON TROUT.

Editor Forest and Stream:

The great river keeps up its reputation. I could not make my accustomed visit this year, perhaps never shall make another, as fishing is wearisome there from its success. Besides the Dominion wisely prohibits destruction for mere sport, and one is not allowed to take trout away, so the sport is limited.

I have not yet heard from my correspondent as to the exact records made by fishing parties there this summer. But from one party on the river the last of August, the information is obtained that another party just ahead made this record of weight of individual fish: 1lb., 7½lbs., 10lbs., 6lbs., 12lbs., 5lbs. etc. These are as fine weights as are recorded. Probably some of your readers are not acquainted with the requirements of the Dominion officials as to records. It is, however, enough to say that persons having permits to fish are required to enter on the book kept for that purpose the number and weight of trout killed. When I speak of recorded weights I refer to the entries on the trout book.

I wrote you some years ago of my information about large trout in Lake Nepigon, and that Mr. LeRonde of Nepigon House (100 miles above Red Rock) and his brother told me of taking trout of 17lbs. weight with a seine, and other large fish from that weight down to 5lbs. I have no doubt of the existence of such fish in the lake and river. But I doubt whether the larger ones can be taken with the fly. The record of this season above given is believed to have been made by bait-fishing (probably live minnows). We hope to have an account of this through your columns. I will try and get fuller particulars. H.

SEPT. 20, 1886.

WEIGHTS AND MEASUREMENTS OF BASS.—Post Mills, Vt. —In regard to estimated weight of large black bass which we have seen asked several times lately by correspondents who had no means of getting the weight except from estimates taken from measurements of fish, we give the weight and dimensions of a small-mouthed black bass which was taken from Fairlee Lake last week, and which the writer weighed and measured. Length of fish 21½in., circumference 16½in., depth 7in., weight 6lbs. The fish was one of the most handsome bass I have ever seen, and is soon to adorn the office of Thos. H. Chubb, the fishing rod manufacturer, who has quite an assortment of fish, bird and deer heads, and also one of the finest elk heads in America. The black bass fishing here this season has not been quite up to what was expected, although quite a number of bass from 4 to 5lbs. in weight have been taken. —OMPOMPANOOSUC.

THE MANUFACTURE OF FISH HOOKS.—We have received from S. Allcock & Co., Redditch, England, a card containing the different forms of fish hooks and the wire in its different stages, from the straight piece cut to the proper length, the same barbed, filed to the "Kirby" point, hollow point, etc., to the bent hook in its various shapes; and also specimens of the blued, tinned and rust-proof hook. From a pamphlet accompanying the card we learn that at Messrs. Allcock's factory the hook passes through eleven hands before it is put up in packages and labeled, and that there are no less than 180 different hooks, each having from twenty to thirty sizes. The processes of manufacture are: cutting; bearding; filing the point; bending; ringing, flattening, or marking; hardening; tempering; scouring; polishing; blueing, tinning, or japanning; counting, and papering. Several hundred persons are employed at this work.

A STURGEON YARN.

THE reef is more than half way between Crab Island and Cumberland Head, and is about two miles out from the mouth of Dead Creek. No sir, no soundings were ever made on that reef and it is so little known that I am not aware that it was ever named, but it is very long and wide, running east and west with the outside curve facing the south. If I were to venture an opinion, I would say that it is an old glacial moraine, formed of boulders that were pushed out and left there by a glacier that came down the valley of Dead Creek. Several years ago the hydrographic survey in taking soundings westward from Cumberland Head, dropped the line a little inside the eastern extremity of the reef. The officer in charge expected to sound about sixty feet of water and expressed considerable surprise to find that he had to pay out something over nine hundred feet of rope without getting any sign of bottom. This exhausted his supply of sounding line and, fearing that something was wrong with the lead, he caused it to be drawn up. It came up with considerable difficulty, which was for a short time inexplicable, but at last, looking down into the water, the form of a very large sturgeon was seen to loom up from the depths and the mystery was soon solved. It appeared that on lowering the line to the bottom, the sturgeon, attracted by the smell of the grease on the plummet, had swallowed it and continued to engorge the line as fast as it was paid out. In attempting to retain the cordage on his stomach he had followed it to the surface until at last the plummet itself was rescued, when he dropped out of sight. Several attempts were made to obtain a sounding at this point, but the same result followed each trial and the sturgeon brought the plummet to the surface every time it was hauled in. If my memory serves me aright, three days were spent in dropping the lead at different points in the vicinity of the first sounding in order to evade the sturgeon, but without avail. At length the idea occurred to the officer to attach a large hook to the plummet and after great effort the sturgeon was brought on deck. But the difficulty was not yet avoided. Every time he attempted to make a sounding he hooked a sturgeon. He persevered, however, until the moon had gone down, long after midnight, when the vessel was loaded to the gunwales by the sturgeon corded up on the deck, and he was about starting for shore to unload. It was just about this time that he ascertained the nature of the ground on which he was working. It was a very calm, dark night, and looking steadily down into the water he discovered that he could trace the outline of the reef by the phosphorescence of the dead sturgeon lying around the inside wall. It lighted up the boulders along the reef and discovered thousands of sturgeon lounging on the bottom. There could be no longer any doubt that a large and hitherto unknown reef existed at this place, and that its inside basin was the herding ground of all the sturgeon in Lake Champlain. In other words, Cumberland Bay was fenced in by a reef and paved with fish. It was very clear that measures must be taken to rid the bay of the sturgeon before any further government work could be prosecuted, so the officer reported the fact to the war department. In accordance with orders received a month later, he proceeded with four government steam yachts to the head of Cumberland Bay. Each of these yachts had on board three miles and a half of barbed fence wire, all along which very large fish hooks soldered at close intervals and the whole smeared over with lard, like a box of cartridges. Starting southward, the yachts paid out the fence wire down the bay until they stopped for a short time to allow the wire to settle to the bottom. The load of sturgeon caught on the fence wire was so great that in attempting to start up again the sterns of the yachts were submerged in the water about ten feet and it was fully two hours before any headway whatever was made. It was a sublime sight. Cumberland Bay from Dead Creek almost to Crab Island was lashed to a sheet of tossing foam by the struggling sturgeon, and the sound of their tails beating the water was like a continuous roar of thunder, only louder and more impressive. It took two days to tow them to the mouth of the Ausable, where they were hauled ashore by a steam windlass. The suction occasioned by drawing the fish out of the water was so great that the Richelieu turned back its course and flowed southward into Lake Champlain. The water of the lake was agitated from one end to the other, down to the deepest bottom and produced very singular results. The eddies were so strong that fragments of keels and spars and about seven tons of cannon balls from the battle of Plattsburg were thrown up on the Plattsburg dock; the Royal Savage rose to the surface, floated clear around Valcour Island and sank again near its old location, and I am told that the sea serpent came to the top in the channel off Cumberland Head and finally took refuge from the commotion by crawling up on the Plattsburg breakwater. Pieces of pottery, stone, hatchets and gouges and Indians bones and old horses teeth boiled up over the lake. When the tumult had subsided, it was found that the bulk of sturgeon taken out had lowered the lake two inches, notwithstanding the influx of the Richelieu. I think that I may safely consider it one of the largest catches of fish that has occurred on Lake Champlain."—*Plattsburg, N. Y., Republican.*

Fishculture.

Address all communications to the Forest and Stream Pub. Co.

THE U. S. FISH COMMISSION.

WE have received Part XI. Report of the Commission of Fish and Fisheries for 1883. The volume is bulkier than any of its predecessors, and contains a great deal of very valuable matter. The report proper of the Commissioner to Congress consists of 95 pages, while the appendices cover 1206 pages, exclusive of the numerous plates. The work of deep sea and general marine investigation has been extended and many valuable discoveries of aquatic animals have been made. The specimens after having been submitted to a careful investigation for monographic research and a complete series made for the National Museum, have been made up into well identified and labeled sets and distributed to colleges, academies and other institutions of learning throughout the United States. Applications for these sets have yearly increased, showing an increase in the interest taken in the life history of aquatic animals in general. These sets are usually asked for through the member of Congress representing the district in which the institution is situated. An arrangement has been perfected with the life-saving and lighthouse services whereby the keepers for the entire coast make telegraphic reports to the Commission of the stranded whales, porpoises and other forms of marine life.

In fishculture the most important events in 1883 were the planning of a fishway at the Great Falls of the Potomac. The success of Professor Ryder in the artificial propagation of oysters at Stockton, Md. The opening of the Cold Spring Harbor station by the New York Commission and its use by the U. S. Commission. The survey of the Columbia River by Mr. Stone to find localities for salmon hatching. The introduction of whitefish into Eagle Lake, Maine. The transferring of eggs of the shad on trays to distant stations. A large run of shad in the Sacramento resulting from the planting of fry a few years previous by the Fish Commission. The reappearance in Gloucester harbor and other points of young cod believed to belong to a school hatched in 1878, and the experiments of S. G. Worth in hatching the eggs of striped bass or rockfish. Although much has been done in the way of investigation of the character, abundance, geographical distribution and economical qualities of the inhabitants of the waters, both fresh and salt, the subject is practically unlimited in extent, and much more remains to be done in the matter of improving old methods and apparatus used in fishing.

Much has been done by the Commission in bringing to the notice of American fishermen the gill-nets with their glass ball floats used by the codfishermen, which have already revolutionized the winter codfishery of New England, and have, notwithstanding the prejudices of the fishermen, demonstrated the fact that codfish can be taken in great numbers without bait, the necessity for which has been a source of great expense heretofore. Captain Collins, of the Commission, an experienced New England fisherman, who has carefully studied the fishing boats of all nations, has prepared a new model which is believed to combine the excellencies of both European and American fishing vessels, and which is believed to be safer and more substantial than any in use.

In the appendices, which constitute the bulk of the volume, are many articles. The first of these is a most interesting article on the construction and outfit of the steamer Albatross, by the Lieutenant-Commander, S. L. Tanner, U. S. N., consisting of 111 pages and 55 plates. This includes a preface by Commissioner Baird. Construction of the Albatross: Steam machinery and mechanical appliances, by Engineer Baird; apparatus for deep-sea research, general description of methods of sounding and much other interesting material. This is followed by a report of the work done by the Albatross in 1883 by Lieutenant-Commander Tanner. Mr. Livingston Stone contributes the result of his explorations on the Columbia River from the head of Clarke's Fork to the Pacific Ocean, made in the summer of 1883, with reference to the selection of a suitable place for establishing a salmon breeding station. He gives a very interesting account of his journey and the description of the many streams visited, and while recommending several locations as being more or less desirable, he did not find any of them equal to the McCloud River station. The British Sea Fisheries Act of 1883 is given in full.

Appendix B treats of the fisheries. Mr. Charles W. Smiley contributes a table of the principal river fisheries of the United States with an estimate of the catch for 1880 in pounds. In this table the estimated number of pounds is given for a river and its principal tributaries without designation of the species of fish, and the recapitulation gives us the annual catch in each State during that year, with an index. Mr. Smiley follows this with the statistics of the United States imports and exports of fish, fish-oil, whalebone, the tonnage of fishing vessels, etc., for the year ending June 30, 1883, prepared from the annual report of the Bureau of Statistics of the Treasury Department, and based on the Custom House returns. Next comes an abstract of a lecture delivered by R. W. Duff, M.P., at Cullen, Scotland, on the Fisheries of Great Britain, and the Fisheries Exhibition of 1883. The whale fisheries for 1882 and 1883 in a review which Mr. Smiley has compiled from the "Whalemen's Shipping List" and the "Merchants' Transcript." The great herring fisheries considered from an economical point of view, the Norwegian fisheries in 1883 and the Iceland cod fisheries are translated from the Swedish, the Norwegian and the Danish for the report. The article on the fisheries of India by Francis Day, formerly Inspector General of the fisheries of India, and an article on eel fishing on the Baltic coast of Sweden and in the Sound follows.

Appendix C is devoted to economical research, and contains contributions to the knowledge of the chemical composition and nutritive values of American food fishes and invertebrates, by Prof. W. O. Atwater, with whose valuable researches in this direction many of our readers are familiar. Results of the explorations made by the steamer Albatross off the northern coast of the United States in 1883, by Prof. A. E. Verrill, gives a list of the specimens captured, with valuable notes on the work and specimens with numerous plates. A list of deep-water mollusca dredged by the U. S. Fish Commission, steamer Fish Hawk, 1880-82, with their range in depth, by Katharine J. Bush. The osteology of *Amia calva*, including certain special references to the skeletons of teleosteans, by Dr. R. W. Shufeldt, U. S. A.—a long and interesting treatise, profusely illustrated. Mr. William P. Seal gives an article on the aqua vivarium as an aid to the biological research, with illustrations.

Appendix E is devoted to the propagation of food fishes. Mr. Fred Mather gives an account of eggs repacked and shipped to foreign counties by him under the direction of the U. S. Fish Commission during the season of 1883-4. Mr. Frank N. Clark follows with a record of his work at the Northville and Alpena, Michigan, stations for the same season. Mr. Livingston Stone gives a report of his work at the U. S. salmon breeding station on the McCloud River and also a report of the trout breeding station on the same river. Mr. Charles G. Atkins reports on the propagation of Penobscot salmon in 1883-4 and also reports of his work with the Schoodic salmon. Col. M. McDonald records the operations at the central station of the U. S. Fish Commission during the year 1883. Lieut. Wm. C. Babcock, U.S.N., reports on the shad hatching operations at Fort Washington, Md., in the spring of 1883. Lieut W. F. Low, U. S. N., gives the results of shad hatching at Havre de Grace. Mr. Frank N. Clark has some notes on experiments in penning shad and taking eggs at Battery Station, Havre de Grace. Col. M. McDonald gives a report of the division of distribution of the Commission for 1883, with tables. Lieut. W. M. Wood, U. S. N., reports on the operations in hatching eggs of the Spanish mackerel in Chesapeake Bay by the steamer Fish Hawk. Dr. J. Alban Kite reports on apparatus and facilities needed for hatching Spanish mackerel, with cuts. Utilizing water by fishculture, by Prof. B. Benecke, with several plates, is translated from the German, as is also "How to Raise Carp and Other Fish which Spawn in Summer," by Max von dem Borne. Translation from the German on "Pond Culture and the Food and Spawning of Carp," by Adolph Gasch, ends this appendix.

Appendix F contains much miscellaneous matter, such as a report of operations at Saint Jerome station in laying out oyster ponds, by Lieut. W. M. Wood, U. S. N., commanding steamer Fish Hawk. Mr. Frederick W. True makes suggestions to the keepers of the life-saving stations, lighthouses and lightships and to other observers relative to the best means of collecting and preserving whales and porpoises, with numerous plates. Statements concerning the fisheries of several different countries, compiled from the Consular Report for 1882 and 1883, by Howard Fox, completes the volume.

LIVE SOLES ARRIVED.—Capt. Hamilton Perry, of the Britiannic, brought over twenty-five live soles on his last trip. They were consigned to Mr. E. G. Blackford, New York, and were forwarded to the United States Fish Commission at Wood's Holl, Mass. This is the fifth lot which Capt. Perry and his chief steward, Mr. Bartholomew, have successfully brought. They bring them in swinging jars with sand in the bottom, and see that the water is kept fresh. If this fish can be established on our coast, it will be a most valuable addition to our tables. Quite a number are now in the tanks at Wood's Holl, and it is possible that they may breed in our waters.

SUNFISH AND CATFISH FOR FRANCE.—The steamer Le Bretagne on Saturday last took out 200 small sunfish and some catfish for the Société d'Acclimatation, of Paris. They were sent by Mr. Blackford, and will no doubt arrive safely. The sunfish were from 1in. to 1½in. in length and came from Cold Spring Harbor, Long Island, from the ponds of the Messrs. Jones. The catfish were a trifle longer. We think that the latter may prove a valuable food fish in France, but the sunfish are only good for aquarium pets, and are worse than useless in ponds.

DANGER SIGNALS from the Weather Bureau are not more significant of a storm than a cough is of consumption. Providentially we can cure any cough with Hale's Honey of Horehound and Tar. Sold by all druggists and country storekeepers. Pike's Toothache Drops cure in one minute.—*Adv.*

FIXTURES.

DOG SHOWS.

Sept. 27 to Oct. 2.—Dog Show of Indiana State Fair Association. J. M. Freeman, Secretary, Bicknell, Ind.

Oct. 5 to 9.—Annual Dog Show of the Danbury Agricultural Society. B. C. Lynes, Secretary, Danbury, Conn.

Oct. 13 and 14.—Third Annual Dog Show of the Stafford Kenne Club. R. S. Hicks, Secretary, Stafford Springs, Conn.

Oct. 19 to 22.—Fifth Annual Dog Show of the New Brunswick Kennel Club. H. W. Wilson, Secretary, St. Johns, N. B.

Dec. 1 to 8.—First Dog Show of the Inter-State Poultry and Pet Stock Association, Cairo, Ill. A. A. Cowdery, Secretary, Cobden, Ill.

FIELD TRIALS.

Nov. 8.—Second Annual Field Trials of the Western Field Trials Association, at Abilene, Kan. R. C. Van Horn, Secretary, Kansas City, Mo.

Nov. 8.—Third Annual Field Trials of the Fisher's Island Club, at Fisher's Island, N. Y. Max Wenzel, Secretary, Hoboken, N. J.

Nov. 22.—Eighth Annual Field Trials of the Eastern Field Trials Club, at High Point, N. C. W. A. Coster, Secretary, Flatbush, Kings county, N. Y.

Dec. 6.—Eighth Annual Field Trials of the National Field Trials Club, at Grand Junction, Tenn.

Dec. 14.—Inaugural Field Trials of the Texas Field Trials Club. For members only. John F. Sharp, Secretary, Marshall, Tex.

A. K. R.—SPECIAL NOTICE.

THE AMERICAN KENNEL REGISTER, for the registration of pedigrees, etc. (with prize lists of all shows and trials), is published every month. Entries close on the 1st. Should be in early. Entry blanks sent on receipt of stamped and addressed envelope. Registration fee (50 cents) must accompany each entry. No entries inserted unless paid in advance. Yearly subscription $1.50. Address "American Kennel Register," P. O. Box 2832, New York. Number of entries already printed **4126.**

CÆSARIAN SECTION.

Editor Forest and Stream:

It is so long since I have had this pleasure, that I am almost afraid you will scarcely have space for any communication from your ancient correspondent. With this preface I will give your readers last Saturday night's experience, which I hope and trust will be of both use and benefit to all lovers of the canine race, especially to those who are interested in toy dogs. As it often happens to a busy professional man, Saturday was a rather heavy day with me, and consequently I was, about 8 P. M., rather cross; in fact, I didn't want to be bothered with any one, especially a toy dog crank—who nearly always is a man who has a very nice home, an exceedingly nice wife, but no cradle to rock. As I said before, I was cross, or rather had an attack of "obliquity of temper" last Saturday evening, when my office bell rang and the toy dog crank appeared. He was very sorry to trouble me, but as both he and his wife were nearly driven to desperation he had to do something, and as he knew I always had a love for dogs he came to me and stated his case. He had a black and tan bitch about four pounds weight, which had been in labor for three days and was in great pain. Could I do anything for her?

I was at once restored to my usual good temper by thoughts of making myself again notorious in dog surgery, and imagine I may be helping some of my dog friends by telling what I did do.

I started out with a whole kit of instruments, including sulph. ether, my patent (not yet obtained) ether dog administrator. I never give a dog chloroform now, as I have had so many deaths from chloroform, never any from ether. The little patient having been duly etherized, I made a vaginal examination and found that the mouth of the uterus was fully dilated, and that a puppy was being forced through it. I had the greatest difficulty in getting my forefinger through the vagina, and consequently I thought there was little chance of my being able to get the puppy through. Nevertheless I tried with a small pair of placenta forceps to effect delivery, but with no result except that the skin of the puppy came out. I told my toy dog friend, a "crank," that the only way I could see of saving his bitch was to perform Cæsarian section, and warning him that I did not at all warrant the life of his dog. He gave his consent and I immediately began to operate, having the following instruments ready: a sharp scalpel, a pair of scissors, a needle armed with silk, a sponge and some warm water in a basin. As the bitch was very fat and her breasts very full of milk, I could not operate as I should have liked down the *linea alba*, so I had to draw the breasts to one side and make an incision about two and a half inches long in the left side. Having got through the muscles and peritoneum, I introduced my finger into the vagina and pushed the uterus up into the cut. I then made an incision into the uterus and withdrew the puppy that was presenting, which had evidently been dead for some time and was being forced out back first. I could not at once find any more pups, but I felt round for some time and at length found a hard body at a considerable distance up in the abdomen, which by pressure I brought down to the external opening, and found it was another dead puppy. I extracted this. Then came the point, ought I place sutures in the rent in the uterus. Finding the natural state of the bitch's uterus to be nothing but a sero-fibrous tube, and having no catgut ligatures with me, and silk would have acted as a foreign body, I came to the determination of leaving the uturus rent as it was. I placed two sutures through the external openings, taking care that I included the muscular structures in them, and brought the sides not too forcibly together. Before I did so I sponged out the abdomen as well as possible, as it was very much charged with black matter from the puppies. By this time the little bitch was recovering from the ether, and I had her placed in her box and gave her a little water, and I was pleased to see her begin to lick herself where she had been wetted. I advised complete rest and very little food, and that she should get two teaspoonfuls of castor oil on the second day after the operation, and that she should be brought to my office, if alive, on the fourth day to remove the sutures. I was both surprised and pleased by seeing her trot in at her crank owner's heels on the fifth day looking as if nothing had happened her. I removed the sutures, and she appeared as well as ever.

If this history of the Cæsarian section will be of any use to any of your readers I will be more than repaid for the trouble of transcribing it, and I think if it were more often resorted to, many valuable pet dogs' lives would be saved.

J. S. NIVEN, M. D.

LONDON, Ont.

GREAT DANES.—A Massachusetts law (Chap. 340, Laws of 1886) provides: "No person shall keep or have in his care or possession any dog of the species commonly known as bloodhound, or any dog which is or has been classed by dog fanciers or breeders as Cuban bloodhound, Siberian bloodhound, German mastiff or Great Dane, boarhound or Ulmer dog, be said dog in whole or in part of said species; unless the same be kept for exhibition solely, in which case said dog shall at all times be kept securely inclosed or chained and shall not be allowed at large, even though in charge of a keeper, unless properly and securely muzzled." Penalty $50.

THE ATTLEBORO DOG SHOW.

PAWTUCKET, R. I., Sept. 25.—*Editor Forest and Stream:* As this has been Fair week in our little State of Rhode Island I have not had time to make out a list of the winning dogs at the show which was held last week at Attleboro, under the auspices of the Attleboro Farmers' and Mechanics' Association, which I had intended to do. The dog department was a great success and the number of dogs entered as follows: Two mastiffs, one St. Bernard, three greyhounds, three deerhounds, eighteen foxhounds, twenty beagles, fifteen English setters, ten Irish setters, twelve Gordon setters, ten pointers, four collies, four cocker spaniels, four bulldogs, two bull-terriers, four fox-terriers, four Yorkshire terriers, eight pugs, two Italian greyhounds, total 126, besides four litters of nursing puppies. There was not room enough in the building where the show was held last year to accommodate all the dogs, so they had to fit up another building adjoining. The show was in good hands under the management of Mr. A. H. Wakefield, of Providence, who did all in his power to make it pleasant for the dogs as well as the hundreds of visitors who were in attendance during the day. The judging of Mr. Samuel Scranton, of Providence, was all that could be desired; not a kick or any grumbling by the exhibitors showed that he gave good satisfaction. He took plenty of time, understood his business, and went at it in a workmanlike manner. The dog department has got to be one of the principal features of the fair, and they are all so much interested in the association that they are going to build a new building before another season and have it fitted up in the best possible manner for the comfort and convenience of the dogs. They will give good premiums another year and try and get some of the best dogs in the country; in fact, we had some from Mr. Thayer's kennels this year that get the blue ribbon at every show. His dogs were especially admired by all.

C. F. C.

"FANCY" AS APPLIED TO DOGS.

Editor Forest and Stream:

Would it not be a pretty good idea if there were a little consistency and common sense used in considering what breeders are aiming at in "improving" dogs? It really seems to me that there is risk of our "improving" every useful quality out of dogs if the "fancy" keep on in the same track much longer. In what direction are we improving dogs? It is possible, only possible, that taken altogether, all dogs have been improved in appearance as a result of dog shows, but that they have been improved in one *useful* quality, I most steadfastly deny. Of course I have to fall back on mastiffs as my stronghold, and it is my deliberate conviction that the mastiffs of to-day do not, *as an average*, equal those of thirty-five years since as guards and true watch dogs. When I made their acquaintance at that time I can honestly say that I never knew either a savage or coward among the dozens that I had personal knowledge of. True, some were wiser than others, some were sharper than others, but none were destitute of that crowning glory of the mastiff, the indisposition to bite or take any harsh means until gentle ones had been tried and found wanting. That this was an original characteristic of the breed is shown by Bingley describing it as early as 1804, dwelling on how mastiffs would allow a stranger to enter on their owner's grounds without molestation, so long as he touched nothing, but if he did, they would prevent him and keep him from going away until their master's return, and I cannot remember one animal among the mastiffs I knew thirty-five years since that did not have this trait of character. We now hear constantly of this, that or the other point, such as short head, blunt muzzle, snub nose, etc., as being a "characteristic" of the breed; does it ever occur to those who dwell on these points that his character, his mental, moral character was a characteristic of the mastiff? Yet which is the most important, an inch off his nose, or the trusty disposition? Truly "the fancier" will smile at your childish innocence and will say: "Why, the nose is everything there is about a dog, the breed we will produce before we get through will be nothing but head, and the head will be minus a snout."

So much for the usefulness of the dog; and now let us see about his beauty, as it is bad enough to ruin a dog's usefulness for the sake of his beauty, but worse, to make him as ugly as sin while making a fool or savage of a philosopher and philanthropist. I take such a dog as Ilford Caution, because I know him in the flesh, and a noted English fancier says he has the grandest head of any dog since Banford's and Pemberton's Wolf. Will any one assert that this ridiculous, snub-nosed, laybacked beast is as noble looking a dog as say Old Turk, Lukey's Governor, Hanbury's Phillis, Field's Nell, Rajah, Beau or Cardinal? So it strikes me that "fancy" has not even the justification of good looks. Will your "fanciers" assert that this disgusting snubbiness of nose is a "characteristic" of the breed? How then comes it that none of the dogs I have mentioned above are marked with it?

This may answer for mastiffs, and let us see how it is about collies. I must confess to complete ignorance of the points of the breed from a fancier's standpoint, but a distinguished collie breeder told me that he didn't believe that out of the hundreds of collies on the English show benches, one per cent, could be found that could work stock. I know of two bitches by one of the cracks of the English show ring, and neither were of more use as farm dogs than a cat, neither of them could be taught the first principles of farm work. They were out of different bitches, one of them a sister to a champion bitch, but both were nasty, nervous, noisy, barking, biting, jealous, cowardly beasts, with as much brains as the sheep they should work, and as much courage as those they should have defended. One of them had the temerity to attack the bobtail, Dame Judith, presuming on her superior size, but the Dame incontinently killed her off-hand, and repeated the operation with her dam when *she* tried the same game. Grand "protectors" of a flock they would have been should a sheep-killing dog have come around! Then as for looks, I must say that the present rage are awfully ugly beasts as compared with the pictures of such dogs as Old Cockie. The older dogs had a really sharp, foxy expression; those of to-day look like a black snake in head. Anyhow, it seems to me that the comparatively broad skull, with the narrow, pinched muzzle, much like a fox's, that collies used to have, has been replaced by a narrower skill, thicker muzzle and a generally longer head, and I have found it the impression of non-collie fanciers that the resultant has been as repulsive a looking dog as lives.

Now why cannot fanciers be reasonably consistent? If they want a dog purely and entirely to meet the requirements of Dame Fashion, why not say so and be done with it? That would be at least logical and intelligible, but they come over such rotten gibberish as "character," "typical," "characteristic," etc., words that ordinarily mean something, even if "the fancy" is above such weak considerations as the necessity of being logical or comprehensible. Didn't somebody say in the London *Stock-Keeper* a short time since that a poodle, shaved to look more like the devil than the devil does himself, was a thoroughly "typical" specimen of the breed? And by the way, I saw this poodle at New York show only moderately disfigured, and I thought that, with all his disadvantage, he was one of the brightest, most lovable-looking dogs I had met, amiable to a fault and as courageous as Richard Cœur de Lion. Now if "the fancy" will only confine themselves to "fancy" dogs, those that have no use in the world, such as pugs, toy spaniels, toy terriers, etc., much mischief would be saved, and in mercy to those stupid enough to still believe that dogs may have some use, cannot they leave such dogs as mastiffs, collies, poodles and working terriers alone? Will they not openly confess that all such considerations as real beauty and ordinary usefulness enter into their calculations about as they do into the composition of a lady's bonnet, or her shoes, or a man's plug hat, or the cut of his breeches?

Now, if I haven't spun the above out beyond your patient endurance, may I suggest a few things *re* "Aper's" article? It strikes me that he has propounded an old and obscure conundrum, but has not given us an answer. Why is it that animals, not only of high pedigree but of high merit, both as specimens and breeders, often produce litters or single offsprings utterly worthless? Why was it that Merlin, the dam of the Crown Prince litter, produced a litter to either The Shah or The Emperor of a very marked character, and then produced a litter, undoubtedly to The Emperor, of a totally distinct character? The Crown Prince litter was bulldog to the extreme, and the produce of the litter were generally the same, while the Maximilian litter were fine, powerful, large animals, with what I maintain is a true mastiff head, decently long-faced. Then why was it that Merlin's litter by Beau were such bad ones that Woolmore drowned the lot? Beau was very efficient in getting short-faced ones, as for instance The Lady Clare and Beaufort, while The Shah was on the long-faced order, and Maximilian was decidedly the same. The Emperor, a son of The Shah, was very short-faced; where he got it from perhaps "Aper" can tell, I can't guess, for his dam was a real handsome bitch, nothing of the snub-nosed kind, although not so short-faced as her litter sister, Curtis's Duchess. Further, why is it that a particular litter or cross will have such damnable tempers? I had a litter by De Buch ex Dinah that, with one exception, were the worst cases I ever saw—not savage, but the most nervous, flighty, timid beasts I ever bred, yet neither sire nor dam were ever parent to any others of the same character. It strikes me that there is often something in the condition, surroundings or happenings to the mother during pregnancy that have a powerful effect on the offspring. We know that such is the case in the human family, why not in the canine? W. WADE.

HULTON, Pa., Sept. 3.

A TENNESSEE FOX HUNT.

A SHORT time since I found myself in company with two companions quartered at the country residence of Col. N.—a well-to-do farmer and ranchman of West Tennessee. After supper we were sitting on the veranda enjoying the cool breeze, when noticing a number of sleek, well-fed dogs lazily stretched on the grass at our feet, I inquired of our host if he ever hunted. Unconsciously I had struck the key note of his very life. "Hunt," said he, "hunt? Why I was born in the saddle behind a pack. Do you?" Then he proposed a run that night. In an instant what a few moments before had been languid ease now was in commotion; the negroes were summoned from the cabins, horses saddled and led to the block, dogs collected and fed sparingly, as a full stomach mars a keen scent, and in less time than it takes to write it we were in readiness. My two friends were mounted on clean-limbed thoroughbreds, the Colonel on a long, lank, raw-boned, antiquated specimen of horse flesh that had evidently seen better days, yet which, according to his statement, had been in at the death more times than "any other hoss in this section," and I, poor hapless I, find myself astride a nondescript known in common parlance as a mule. I am inclined to murmur at this discrimination between my companions and myself, but the good-natured Colonel, seeing my discomfiture, explained that the other horses are down in the cane and this is the best he can do for me on short notice. I thank him, and we start.

We ride slowly down a long lane, chatting gaily of the prospects. A light breeze is coming from the west, and in the east the silver crescent of a new moon is just peeping over the hill. The dogs in charge of Bill and Fun, sons of the Colonel, are ranging to the west, and hunting in fine style. Before we are a mile from home, old Rattler, a fine black and tan hound of the purest strain, who has been industriously sniffing the ground and bushes for some moments, suddenly raises his head and gives voice. Instantly the pack closes in, and away they go to the westward, square to the wind, and reynard is started. We restrain our horses a moment to determine the course, and then, at a word from the Colonel, dash off sharply to the southwest toward the bottom. We have a sharp run of five miles across fields and farms, and halt at the edge of a wood. As we supposed, this fox has made a circuit of about five miles, and is now coming almost directly toward us. The excitement is intense, every man is standing in his stirrups, with rein drawn taut, every nerve tingling, and straining the ear to the musical "talk" of the dogs. We have not long to wait. They draw nearer and nearer, and the yelping, which before was blended into one harmonious roll of fox-hunting melody, now becomes distinct and separate, each dog distinguishable by his voice. They come in sight; the pack scarce three hundred yards behind the game, with heads well up and tails down they seem hardly to touch the ground, but remind one in the dim moonlight of a flock of huge birds. We have no time for such comparisons, but with an ear-splitting yell are off after them, helter skelter, pell mell, every horse doing his best licks and scattering the leaves and sticks like a miniature hurricane.

Now we have the grandest run of the night. The Colonel's mare begins to show her colors. She leads us all, covering the ground at a terrific pace that leaves us far behind, and her rider is a perfect picture of horseman and hunter. His long gray hair and beard stream out behind, his hat in hand, he leans forward encouraging his noble mount and his keen eyes fairly blaze. My mule begins to show her blood, too, with neck stretched out, ears laid back and nose almost touching the ground, she passes the thoroughbreds, who have backed at a fence and brings me to second place. She didn't run so fast as the others, but she takes the fences and gullies like a flash, which gives me a decided advantage. We have open country now, and the speed increases and the pace begins to tell. Two young nags ridden by the boys have thrown up the sponge; one of my friends is coming down to a slow gallop. Reynard is failing, too, and makes a detour to the right toward hills. This movement costs him his life. One of the lead hounds anticipates this and turns squarely at right angles to the course followed by three young dogs, and when the game emerges from a narrow strip of wood into the open again, the dogs are a short fifty yards behind. The wily animal for once is bewildered. The pursuers are to the right and left of him and he hesitates, turns first forward, then backward, and finally goes off diagonally down a ravine. His hesitation costs him dear, for the dogs gain on him now at every leap. He sees it and attempts to leave the ravine and scramble up the hill, but it is vain; that portion of the pack left behind has made a flank movement and he is running straight toward them. He knows he is hemmed, but is game to the last, and as a slender chance attempts to double. The dogs are prepared for this, and Trailer, a large red hound, intercepts and springs upon him—a snarl, a snap, and all is over. Before I can extricate myself and my mule from a bad thicket into which he has carried me, the Colonel dashes up, springs from his horse, and, beating off the dogs, seizes the fox and swings him high in air, and gives vent to a yell that reverberates from the surrounding hills, is answered by myself and companions, and pandemonium reigns supreme. The brush is taken and bestowed upon the writer as a remembrance of the run, and we turn our tired horses' heads homeward and ride up just in time to catch the savory odor of fresh ham and eggs and delightful rolls issuing from the kitchen. I consult my watch and it is a quarter to 6, and we have been out nine hours and run altogether thirty-six miles.

TREV.

FULTON, Ky.

THE PERRY DISQUALIFICATION.—Following is the paper read by Mr. Elliot Smith at the recent meeting of the American Kennel Club upon the question of sustaining the action of the New England Kennel Club in disqualifying H. M. Perry from exhibiting at their show last spring: "I find it difficult to satisfy myself which is the better course in casting the deciding vote in this matter. Much can be said on each side. The precedents that we have among the racing associations would prohibit any other association from taking cognizance of wrong doing when that at which it occurred had failed to act, the theory being that the local body had the best means of judging of the wrong, and having failed to impose punishment, the presumption is that none was earned. It is unfortunately true, however, that we are not as yet so far or firmly established, nor has the importance of dog shows so far advanced, that we can take the same stand. There is with us always danger of local influence, or petty reason for refusing to mete out punishment when the public believe it has been earned. It seems to me to be best, therefore, to make such ruling as will enable any club to cure the evil resulting from the default in duty of a fellow-club by themselves acting. In casting the deciding vote I am endeavoring to do so without undue regard to the circumstances of the present case, but for the purpose of establishing a precedent for the future, I vote that the disqualification of H. M. Perry shall not be removed."

DIADEM.—New York, Sept. 23, 1886.—*Editor Forest and Stream:* I beg to call your attention to a misstatement in your Waverly report. Diadem was not shown, and therefore your saying that she "was not noticed" implies that she competed and does her an injustice. She was not in good enough condition to show, if you will allow me to suggest a fairer comment.—AUGUST BELMONT, JR. [We saw Diadem in the judging ring in charge of Mr. Lacy. She was sent out by the judge, and upon inquiry we learned that it was owing to her bad condition.]

THE IRISH SETTER CLUB.—*Editor Forest and Stream:* The committee of the Irish Setter Club are handicapped in their work seriously by the chronic inattention of the secretary and treasurer of the club, to all appeals for information in regard to the standing of matters. Will they please communicate at once with M. Wenzel, 89 Fourth street, Hoboken, N. J.

THE WINSTED DOG SHOW.—The dates for the second annual dog show at Winsted, Conn., are Dec. 15, 16 and 17. Entries close Dec. 4. F. D. Hallet, Winsted, Conn., is superintendent.

KENNEL NOTES.

Notes must be sent on prepared blanks, which are furnished free on receipt of stamped and addressed envelope. Sets of 200 of any one form, bound for retaining duplicates, are sent for 30 cents.

NAMES CLAIMED.

☞ **Notes must be sent on the Prepared Blanks.**

Melody and Echo. By H. F. Schellhass, Brooklyn, N. Y., for beagles, one white, black and tan and and black, white and tan bitch, whelped Nov. 20, 1885, by Trailer (A.K.R. 2525) out of Music (A.K.R. 1411).

Forest Dirk, Forest Dandie, Forest Friend, Forest Dell, Forest Daisy and Forest Flower. By John H. Naylor, Mount Forest, Ill., for pepper Dandie Dinmonts, three dogs and three bitches, whelped Sept. 16, 1886, by Bonnie Briton (Border Minstrel—Wee Miss) out of Pansy (Minstrel Boy—Linnett).

Glen Gow, Glengary, Lowry Dunbar, Gypsy Queen, Maggie N. and Fanny Fern. By John H. Naylor, Mount Forest, Ill., for brindle Scotch terriers, three dogs and three bitches, whelped May 18, 1886, by Nell Gow (Dundee—Glen Artney) out of Rosie (Tommy Dod—Rosa).

Samter, Ted's Pride, Cloudy and Chautauqua Belle. By Chautauqua Kennels, Sheridan, N. Y., for blue belton English setters, two dogs and two bitches, whelped March 16, 1886, by Ted Llewellin (A.K.R. 599) out of Marcella (Prince Phœbus—Stella).

Dixie, Lucy and Midnight. By American Cocker Kennels, Camden, N. J., for black cocker spaniels, one dog and two bitches, whelped Aug. 27, 1886, by Black Pete (Obo, Jr.—Phonsie) out of Queen Obo (A.K.R. 3032).

Roxy and Ruth. By S. R. Hemingway, New Haven, Conn., for black cocker spaniel bitches, whelped July 18, 1886, by Black Pete (A.K.R. 3071) out of Miss Nance (A.K.R. 1519).

General Booth. By Thos. W. Mills, Montreal, Can., for white, with brindle head, bulldog, whelped Aug. 1, 1885, by Guillermo (A.K.R. 671) out of Lillie Langtry (A.K.R. 2453).

Ted's Bang. By Chautauqua Kennels, Sheridan, N.Y., for black, white and tan English setter dog, whelped Nov. 1, 1885, by Ted Llewellin (A.K.R. 599) out of Trusty Gladstone (A.K.R. 1550).

Treff. By Dr. W. Thornton Parker, Newport, R. I., for white and tan fox-terrier dog, whelped June 23, 1886, by Clover Turk out of Clover Poppy (Trajan—Spite).

Dream. By G. E. Osborne, Birmingham, Conn., for black, white and tan English setter bitch, whelped April, 1886, by Foreman (Dashing Monarch—Fairy II.) out of Passion (A.K.R. 3224).

Fly. By Rev. E. F. Baker, Cold Spring Harbor, L. I., for white and tan fox-terrier bitch, whelped Oct. 1, 1883, by Zip out of Jill (Nibs—Vixen).

Teazer. By Rev. E. F. Baker, Cold Spring Harbor, L. I., for white and tan fox-terrier dog, whelped Dec. 7, 1885, by Curate II. (Curate—Flora) out of Fly (Zip—Jill).

Philip. By Rev. E. F. Baker, Cold Spring Harbor, L. I., for white and tan fox-terrier dog, whelped Sept. 9, 1884, by Curate II. (Curate—Flora) out of Fly (Zip—Jill).

Fanchette. By G. E. Osborn, Birmingham, Conn., for black, white and tan English setter bitch, whelped April, 1886, by Foreman (Dashing Monarch—Fairy II.) out of Passion (A.K.R. 3224).

Ranger. By G. E. Osborn, Birmingham, Conn., for lemon belton English setter dog, whelped April, 1886, by Foreman (Dashing Monarch—Fairy II.) out of Passion (A.K.R. 3224).

The Ishmaelite. By S. R. Hemingway, New Haven, Conn., for black spaniel dog, whelped April 2, 1886, by Black Prince (A.K.R. 62) out of Zona (A.K.R. 1881).

Nellie of Loudoun. By S. G. Graham, Tazewell C. H., Va., for lemon and white pointer bitch, whelped Nov. 15, 1885, by Fritz (Beaufort, A.K.R. 694—Spot, A.K.R. 1351) out of Virginia (Sensation—Rose).

Chautauqua Kennels. By W. B. Peet, New York, and F. M. Shelley, Sheridan, N. Y., for their kennels of English setters at Sheridan, N. Y.

Keystone Kennels. By R. E. Westlake, Olyphant, Pa., for his kennels, formerly known as Lakawana Kennels.

Editor Forest and Stream: In claiming name of Spot Dash, Sept. 16, the pedigree of his sire should read Dash—Fannie, instead of Fosco—Kit. By making the correction you will greatly oblige—ROBERT LESLIE (Lynn, Mass., Sept. 23).

BRED.

☞ **Notes must be sent on the Prepared Blanks.**

RANGE AND GALLERY.

THE CREEDMOOR MEETING.

SECRETARY SHEPHERD is rapidly finishing up the mass of detail work connected with the N. R. A. fall meeting of last week and by this time most of the prizes won have been duly handed over to their lucky and deserving owners. One of the best put summaries of the work and lessons of the meeting comes from the lips of Lieut. Zalinski, U. S. A., who as executive officer of the meeting had abundant opportunity to supplement his already extensive acquaintance with all matters relating to rifle practice. He says:

"There has been one good and one bad feature about the meeting this year. The bad feature is the poor attendance of the outside public and the obvious want of interest which this implies in the work done here. This rifle shooting should not be looked upon simply as a branch of sport; it is absolutely necessary to enable us to do our duty properly in defence of the country when the need comes. The most conspicuous necessity, in order to bring about a change to this matter, is to move the scene of meeting, to hold it on ground nearer the city. And the best available ground in my opinion is at Erastina, on Staten Island. Not only is it much more readily and cheaply accessible from New York, but there is a large residential population around who would help by their presence at the range to encourage and inspire the men to do their best. The fact that good work will be seen and appreciated by fellow citizens has a very favorable effect upon the quality of the shooting.

"The encouraging feature at this meeting has been the special interest shown by the men in the competitions, the increased readiness to take part in matches arranged on the ground, to take part in the pool firing, and in general to show an active appreciation of all means adopted to give them a chance to exercise and improve themselves with the rifle and also with the pistol. With regard to the latter weapon, now that non-commissioned officers are armed with the revolver, it is most important that opportunities should be generally provided for them to perfect themselves in its use.

"The very friendly feeling that has prevailed among the competitors this year is especially worthy of notice. Unlike former years, there have been very few protests made, and all the competitions have been conducted in an amicable spirit. The protest in the Hilton trophy match against a member of the New York team, whose rifle was discharged before he was ready to fire—as he alleged, by the closing of the breech—was made by the captain of the New York team himself, in order that the question as to whether such a shot should be counted might be amicably and definitely settled.

"There is an important and very striking lesson to be drawn from the result of the newly-arranged skirmishing competition. This was entered by four teams, of six men in each, three from the army and one from the national guard. They started at 600yds., with 40 rounds each in their pouches. Having gone a short distance, they were halted by bugle and began firing, fifteen seconds being allowed. They were then advanced again, halted, and so on down to 200yds. They then retreated in like manner. The result is rather startling. The national guard is usually supposed to be equall skilled in the use of the rifle with the army. But the scores stood: Engineer Battalion, 748 points; 5th Artillery, 691; 4th Artillery, 689; 13th New York Regiment of the national guard, 278. The reason for this inferiority on the part of the militia is obvious. They are as good marksmen as the others, but they have never had any practice in firing at uncertain distances. As in real warfare almost all of their work would have to be done under just these conditions, the moral is plain, and I hope the result of this match will be to stir up the militia organization to give their members opportunities to practice in this mode of firing.

"To render this meeting a real success and get out of it all the benefit that should be obtained, it will be necessary to increase the prize fund very largely. The amount given in prizes at the National Rifle Association meeting at Wimbledon is $60,000, and the highest individual money prize, the Queen's, is $1,000. We have hard work to collect $1,600 for prizes once a year, and the highest money prize is $50. What is really needed is a series of prizes, the opportunity to win which will make it worth a man's while to do his utmost to perfect himself with the rifle."

Massachusetts has determined to do full honors to the team which has honored the old commonwealth. Adj. Gen. Samuel Dalton by a general order, "directs that, as a suitable recognition of the achievements of the Massachusetts rifle team at Creedmoor during the past week, a commemorative medal be given to each member of the team. The winning of the several trophies in competition with the trained and tried troops of other States and of the regular army is an event in which the entire militia may take pride, as it marks conspicuously the rapid advance which they have made during the past three years in that most important part of milita instruction, the effective use of the rifle." The team members have been the recipient of special attention since their return home.

The following scores omitted from our last issue will complete the record of the meeting:

Match No. 16. General Sheridan's Skirmishers' Match.—Open to teams of six from the regular army, navy, marine corps, national guard, volunteers or militia of any country, State or Territory, 600 to 200yds. and return, second class targets, adopted military rifle.

Editor Forest and Stream:

I noticed in your report of the Creedmoor meeting that there was talk of establishing a rifle range at Staten Island. I was in attendance at the range and heard such conversation much to my gratification, and I hope the matter will not end in talk but that the project will meet with such favor among riflemen as to result in the establishment of a range within easy access of the city. I believe if a range could be established at Staten Island or nearby that the interest in this sport would be greatly augmented. I judge from my own experience; and find it impossible to go to Creedmoor owing to the time occupied in getting there, and this is the case with four other gentlemen who with myself compose a club, we find it inconvenient to go to Creedmoor and have for the past year met on a farm near the city; this is pleasant for us, but it prevents association with other riflemen and the furtherance of mutual friendship and interest which the sport needs.

I trust riflemen of this city will take up this matter and "push" it, and I am sure the result will be gratifying to all lovers of the rifle. SHOOTER.

NEW YORK, Sept. 24.

THE ARMY COMPETITIONS.

AT Fort Leavenworth, Kas., is just now collected the cream of the U. S. A. so far as marksmanship is concerned. For two months past the army has been undergoing a sort of natural selection. Companies and regiments have been making up teams; they in turn have pushed out the weaker men until Department teams were made up, and they in turn have been reduced by the same system of selection into Division teams, and these are now in rendezvous at Fort Leavenworth to fight for the final honors and make up the one army team of real champions.

The annexed summaries give the totals made by the team men of the three Division teams. In the known distance work, the scoring is at 200, 300, 500 and 600yds., 10 shots each, making a possible total of 200. This is repeated on each of two days. The skirmish firing is done from 600yds. toward the target and in retreat until forty rounds have been exhausted. The *Army and Navy Register*, speaking of the coming tests under the personal direction of Col. S. E. Blunt, Inspector of Rifle Practice for the Army, says:

"The competitions of this year possess unusual interest because of the modified and new regulations. First, restricting to the fortieth number of cartridges allowed to be expended per man per run in skirmish firing, and second, because of the use of skirmish targets, iron skeleton frames covered with cloth and dark-colored paper cut as silhouettes, fitted to the shape of the frames, representing a man in the firing position either standing, kneeling or lying prone. Formerly there was no limitation as to the number of cartridges permitted and the scores were determined by the number of hits made on the target. Formerly the presumed relative excellence of marksmanship between competitors firing, perhaps a different number of shots was expressed by the sum of the values of hits and not by the per cent. Complaint was made that by this method undue prominence was given to mere rapidity of fire and not enough to accuracy. The method was trained by those who, by reason of middle age or habitual deliberation in firing, could not average as many shots as the younger, or more nimble, or more dextrous, the "unlimited celerity fire method" and many expressed themselves as discouraged, being hopeless in competition with the "human gatling guns." In illustration of this rapidity of fire, it is but necessary to cite one or two cases. Lieut. Handforth last year scored 222, firing 64 shots in one run. Sergt. King, 12th Infantry, has made 10 hits in one-half of 15 seconds. Sergt. Craw, 20th Infantry, has fired 12 shots in 15 seconds. It is the opinion of many that the new method gives more general satisfaction because securing an equal competition, fair alike to all. It affords a method of determining the relative excellence of marksmanship by per cent."

The Division teams as selected stand:

LUBRICANTS.

Editor Forest and Stream:

I have been much interested lately in the reports of rifle shooting where wonderful good scores were made without wiping the gun after each shot. Mr. K. Wertheimer in his letter published in your paper of Sept. 9 tells of the wonderful shooting of his Ballard Schuetzen Rifle and of his own success last August. He says the last 120 shots were fired without wiping or cleaning the gun, and from the total number of shots fired I judge he did not have time to clean it many times that day. If Mr. W. will tell through the columns of your paper how he managed to get such good results from lubricated bullets, the sort of bullet used, manner of lubricating it, kind of lubricant, etc., I am sure it will be interesting reading to many, who like myself, have always supposed the finest shooting could be done only with a patched bullet and a clean gun. I have tried naked bullets of various sizes in both Sharps and Ballard rifles, with plain tallow, and with different mixtures of tallow and beeswax for lubricant, and have used the factory bullets that come already greased. These last do very good work, but I have not succeeded in doing as good shooting with any of them as with the patched bullet. I would like to know what the experience of others has been. Certainly target shooting would be more enjoyable if the infernal amount of scrubbing that usually has to be done between shots could be dispensed with and as good work be done, and if it can I want to know how.

TROY, N. Y. INQUIRER.

WILMINGTON, Del., Sept. 20.—A small delegation of the Wilmington Rifle Club went to Greenbank this afternoon for its first practice at mid-range shooting, Creedmoor second-class target, 600yds., lying down position. A strong fish-tail wind, the suction of a very low valley and creek and bad reflection of light caused most of the low figures, as nearly all of them were fine liners. First match:

H Simpson	4552553555—44	C Heebner	2233232455—31

Second Class.

C Mayer	4514345553—42	5543444455—45—87

Third Class.

C Petry	4455544445—42

Fourth Class.

C Jansen	3445536334—37

The following excellent record with the rifle was made by Ed Hovey at the Harbor View rifle grounds this morning, the gun used being a .38-caliber Winchester, single loading, with a 25 ring target, at 200yds.; 24, 23, 18, 23, 18, 21, 18, 22, 22, 20, 17, 19, 24, 23, 21, 23, 18, 22, 20, 23—419.

BOSTON, Sept. 25.—The regular rifle matches were shot to-day. The attendance was good. C. L. Parkhill won the bronze badge in the State militia match. The fall meeting of the Massachusetts Rifle Association will be held at Walnut Hill, Oct. 7, 8 and 9. Following are the best scores made:

Decimal Match.

W O Bennite	7	9	9	9	9	10	9	7	5	9—83
G G Franklin	7	7	5	8	7	10	6	10	8	8—76

E W Bettinson	4444544444—41		

WILMINGTON, Sept. 16.—The Wilmington Rifle Club met at Schuetzen Park this afternoon for the purpose of shooting a match with the West Chester Rifle Team, but while waiting for the latter incidentally shot two other matches. The first was opened as a bullseye match, and although a score was kept nothing but bullseyes were counted. The conditions were, Massachusetts target, 200yds. off-hand. The following is the score out of possible sixty points and bullseyes out of five:

						Bullseye.
C Heinel, Sr.	9	11	10	11	11—52	3
J B Bell	10	9	9	11	12—51	2
E M Clark	9	9	9	11	12—51	2
W F Seeds	10	12	11	8	12—49	2
H Simpson	10	10	8	8	10—46	0
J Manz	8	8	9	7	12—44	1
H A Heinel	11	8	8	8	7—42	1
I W Seeds	8	9	8	8	10—42	0
J R D Seeds	8	9	11	12	8—39	2
S J Newman	6	7	9	9	9—39	0
W O'Connor	3	8	8	9	9—37	0
W A Bacon	5	3	9	7	7—31	0
J E Newman	8	4	3	8	6—29	0
C Carleton	10	10	0	6	6—29	0

The next match was for a Ballard sporting rifle, offered by a member of the club. Conditions, Creedmoor target, 200yds. off-hand. The following is the score out of possible 15 points: W. A. Bacon 13, J. R. D. Seeds 12, J. B. Bell 14, W. O'Connor 11, J. E. Newman 12, H. Simpson 11, W. F. Seeds 14, J. J. Newman 13, H. B. Seeds 14, George R. Walton 13, H. A. Heinel 12, T. W. Taylor 13, W. C. Seeds 13, F. H. Eachus 11, E. M. Clark 13, C. Heinel, Sr. 14.

The tie between Bell, W. F. Seeds, H. B. Seeds and C. Heinel was decided in favor of the first, who made a fine score of 3 straight bullseyes, or 33 points out of possible 36, thus earning as well as winning the rifle.

The match with the West Chester Rifle Team was then opened. It was soon apparent that the West Chester boys were not in their usual good condition for shooting, for the Wilmington team led on every round from the start, and finally won by a good margin, which was materially aided by the unusually fine shooting of Heinel and Bell. The conditions of the match were: Massachusetts target, 200yds. off-hand. The following is the score out of individual possible 120 points, and team possible 480:

Wilmington Team.

C Heinel, Sr.	12	12	12	10	10	10	11	9	12	—108	
J B Bell	11	10	9	10	10	10	9	11	12	10—102	
J Manz	12	11	8	7	9	11	7	9	6	8— 88	
W F Seeds	7	11	10	11	10	10	8	6	7	7— 87—385	

West Chester Team.

F H Eachus	9	11	11	7	5	10	10	10	10	9—92
Geo Walton	10	8	9	9	10	9	6	11	8	11—91
T W Taylor	9	7	8	11	12	8	6	7	8	12—88
M B Jackson	11	9	5	7	11	10	8	7	6	9—83—354

Another match was arranged to take place between the Wilmington and West Chester clubs at Stockton Range, on Tuesday, October 5.

THOMASTON, Conn., Sept. 25.—Subjoined are the scores of the Empire Rifle Club, Sept 11:

E Thomas	8	6	6	8	9	8	8	9	7	6—76
F Whitlock	4	7	9	8	8	8	10	4	10	7—75
G A Lemmon	7	7	10	6	4	6	8	6	6	9—72

Scores of Sept. 18.

G A Lemmon	10	10	8	6	6	5	10	5	10	9—79
E Thomas	8	9	9	8	7	9	6	4	10	8—78
W H Dunbar	7	8	10	6	7	8	10	7	6	7—76
G C Cafineld	9	5	8	7	6	9	8	6	7	10—75
F A Perkins	8	3	6	7	6	7	8	7	5	7—64

SAN FRANCISCO, Sept. 19.—The annual prize shooting of the San Francisco Turner-Schuetzen took place at Harbor View to-day. About thirty of the members of the company spent the entire day at the shooting butts. The shooting was managed by C. K. Zimmer, captain of the company. A. Strecker, Philo Jacoby, Mr. Ehrenpfort and other expert shots contested for the various cash prizes, amounting to $154. About 3 o'clock in the afternoon a great shout and repeated cheers from the shooting stand announced that something unusual had occurred. It appears that early in the day Strecker had mad 94 points out of a possible 100, which was within one point of the best score ever made in the world of which there is any known record. In the afternoon he made 97 points, and this feat set the whole crowd wild with enthusiasm.

The San Francisco Schuetzen Verein also had their monthly medal shoot at the Shell Mound Range. Twenty shots each competitor, at 200yds., were allowed, at 25 ring target. In the first class K. Wertheimer proved the medal winner with 421 points, while in the second and third classes Lieut. A. Browning and John Plath took first honors, with scores of 362 and 368 respectively. In the fourth class John Broyer received the medal with 197 points, and as this is the third occasion on which he has won it, the prize becomes his absolute property.

Capt. J. E. Klein, of the National Shooting Club, states that the match between his club and the Carson City Guards has fallen through for the present. The conditions originally agreed upon were that ten men from each company should shoot at 200 and 500yds., 10 shots at each range, but the Carson City Guards wish now to have thirty men on each side and shoot 200yds. only. To this Capt. Klein objects unless the original programme is carried out first, so that for the present the match is off. P. E. Robertson, of Co. G, First Infantry, made 47 and 46 in shooting a double string of 10 shots at 500yds. O. H. Wescott, late of the Marysville Shooting Club, scored 46 at 200 and 45 at 500yds.

THE TRAP.

Scores for publication should be made out on the printed blanks prepared by the Forest and Stream, and furnished gratis to club secretaries. Correspondents who favor us with club scores are particularly requested to write on one side of the paper only.

THE SAVANNAH TOURNAMENT.

SAVANNAH, Ga., Sept. 21.—The gun tournament here yesterday was a great success, and a large crowd of both ladies and gentlemen were in attendance. The Ligowsky medal was won by the Chatham Club, from Tallahassee, Fla., who took it from the Chathams a year ago. Altogether the matches were very interesting, and were the most closely contested of any that have been shot in Savannah. Teams from Augusta, Millen, Tallahassee, Fla., and the Chatham and Forest City teams, of Savannah, took part in the tournament.

The first match was for individual sweepstakes, 7 single birds being the test.

De Loach, of Millen, led off with a full score; Denning, of Augusta, and Williams, Roach and Westcott, of Savannah, followed, each scoring 6. Then came Hunt and Harrison, of Augusta, Davis, Allen and Crawford, of Tallahassee, and Belle, of Millen, with a score of 5. Denning, Williams, Roach and Westcott shot off their tie, Denning and Westcott tieing again and dividing second money.

Hunt, Harrison, Davis, Allen, Crawford and Bell then shot off the tie for third money, which was won by Crawford.

The second match was also for sweepstakes, 5 pair doubles. Palmer and Westcott, of Savannah, and Rockley, of Millen, each made a full score of 10, dividing first money. McAlpin, of Savannah, earned second money on a score of 9. May and Williams, of Savannah; Crawford, of Tallahassee; Bienkampen and Herschbach, of Savannah; Duncan, of Augusta; Lemcke, of Savannah, and Lumpkin, of Millen, each made 8. This tie was shot off and won by Herschbach, giving him third money. The tie of eight men, each making a score of 8, attracted considerable attention, and was discussed as one of the most remarkable scores ever made.

Team match, entrance $15, 10 singles, 5 pairs:

Williams	1110101111—8 10 11 11 11 11—9
Thomson	1000000000—1—31 01 11 11 10 11—8—36

Chatham and Millen divided first, Forest City took second. De-Loach, of the Millen team, was the only one to make a full score of 10 on single birds. Crawford, of Tallahasse, Roach and McAlpin, of the Chathams, Sancken, of Augusta, and Williams, of the Forest Citys each made a score of 9 on doubles.

The next match was unusually interesting, as it was a contest between the Tallahassees to retain the championship medal, which they have held for some time, and the Chathams to take it from them if possible. Each team went in determined to win and there was some good shooting on both sides. The Chathams led off with the splendid score of 75 out of a possible 100, which the Floridians failed to reach, thus giving the medal to the Chathams.

Chathams.

Manning	1001010111—6 11 11 10 10 11—8

Hall	0000011000—2—26 10 10 11 11 11—8—45

No sooner was it decided that the Chathams had won the medal than they received a challenge from the Milton team to shoot for it. The challenge was accepted, though protest was made at the time by the Forest City. The Chathams again led off, beating their record in the contest with the Tallahassees by two points, and running up a good total of 77, winning the medal on this score. The Millen team did some good shooting, and for some time before they finished it looked as though they were the coming champions, but their totals footed up only 73, thus leaving the Chathams for a second time the winners of the medal:

Chatham.

NEW DORP, N. Y., Sept. 23.—Springfield Gun Club, first shoot for the Dr. Myling cup, winner to be handicapped 1yd. Match at birds, 25yds. rise, 80yds. boundary:

Jas J Davis	1*	½	1	1	1	1	0	1	1	0—7½	
Wm Schwind	1	0	1	1	1	1	1	0	0	0—6	
Aug Strohmenge	0†	1	0	1	0	1	0	½	½	½—4½	
M Englert	1	1	0	½	0	0	1	0	½	1—5	

*½ signifies both barrels. † Out of bounds.

CONNECTICUT.—Meriden, Conn.—Trap shooting is on the increase here judging from the number of shoots that have taken place recently and more to come. At the tournament of the New Haven Gun Club, Sept. 21, the guaranteed purse of $30 first money was won by C. H. Sterry, of Tolland. The shoot at South Manchester, Sept. 24, was well attended, and the club there have many promising trap-shooters. The two-men team shoot, 10 clays, 18yds. rise, was captured by Sterry and Ives.

FITCHBURG, Mass., Sept. 22.—There has been a two-days' tournament here under the auspices of the Fitchburg Rifle and Gun Club. It was not only the first gathering of sportsmen in this city, but it was a dedication, as it were, of their new club house at the River Street Range. The house is two stories, and is roomy and convenient. There is a kitchen, dining room and two rooms for the club purposes. Among the guests present were H. W. Eager, L. R. Hudson, E. T. Smith, Gilbert J. Rugg, M. D. Gilman, Henry W. Webber, C. B. Holden, Edwin F. Snow, of Worcester, Mass.; Geo. Sampson, of Clinton, Mass.; A. R. Bowdish, of Oxford, Mass.; O. R. Dickey, J. Nichols, T. G. Stanton, H. Swift, of Boston; C. M. Stark, of Dunbarton, N. H.; A. F. Cooper, of Exeter, N. H.; Fred and F. H. Colony, of Wilton, N. H. The Lancaster, Leominster, Lowell, Ashland, Marlborough, Gardner, Cambridgeport and other clubs in this State were also represented.

The principal event on the first day was the contest for the Climax badge, held by H. W. Eager. This badge, which is quite a valuable one, is to be competed for once a month for one year; the man winning it the most times to claim it. Thus far, including the present, it has been contested for six times as follows: H. W. Eager, twice, his scores being 20 and 19; C. M. Stark, twice, his scores being 19 and 18; T. G. Stanton once, with a score of 20, and A. F. Cooper, once, with a score of 19. The result of to-day's contest was in favor of Stark of Dunbarton, N. H., with a score of 18 as stated above. There were 32 entries at this last contest, with a possible 10 clay-pigeons and 10 bats or a total of 20. Two were subsequently withdrawn. The work of each man in detail was as follows:

	Pigeons.	Bats.
Stark	1111101111	1101111111—18
Dickey	1111111011	0011111111—17
E T Smith	1110101111	1111110101—17
Weymouth	0011111011	1111111111—17
Stanton	1101101111	1011011111—16
Cooper	1110111110	1101101111—16
Knowles	1011111111	0011101111—16
Rugg	0011110111	1111111110—16
Sampson	0110101101	1110111111—15
Beaudry	1110001001	1101111111—14
Webber	0101110001	1101111111—14

F H Colony	1111010100	0001101110—11
Gray	0110001011	0100110111—10
Beard	1100110001	0010000111—10
Nichols	1001100001	1011001011—10
McKay	0110110100	0010011100—9
Tank	1110000100	1100101111—9
Gore	0111000000	1000011101—8
Gilman	11010 Withdrawn.	
Sawyer	1010010100	10001 W.

The principal event the second day was the guaranteed purse of $25 for the largest score. The purse was divided by O. R. Dickey, of Boston; M. D. Gilman, of Worcester, and A. R. Bowdish, of Oxford, each breaking every one of the 12 birds thrown. The work of each man in detail was as follows:

Gilman	111111111111—12	Knowles	111111111010—10
Bowdish	111111111111—12	Lovejoy	011111101111—10
Dickey	111111111111—12	Mackay	111111101010— 9
Swan	111101111111—11	Baker	011111011110— 9
Weymouth	111111011111—11	Gore	100111001111— 8
Tank	111111110111—11	Wallace	0011011110w— 6
Webber	111110011111—10	Colony	111100010w — 5
Snow	101110111111—10	Cummings	011101010w — 5
Beaudry	111101011111—10	Fox	111000101w — 5
H C Deane	111110111011—10	Deane	10110000w — 3
Stanton	110011111111—10	Powers	100001w — 2
Swift	101111101001—10		

There were 14 events on the first day and 16 on the second, during which 6,350 shells were used. On two occasions a blue rock and a clay-pigeon came together in mid-air and two birds claimed with one shot.

The first prize winners were: E. N. Cummings, G. W. Weymouth, D. H. McIntire and D. C. Colony, of Fitchburg; E. F. Snow, C. B. Holden, E. T. Smith, M. D. Gilmore, H. W. Webber, H. W. Eager, of Worcester; George Sampson, of Clinton; A. R. Bowdish, of Oxford; Beaudry, of Marlborough; Knowles and Lovejoy, of Lowell; Snow, Swift, Dickey, Tank and Stanton, of Boston; C. M. Stark, of Dunbarton, N. H., and A. F. Cooper, of Exeter, N. H.

SAN FRANCISCO, Sept 12.—The season as far as the California Wing Club is concerned was brought to a close by a meeting at San Bruno to-day. A 12-bird match, the last of a series of six, was shot off The eccentricities of the prevailing wind enjoined extra watchfulness on the part of the shooters. The birds supplied were both strong and artful, and the major part of them on feeling the breeze worked to the right in double quick time. A very small percentage of them flew against the wind, and these were easily negotiated. E. Fay made a clean score and C. Robinson and J. de Vaull, Jr., killed eleven birds each. The conditions were 30yds. rise and 100yds. boundary. The following are the scores made:

Robinson	111121111021—11	Ingalls	111010011112— 9
Fay	112112111111—12	Levy	121121110110—10
De Vaull	222221021111—11	Slady	111111020111—10

The figure 2 denotes that the second barrel was used. This being the last match of the season, decided what member were entitled to the club medals for the best average scores made. C. Robinson took the first medal, E. Fay the second and Slade the third. A $5 sweepstakes match was then opened, in which Messrs. Robinson, Fay, Slade and Levy took part. These men proved to be pretty evenly matched, as out of 12 birds, at 30yds., each of them killed 11. They then started to shoot off and slaughtered all the available pigeons on the ground without being able to decide as to superiority. In all 96 birds were shot at and Levy, Fay and Slade killed 22 each, Robinson killing 21. The match therefore remains undetermined.

NEWARK, N. J., Sept. 18.—Nimrods vs. East Orange Gun Club, shot at J. Erb's; match at pigeons, 5 ground traps, 25yds. rise, 80yds. bound. Shot under National Gun Association rules:

Nimrod Gun Club.		East Orange Gun Club.	
W J Beatty, capt.	10001—2	T Dukes, Capt.	11111—5
S A Goldsmith	11110—4	A Wheaton	00111—3
W S Goble	11111—5	H Babbage	10110—3
S Cockefair	11111—5	C R Heden	10111—4
A Cockefair,	11111—5	L Dents	10111—4
C Brown	11110—4	J Kinsey	00011—2
S Castles, Jr.	10101—3	A Hedden	10111—4
P Cockefair	01111—6	Mitchell	00011—2
A Whatton	10111—4	S S Hedden	01111—4
O Feltheisen	10001—2—38	R Dukes	10110—3—34

This is the closing match of a tournament between the East Orange and Nimrod Gun Clubs which resulted in a victory for the latter club by winning two out of three matches, the other one resulting in a tie.

WINCHENDON, Mass., Sept. 22.—The Winchendon Gun Club had a meet at their range to-day to break clay-pigeons. The totals out of a possible 10 were as follows: H. Lawrence, 7; P. S. Davis, F. F. Hapgood, C. Houghton, each 6; A. H. Fitch, 5; J. G. Henry, W. L. Knight, each 4. At the recent meet of picked teams of the Gardner and Winchendon clubs, on the grounds here, the following totals out of a possible 10 glass balls and 5 clay-pigeons were broken:

Gardner Team.	Balls.	Pig's.		Winchendon Team.	Balls.	Pig's.	
G W Cann	5	4—	9	P S Davis	5	5—	10
I N Dodge	7	2—	9	H J Laurence	6	2—	8

RIFLE SHOOTING AT GLASS BALLS.—*Editor Forest and Stream:* In issue of Sept. 16 is an article on rifle wing-shooting. I cannot agree with the writer on the sight question, for I have tried the bar sight he speaks of, and for me it is of not much use. I prefer for shooting at flying objects at more than 10yds. rise a pair of Lyman's sights. For less than 30ft. plain open sights (coarser are just the thing. I think that I have hit as small objects in the air as it is possible to hit, and I find coarse open sights all right for that work. When my rifle strikes my shoulder my eye is in the sights; as he says, "You do not know when you pull the trigger," more instinct than anything else. After I break a ball I cannot tell from memory that I sighted at the ball, although I must have seen the ball in the sights. In my regular glass-ball shooting I use a .22 Winchester and shoot at about 18 or 20ft. rise. When the ball leaves the thrower's hand I keep the front sight as near the ball as convenient until the gun is to my shoulder, and then "plug it." I can set my trap with a string and cut off the cord and reload and break the ball very well. My .22 has made some very good records this year under the above conditions. I have broken 112 out of 114 and 98 out of 100; at another time 97 out of 100; again 95 out of possible 100. These 414 shots were made consecutively but on four different days. Out of the 414 I hit 402. This was done on the sights originally on the '73 model Winchesters. I have never made any records at over 12yds., but before long I shall try 100 balls from ground trap at 15yds., Lyman sights. From what I have shot I think I can get about 85 of them.—WILL A. PARKER (Rome, N. Y., Sept. 17).

SACRAMENTO, Sept. 18.—The grand shooting tournament under the management of D. J. Stevens, commenced Tuesday morning last at the park. The prizes offered by the State Agricultural Society were, as in number, all cash, as follows: $100, $80, $65, $50, $35 and $20. The entrance fee was $20, and open to all the State. Among those who entered were J. R. Cheatham, Los Angeles; F. Bassford, Vacaville; D. H. Wyckoff, Woodland; F. B. Coffin, San Francisco; G. Coons, Elk Grove; Crittenden Robinson, (Norton), San Francisco; Ed Fay, San Francisco; O. Reed, Elk Grove; H. W. McCullough, Amador; T. A. Pearson, San Francisco; A. L. Donaldson, Fairfield; J. Parrott, Sacramento; H. Albery, Colusa; C. J. Haas, Stockton. A large number of sportsmen were in attendance, and pools were sold; Robinson first choice, Bassford second. The shooting was governed by the California State Sportsmen's, ground trap, Hurlingham rules. The shooting resulted as follows:

Cheatham	1110111111111011110—17	Reed	0011111101111001011—14
Bassford	1101111111111111111—19	McCull'gh	0011101111111111111—17
Wyckoff	1110101111111101011—16	Pearson	0111111101101111011—16
Coffin	1110111001011111111—16	Donaldson	1111111111111111111—20
Coons	1011100100111111011—14	Parrott	1111111111011111111—19
Robinson	1111110111111111101—18	Alberry	1100111111110110111—15
Fay	1110111111111111011—18	Haas	1011110111111110101—16

A. L. Donaldson, having made a clean score, was awarded the first prize—$100. J. Parrott and Frank Bassford tied on 19 birds and divided the second and third prizes—$80 and $65. Ed Fay and Crittenden Robinson tied on 18 birds and divided the fourth and fifth prizes—$50 and $35. J. R. Cheatham and H. W. McCullough tied on 17 birds and divided sixth prize—$20.

Wednesday the first match was $5 each, twelve entries, six birds. The money was divided into three moneys—$30, $17.50, $12.50. The result was:

Norton	111111—6	Robinson	111111—6
Johnson	111110—5	Bassford	111111—6
Cheatham	10w	Wyckoff	110011—4
Pearson	110111—5	Kellogg	101101—5
Alberry	111100—4	Loeffler	101111—5
Donaldson	111111—6	Fay	111111—6

Tie for first:

Coffin	1111—4	Robinson	1111—4
Donaldson	1111—4	Bassford	1111—4
		Fay	0111—3

Coffin, Robinson, Donaldson and Bassford decided to again shoot off at four birds, but after killing their first bird they decided to go on with the next pool shoot and let the scores at the end of that match decide the tie.

The next match was fifteen birds, $10 entrance, with ten entries. The money was divided as follows; $50, $30 and $20.

Bassford	111111011111111—14	Arnold	111011111110w
Robinson	111111111111101—14	Norton	111111111111101—14
Fay	011111111111111—14	Pearson	111111111101—14
Donaldson	111111111110—14	Wyckoff	111111111111101—14
Cheatham	111101111111011—13	Johnson	1101110w

Those tieing on fourteen birds shot off as follows, at four birds:

Bassford	1111—4	Donaldson	1011—3
Robinson	1111—4	Norton	0111—3
Fay	1111—4	Pearson	10w

The next and last pool was at ten birds, $5 entrance, three prizes —$22.50, $12.50 and $5.

Fay	1111110111— 9	Bennett	1110111111— 9
Donaldson	1111111111—10	Kellogg	1111111101— 9
Albury	101110w	Robinson	1111111111— 9
Bassford	11100w	Cheatham	100w

Donaldson took the first money, and the second and third was divided between the four who tied on nine birds. After paying for their pigeons they had $1.87½ each.

YONKERS, N. Y., Sept. 24.—There was a private pigeon match on the grounds of Banker G. P. Morosini at Riverdale to-day. Giovanni P. Morosini, Jr., who is a clerk in the Hanover National Bank, invited some of his young Wall street friends to try their hands at the trap and gun. J. B. Sheriff, Frank Simons, John Aljeo and James Clarke accepted the challenge and were at Mr. Morosini's country place bright and early. The terms of the match were that each man should have 10 birds to shoot at at 22yds. rise. Young Morosini and Mr. Sheriff tied, each killing his 10 birds. Mr. Simons, Mr. Aljeo and Mr. Clarke killed respectively 3, 5 and 4 pigeons and they had to stop shooting because there were no more birds in the coop.

SAN FRANCISCO, Sept. 18.—The San Francisco Gun Club wound up the season with a most successful shoot at Adams's Point to-day. The conditions were as usual, 12-bore guns, 28yds. rise; 10-bore, 30yds.; 12 birds each, Hurlingham rules. Twelve men shot, and Wilson, Gillette and Ewing each killed all. In the shoot-off at 4 singles Ewing won, after a tie on his first 4 with Wilson. Earl, Butler, Gordon and Orr each killed 11. W. Golcher and Laing got 10 each. The former shot with a new gun for the first time, and the latter lost his last bird stone dead just a foot outside the boundary line. Al Havens got his usual 9, as also did Smith, while Grant, who shot yesterday for the first time this season, got the leather medal with 8. Mr. Gilbert, of Chicago, acted as judge and referee:

Wilson, 30yds.	111111111111—12	Ewing, 30yds.	111111111111—12
W Golcher, 30yds.	101011111111—10	Butler, 30yds.	111111011111—11
Havens, 28yds.	110111011101— 9	Laing, 28yds.	111111011110—10
Grant, 28yds.	001101110111— 8	Gordon, 28yds.	111101111111—11
Earl, 30yds.	111101111111—11	Smith, 30yds.	110001111111— 9
Gillette, 30yds.	111111111111—12	Orr. 28yds.	111111011111—11

SAN FRANCISCO, Sept. 19.—The Lincoln Gun Club held its first meeting at its new grounds, Alameda Point, to-day, and there was quite a large attendance. The first event was at 15 birds, 18yds. rise, with the following result:

H Venker	011111111000111—11	Blinn	110010011000000— 5
Cate	111101101101111—11	Donaldson	111011011111111—13
Cooper	011100001000010— 5	Robinson	001101110011000— 8
Richter	010101101011110— 8	Potter	111110101000100— 8
Hammond	001111011011100— 9	Brown	111111101011111—14
Burns	001101100111010— 8	Goldsmith	111011100100010— 8
Campbell	111001101100011— 9		

In shooting off the ties at double birds, Messrs. Venker and Cate repeated the tie at 15 and 18yds., and the formerly won at 21yds. by one bird, taking first money.

A 5 bird match followed, $1 entrance, in which Messrs. Nutz, Hammond and Campbell divided the money:

Potter	11010—3	Hammond	11111—5
Fox	00001—1	Richter	10101—3
Venker	10011—3	Campbell	11111—5
Nutz	11111—5	Page	00000—0
Blinn	10100—2		

A sweepstake at 10 birds, $1 entrance, followed, Messrs. Donaldson, Cooper and Cate dividing the money on the ties. The following score was made:

Cate	1111100111—8	F Venker	1111100000—5
Cohn	0110101100—4	C Brown	1111011010—7
Campbell	1101011011—7	Cooper	1011111110—8
Hinch	0101010010—4	Burns	1001010011—5
Black	0100101101—5	Donaldson	1101101111—8
H Venker	0110111000—5	Peterson	0100100110—4
O Brown	1100111001—6	Harber	1000000001—3
Richter	1000101000—3	Page	0100001111—5
Potter	1100010110—5	Goldsmith	0110111110—7

ALTOONA, Pa., Sept. 23.—The score of bird shooting at Prospect Hill to-day was as follows. Only nine birds were sprung:

W Brooks	111111111—9	W B Ford	110001111—6
W W Brooks	111011111—8	W McDonald	110011001—5
"Skin"	111011011—7	Frank Christy	111001001—5

W. W. Brooks, of Lebanon, is the champion shootist of this city, and had hard flying birds, but he succeeded in bringing down eight out of nine, and actually killed the ninth, which fell, however, outside the line.

WELLINGTON, Mass., Sept. 25.—The Wellington Gun Club held its regular weekly shoot to-day. Following is the result of the several events: First, 6 clay-pigeons—Wardwell and Stanton first. Second, 6 birds—Snow first. Third, 6 blackbirds—Stanton and Nichols first. Fourth, 3 pair clay-pigeons—Snow first. Fifth, 3 pair birds—Shumway first. Sixth, 6 blackbirds—Stanton first. Seventh, 3 pair clay-pigeons—Stanton first. Eighth, 6 blackbirds—Stanton first. Ninth, 6 clay birds—Stanton first. Tenth, 6 blackbirds—Shumway first.

COLUMBUS, O., Sept. 17.—Regular weekly practice shoot of the Sherman Gun Club, held on the West Broad street grounds this afternoon. Hardy takes first and Fitch second prizes:

Mason	1111101101101111101—16	Swan	1100001111110010110—12
Mone	0011101010000111000—10	Hardy	0011111111111111101—17
Marriott	0111011111101010110—14	Bonnett	0111010011101001111—13
Flowers	0110011110011001101—11	Ward	1111110101011110011—15
Rumi	0100110111011100101—12	Brown	0111101111100111111—16
Fitch	1001101111000111111—14		

ST. LOUIS, Sept. 23.—The Central Gun Club to-day wound up its season with an all day shoot. This club is the largest in the city in point of membership and it meets with strong support from a large number of solid business men of the city. On the occasion of the wind-up special prizes were given by these gentlemen. The sport resulted as follows:

First—Sweepstakes, 5 clay birds, 18yds. rise:

Nouss	11111—5	Mueller	11100—3
Ziminski	11110—4	Klein	01110—3
Stosberg	10111—4	Cardwell	01010—2
Parker	10111—4	Hein	01001—2
Weinheimer	11010—3	Weidner	00001—1
Loeffel	01101—3		

Nouss first, Parker second, Weinheimer third.

Second—Sweepstake, same conditions.

Ziminski	10111—4	Hein	11100—3
Stosberg	11011—4	Nouss	10101—3
Parker	11101—4	Weinheimer	00001—1

Ziminski and Parker divide first, Hein and Nouss second.

Medal shoot, 10 Peoria blackbirds and 10 clays, 21yds. rise:

Nouss	0011011103	1011111011—12	
Hein	0111110010	1101111000—12	
Cardwell	0100111111	0101110110—13	
Storberg	1000000011	0111010011— 9	
Klein	1000000010	1010100010— 6	
Doerner	0010000061	0000000100— 3	
Stippich	1001101000	1010000000— 6	
Jost	0000010100	0060010000— 3	
Loeffel	0001000000	1010100000— 4	
Mueller	0000001000	0010101101— 6	
Maurer	0000010010	0110000010— 5	
Parker	0110100111	1011111111—15	

Parker won the gold medal, Cardwell and Nouss won silver medals.

Sweepstakes, 20 clays, 18yds. rise:

Lenharth	11100111110111001111—15		
Nouss	00000110001001111110— 9		
A Storberg	11110101101001110101—13		
K Stecker	10101010011101110000—10		
Hein	10000000001001110011— 7		
Reifeiss	10101001111111001000—11		
Maur	00000100111111111110—12		
Handorf	01110100001011010100— 9		
Steffen	11101111110000111111—16		
Goodwell	11111011111010110010—13		
Eisenrath	10001010011000000010— 8		
Goertz	00010101001000110100— 7		
Otto	01011000001010101000— 7		
R Storberg	00010000010010110110— 7		
Klassing	00000000100100000001— 3		
Kriegesman	00000010000111110000— 6		
Jost	01101001000100000001— 6		
Maurer	00111010001111000100— 9		
Stibbick	00001100101000111000— 7		
Stuessel	00000110001011001000— 6		
Mueller	00100101001000000000— 4		
Grass	00000100101001010000— 4		
Loeffel	11000001010110100011— 7		

Steffen first, Lenharth and Goodwell divided second, B. Storberg third.

Sweepstakes, 5 clays, 18yds. rise:

Loeffel	11111—5	Stuessel	11000—2
Cardwell	10111—4	Steffen	10100—2
Nouss	11011—4	A Storberg	00101—2
R Storberg	11101—4	Stecker	00101—2
Lenharth	10110—3	Klasing	00001—1
Hein	10110—3	J Lenharth	00000—0
Reifeiss	10001—2	Yath	00000—0

Loeffel first, Nouss second, Hein third.

Sweepstakes, 5 Peorias, 18yds. rise:

Reifeiss	00101—2	Falkenrath	00101—2
Stosberg	00010—1	Steffen	00011—2
Cardwell	11001—3	Lenharth	00001—1
Nouss	01001—2	Stecker	01000—1
Hein	00100—1		

Cardwell first, Reifeiss second, Storberg third.

UTICA, Sept. 20.—At the monthly shoot of the Oneida County Sportsmen's Club on Riverside park, this afternoon, for the Kamp-Benham prizes, the following scores were made:

Scott	0001111101—6	Yates	1100110110—6
Harris	1111100010—6	Fox	1011011011—7
Howe	1110000100—4	Pfeiffer	0010011010—4
Rapp	0511110001—5	Beckwith	1100111111—8
Wheeler	1110111011—8	Fisher	1011110010—5
Elliot	1101111111—9		

Elliott won first place, and Messrs. Wheeler and Beckwith tied for second. In shooting off the tie the latter won. In the match each marksman shot at 10 blue rock targets.

ST. LOUIS, Sept. 23.—The following are the scores of sweepstakes of the St. Louis Gun Club this afternoon:

First sweepstakes, 5 Peoria blackbirds, 21yds., one money, ties 5 birds:

Williams	01110—3	Smith	01100—2
Dr Coles	10011—3	P Coles	10011—2

Match, 10 Peoria blackbirds, same rise:

Williams	1011111101—8	P Coles	1001110111—7

Sweepstakes, 5 live pigeons, ground traps, 30yds. rise, use of both barrels; the figure 2 denotes a kill by the second barrel:

W Coles	11121—5	Williams	00120—2
McClure	11101—4	Dr Coles	01020—1
Ranken	01211—4	P Coles	00000—0
Wells	21011—4		

Sweepstakes, 5 live birds, ground traps, 30yds. rise, ties miss and out, 2 moneys:

W Coles	02111—4	Wells	01210—3
Mc Clure	22101—4	P Coles	12000—2
Dr Coles	11120—4	Williams	20000—1

W Coles first, Wells second.

Sweepstakes, 5 live birds, ground traps, 30yds. rise:

Wells	11211—5	McClure	01111—4
Williams	11121—5		

Sweepstakes, same conditions.

Wells	11111—5	McClure	11231—4
Dr. Pitts	11202—4	Williams	00220—2

Yachting.

FIXTURES.

SEPTEMBER.

30. Sylvia-Enright Match, Lake Erie. 30. Sachem-Miranda Match. Newport.

OCTOBER.

1. Lorna-Nahli Match, Sands Point. 2. Columbia Match, Hudson River.
2. Larchmont, Private Sweepstakes. 5. New Haven Fall Regatta.

ANOTHER CHALLENGE FOR THE CUP.

UNDETERRED by the ill success of Genesta and Galatea, another British yachtsman is now ready to make a trial to regain the America Cup, and has sent a notice of his intention to challenge in the form of the following telegram, received by the New York Y. C. on Wednesday of last week:

GLASGOW, Sept. 21, 1886.

John H. Bird, Secretary New York Y. C., N. Y.:

On behalf of James Bell, a member of this club, I officially intimate a challenge for the America's Cup contest, to take place next September. Confirmation by post. WILLIAM YORK,
Sec'y Royal Clyde Y. C.

Mr. James Bell is a wealthy Scotch yachtsman and owner of the schooner yacht Amadine, a fast little cruiser of 92 tons, about 80ft. waterline, built by Fife & Son, of Fairlie. He is a member of the firm of John Bell & Sons, of Glasgow, the agents of Mr. T. C. Eastman, of New York, the business of the firm being the importation of American beef. No action has been taken by the club, as the cablegram is not in the proper form for a challenge, but is simply an intimation of a challenge to come. Nothing is known of Mr. Bell's plans, but he will probably build a yacht from a design by Fife or Watson. Her dimensions and details as yet are only a matter of conjecture; but there is no doubt but that it will be a keel cutter of 70 to 90ft. waterline, though possibly with more beam than Galatea. At any rate it seems likely that a contest for the Cup is assured for next year.

THE MAYFLOWER—GALATEA MATCH.

THE only ones who find any consolation in the disappointing weather of the last two weeks are the New York yachtsmen who, for two seasons have listened to an abuse of New York weathers and waters, and a promise of what would be done if they would only come East; if not to Marblehead then to Newport. It has been urged that the Cup races should have been sailed at one of these two ports instead of at New York. The racers went to Newport and met the most disastrous fizzle of the season, and now for eight days have Galatea and Mayflower been waiting at Marblehead for a fair sailing breeze; and this not at the first but the last of September.

On Tuesday of last week, at 3:30 P. M., Galatea anchored at Marblehead, having come along easily from Newport. Mayflower laid overnight at Vineyard Haven, and arrived next day at Marblehead.

The much-talked-of match between the two had been definitely arranged according to the following terms:

Agreement for a match between the Galatea and Mayflower, to be sailed under the rules of the New York Club, in a whole-sail breeze, on the first day (Sept. 23 excepted) on which there is such a breeze, the judge to announce before 9:30 A. M. each day whether the start will be on that day. If not sailed before October the match to be off. Commodore Hovey, or some one named by him, to be the judge. The match is not to be sailed in storm or fog, or when there is a prospect of thick weather. If the yachts are started, the match to be sailed whether the wind subsequently is such as referred to by this agreement or not. This match is to be for a cup and stakes for $200. (Signed) WILLIAM HENN.
C. J. PAINE.

Seven courses were laid out to suit different winds, all starting at Half-Way Rock and ending at Marblehead, the distance being 35 to 40 miles. Mr. Lloyd Phœnix, of the schooner Intrepid, was requested by Lieut Henn to represent the Galatea in the arrangements, and each day for the past week he and Com. Hovey have met in the morning and decided that no race was possible, the weather on each day turning out as they expected. The only exception was on Saturday, when a fine breeze prevailed all day, to be followed by rain and calms on Monday and Tuesday. Each morning at 9:30 a gun is fired and a signal for "no race" is set on board the Fortuna. A very large number of yachtsmen and other spectators are on hand every day, only to go away disappointed at night. On Tuesday night the wind was in the best quarter, N.W., and as a cold wave was following the heated spell and the same wind prevailed along the Atlantic coast there was a fair prospect of a race.

THE MATCHES FOR THE AMERICA CUP.

IT was most unfortunate that the fate of the America Cup should have been decided in such paltry weather, that it practically leaves the relative merits of the Mayflower and Galatea undetermined. This was in some measure the case last year in the matches between Puritan and Genesta; but on the whole, those contests were more satisfactory than the matches just completed. For a vessel of the Mayflower type to prove superior to one of the Galatea type in a light topsail breeze is nothing more than might have been expected, especially when it is remembered that Mayflower has the larger sail area by 1,182 sq. ft., the figures being 8,073 sq. ft. for Mayflower and 7,491 sq. ft. for Galatea. We do not know what the actual area of immersed surfaces of the two yachts are, but the Galatea's is very considerably the greater—a fact, coupled with her smaller sail spread, quite sufficient to account for her defeat by the Mayflower.

In a fresher breeze, when higher speeds would have been attained—the speed in the last match does not appear to have at any time exceeded six knots an hour—surface friction would have less to do with the resistance; and if there had been any sea, the greater weight and depth of Galatea would no doubt have proved an advantage. The displacement of Galatea, it should be said, is about 158 tons and she has about 77 tons of lead moulded into her keel. The displacement of Mayflower, according to *British Yachtsman*, is 110 tons, and she has 48 tons of lead, 37 tons of which are on her keel. Of course it would be too much to assert that Mayflower could not beat Galatea in any kind of sea—a long easy sea for instance—but all our experience on this side of the Atlantic goes to prove that in the steep seas usually met with on a coast with hard-running tides, the long, narrow, deep type of yacht can get through it faster than the beamier type.

The only consolation we have for the complete and easy defeat of Galatea is the knowledge that she is by no means our fastest yacht; in short, she left our shores on a sort of forlorn hope, after suffering successive defeats by Irex. Beyond this, assuming that Puritan and Genesta were sailing up to their last year's form, it is pretty certain that Galatea was not sailing so well in her matches against Mayflower as she was in her matches at home against Irex. In the latter matches it seemed pretty apparent that Irex was about 6m. better than Galatea over a 50-miles course, or 4m. on a course of 35 miles. Last year Puritan beat Genesta less than 2m. over a course of 65 miles, and this year Mayflower beat Puritan about 4m. over a similar length of course; she therefore would presumably have beaten Genesta 6m. and Irex 2m.—these figures being, it is understood, the result of light-wind encounters only.

But, so far as Genesta is concerned, Irex beat her four or five times in succession in a fair sailing breeze, by about ten minutes; and assuming her to be sailing as well as she did in the matches against Puritan, this would make Irex capable of beating Mayflower by about three minutes over a thirty-five-mile course. It also shows—still assuming that Puritan and Genesta have repeated their last year's form—that Galatea could not have been sailing up to the form she displayed at Harwich and Dover; and also, even if she had sailed up to this form, that Mayflower would still have beaten her by a couple of minutes. The conclusion, therefore, is that, if Galatea had sailed in her very best light-wind form, she would still have failed to win the America Cup. All this was foreseen before she started, and no one on this side of the Atlantic was surprised or much disappointed at the result.

No doubt some who have followed the bearings of these international contests will point to the fact that, by the Y. R. A. tonnage rule, Mayflower comes out as of 162 tons against the 90 tons of Galatea; but, unfortunately, no consolation can be derived from this mode of comparison, as by it the time allowance for a course of thirty-five miles would be 8min. 30sec., and Mayflower beat Galatea 12min. Beyond this, it would be difficult to convince the multitude that a yacht like Mayflower, of 110 tons dead weight, should be rated at 162 tons, and another, like Galatea, of 158 tons dead weight, at 90 tons. But, even supposing that Galatea could have won under the Y. R. A. tonnage rule—as Genesta could have last year, and that rule is a just measure of comparison—it seems pretty certain that we shall never win the America Cup with yachts which are built to sail under the rule, unless we can persuade the New York Y. C. to have contests under the rule for the Cup. In reference to this matter, we said, in a leader on May 1, "It is certain, if the Americans continue to use the length and sail area rule, and if we confine all our races for the A class on this side of the Atlantic to a rating by the Y. R. A. tonnage rule, that the Americans will always be a little ahead of us for match sailing in ordinary summer weather."

The case then really stands like this: If the Americans will be complacent enough to build yachts as they do now, and consent to have them rated by the Y. R. A. tonnage rule in a contest for the America Cup, then an English yacht may be able to win the Cup. On the other hand, if we persist in building yachts of the present type and consent to sail for the Cup against centerboard yachts under a length and sail area rating, it is almost a matter of certainty that we shall never be successful—at least not in ordinary summer weather. Now it is pretty certain that the Americans will not consent to sail under a tonnage rule, which we ourselves are beginning to discredit; and the sole matter for us to consider is whether it will be worth while to entirely adopt a rule—which we have already half adopted—that will encourage the building of yachts of the American compromise type, as exemplified in Mayflower, Puritan and others. So far as present indications go, there seems little prospect of any more large yachts of an extremely narrow type being built in this country under the existing tonnage rule, and the number of "live" racing yachts ready to compete under it are very few; thus, so far as vested interests are concerned, the present would be a very favorable time for enforcing the sail tons rating for use in all matches.

Of course it must not be expected that a keel yacht of the proportions of Mayflower could be built to beat that yacht, on account of the enormous immersed surface she would have. The probability is that the beam would be very considerably less—at least two feet—and the extreme draft of water about three feet greater. The displacement should also probably be greater to the extent of 15 tons, and the sail area would be about the same. Such a yacht would, we believe, have a much better chance against Mayflower than either Galatea, Irex, or Genesta; but no one is likely to make the experiment for the sake of competing in the few matches now sailed under the sail area rule of this country. The question is entirely one of policy; whether the building and sailing of racing yachts would be revived by making the sail tons rule the sole basis for rating; whether such yachts as would be built under the rule, of from 4 to 4¾ beam, are worth encouraging; and whether, assuming the two foregoing propositions to be answered in the negative, it would be worth while to sink our own opinion as to what is the best type of yacht for all-round work, for the mere sake of some day or other winning back the America Cup. Of course, it must not be lost sight of, that if we win the Cup while our present tonnage rule is in force, we shall be at some advantage, because we could insist on any competitor who desired to re-win it abiding by that rule. This, however, need have but little weight, as we would alter our rule of rating as seemed desirable to meet the circumstances. An excellent precedent for this exists; when the Cambria competed for the Cup in 1870, it was under the rating of the New York Yacht Club, the time allowance being based on the area of load line, the area being assumed to be equal to the length multiplied by the breadth. This rule undoubtedly favored a long narrow yacht like the Cambria, and no one found fault with the club for altering the rule for one of displacement for the contest with Livonia in the following year, although, of course the rule was much less favorable to the English yacht than the length and breadth rule would have been.—*London Field.*

THE EASTERN Y. C. RECEPTION.

IN spite of a chilly easterly rain Marblehead made merry on last Thursday night over the Mayflower's victory. Houses were illuminated, bonfires lighted and fireworks set off in all directions, the fleet at anchor of course taking part in the display. At the Eastern Y. C. house a band was in attendance, and supper was ready for the large number of invited guests, among whom were Lieut. and Mrs. Henn, Gen. Paine's health was first drank with cheers, after which Mr. Burgess and Lieut. Henn were toasted and heartily cheered. The affair was in every way a very pleasant one.

A reception no less hearty in character was given to Captain Stone at Swampscott on the following evening. At 7:30 P. M. a procession formed at the Town Hall, led by the Salem Cadet band. Following them was a barouche with three members of the committee, escorted by the crew of the Mayflower and Fortuna on each side of the carriage bearing torches. Proceeding to Capt. Stone's house he was taken into the carriage and the procession moved through the streets amid a display of fireworks on all hands, the houses being also illuminated. Proceeding finally to the Town Hall, as many as could get found places in the large hall, which was very tastily decorated. The chairman of the committee first proposed three cheers for Captain Stone, after which Rev. Mr. Rodgers made an address, in which he spoke very highly of the qualities of Captain Stone as known to his townsmen and to his place in his calling, and finally presenting to him a very handsome gold watch with an engraving of Mayflower on the case. Captain Stone's reply, delivered with much feeling, was as follows:

"My friends and fellow townsmen, I am at a loss for words with which to properly express my great gratitude, not only for your beautiful present, but more particularly for this emphatic, and to me altogether unexpected demonstration of your good will. I feel, however, that you place too high a value on my small part in the defense of the International Cup. A large portion of the credit belongs to the Mayflower herself; more to her noble-hearted owner, Gen. Charles J. Paine, much to the best crew that ever trod on vessel's deck, to say nothing of the generous aid so often rendered by friends, first among whom stand our excellent fellow-townsman, Captain Newcomb, of the Fortuna, who with his crew has been at all times ready to give us any assistance. In conclusion, my friends, let me again express my thanks to you, one and all."

THE THETIS-STRANGER MATCHES.

THE feeling of rivalry that has existed for some time between the compromise Thetis and the cutter Stranger was in no way diminished by the race at Newport, and after its very unsatisfactory conclusion a match was made between the owners of the two boats to sail from Newport to Marblehead, the stakes being $250 per side. On Monday morning, Sept. 20, both started from Newport at 10 A. M. with a fresh N. N. W. wind blowing. Hardly were they outside before kites came down and a reef was turned in on each of them. Off West Island Thetis led, but lost somewhat in going through Quick's Hole while Stranger passed by Sow and Pigs. Near Tarpaulin Cove Thetis parted her topmast backstay and her topmast went off at the cap. The wreck was cleared away as quickly as possible, but Stranger had passed her, passing Handkerchief Shoals Lightship half an hour ahead.

The wind had been lighter for a time, but now it came in heavier, and Stranger came down to lower sails, but Thetis gained on her, At 5:30 Stranger passed Pollock's Rip Lightship, with Thetis 15m. later. A short time after this a sheave broke in Thetis's throat-halliard block, the halliard parted, and the sail came down. Again all turned to and rove a new halliard, putting in a second reef, while Stranger had disappeared ahead. Thetis then had only jib and two-reefed mainsail. Off Nobska Gitana and Intrepid passed her, also bound for Marblehead. Thetis sighted the Stranger off Chatham, but saw her no more during the night. The wind continued light, with a heavy sea running, but fell lighter toward morning, and Thetis increased her canvas as far as possible. At 9:40:55 she was off Marblehead Rock, her elapsed time for the 150-mile run being 23,40.55. Stranger arrived, in company with Gitana, at 1:50 P. M., or 4.10.55 after Thetis. Two more matches were to be sailed as soon as Thetis has completed her repairs, but they are now reported off.

Editor Forest and Stream:

Will you please request Mr. Kunhardt when he gives that review of this season's yacht racing, which in this week's FOREST AND STREAM he promises to do, not to omit that race which is worth more than all the others put together, as a test of the ability of the types. It is so for these reasons:

First—A deep and narrow model met a broad centerboard of moderate draft in a race on the open sea. The boats were of moderate size, considerably smaller than Bedouin and Gracie, so that the sloop did not possess that advantage which Mr. Kunhardt and the FOREST AND STREAM report to us goes to the "big ones" by virtue of size alone. The cutter was a fraction of a foot longer on the waterline, and by the rating of the New York Y. C. the most powerful vessel, allowing the sloop some 36 seconds in 45 miles. Here again she failed to possess the advantage of greater power which the "big ones" had over Genesta and Galatea. The driving power was in this instance on the deep and narrow yacht.

Second—The weather was what Mr. Kunhardt, FOREST AND STREAM and Mr. Harvey have assured us it was only necessary to have, and then the narrow beam and deep draft would, by reason of inherent advantages of type, do as she pleased with any broad-beamed, moderate-draft centerboard of equal length and power. Mr. Kunhardt has announced this as one of the laws of nature about which there could be no dispute. In the race in question there was about a 40-mile an hour wind rising during the night, while the two yachts were on the open Atlantic, to what is described as "half a hurricane," during which Galatea was hove to for comfort, she being off the same coast as the racers. At least one-half of the race of 150 miles was sailed against the head seas raised by this violent wind. Both boats started in on the beat to windward in the "chalk pit sea," (*vide* "Whose Waterloo?" by C. P. K.), practically even, the advantage being slightly with the cutter. They had it for more than 70 miles, and in that 70 miles of thrash to windward the Thetis beat the Stranger 4 hours.

No race in recent years has begun to give such a fair and thorough test of the capabilities of draft versus beam and centerboard. As I said in the beginning, this race has an importance greater than all the others of this year put together. Mr. Kunhardt cannot fail to discuss it in his resumé of the season.

NEW YORK, Sept. 24, 1886. READER.

ANOTHER VIEW OF THE QUESTION.

NOT the least mischievous of the many absurd fallacies that have hampered American yachting for so long a time, is the belief held not only by the ignorant, but by men whose common sense and intelligence should teach them better, that the best yacht is the one which can carry the largest spread of canvas. Looked at from this point of view it must be admitted that the narrow cutter is a failure; if all that is needed is a great hoist and boom, a large and expensive rig and a crew in proportion, the sloop stands far ahead. If any man should claim that the best steam yacht was the one with the largest cylinders, that burned the greatest amount of coal for the distance run, and that carried the largest crew of firemen and coal passers, he would be pronounced a fool; and yet this is exactly the line of argument that is used against the cutter. Galatea carries only 7,000ft. of sail to Mayflower's 9,000, consequently Mayflower is the better boat.

What is the end and aid of yacht designing; to lug heavy spars and enormous sails at any cost? Power means money, whether is is paid for coal in the steam yacht or for sails, gear and men in the sailing yacht, and the first object of the designer, other things being equal, should be to economize power, or money. A larger rig means a greater first cost, more money to the sailmaker, the rigger, the spar maker and the blacksmith; a greater cost for ordinary repairs increased still more by the additional strains of a heavy rig on the hull and gear, consequently a shorter life for the boat. Besides this the crew must be larger in proportion. Supposing the speed and interior accommodations of two yachts to be equal, any owner who has ever paid bills will admit that if one can do with 10 or 15 per cent. less sail than the other, owing to superior model, she is the better boat by far. Again, in two boats of equal speed and sail area, if one can have 30 to 50 per cent. more displacement than the other, it follows that she must have more space and better accommodation. Speed, cost of running and accommodation are the three secondary points in yacht designing, safety, of course, ranking first, and the best boat is the one in which the three are most evenly balanced. This novel idea has lately been revealed to a reporter of the Boston *Herald* by Lieut. Henn, as follows:

"For instance, in the case of the two representative boats of their types this season, the sail area and tonnage are as follows: Galatea, displacement, 157 tons; sail area, 7,000sq.ft. Mayflower, displacement, 110 tons; sail area, 9,000sq.ft. Sq.ft. per ton—Galatea, 44; Mayflower, 81. This shows that the Galatea displaces 42 per cent. more than her rival, and that her sail area is 28 per cent. less. Of course, sail area means propelling power, and to adhere closely to the line of the lieutenant's argument, and to follow it to its inevitable conclusion, the fact would be established, in the event of a tie, that the cutter model is such that 42 per cent. more load was carried over a given mileage, with 28 per cent. less power. Now, to go still further with this proposition, give the cutter the additional area of 2,000sq.ft., she would outsail the sloop by just the advantage derived from that extra spread of canvas. All this, however, is based on the still disputed proposition that the boats are at present equal, and the further assumption that the Galatea could stand up under the additional canvas. After all, this may very properly be written q. e. d. That the Galatea is properly rigged for the exigencies of the service to which she belongs the Lieutenant entertains no doubt. He believes that we are in the habit of overestimating the strength of the wind here, and that what would be called a fresh breeze on the other side of the Atlantic would here be called a gale. Now, as a fresh breeze is a common matter around the British coasts, and is generally accompanied with more sea than is usual here, it is evident that a yacht, to have solid all-round qualities, must be weatherly, speedy and comfortable."

It is true that the immediate question at stake just now is speed, but in measuring the contestants fairly, some consideration must be made for the obvious advantages in other points, both of Galatea and Genesta.

ROYAL CANADIAN Y. C., SEPT. 18.—The race of the Royal Canadian Y. C. for the Prince of Wales Cup was sailed on Sept. 18 over a thirty mile course. The wind was light from S.W. at the start. Only Oriole, schooner, and Aileen and Verve, cutters, entered, the former allowing 3m. 30s. to Aileen and 23m. 21s. to Verve. At 10:45 A. M. all got off together, Aileen soon taking the lead with Verve second. Verve made an error near the first mark and lost second place. The first turn was timed: Aileen, 12:09:30; Oriole, 12:14; Verve, 12:31. There was a flat calm at the buoy, but after a time a strong S.W. wind came up and Oriole began to gain on Aileen, being timed at Scarboro buoy thus: Aileen, 1:31; Oriole, 1:46; Verve, 2:10. At the bell buoy the times were: Aileen, 2:25:30; Oriole, 2:28:30; Verve, 3:01. The wind came still fresher on the next leg, but Aileen still held her own, being timed at the Lake buoy: Aileen, 3:57; Oriole, 4:00. Verve had given up, as she was far astern. At the Scarboro buoy Oriole had almost passed Aileen, but the latter managed to turn ahead, thus: Aileen, 4:59; Oriole, 5:00. A little later Oriole passed through Aileen's weather and took first place. The wind was now so light that, as agreed upon, the race was called outside instead of at the inner finish line, the times being:

	Finish.	Elapsed.	Corrected.
Oriole	5 59 10	7 43 50	7 43 50
Aileen	6 11 00	7 55 20	7 51 50

ADELE-PERICHOLE MATCH.—On Sept. 25 a very interesting race was sailed off New Rochelle between the open boats Adele, Mr. Geo. Grieve, and La Perichole, Messrs. W. S. Alder and C. P. Buchanan. The stakes were $250 per side, and the course was from a line off Bailey's Rock around Center Island Buoy, 10 miles to windward and return. The start was signaled at 11:03:30, but both boats were slow and just saved being handicapped, the times being: La Perichole, 11:03:02; Adele, 11:03:17. La Perichole led from the start, and Adele was soon disabled by the iron strap of her throat halliard block giving way and letting the throat down. It took just 4m. 30s. for a man to go aloft and lash a new block, but about 8m. later the lashing gave way, and again the sail fell. The damage was repaired and the race resumed, but La Perichole was a long distance ahead. At 12 M. the first tack was made off Red Spring Point, La Perichole working close in by the shore out of the tide. Adele tacked at 12:12 and worked along the beach also. The times at the turn were: La Perichole, 1:28:26; Adele, 1:34:29. The run home was made without any special occurrence, the times being:

	Start.	Finish.	Elapsed.	Corrected.
La Perichole	11 08 02	3 16 55	4 08 53	4 08 53
Adele	11 08 17	3 22 38	4 14 21	4 14 06

YONKERS Y. C.—Saturday last the club sailed a match for the challenge cup over a course of 20 miles, from Yonkers to Columbia Y. C. house, foot of Eightieth street and return. Wind variable from S.E. Starters were the well known flyer H. W. Beecher, Mr. J. S. Warren; the sloop Crawford, belonging to Commodore C. E. Day, and Mr. A. Bailey's sloop Tethys. The start was flying, Crawford going over first, with the Beecher 2½m. later. Jibtopsails were carried most of the way down in a puffy wind, which made it clearly a matter of fluking to the turn, where all three were bunched and within a few inches of fouling. The Beecher got out of the scrape first, her lofty topsail catching a puff which sent her off for home at a lively rate along the Jersey shore, where the ebb was slackening. The Crawford followed, but lacked enough sail to hold the leader, the Beecher winning by 8½m. corrected time, Crawford second and Tethys third. The club's measurement rule includes half the overhang, which is much too great a penalty, especially when pitted against boats with a square transom, like the Beecher. Plain waterline measurement is to be preferred. The number of cabin yachts is increasing in the club and distant cruising is becoming more popular. Ex-Commodore Prime has been off in his snug little schooner Edith for several weeks.

MIRAMICHI Y. C. REGATTA.—The Miramichi Y. C.'s second annual regatta was held on Sept. 15. The course was from Newcastle to Chatham and return, 10 miles. The prizes were silver cups offered by Com. Miller, R. R. Call and P. S. Noonan, and sweepstakes. There were seven entries in first class and seven in the second. There was a good breeze with frequent squalls. The yachts carried all their light sails, and several had narrow escapes from being upset. Kittoch carried away her jibstay and Fedora her mainsheet traveler.

FIRST CLASS.

	Actual.	Corrected.
Kilbride, J. C. Miller	1 43 56	1 28 27
Fedora, P. A. Noonan	1 46 40	1 32 40
Yum Yum, H. A. Muirhead	1 47 49	1 27 39
Blondy, W. C. Miller	1 48 33	1 28 47
Kittoch, James Miller	1 48 52	1 33 00
Arrow, Geo. Watts	1 58 28	1 39 41
Dauntless, W. Wyse	Not taken.	

In second class the three leading yachts only were timed:

Pooh-Bah, H. A. Muirhead	2 02 24	1 35 47
Ida, M. Moore	2 04 54	1 33 00
Annie, J. L. Stewart	2 09 10	2 42 40

The winners of the silver cups to hold them until next season, when there will be three races for them, and the yachts winning the greater number of races of the eight will own them.—J. L. STEWART, Vice-Commodore.

COLUMBIA Y. C. PENNANT REGATTA.—The final pennant regatta of the Columbia Y. C. was set for Sept. 18, but was postponed until Saturday last, when it was sailed in a moderate easterly wind over the regular club course. Only three yachts started, the times being as follows:

CLASS A—CABIN YACHTS.

	Start.	Finish.	Elapsed.	Corrected.
Emma and Alice	3 17 18	4 43 46	1 26 43	1 26 43

CLASS B—OPEN YACHTS.

Troublesome	3 14 02	5 13 28	1 57 26	1 57 26
Unit	3 16 48	5 18 58	2 02 10	1 58 10

The results of the series give the pennants to Emma and Alice, Troublesome and Daisy. On Oct. 2 a match will be sailed over the club course by the Daisy, Henry Gray and Defiance.

ANOTHER CAPSIZE.—The centerboard sloop Gitana, Mr. Thos. Pearsall, of Black Rock, Conn., was capsized on Sept. 20 while racing with the sloop F. C. Smith. Her crew of four clung to the bottom of the boat until the Smith came to their rescue. She attempted to tow the waterlogged boat, but both drifted across to Long Island, where the Gitana was beached and bailed out, being towed home by a steamer.

A YACHT DISMASTED.—On Sept. 21 the sloop Valhalla, of Boston, was dismasted off Cuttyhunk and towed into Vineyard Haven and thence to Newport by the steam yacht Electra.

NEW HAVEN Y. C.—The fall regatta of this club will be sailed on Oct. 5.

LIGHTS ON YACHTS.—Yachtsmen will be interested in the following reply of Acting Secretary C. S. Fairchild to a communication from Chicago inquiring whether the penalty of $200 prescribed by section 4234, Revised Statutes, can be enforced against sail boats and other vessels of less burden than five tons for failing to carry the lights required by section 4233, Revised Statutes. Mr. Fairchild says that by section 3, Revised Statutes, every species of craft capable of being used for transportation on water is a "vessel," and the penalty specified in section 4234, Revised Statutes, applies to all sail vessels. It would seem, therefore, that sail boats are bound to carry the lights mentioned in section 4233, Revised Statutes. In support of this construction of the statute, it may be remarked that section 16 of the act of June 19, 1886, which abolishes certain fees for official services, etc. (see circular of June 21, 1886), exempts even row boats on the river St. Lawrence from observing rule 12 of section 4233, Revised Statutes, the implication being that sail boats even there, as well as elsewhere, must conform to the requirements of that section.

COMING MATCHES.—The racing this year continues later than usual, and several matches yet remain to be sailed besides the one at Marblehead. Another important match has been made between Messrs. Metcalf & Owens, of the new schooner Sachem, and Mr. G. W. B. Hill, of the Miranda, to be sailed to-day off Newport. The course is 20 miles to windward or leeward, with a limit of 8 hours, under the N. Y. Y. C. rules. The race will be a sweepstakes and probably some other schooners will enter. At Larchmont, on Saturday, two matches will be sailed, one between Clara and Cinderella, and one between the sloop Santa Pogue and the cutters Mona and Surf, and the rivalry between all the boats will tend to make a most exciting contest. On Friday, another match will be sailed near Larchmont, the course being 10 miles to windward or leeward from Sands Point, between the jib and mainsail boats Lorna and Nahil. The stakes are $300 per side.

A NEW AND IMPROVED ANCHOR.—Mr. Thos. Caplin was in town on Monday with models of his new anchor which found much acceptance among those who saw them. It is made of a continuous bar of iron and is self-adjusting. There are two movable flukes which have great holding power. In hauling up there is no danger of the flukes coming in contact with the vessel, as being movable they swing outward. They require no management before dropping, and are readily stowed away, and it is impossible for a craft to sweep this anchor, as there is nothing that the mooring or cables can hitch to. They have been used in the Provinces among the fishermen with great success, and their merits over all other anchors can be seen upon looking at the models. It is probable that some parties in this city will manufacture and introduce them among our fishing fleet.—*Cape Ann Advertiser.*

BEVERLY Y. C. OPEN REGATTA PROTESTS.—The protests in the Beverly Y. C. regatta, Sept. 4, at Marblehead, have been decided as follows: First class centerboards—Maggie vs. Violet, for cutting off part of course; protest allowed and third prize awarded to Maggie. Second class keels—Ione vs. Lizzie F. Daly, protest not allowed; prizes awarded as originally published. Third class centerboards—Seabird vs. Nora; and fourth class keels, Vera vs. Carmita and Vesper, both protests withdrawn; prizes awarded as originally published. The fifth prize in class 4, centerboards, was taken by Vera and not by Hard Times, as at first printed.

THE BOSTON SCHOOLS OF DESIGNING.—The two schools of yacht designing in Boston will open very shortly with a full roll of students. Mr. J. L. Frisbee will have charge of the one in the old City Hall, Charlestown. The Hawes Fund school will be held in the Lincoln school building in South Boston. This is a great country, with many thousand miles of sea coast and water courses, but we believe that these two small schools in Boston offer the only instruction that can be had in naval architecture and designing.

SANDY BAY Y. C.—The third race for the championship pennant of the Sandy Bay Y. C. was sailed for on Sept. 25, the entries being Silver Cloud, Petrel, and Louette. Silver Cloud had sailed from Gloucester before the race and was in such bad trim that she withdrew after starting. Louette split her stemhead and damaged her bowsprit gear, so she also withdrew. Petrel's time was 3h. —m. A pennant race for second class will be sailed to-day.

THE AMERICAN Y. C. CLAMBAKE.—On Saturday a party of 60 gentlemen left New York on board the steam yachts Tillie, Lagonda, Viola, Nooya and Sphinx, and steamed to Milton Harbor. Here they landed and were received by Mr. W. E. Connor, at whose invitation they partook of a clambake prepared in the pavilion. The party returned to the city in the evening.

DORCHESTER Y. C.—On Sept. 23 the 96th regatta of the Dorchester Y. C. was sailed off the club house, resulting in a drifting match. Scamp, Frank Gray, won in fourth class, and Nora, L. B. Dennie, in fifth. The judges were Louis M. Clark, H. S. Carruth, Erastus Willard, A. J. Clark and Hartford Davenport.

THE NEWPORT RACE.—The latest decision of the regatta committee is that as Cinderella had no club member on board she was ruled out, and Clara takes the prize in third class. The cups awarded are as follows: For schooners, $500; for first class sloops, $500; second class sloops, $350; third class sloops, $225.

HURON.—The keel sloop Huron, belonging to the estate of the late Wm. Gray, Jr., has been sold to Messrs. H. K. Bloodgood and Edward Kelly, of New York. She will lay up at once at the latter port.

CORINTHIAN Y. C.—The last race of 1886 was sailed on Sept. 25, a sail off for the third class pennant between Vera and Peri, Tartar not starting. Vera led by so much when half over the course that Peri withdrew. Mr. E. H. Tarbell was judge and timekeeper.

Canoeing.

Secretaries of canoe clubs are requested to send to FOREST AND STREAM their addresses, with name, membership, signal, etc., of their clubs, and also notices in advance of meetings and races, and report of the same. Canoeists and all interested in canoeing are requested to forward to FOREST AND STREAM their addresses, with logs of cruises, maps, and information concerning their local waters, drawings or descriptions of boats and fittings, and all items relating to the sport.

FIXTURES.

8-9. { Hartford and Springfield } Fall Meet,
{ New England Div. A. C. A. } Calla Shasta.

A DAY'S CANOE CRUISE.

IT was early May and the first warm breezes had called forth the sweet violet and gay buttercup, and we were to take the long talked of trip from Noblesville by river. Several of the boys had promised to accompany us, but had backed out at the last moment, saying the trip was too long for one day.

La Belle and Nellie were packed Friday night and shipped Saturday by the 2 P. M. train to Noblesville, we following at 7.

At a few minutes past 8 we were set down at our destination and began searching for our canoes. After much worry we found an official, who led us to a great barn-like depot, where we saw the beauties in most excellent shape, being set on an even keel, with carpet around to keep them from getting scratched. Hunting among the crowd that was standing about, Nellie's skipper found a strong boy who was willing to help pack the canoe down to the river which, until that time, we had supposed to be about a block from the railroad. But now we found it was at least half a mile and no wagon to be found. So shouldering our load we started off. After a weary trip up one street, down another and across a common, I at last brought up at the landing. Here I found a spring clear and cold, which, overflowing its rocky basin, sought refuge in the river below with a musical, silvery tinkle. La Belle was nowhere to be seen.

The young moon had about set and threw a light over the world that made everything look weird and wild. While studying the landscape I heard from up stream a cry from the missing boat, and it was not long before she came alongside and explained her delay. The negro who assisted in carrying her down was drunk as a fool, as La Belle expressed it, and it was with great difficulty that he was kept from spilling the canoe and contents into the street. The boat was safely landed upon the river bank, however; the darky was paid, and her skipper tried to launch her. He found the place to be a ford, and it was necessary to wade out some distance before enough water could be found to float her. This was done without accident, but with a pair of wet feet. It was our intention to drop some distance below town to make camp, but we were scared off by the description of a bridge a short distance down, and contented ourselves with simply crossing the river and camping just opposite to an old pork house. The night was threatening, and as we were tired no fire was lit, but we turned in at once, and after a pipe we slept soundly.

Early morning found us astir, and such a morning. The wind was cold and damp, the sky overcast, and we knew we were going to be caught in a storm. After a hasty breakfast we launched our canoes and started. Almost immediately below our camp was the bridge the boy had described, and we were glad we had not attempted to get through at night. The piles were driven close together and it was with great difficulty that we got through even then. The bridge was washed entirely away by a flood two weeks later. Soon we came to the island where we had intended to camp, and a good place it was, but the channel to it was barred by a shallow ripple that we would never have been able to get through in the uncertain light of the moon. We had estimated that the trip was fifty miles, and with a start at 5 o'clock we thought by hard paddling to reach the boat house by 6 o'clock in the evening. But the wind was dead up stream. No matter which way the river turned the wind was always ahead. The scenery was becoming beautiful—almost grand. High banks upon one side, covered to the water's edge with a heavy growth of timber, and rich bottom lands stretching far away on the other. Here the river turned to the east, and reaching the railroad doubled on itself. This we knew was the "Horse Shoe Bend." Just below this we came to our first rapid. The river ran between high precipitous banks, which confine its waters to a narrow channel, and through which they run like a mill race. Great rocks raised their heads against the mighty current, and their resistance threw the water in a boiling, foaming mass. Here and there the presence of rocks below the surface was marked by peculiar semi-whirlpools.

The water was rolling and breaking in great billowy waves, reminding us of the surf of the ocean. As we neared the rapids, we braced ourselves, grasped the paddles with a firmer grip and were ready for the fray. Nellie was first, and reaching the crest, she darted into the roaring current like an arrow shot by powerful arms. The water boiled and thundered about her bows and the decks were completely deluged. Here we rushed past a great boulder; there we just grazed a sunken rock that we had failed to notice until almost upon it; now we dash between two large rocks and then ahead is another, standing like a demon to give us a crushing blow. But we are not going to be "blowed," and with a powerful stroke we turn the little craft (so susceptible to the springy spruce when properly handled) a point to the right and sweep by it like lightning. Every sense was on the alert, "the blood tingled in our veins, our eyes gleamed with excitement, our muscles were tempered like steel, from the use of the paddle" in avoiding the dangers that beset us. The rapid was a full quarter mile long and during the passage we hardly drew a breath. When in the quiet pool below we turned to look back, we wished it was to do over again. But time was short and we reluctantly started on.

We ran several other rapids, but none to equal this. Thus far we had not seen a single habitation of man, but now we came to one perched upon the hill, and we tried to imagine it was a frontier fort. We were the "dusky savages" stealing past in the quiet Sabbath morn to make way with the canoe—their only means of communication with the outer world.

The clouds were now piling up in the west in a most ominous manner—great banks that assumed odd shapes and weird forms. Sometimes the pure white and the black would arrange themselves in alternate stripes, and again taking the form of vast mountains, with great yawning chasms that seemed to open to receive and gulp you down. We knew the storm was not far off, so running the bank under shelter of some bushes, put on our rubber coats, tucked the rubber blanket close around us, and were soon snug as possible. And none too soon either, for hardly had we left our shelter when it began to rain, or rather pour. The harder it rained the more we enjoyed it, and our merry shout and laughter caused many a frightened bird to leave its shelter and seek refuge further from the bank. Of course we had not forgotten our pipes, and now and then the two canoes would come alongside and for some minutes the heads of the skippers would come close together, when suddenly through the rain-soaked air would come a "crack" and a blaze, and then the pipes could be seen smoking like a Mississippi River steamboat.

On rounding a bend skipper Belle cried, "There's Allisonville." The other did not believe we were so far down but the skipper was positive. "Of couse it's Allisonville, don't you think I've been here enough to know it when I see it? Below is a bridge and below that is a broad ripple. You'll see." And he was right. Here we were at the first island in the ripple, only 15 miles from home and the hands of the watch only pointed to nine. This was such a surprise that we had to stop and celebrate it by another smoke. The rain still came down in fitful showers and it was necessary to seek the protection of the pavillion at the picnic grounds, 2 miles below, in order to eat our dinner. "We're powerful hungry," as the skipper remarked, and so we at that early hour. D—— tried to make some coffee over a boat's lantern but failed entirely. We finished the cold lunch 'mid many a jest, and the sun having come a little from behind the clouds, we again embarked, making the portage round the locks, we were once more upon the placid bosom of the raging canal.

The sun had now come out in earnest, and in the way of heat tried his best to make up for time lost in the morning. The wind was blowing a small gale dead against us—always against us. We seemed doomed to face that wind as the Ancient Mariner was the Albatros. Upon nearing the boat house we met one of the boys who had backed out because he thought we could not make the trip in a day. Our sailing fancies tantalized him and he endeavored to kick himself, but on account of the limited space in the canoe he did not succeed. However, a few minutes later he capsized while sailing and thus did he meet his just dues. We reached the boat house at 3 o'clock, having made the trip in ten hours—quickest time on record. Unpacking our canoes, we assumed the garb of civilization and were ready for the street. Anybody seeing us ten minutes later would never have supposed that we had just completed a trip from Noblesville in a canoe. C. A. NOE.

THE AMENDMENTS TO THE CONSTITUTION.

To the Members of the American Canoe Association:

The following changes and amendments to the constitution and by-laws of the A. C. A. were adopted at the last meeting of the Executive Committee, held at Grindstone Island during the annual encampment, August, 1886:

Commencing with Article 5 of the constitution, par. 3 now reads: The Vice and Rear-Commodores and Purser shall be elected by members of their respective Divisions at the Division Meet, or at the general annual meet of the Association.

Article 6. There shall be annually elected in each Division at the meet thereof, or at the general annual meeting of the Association, one active member for every thirty (30) members of each Division in good standing present. The members so elected, etc.

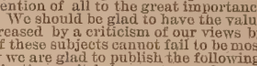
Art. 7. It shall be the duty of the Commodore to preside at the annual meetings of the Association and Executive Committee, and to visit, if practicable, each of the Division meets during the year, and to see that all rules and regulations are properly enforced, to pass on qualification of names submitted for membership by the secretary and to appoint within thirty (30) days after his election a Regatta Committee of three (3) active members for the annual meeting of the Association.

Art. 8. The Vice-Commodores shall organize and preside over the annual meetings of their respective Divisions, and within thirty (30) days after election appoint a Regatta Committee of three (3) active members for their Divisions. In the absence of the Vice-Commodores the Rear-Commodores will act in their stead. The Division officers present at the general meeting of the Association, or at the meetings of the Executive Committee, will act in their official capacity, those in whose Division the meeting is held taking precedence as to rank.

Art. 10. A quorum for the transaction of business at the annual meets of the Association or Divisions shall consist of twenty (20) active members.

BY-LAWS.

Art. 3. There shall be an annual meeting of the Association, and if practicable, of each Division, for business, camping and racing, the dates and places to be fixed by the Division officers, subject to the approval of the Commodore.



Art. 9. It shall be the duty of each Regatta Committee to prepare and publish, not later than June 1, an order of races for their respective regattas, to superintend the laying out and buoying of courses, to provide the prizes, to appoint judges, starters and timekeepers, and to decide all protests. They shall post the course and conditions of each race in some prominent place at least one hour before the race is called, and shall have entire control of the races of their respective meetings. CHAS. A. NEIDE,
SCHUYLERVILLE, N. Y., Sept. 20. Sec'y A. C. A.

FALL MEET AT CALLA SHASTA.—The Hartford and Springfield Canoe Clubs will hold a two-days meet at Calla Shasta on Friday and Saturday, Oct. 8 and 9, to sail for prizes given for spring meet, but not sailed for then on account of there being no wind. The races to be sailed are as follows: First, sailing (no limit), two prize flags; second, sailing (limited area), two prize flags; third, sailing (open), two prize flags; fourth, sailing (consolation), one price flag. The New England Division of the A. C. A. will hold their fall meet at same place and on the same days.

NOTES ON PRACTICAL CANOEING.

PLANKING.

OUR articles on the practical part of canoeing, on model building, boards, etc., have met with the general approval of canoeists, and we shall continue them with similar talks on sails and fittings. The design is not so much to impart specific information as to set men to thinking and working for the improvement of canoes, and to call the attention of all to the great importance of these many small details. We should be glad to have the value of the work still further increased by a criticism of our views by canoeists, as the discussion of these subjects cannot fail to be most profitable. With this in view we are glad to publish the following, though not written for publication, as it brings out some important points. Concerning our notice of his method of planking Mr. F. Joyner writes as follows: "I notice in your comments on canoe

building that you do not fully understand my method of making the joints in siding, and to make it plain I enclose two samples of the plank from Mr. L. Q. Jones's new racing canoe. The inner edge of each plank is not tapered to a feather edge, but is left with a square shoulder inside to hold the swell of the timbers and to support the fastenings as well. I have used this same joint in all my lapstreak work for four years, especially below the water, with a heavy varnish or a mixture of varnish, japan and lead in the joint; and when thoroughly dried it is the strongest and tightest joint possible. The scarfs are made in the same manner as the laps, at least 2in. long. The ribs are ½in. wide and spaced 3in. centers, with no nails between.

"Now in regard to wide vs. narrow planks, in all fairness allow me to differ with you as to getting a tight, light, fair hull, as free from the defects you mention as is possible. I have studied this matter carefully and have come to the conclusion that by using narrow planks, say 2½in. in the clear between the garboard and upper strake, I can get far finer lines, especially over the bilge, at least in my own models, in which I hold to straight waterlines for as far from the keel as possible. It would be very difficult to work sides of three strakes and hold the lines fair, as the wide strakes must be twisted from their natural shape and sprung at the same time and unless very cleverly done will leave an uneven surface. Soaking and steaming may get them on fair but when they get dry will they retain their shape, and again will a wide strake shrink and swell more perceptibly than if three strakes were used, springing on more evenly and lying closer to the moulds and thus avoid any buckling or distortion."

It is impossible to give a general reason why one method is better or worse than the other in all cases, as much depends on the circumstances of the case, and the builder must use his judgment. As a general rule the fewer joints the better, hence as wide plank as possible should be used. If two seams on a side, besides the garboard, will answer, certainly it is better than to have four or five. On the other hand the narrow plank will shrink and swell less and on some models can be laid fairer. We have seen some canoes in which the garboard was very wide, 8in. or over at center and more at the ends, while the upper streak extended from waterline to gunwale. Between the two was a narrow bilge streak, in some cases only extending over two-thirds the length of the boat. If the material is well seasoned a skillful workman should be able to lay these two wide planks on any ordinary model, and to close in between them with one or two narrow ones, according to the curve of the bilge. The timbers should be not over 5 or 6in. apart and the planking must be nailed to them very closely, the nails being not over 2in. apart on each timber. A little warm water will aid such work, but no soaking nor steaming should be used. If firmly fastened the planks will not shrink or swell, and are little liable to split or check. This makes a very fine surface and few seams. On the other hand some very good work is done with narrow plank and very close ribs, and each mode has its advantages. For an ordinary 15x30 lapstreak canoe five planks are enough, but many such boats could be planked, as we have indicated, with three or four. Perhaps some of our readers can give their experience in the matter as well. The cut shows a full size section of Mr. Joyner's joint. We supposed that it was the ordinary "ship lap" with the feather edge inside, but it seems we were in error. The method shown is a better one and certainly makes a very good joint. The question of planking is one of the leading ones just now in canoeing, and a number of amateurs are studying it very closely.

BIRCH BARKS.

Editor Forest and Stream:

I notice in your latest issue that a correspondent wishes the address of a birch bark canoe maker. I have a canvas canoe built by a Maine guide like a birch, and I presume he would build a birch equally well. His name is Hilbert Colson, Great Pond, Hancock county, Me. Having at various times received valuable information from your paper, I am glad to offer my mite.

NORWICH, Conn., Sept. 19. LEONARD B. ALMY, M.D.

Editor Forest and Stream:

I noticed a request for the name of a maker of birch bark canoes, I should give Sabattis Thay, Oldtown, Indian Island, Maine, as the best, his canoes always give satisfaction as to style and workmanship. A. C. A. members will remember the one I had at the last meet, it is of his make and nine years old, I think they will outwear a wooden canoe, though the uses are altogether different. F. R. KIMBALL.

BOSTON, Mass.

Editor Forest and Stream:

Your correspondent inquiring for birch canoes can get from the Indians at Tower, Minn., as fine specimen, with two paddles, for $12 as he could wish for. I saw a canoe at Duluth, Minn., that came from Tower only last week, and it was a beauty. Your correspondent can get captain of steamer Dove, plying between Duluth and Two Harbors, Minn., which last named place is near Tower, to make negotiations with some party to buy canoe, or if he will write me I will try to help him in the matter. C. M. C.

BUFFALO, N. Y.

THE TORONTO SKIFF SAILING CLUB.—This young organization has just finished a very prosperous season of racing, and its success is now fully assured. The officers for the year are: Commodore, J. Walter Dick; Vice-Commodore, J. B. Kilgour; Captain, Percy A. Bath, and Secretary-Treasurer, Hamilton S. Hall (re-elected by acclamation). The spring races this year were very successful. Mr. Kilgour's Barb winning the first prize in both the first and special class races. The second class race was won by Mr. Howard's Arrow, a very fine 16ft. skiff. An open race was sailed in August, which had to be sailed over three times before it could be finished. The first time one boat, Mr. Green's Water-Lily, upset, and two boats going to her rescue, of course, the race had to be sailed over by them and the winner. The next Saturday there was nothing but a drifting match, and the last day the race was finished as follows: First, Alianee, owned by A. R. Taylor; second, Gladys, owned by Capt. P. A. Bath; third, Elsie, owned by J. Ward. This year the club has had four new boats added to the list, Mr. Bath's Gladys, Mr. Kilgour's Barb, Mr. Garrett's Ichi Ban and Mr. Green's Water-Lily, the first two being 18ft. 6in. skiffs and the latter two 16ft. 6in. skiffs. Mr. Bath and Mr. Green rig their boats with single lug sails, and Messrs. Kilgour and Garret rig theirs as sloops. Next Saturday the first class race comes off, which is really a race between Mr. Kilgour and Bath, or, in other words, sloop vs. lug. Mr. Bath's boat has won the third class yacht race of R. C. Y. C. and Mr. Kilgour's the third class yacht race of the Q. Y. C., so a good race is expected. The membership has increased and everything is very prosperous. During the season the club has had two or three "at homes," which have proved very enjoyable.

CRUISERS AND THE BALANCE LUG.—*Editor Forest and Stream:* I wish to thank you for plans of the Barnegat cruiser. I find the balance lug the best sail for a small boat I ever handled, It is close winded and works to a charm in all kinds of weather. I followed a trading sloop all of 40ft. long for miles in quite a sea for an 11ft. waterline, boat under single reef, and the cruiser seemed to me a wonder. I did not do it from choice but was obliged to; it was under those circumstances I found out what the cruiser was able to do. I sailed her jammed on the wind with a reef 32 miles in 4 hours, which seems to be as fast as she can be driven, for I could get only the same speed under full sail with all the wind she wanted; I speak of long runs of 30 and 40 miles and rough water, which generally comes with the wind. The sail was made in Boston from the FOREST AND STREAM'S sail plan, by the maker of the Huron's sails, which is a guarantee that it was made according to the plan. I attribute the success of the cruiser to my not knowing more about it than your nautical editor. Most of my experience in sailing boats was gained in Boston Bay, and I think I know when a boat is doing what her length calls for.—H. R. SMITH (Fruitlands Fla.).

TORONTO C. C. NOTES.—The combined challenge cup of the T. C. C. was raced for for the fourth time this season on Sept. 18, Colin Fraser being the challenger and W. G. McKendrick the holder. The course is triangular, ¼ mile a side, sailed and paddled alternately. The following canoes entered: Boreas, Com. H. Neilson; Evora II., Vice-Com. A. H. Mason; Yanewah, D. B. Jacques; Allouette, W. A. Lays; Una, Colin Fraser; Wanda, W. H. P. Weston; Black Jack, I. B. McLean; Mac, W. G. McKendrick. At the word "go" Yanewah took the lead and finished the paddling stretch first, the other seven being bunched together. Mac had sail up first and got a good start before the rest got under way. Then Evora II. and Yanewah, two boats of the same moulds and sails exactly alike, commenced a hot scrap for second place, with Boreas and Una doing likewise for fourth position, and it made a very interesting race, as some one said, "it's not so much a question of first place as how far can we keep from being last," with the result that every one works hard from start to finish. At the finish the positions were as below: Mac, Yanewah, Evora II., Boreas, Una, Allouette, Wanda, Black Jack. The last named canoe pluckily entered, although having only a small sail of about 25ft. against the 70, 80 and 90sq. ft. which the other canoes carried. Next Saturday the sailing cup and Class 4 paddling cup will be raced for. Mr. Gelder, of the Halifax C. C., paid us a visit last week.—W. G. MCKENDRICK, Secretary T. C. C.

Sept. 25.—Nine members of the T. C. C. started in the race for the sailing cup this afternoon. After the first round had been completed the race was given up, there not being enough wind to finish within the time limit. Boreas led the fleet for the greater part of the time, although loaded with 80lbs. ballast and a heavy board, while the Mac, with more sail than the Boreas, no ballast and a light board, was behind until it commenced to blow after the race had been abandoned, when she took first place. (What is the theory about it?) immediately after this race the following canoes were stripped of their canvas and entered for the Mason paddling cup: D. B. Jacques in Yanewah, Will G. McKendrick in Mac, and W. A. Leys in Allouette. After 200yds. had been covered Yanewah forged ahead and treated the other contestants to a stern view for the rest of the race. The Mac finished second, with Allouette two lengths behind.—W. G. McK.

HARTFORD C. C. FALL MEETING, SEPT. 21.—Reports of the officers show an increased membership, an increased number of canoes and a strong financial condition of the club. The house has had an extra coat of paint and has all summer long looked out of its place behind the trees, the prettiest and most attractive spot on the banks of this part of our Connecticut River. The club has entertained, canoeist-fashion, a large number of fellow canoeists who have been cruising up or down the river, and it is the intention of the club to have its house open to the members of other clubs, or to the stray canoeists who make its shore during the season. There is to be a New England meet about the time of the full moon in October at Calla Shasta, near Springfield. The fall regatta of the club will probably take place about Oct. 10.

VESPER BOAT CLUB RECEPTION.—The Vesper Boat Club of Lowell held a grand reception on Sept. 12 at their handsome club house on the Merrimac. Inside and outside the house was decorated with flowers, lanterns and lamps, while on the river was a fleet of canoes, each with lanterns slung aloft. In some the lights were so arranged as to show the outlines of sails. A band was stationed near by and played as the fleet moved off in a procession. After the return dancing followed. The affair was a complete success in every way. Messrs. Butler and Nichols had charge of most of the arrangements.

CANVAS CANOES AND BOATS.—Will some of the readers of the FOREST AND STREAM oblige me with their views and experiences with portable canvas boats? I would like to obtain a good staunch portable canvas boat for inland cruising. I have never seen one in use, but have read many arguments for and against them. I would like to see the question settled.—C. WILMER HALLOCK (Camden, N. J.)

THE PEARL CANOES.—As we have criticised the failings of these two boats it is but fair to state that the builder was not entirely to blame, as the work was done very hurriedly, being only eight days each in building. It was intended at first to make a double skin to the first Pearl, and when this plan was abandoned at the last moment no thicker oak could be had than that prepared for the inner skin, which, as it proved, was entirely too light.

Gophers are causing much havoc in the grain fields of Manitoba. The Birtle *Observer* thinks this is due to the destruction of foxes, hawks, badgers, skunks and wolves, which prey on the gopher, and that a pair of little active Scotch terriers on each farm would do much to rid the farmers of this pest.

Answers to Correspondents.

☞ **No Notice Taken of Anonymous Correspondents.**

A. R., St. Louis.—Address Henry C. Squires, 178 Broadway, New York.

E. F. B.—There are several makes which are good for the price. Choose of the two a 12-bore, one barrel modified choke, the other cylinder.

U., Casselton, Dak.—To settle a discussion, please answer: "What is a rifle?" Can there be a "smooth-bore rifle?" Ans. The rifling is a necessary constituent of a rifle; without rifling the arm is not a rifle. Smooth-bore military arms are called muskets.

F. E. J. S.—Will you kindly inform me through the columns of your valuable paper how I can cure a dog of gun shyness? It is a bitch belonging to the setter class and about two years old and very sensitive. Have never had her in the field, but have seen some beautiful points on tame chickens by her, therefore I would not like to give her up. Ans. Full directions are given in Hammond's "Training vs. Breaking," for sale at this office.

P. A. B., Philadelphia.—Your issue of Sept. 2 contains a communication from Mr. Geo. Wild, of Red Bank, N. J., concerning the rock bass of Chesapeake Bay (I presume he means the striped bass). Would Mr. Wild kindly furnish the name of the boatman and his address, as I would like to try the same place? Ans. Red Bank, N. J., Sept. 24.—Most all of the gunners at Havre-de-Grace can accommodate fishermen with scows, boats, etc., but no bait. Bait has to come from Bush River, and it is now too late in the season for crabs out of that river. I took bait from this river (North Shrewsbury). Bass can be taken around the bridge and up the river above Port Deposit. I have my own man, and he is too busy gunning to bother with any fish.—GEO. WILD.

ACCIDENTS WILL HAPPEN, whether you like to think so or not; and if you do not wish to run in debt while disabled, or have your family suffer if you die, insure in the Travelers, of Hartford, Conn. —*Adv.*

Round Section Bamboo Rods.

Having been the pioneers in the manufacture and introduction of Section Bamboo Rods, we have always taken great pride in securing and perfecting every improvement in order to maintain our position as the makers of the very best rods. Knowing not only theoretically, but also by long experience, that a properly made round rod is the only absolutely perfect rod, we have invariably refused, and still do refuse, to put our name to any but our "Best" round section rods. While our prices for these round rods are only a trifle more than the prices asked by any other makers, the rods are widely known to be *incomparably superior* and *guaranteed* in the most liberal manner.

We have just finished and put on the market a *new caliber* round rod, 10 feet long, and weighing with the solid reel seat only 7 ounces. This rod has stood the most severe tests, and found capable of killing the largest black bass. The many expert anglers who have handled this rod pronounce it the *best balanced and most perfect rod* in the market.

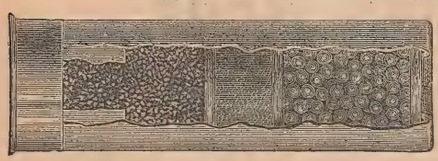
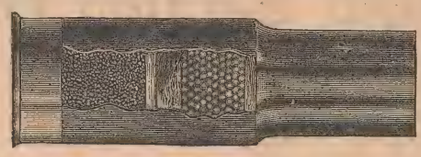
THE Atlantic Ammunition COMPANY,

(LIMITED.)

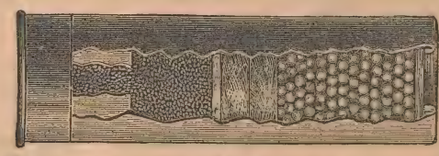
291 Broadway, New York.



Manufacturers of



CHAMBERLIN CARTRIDGES,



Fixed Ammunition for Shotguns.

Under the Chamberlin Patents.

To furnish the trade of New England States, New York, New Jersey, Eastern Pennsylvania, Delaware, District of Columbia, Maryland, Virginia, North and South Carolina, Georgia and Florida.

The Most Convenient and Best Ammunition.

Loaded by machinery. Every cartridge perfect. Every one alike. Wadding of uniform thickness, and placed squarely upon the powder and shot. Rammed with uniform pressure, sufficient to obtain the best result. Beautifully and securely crimped.

ALL DANGER FROM HANDLING POWDER IS AVOIDED by the use of these cartridges, and they are the safest form in which ammunition can be carried in stock or transportation.

Highest scores on record have been made with Chamberlin Cartridges. Persons who use them in the field are constantly speaking in their praise.

SOLD BY PRINCIPAL GUN DEALERS THROUGHOUT THE COUNTRY.

SMALL YACHTS.

Their Design and Construction, Exemplified by the Ruling Types of Modern Practice.

By C. P. KUNHARDT.

THE FOREST AND STREAM PUBLISHING COMPANY takes pleasure in announcing the publication of a magnificent quarto volume, bearing the above title. This book covers the field of Small Yachts, with special regard to their design, construction, equipment and keep. The opening chapters are devoted to a consideration of the model and the draft, their relations to one another, and the purposes which they subserve. Full directions are given for producing the plans of a yacht with reference to the chief points in design, and the method of taking off the lines of a boat already built is likewise described in detail.

All elements entering into design, such as Resistance, Stability, Balance of Rig, Handiness, Displacement, etc., are dealt with in separate chapters. The rules necessary for the mathematical computations, and a review of theory and practice close the first division of the book.

The second portion comprises the description of the Plates, covering the whole range of type in small yachts, from the shoal catboat and American centerboard sloop to examples of the narrowest and deepest British cutter yet built. These yachts have their lines, build and fittings depicted in the Plates, which are drawn to scale. With their aid and the specifications presented, the reader is placed in possession of accurate information concerning the mould, accommodations, rig and characteristics of all styles of yachts which have received favorable recognition. Sporting boats, combination row and sailboats, and various examples of special form are introduced.

The third division offers a comprehensive review of single-hand sailing, to which small yachts are especially adapted. Directions are given as a guide in selection of type and sail plan, and subsequent equipment and proper management.

The iron work of yachts, their gear, yawls, stearing apparatus, boat building and much other closely related matter is entered upon. The new International Rules of the Road, Signal Service, and a Bibliography appear in the Appendix.

The work is profusely and handsomely illustrated with 150 illustrations inserted in the text, besides the sixty-three plates.

A folio (size of page 14½x12½ inches), printed on paper specially manufactured for it, and with great beauty of execution and finish in every detail, making a volume vastly superior to any other work of the kind ever published. Pages 370, with 136 plate pages additional, or a total of more than 500. Price, postpaid, $7.00.

D. BROWN, Olneyville, R. I.

STATEN ISLAND, N. Y., Sept. 10, 1886.

D. Brown, Esq.:

DEAR SIR—Yours is the *most complete* loading arrangement I ever saw, and if I could not replace it, it would take much more than the price you ask for it to buy it. It does the work well, is small and conveniently carried and something needed very much among shooters. Hoping you will have success with it, I am, respectfully,
ANNIE OAKLEY,
Of Buffalo Bill's Wild West.

ANSWERS TO CORRESPONDENTS.

FIRES IN THE NATIONAL PARK.

THE latest advices we have from the Yellowstone National Park show no improvement in the disastrous condition of affairs there. Our staff correspondent writes from the Mammoth Hot Springs, under date of Sept. 22, as follows of the most lamentable destruction of the Park forests by raging conflagrations:

"I have before this given you a hint of the curious outburst of conflagration which took place at the close of Col. Wear's administration here, and I have now to report that all of these fires are still raging and that others, which promise to be equally destructive, have broken out in other localities.

"About the 15th of August a fire got out on the head of Blacktail Deer Creek and the north slopes of Tower Creek Mountains. This has since spread in both directions, and is now raging among the mountains on the head of Blacktail, as well as in the valley of the Yellowstone River. In this latter place it has burned over an enormous amount of green timber, has crossed Tower Creek, and is now working southward along the river toward the Grand Cañon, the Falls and the Lake. If it should reach the timber about the Lake, the beauty of one of the most charming spots in the whole Park will be destroyed.

"On the 20th of this month two fires broke out on the head of the Madison River, on the west side of the Holmes range. The weather is intensely dry and has been so for a long time, and the high wind of the past two days has caused the flames to spread with startling rapidity. Mr. Cannon, who was one of the old civil force in charge of the Park, reports that when he passed the fire to-day, it being then only one day old, an area of more than eight square miles had been burned over.

"A party of soldiers was to-day sent to the scene of the fire by Captain Harris, but they were unable to do anything to check its spread.

"The prediction was made to-day by an old resident of the Park, that unless Congress shall take action in the matter of Park protection there will not be in five years five acres of green timber standing in the Park."

What is especially needed is a force of trained men who shall patrol the forests and ride the trails constantly during the three or four months when there is much travel in the Park. Such men, if they knew their duties, would be sure to discover the fires almost as soon as they had started and could then attack them at a time when they could be easily handled and either extinguished or isolated so that they could not spread. Unless some such method of protecting them is set on foot the forests of the National Park are almost sure to be destroyed, and their destruction will be a calamity whose magnitude will not be realized until after it has taken place.

A MUDDLE.

A GAME and fish law ought to be compact and intelligible. It should be so plain that all whom it is intended to govern should be able to readily comprehend its meaning. There are such laws. That of Ohio, for example, is brief, plain, to the point; one is not obliged to engage the services of a lawyer to determine what it means or does not mean. On the contrary, the game and fish laws of New York are in a hopelessly muddled condition. Lawyers, men trained to the interpretation of the statutes, declare that they do not know what the Legislature intended to be the law with regard to certain subjects. Blind and contradictory provisions have been piled atop of earlier blunders and enigmas, and the result is a mass, or mess, of disgracefully unintelligible and petty general and local legislation. In a recent communication to the New York *Evening Post*, Mr. Geo. C. Holt, a member of the bar of this city, calls attention to the growing evils of special legislation at Albany. He points out that of the 681 New York Session Laws of 1886, more than five-sixths are private or local acts, most of the game laws coming within that category; and he points out that the effect of all this is to make it exceedingly difficult for citizens, who desire to conform to the statutes, to know what the law actually is. We quote:

> The game laws contained in this volume are a striking example of the effect of such a system of legislation. There is no reason why the game laws of the State should not be uniform and general. The time for fishing and shooting in different parts of the State may undoubtedly differ somewhat according to differences of climate, but substantially the whole subject ought to be regulated by a general law, and if such a law, judiciously drawn, were once passed, it ought not to require amendment for many years. The last legislature passed twenty game laws. Chapter 11 amends the General Game Act so as to fix a special time in which black bass can be caught in Lake Mahopac and in Columbia county, in Schroon Lake and Paradox Lake in Essex county and Warren county, and in Lake George and Brant Lake. It also fixes a special time in which muscalonge can be caught in the St. Lawrence and other rivers named. It also prohibits catching bullheads in Lake George during a certain period, and prescribes a general law for Lake George different from the other waters of the State. Chapter 124 changes the law relating to the time of catching trout in Spring Creek, Livingston county. Chapter 141 prescribes the law in relation to fishing in Henderson Bay. Chapter 193 provides for the construction of fishways in the dams across the Oswego and Seneca rivers. Chapter 202 provides for the construction of fishways in the dams across the Little Salmon River. Chapter 226 regulates fishing in the town of Saugerties. Chapter 247 protects wild geese and ducks in Chautauqua county. Chapter 267 amends the General Game Act so as to permit fishing through the ice in Keuka and Canandaigua lakes. Chapter 334 authorizes the building of eel weirs in the Oneida River. Chapter 395 prohibits the killing of quail and partridges in Niagara county. Chapter 429 amends chapter 11 of the Laws of 1886, the first game law above referred to, in some trifling particulars. Chapter 430 makes special provisions for the protection of game in the counties of Chautauqua and Cattaraugus. Chapter 437 amends Chapter 124 of the Laws of 1886, above referred to in some trifling particulars. Chapter 522 prohibits the use of certain nets in the Hudson River during a certain period. Chapter 590 regulates fishing in Cattaraugus Creek. Chapter 603 regulates fishing at the south end of Lake Champlain. The result of such a mass of special acts is that no sportsman in New York can tell whether he is violating the law or not. A correspondent of *The Evening Post* recently inquired whether the President was not catching trout out of season. The editor in his answer decided that he was not; but if he had examined carefully all the game laws of the State, it is doubtful whether he could have rendered an unhesitating decision on the question.

The manifest course to remedy the present muddle would be to simplify the statute. If this were done the law would be better observed because more generally understood. Here is an opportunity for some competent and public-spirited citizen to advance the public good by reducing the game law by itself to a concise form and the fish law by itself to a concise form. This could be done without changing any general provision of the law as it stands, and the simple alteration of form would be free from the opposition which would naturally be made to any radical changes of seasons. Then, as Mr. Holt suggests, by a constitutional amendment prohibit all such special legislation.

SAM LOVEL'S CAMPS will be continued next week.

STRIPED BASS.—This fish is unusually scarce along the shores of Buzzard's Bay and Martha's Vineyard, where the fishing clubs have their houses and stands. So far none have been taken by the Cuttyhunk Club, and only two fish, one of six and one of fifteen pounds, at the Pasque Island Club. The West Island and Squibnocket clubs have had about the same experience. The members of these clubs have fished faithfully all through the season, and have had to resort to "bottom fishing" for sea bass, etc., to supply their tables. The striped bass was often taken from the wharves of New York city in former years, and Emigration Commissioner Starr has fished for them from Castle Garden for the past ten years with more or less success. This season he has fished patiently without reward until Monday last, when he took a six-pounder and rejoiced that one had come at last. Mr. James Vallotton, Treasurer of the National Rod and Reel Association, has spent the season at Pasque Island without success. The fish have gradually decreased year by year, and it is possible that they may follow the buffalo and wild pigeon and leave us forever unless means are taken to preserve or propagate them.

AMONG THE DISAPPOINTMENTS OF SHOOTING must be reckoned the disgust with which a law-abiding sportsman is overwhelmed when he finds that the cover he thought known only to himself is knee deep with empty shells, and the splendid brood of grouse he hoped to have such royal sport with utterly destroyed; not only this, but the knowledge that even the breeding stock for future years has been wiped out adds to his sorrow and disgust. Had the brood been left until full fledged and more mature in wisdom, the chances are that one or two of them, at least, would have lived to afford us sport another year; but, alas! the ruthless poacher has, without regard to law or decency, potted the last one, and the desolate haunts of the royal birds are not more desolate than the heart of him who threads the dim aisles of the grand old woods that once resounded with the soul-inspiring beats of the quick, whirring pinion, but now are as silent as the desert waste.

ALGONKIN PARK.—The Crown Lands Department has under consideration a proposed Canadian reservation of public lands on the watershed which contains the sources of the Muskoka, Madawaska, Petewawa and Bonnechere rivers. The first named stream flows into the Georgian Bay; the others flow easterly to the Ottawa River, the waters of all of them forming ultimately the great St. Lawrence. The land is not adapted to settlement, but it has very decided attractions for tourists and campers; and as a people's pleasure ground would have high value. The chief consideration, however, is economic, the design being to preserve the forests and maintain the water supply. This is wise.

THE VIRGINIA CONVENTION.—The convention of sportsmen at Richmond, appointed for Oct. 21, promises to be the beginning of a most commendable movement. Virginia is peculiarly favored as a game country, and only the exercise of intelligent care is necessary to maintain a supply which shall be permanent and abundant. In another column we publish the call for those interested in the formation of a "Virginia Field Sports Association."

"NESSMUK'S POEMS."—The announcement in another column of the publication of "Nessmuk's" poems will be received with satisfaction and we hope may receive a fitting welcome. Subscribers to the volume will greatly oblige the publishers by promply returning the subscription blanks, for as explained the size of the edition will depend upon the number of copies spoken for.

A NEW RANGE.—The officers of the National Rifle Association are at last bestirring themselves to find somewhere a range less inaccessible than Creedmoor. At a meeting Tuesday Gen. C. F. Robbins reported adversely on Staten Island and Van Cortland Park, while Lieut. Zalinski thought it possible to find a suitable site on Staten Island.

A STATUE OF IZAAK WALTON.—It is proposed to reserve in the great screen of Winchester Cathedral a niche for a statue of the Father of Anglers. Walton lies buried in the Cathedral, and the Dean of Winchester has expressed his approval of in this way further commemorating the author of the "Compleat Angler." Who better deserves such a place?

The Sportsman Tourist.

BIKE.

FOUR of us, Reid, Beck, Manny and myself, were on a Fourth of July trip to Clarksville with our bicycles and various other members of the M. B. C. were sitting with our heels braced against the hotel railing when the announcement of the trip was made by the first three and I pricked up my ears at it so sharply that I was asked to go along; and so it came about.

We went to a railroad town just within New Mexico first, and from there started over the prairies with our wagon teamster Henry, and colored boy John. A good many of the boys saw us off at the train we were to take for the before-mentioned town. Some of our friends commissioned us to bring them bear skins and deer skins, others to secure Indian scalps for trimming various bonnets; and one young lady went so far as to bespeak for herself a captive Indian boy for a page, none, however, dreaming of the one improbable thing we did get and that was a little bear. And I may as well say that this tale is mainly about this bear. After we had left St. Louis far behind us, and when we were talking over our coming adventures for the twentieth time almost, Reid said, "Just let me do the fishing and you fellows do the hunting. Fishing is my hold." And so it proved to be. John, who had officiated as cook, etc., on various other trips with him remarked to the rest of us sidewise, "Jest let that man get a-fishing and you won't see nothing of him 'fore way into the night. Ef fish jest liked fishin' 's well 's that man they'd be no mo' fish left in the creek!" Manny then said, "Well, I want to kill a deer if I can and then I want to get a bear and then I want plenty to eat. I tell you fellows, a man on a cruising trip wants plenty of good solid food." Beck here came to the front, "All I want is one deer and a pair of horns 'n' plenty to eat." The other member of the party, whom modesty forbids me mentioning more specifically, thereupon remarked that he first wanted to kill a deer, then a little bear, and then to set to work and kill a grizzly, and then to have a little fishing and plenty to eat, adding with one of those bursts of inspired prophecy which occasionally come to the most bereft, "And, great Scott! fellows, if we'd only get a little cub bear wouldn't we just paralyze the club when we got back!" And then, our berths being made up for the night, we betook ourselves to them, little dreaming that we had a prophet in our party. Old Sol Perkins, out in our county, once delivered himself, however, about as follows on this subject:

"It's easy enough to set yourself up for a prophet if you only know which way the wind's blowin'. All's wanted is to stand in with the clerk of the weather 'n' you can make up an almanac that the clerk himself will take to going by. Oh yes, them old time Bible chaps were, but Lord bless you, look at the friends they had. Whenever one of 'em made a prediction, some friend of his'n would come along and do the thing in order that it might come to pass, which was spoken by the prophet saying. Anybody can prophecy if he has the right kind of backin'." It was so with my vision; it was helped into materiality by the strenuous co-operation of myself and colleagues. We worked hard for our bear and got him.

At S—, the end of the railway journey, we made up our outfit. For the benefit of those who go camping, I will give the list of it. It sounds prosaic, but it may be very acceptable to some. These provisions lasted six gourmands 23 days:

2 6x9 wall tents.
3 pairs of blankets each.
6 gum ponchas to sleep on.
1 rubber pillow each.
3 skillets.
1 Dutch oven.
1 large coffee pot (for boiling water in for all purposes).
1 Eureka coffee pot (for making coffee as is coffee).
1 bread pan.
1 dish.
8 tin plates.
8 tin cups.
Knives, forks, spoons large and small, butcher knife, axe, hatchet, spade, extra rope, matches.
2 iron bars 5ft. long.
100lbs. flour.
2lbs. baking powder.
25lbs. lard.
25lbs. buttter.
10lbs. crackers.
25lbs. cornmeal.
5lbs. salt.
25lbs. sugar.
20 candles and one candlestick.
2 bottles pickles.
2 bottles Worcestershire sauce.
2 cans pepper.
4 cans meat.
6 cans baked beans.
6 bars soap.
2 hams.
1 strip bacon.
12lbs. coffee.
3 bushels potatoes.
5 gallons maple molasses.
2 wooden water buckets.
4 pails jelly (4qts.).
6 cans sardines.
1 bottle vanilla.
2lbs. nails.
Straps, rivets, wax ends, awl, screw driver, wire, pliers, extra underclothing and shoes and woolen socks.
1 grub box.

The grub box was a large box of shelves made to stand upright in the end of the wagon and fastened to the bed by means of bolts through the sides of the box and bed, and having a turn down door, which, when propped up by the swinging leg serves as a table on which to cook, and if need be, eat. It is a handy and almost indispensable thing for a wagon journey, and is a kitchen cupboard while in camp. While in camp we fastened one end of the wagon cover over the top of this box, extending the cover out back of the wagon toward the tents, and upholding the other two corners by means of stakes and ropes, making an awning that protected our culinary affairs from both sun and rain. The two iron bars spoken of were suspended on stones across the fire and served to hold skillets, coffee pot, etc., where they did the most good. In addition to this outfit there were guns, and fishing tackle *ad libitum*, and a supply of the following medicines: Quinine, arnica, C. C. pills, Jamaica ginger, essence of peppermint, courtplaster, laudanum, carbolic acid, bandages and absorbent cotton, we were going out of reach of doctors and all of them might, through accident or illness, become imperatively necessary. Besides, if one has a penchant for amateur physicing, the opportunity afforded for dosing every casual bellyache one hears of is not to be lost, for you have the poor devils completely at your mercy. I had my party so utterly subdued that it was a matter of sincere regret that I hadn't a whole drug store with me, for I could have fed a stomach-stricken nimrod or a colic-ridden Izaak Walton upon anything in the whole realm of drugdom from the tincture of squintessence of *aqua pura* to the "pulverized tongue of a spotted calf weaned in the dark of the moon."

So much for the outfit. We packed it in the wagon as well as we could, climbed on top of it, called to the dogs, waved our hands at the group of idlers, cowboys and hotel people, and rattled out of town up on to the rolling prairie, off toward the mountains 100 miles distant, whose snow-capped peaks glistened and blinked down at our aspiring and ambitious party, giving fair promise of icy streams and rugged fastnesses; of nights of snug repose, days of adventuresome quests; of fish and game, and evenings—camp-fire evenings—of recounter and corncob pipes!

We had not gone very far until some one exclaimed, "Snake!" and all eyes intuitively turned to the side of the road where a greenish yellow snake was making off as fast as he could go. "It's a rattlesnake!" was the next exclamation, and as I had taken my gun out early in the afternoon in anticipation of some such encounter, I was first down off the wagon. Now, the rattlesnakes you read about in books, when attacked or threatened, always sound their rattles; and people often say, "There is some protection against rattlers: they always give warning." But here was an every-day, outdoor, unlettered snake, who hadn't heard about its being the regulation thing to rattle. And although I ran along behind him, and even, in company with Beck, who also was down by that time, headed him until he nearly stopped crawling, he never made a sound, and he could have, too, for when I had shot him in the head and we had cut off his tail we counted eight rattles. A while after that I shot another smaller one, this time shooting it through the body with Beck's revolver, and it did not rattle; and toward evening Beck, with his characteristic temerity, tramped on one and killed it, with the same absence of resultant rattling. This leads me to the conclusion that they don't always rattle. Henry, whose many years of plains life in the Southwest gave him credence, was then asked about them.

"No," he said, "they don't allays rattle. Stands to reason. A snake aint goin' to waste no time with his tail if he's in a tight place. Course, they do sometimes, just the same as a dog barks. Out there on the Trampares I jabbed a spade in a dog hole (prairie dog hole) one time that I seed a snake run into, 'n' just caught down on about three inches of his tail, 'n' Lord! you hadn't time to think before he'd turned back out er that hole 'n' hit the spade, and he hit (struck with its fangs) it twice, too, so close together you couldn't hardly count it. Yes, I've knowed 'em to bite people and kill 'em, and I've knowed 'em to get well when they wasn't a thing in camp but a little chewin' tobacco to put over it, just by tying something around the leg. Doctors? Hell! They aint no mo' good on snake bites than I am. They was a fool Mexican down on the "Big L." ranch reached in a dog hole fur a snake 'n' thought he could pull it out afore it could bite him, 'n' it jest naturally hit him a lick on the hand and then give 'im another before he could let go. And they was a Dr. Tarbox down in that country who claimed to know about all they was a goin', and they sent fur him to boss that snake bite. Well, he doctored it awhile and his arm kep' a swellin', 'n' so he cut his hand off. And then this doctor (he wore specks) set down and wrote a medical paper all about the case 'n' how he cured it. Well, his arm still kep' a swellin', 'n' so he cut it off again at the shoulder, and then puts on his specks and writes another article about how to cure snake bites! Well, the feller's shoulder swelled up on him then and he up 'n' died, 'n' if he wrote any more articles I aint heard of 'em!"

We camped that night on the Cimarron, a mountain stream, but whose waters are turgid from the placer mining carried on at its source. When we broke camp next morning and were all ready to start, the oft quoted Henry climbed up on to the wagon and said, "Fellers, one of ye just get that dun horse by the head and the rest get at the wheels, 'n when I say 'cut loose' *let go that hoss 'n git out the way*, 'n the rest of you start the wagon. He aint broke yit and starts off in the morning kind of reckless."

Well, we did as directed, and when he gave the word the horse squatted back an instant, and then there shot out a yellow streak of broncho with a velocity which not only outstripped the wagon and the other horse, but which was no more impeded by harness and singletree than if it had been a yellow cannon ball, which it was. This performance was repeated three times, and as many singletrees patched up before the vicious brute succeeded in jerking the wagon after him, when we proceeded, Reid and Beck walking on ahead as far as Cimarron, 8 miles, away toward the mountains. There we found an old Mexican town located on the Santa Fé trail, its days of glory and prosperity departed. Some lazy Mexicans were playing Mexican monte in a saloon and some of the boys went in and took a hand and taught the natives how to play it. In consequence of which they were not over friendly toward us during our stay there, which lasted over the next day. For Henry found a Mexican with a team of good horses for which he succeeded, after an hour's reflection and examination of the respective teams, in trading his, giving a few dollars to boot. A funny thing about this bargain was that although he speaks Spanish fluently, he asked no questions about the horses he traded for and was asked none about those he traded. In commenting upon it afterward he said, "I knowed he hadn't any worse hoss 'n that yellow devil on the off side, 'n if he had it was my lookout." Again, a week or two later, when I had said, "Henry, how do you think that Mexican is getting along with that dun horse?" he only chewed a blade of grass dreamily and complacently and looked over at the snow on the mountains and replied, "That's the last thing on earth that troubles me!" The horse-trading ethics of a man, who, at the age of 14, "made his first swap and could drive anything that wo' hair" necessarily is to concern himself solely with the new team.

When we had made the exchange and hitched up and got a mile out of town the tongue of the wagon broke, necessitating a return and a stay there of a day, as before mentioned, during which time the wagon was overhauled and Beck had a spell of sickness and I made a pudding. Preparatory to my pudding I sent John to a Mexican's house for some milk, and the proud scion of the noble house of Montezuma went out in his back yard and milked a lot of goats. Now if Beck likes one article of food better than another it is that which he can get at first, so when he spied the milk in a nice wide pan, with an avidity (and I call that a mighty polite term to use in this connection) which the manufacturer of the milk herself might emulate, he drank as much of it as he could. "Ah, there! my friend," said he to me with a pleased look, "that's milk. No chalk and water in that, is there? If there is any left when you get through with your puddin' I'll drink it up." You see, he didn't know it was nanny goat's. Even that night after supper he didn't suspect it. "Seems to me," he said, "'s if the cows had been eating rag weed. It tastes kind of like it in my mouth." But along toward morning there was wailing and gnashing of teeth just outside the tent. The others pounded him on the back and did what they could for him, but it was not until I awoke that the scientific aspect of the expedition began to be manifest. His sickness, being audible, soon brought me to my feet, and as I staggered drowsily but enraptured out into the cool and audible night I prescribed catnip tea. He rejected the idea with scorn. I reflected that he was rejecting almost everything he had except his shirt, but still I couldn't help feeling that a man was in hard luck who wouldn't stop what he was doing then to drink catnip tea. However, the fell ravages of his disease soon weakened him so that he became an easy prey to my desires, and I fed him on alternate doses of whisky and Jamaica ginger and Jamaica ginger and whisky, until by morning it was hard to tell which was nearer heaven, he or I.

With the day, however, came other occupations for us all, so that he had a chance to rally; and before evening we were well on our way toward and almost in the shadow of the mountain, and the night found us sleeping the sleep of the tired in our white tents near a purling stream which made fertile the long stretches of meadows in Van Breemer's Cañon.

But I must go back to that pudding. We had purchased a yellow cook book at Kansas City, and the pudding was really meant for a test of the cook book more than anything else, as we felt doubtful about going off into the wilds dependent upon an untried cook book for what we were to eat. I forget now what the recipe was, but it was a long paragraph of rhodomontade about bread pudding, and spoke of scalded bread, beaten eggs, milk, sugar, jelly, and baking thirty minutes, and if I had the foul fiend who wrote it here now I would make one of them and compel him to eat it. The ravages of goat's milk are nothing to those it will create. The only thing that saved all of us from terrible deaths was that none of us ate any of it. We tried it on the dog first and he ran and jumped in the creek.

But I must hurry on to the bear. We traveled up the cañon for two days, camping at night by the stream which gradually became smaller until we reached a wide stretch of park or open country, from which we descended into the valley of the Vermejo, a much larger stream, where Reid essayed his first trout fishing, verifying all that John had said of him. He came in long after we had eaten our part of the supper with thirty-eight fine trout in his basket. It looked to us like a fine catch, though our fishing further up cast it into the shade. We ate them for breakfast next morning and that afternoon. When near our journey's end, just after a heavy rainstorm Reid and Manny discovered a deer in a thicket and the latter opened fire on her, and in a moment I was up with them, and Reid pointed out the deer to me and I quickly followed Manny's example. It was the first wild deer either of us had ever seen and it had been confidently predicted by all the wise men I had talked with on the subject that the only thing we would get on such an occasion would be the buck fever. Now to say that we were excited would be to do what the intelligent reader has already discerned is not my practice—tell the truth; so I will just remark that we were as cool as icebergs during the few seconds in which we were firing the ten shots that it took to kill that deer. Our last shots were fired together so that the killing rests equally between us. Whoever did the work though sent a bullet through a running deer behind the shoulder, killing it dead, at a distance of about 100yds. and if that is buck fever I hope I had it instead of Manny.

There was great rejoicing as Beck, without a trace of the regret he must have felt at not having had a hand in it visible on his shining face, triumphantly carried the limp and lifeless creature back to the wagon on his broad shoulder. For about a day after that there were great times cooking and eating venison, and after that it spoiled. We had somehow imbibed the idea that meat would keep fresh up there. Perhaps it does in some mountains, but it certainly spoiled there quicker than Henry said it would down on the hot plains. Our bear, too—but I am neglecting that bear too long. Within a day or two thereafter we were permanently installed in camp by a swift rushing mountain stream formed by the melting snow on the summit of the mountains just above us, and the record of the days that followed is one of such fishing exploits and hunting adventures as most everybody is familiar with, and it is not worth while to dwell upon them. We hunted with but slight success, owing to a scarcity of game and an unfavorable time of year to see it in, the timber being for the most part a mass of foliage through which the eye could not penetrate half as far as deer could smell; but the fishing was all that could be desired. Reid said he had fished all through Utah, Colorado and Idaho, and had never before seen any stream to compare with that one. I suppose he could catch three fish to our one, yet any of us could catch over a hundred speckled trout in a few hours' fishing. The most killing flies were the coachman, professor and professor-hackle, with a red-ibis for rainy, dark days.

One evening Henry and I rode the horses part way up the mountain, when, dismounting, we tied them to a tree and proceeded on foot up the two sides of a little stream, which, however, soon headed at a spring, so that our way lay through thickets and occasional stretches of forest. Just before dark I heard him whistle for me, and going up to whence the sound proceeded I whistled around awhile but failed to find them. I therefore started to descend the mountain, the gathering darkness intervened, and presto! I was lost on the mountain at night. I suppose many a man has been lost in the darkness on a mountain. Turning his head whithersoever he will there is naught to be seen but blackness—night. He is isolated for once in his life at least. He begins to feel the chilly night air. He may have had a companion or a friend a little while back who knew the way, but he has left him, and is out of sight and hearing. He knows that up higher, on the crest of the mountain, is a commanding spot whence the whole surrounding country would be visible were it not for the night. He can scale that mountain, but he must needs, even then, wait through a long and doubtful night for a morning he is in that savage country none too sure of seeing. He may descend the mountain, but he will be going down any one, and which one he knows not, of a hundred valleys leading out upon life at a different station. One of them leads to home, the other ninty-nine only to lure him down into a world whose atmosphere is heavy with the taint of corrupt things. How many men are there who, when lost on the mountain, ever again

find their way back to the fireside, the peace, the contentment? How many fail, and wander down some far distant and divergent steep-walled gorge out into a new world full of strange deceipts and pitfalls. How many are there who, climbing to the summit to strain their eyes toward the dawn, have their blood made sluggish in their veins by the keen and icy wind and so fall down in the corner of some cold rock to shiver out their lives? How many are there, who, as I did, at length, after long waiting and wandering, hear a faint calling far off yonder through the gloom, through the woods and hollows, following which he comes once more to his own? Have you followed my meaning? Are you up there now?

When we had come together again Henry told me of the bear sign he had discovered in a thicket about a mile distant, and we hurried home, forming plans the while for a great bear hunt on the morrow. All I have to say about the bear hunt is that the morrow aforesaid arrived but the bear hunt didn't. It rained and we played poker in a tent all day, using grains of corn to bet with. Corn is scarce in that country, so that all day we kept pretty nearly even, and contentment ruled supreme. Toward evening, however, an anarchist with four jacks upset all our ideas of property rights, the result of which is that several of us are not now paying any taxes on corn.

But the next day we had a bear hunt as was a bear hunt. Only, as usual with us, the bear utterly refused to be conventional. This bear had a cub, and a she bear with cubs one is of the fiercest animals found in books. Henry posted us with our guns at the upper edge of the thicket, while he went in to scare out the bear, the thicket being so thick, he said, that he would not be able to get near enough for a shot; but directly there was a shot and a cry, "Look out, George, he's comin'" ("George" is I), and out he or she came sure enough, the only savageness apparent being a savage haste to cross the mountains into Colorado. There were three of us, Beck, Manny and myself, Beck with a .50-caliber express Winchester, Manny with a .45-70 Burgess and I with a .45-70 Winchester, and the way we made a sieve out of that savage bear is not worth speaking of. It seemed as if Beck shot enough explosive bullets into her after she was dead, and even after the jubilant Henry had come out with a funny, squirming little brown bundle in his arms, to have blown her into atoms, and yet when we came to count the holes there were only five or six, showing that bears, even at their prosiest, are exciting. I cannot leave this part of my tale without saying something about our marksmanship. According to this narrative we only shot a deer and a bear, and yet they were running when shot. We, as a body, were pretty good shots with both rifle and shotgun, and there were among us one or two who could smash bottles thrown in the air with a rifle three times out of four, and when I say thrown in the air I mean thrown as high as a house; and we didn't meet any wild Westerners down there who could begin to beat us.

But the little bear is here at last, and I mustn't keep you waiting to see him. We judged he was three months old when we got him. Now if you want to see something funny look at Bike—that's his name, in honor to the Bicycle Club. From his pink tongue and his black, beady eyes to his baby feet and his rather threatening claws, he is about the most enticing little shaver, whether on two legs or four (and he don't care which, for he can go it either way), that walks the earth; but naturally those things which most endear him to us are his bad traits of character. I have read something somewhere about the beauty of goodness, but for something that is really just too sweet to live, give me a real low-down, wicked, unprincipled little cub bear. We never before knew what was meant by bearishness, and have ever since felt remorse at ever having called pigs hoggish. When we found that he could catch a dog twice his size that interfered with his dinner, and hold on to him, our delight became ecstatic, and when, by way of variety, he hit the setter Jack with his paw and sent him a-flying, we fairly fell to and hugged him, during which process he bit Beck on his hand, and that was all that was necessary to complete our bliss. When he speedily thereafter drew blood from Manny and Henry respectively and in succession, our joy was touching. To have a bear was glorious, but to have one so full of original sin as this one was more than human heart could have longed for—but this was not all. Reid handed him a lighted cigarette to see him sniff at it, and, ye gods! he swallowed it so quickly that Reid could hardly let go. A fire-eater! 'Twas too much. Our happiness became hysteric. We fell on everybody's neck (but Bike's) and wept.

And the way he can swear! As scars multiplied on our hands, we found it necessary to whip him whenever he offered to bite, and at such times he stands upon his hind legs and opens his mouth at an angle of a letter V that is broken at the joint and opens up his bass voice and cusses his luck in a way that makes us just sit and hold each other's hands in rapture. Henry would say: "Just hear the dad burned pidilonymous little devil cuss!" When he would get through, for a time there would be an occasional outbreak or sob, for all the world like that of a little child until, the trouble over and forgotten, he would be ready for any new excitement that offered, whether in the way of plain eating or complicated with any of the numerous sins he delights in committing. He is now an active member of the club, lives in style in the back yard, off the tennis courts, and swears he is going to ride a tricicle in the coming wheelmen's parade.

I cannot leave our camping grounds and their memories, however, without telling about Henry's party. The conversation turned upon society and the fair sex one night around the camp-fire and at length it came Henry's turn to speak.

"No sir," and he reached down to the fire with those miraculous fireproof fingers of his for a live ember for his pipe, "I ain't got no use fur women folks. They's allays a-raisin' hell wherever you find 'em. Oh, of course take it where they is just one by herself, she can't hurt nothin'. They's nobody to kick up a row with. Now down there on the Trampares there was four women came in there lately. They only live about eighteen mile apart and two of them is just in speakin' distance—three miles—and I'll be blamed if they'd been there three months till they had everybody in hot water. Nice women's you want to see, too. Only it's in 'em."

"Why I didn't think there were any women down there,' some one said.

"Oh, thunder! yes; they's swarms of 'em if you go fur 'em. You'd ought to see the party I give last New Year's! That's where you saw women. And it was sure a party, too. Why, they hasn't been one like it in this part of the country. They was over thirteen women. And they was one room with a table full of pies and cakes and meat and game and everything you could think of, 'n' puddin's, 'n' pickles, 'n' candy, 'n' toward mornin' it set in rainin' 'n' kept it up all day, 'n' so did we. Hum! We just naturally wore out the ranch. 'N' it didn't stop rainin' the next night, so we says, 'Let's keep her up another night,' 'n' I'll be sizguzzled if we didn't. And nary a fight nor a fuss from the time it started till it stopped.

"You see I was a runnin' things. It was my party. I paid over $160 for the cookin', 'n' I jest met every feller at the door 'n' took his gun away from him, 'n' they wasn't a dadburned feller on that ranch could open his mouth."

"You had the only revolver, had you?"

"No, I didn't even have my own; but I knowed where I could get one awful quick. They never was a quieter time 'n' a nicer time. I just thought that I'd show folks how we used to do it back in the States." G. K. A.

St. Louis, Mo.

TRAVELS IN BOON GAH ARRA HBIGGEE

FROM THE DIARY OF JOSEPH GOATER.

EDITED BY F. H. TEMPLE BELLEW.

(Continued.)

WE found our camp on the borders of the lake under the Mosomea tree so delightful that I resolved to stay there some time and thence make explorations into the surrounding country. Though I still had a good supply of gunpowder and fixed ammunition left I knew it could not last forever, I therefore resolved to economize as much as possible, only using it on large game, and in other cases where absolutely necessary. At the same time I kept my eyes open for any evidences of nitre and sulphur in the geological formation of the earth. I also studied the methods adopted by the natives for capturing game and also set my own wits to work devising new traps and instruments for the same purpose. One simple device of the natives for catching deer I often employed. It consisted in attaching a strong and flexible cord made of the gobwich to the horizontal limb of a tree, and then slowly pulling the limb down as far as it would go, and so fastening it that when a deer attempted to pass the trap he would release the limb, which in its powerful recoil would tighten the rope and drag the animal to the earth. To describe this trap understandingly in words would be almost impossible, but a careful examination of my sketches will make it clear to any intelligent reader.

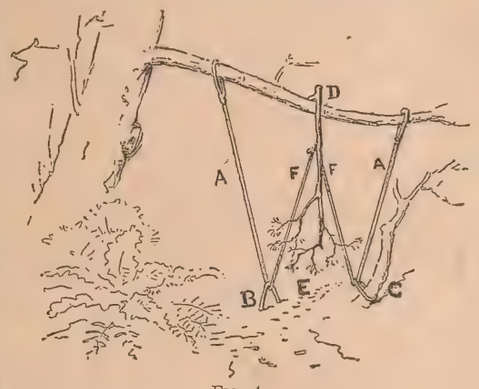

FIG. 1.

A A—Gobwich rope.
B—A loop of gobwich attached to the trunk of a shrub through which the rope is reeved, the loop as well as the rope at this point is lubricated with fat to make it run smoothly.
C—A wooden staple firmly driven into the ground for the same purpose as the loop.
D—The catch or trig which holds the limb down.
E—That part of trig which the game in passing pushes away, so releasing the rope and causing itself to be dragged to the earth.
F F—At this point sharp-hooked thorns are twisted into the rope, exactly on the principle of a barbed wire fence, to still further secure the game.

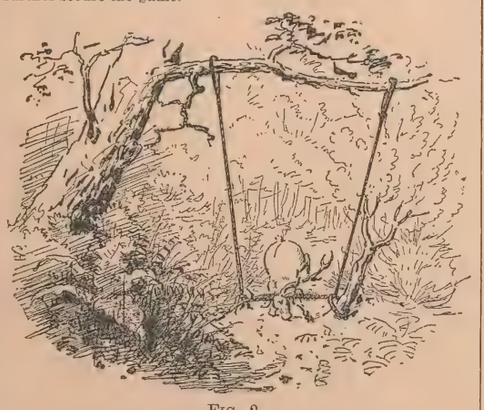

FIG. 2.

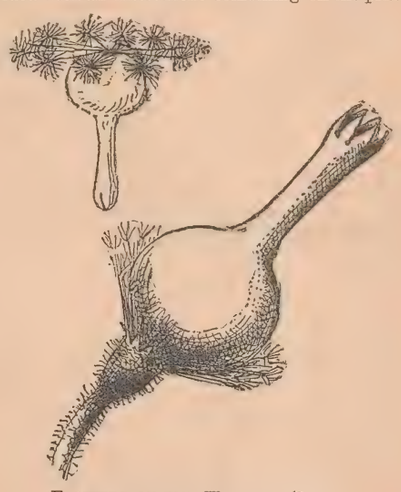
Fig 2 represents a deer caught in the trap. By this means we caught much game and kept our table well supplied with fresh meat, particularly that of a small deer much resembling the axis or spotted deer of India and Ceylon, though not so large. The trap we usually set in one of the narrow tracks or footpaths they were accustomed to take on their way to drink at the lake.



One day while in search of a good spot to set one of these traps—for we never set them twice in the same place in succession for fear of alarming the game—I observed a large and luxuriant bush, into and out of which a swarm of small birds were continually flying with restless activity. My curiosity being excited, I approached the shrub and gently parted the leaves with my hands. Immediately my ears were greeted with the most piercing and confused shriekings and puffing groans or sobs, while the plant became violently agitated. At the same moment all the birds disappeared. After a few moments the noises died away, and I again, with some trepidation and caution, ventured to approach the plant. This time, instead of parting the leaves with my hands, I pushed them aside with the end of my rifle, in order to be prepared for any concealed enemy that might be lurking therein. To my no little surprise no commotion followed this action. Peering in I observed that the stems and main limbs of the shrub were covered with globular warts or excrescences, with an orifice at one side, and somewhat resembling the nests of certain swallows on a small scale, for they were not much larger than butternuts. These were, indeed, the nests of the birds I had seen flying in and out, for I soon saw their little ruby heads and long bills protruding from the orifices I have mentioned. The birds themselves in form resembled our wren, though the bill was longer and the colors were of

THE TATTA-WOO.

the most brilliant description, the head being emerald, the throat ruby, the back wings jet black and the under part white. The natives called them tatta woo, meaning little bird. They did not seem familiar with it, and I doubt whether they had ever seen it before.

On trying to reach one of the nests with my hand, the shrieks that had startled me so much at first were renewed with great vigor. I then discovered that this noise proceeded from the plant itself, being produced by innumerable trumpet flowers, having a sack or bellows at one end that contracted when touched by animal flesh and forced air through the tube of the flower that was provided with an instrument something on the principle

FLOWERS OF THE HOWLING BUSH.

of the tube of a reed organ. I found that inanimate matter, such as wood, stone or metal, or even horn, bone, feathers or claws of birds had not the power of exciting this plant and eliciting the noises. Only warm flesh and blood in the living animal could produce that effect. I frightened poor Juno almost out of her canine wits by sending her into one of these bushes after a stone, whence she came tearing out with her tail between her legs and her eyes starting out their sockets, as though she had just seen Cerberus or the ghosts of all the meat pies and mutton chops she had ever stolen during the whole course of her guilty career. She did not stop until she had put a hundred feet of honest greensward between her and the baleful bush, and then she turned round and bayed back at the shrieking vegetable, with a mingled howl of indignation and terror, a mixture of bravado and funk that was ludicrous to the last degree. Anything in the way of animal life, four-footed or two-footed or no footed, a tangible living creature, Juno would face with equanimity and courage, but this mysterious noise, of intangible origin, coming out of a mere vegetable, was an impertinence too intolerable to be endured. Toptee boldly thrust his black fist in among the leaves, but scuttled off almost as much alarmed as the dog. All my native attendants tried it successively until they grew accustomed to it, and then it seemed to furnish them with an endless source of amusement. The rabbits, rats, cattatoops, wam-wams and indeed all other quadrupeds gave this plant a wide berth, while the big tube bill as well as the rest of the birds seemed to respect it as the home and sanctuary of the little tatta woo. It was not until long afterward I discovered that these interesting creatures lived together on somewhat communistic principles, having a common supply of honey stored up in a large reservoir in the center of their different groups of nests for use in the dry season and stormy weather. They also fed each other's young when they heard them crying for food, and performed a like office for their neighbors when hatching. They were as courageous as birds of Paradise, and defended their homes in platoons against certain large spiders and beetles that were tempted to prey on their honey, eggs and young. I have seen a perfect cloud of them attack and pick to death a small but vicious species of cat that had made an assault on a stray and inexperienced member of their fraternity.

INDIAN ARROW MAKING.

Editor Forest and Stream:

In a late issue appeared an interesting communication on "Indian Arrow Making," by H. G. Dulog.

Stone implements are continually washed up by rains or turned up by the plow and are of "comparatively little scientific value; it is only when they occur in considerable numbers and especially when associated with other remains, that they serve to throw much light on the manners and customs of ancient times." Thus writes Sir John Lubbock, in his "Prehistoric Times."

My father, the late Prof. S. S. Haldeman, L.L.D., M.N. A.S., etc., discovered in 1876 the valuable remains of an Indian habitation and workshop, the stone and pottery relics, many hundred in number, were varied and illustrative of a restricted locality. He considered the deposit at least two thousand years old, as it was covered by a vegetable mold of 30in. Dr. Abbott (*American Naturalist*, February, 1876) estimates that it requires thirteen centuries to accumulate 10in. of vegetable mold. My father sent a preliminary account of his "find" to the Société des Américanistes in 1877; the following year he made a verbal communication to the Academy of the Natural Sciences, Philadelphia, and a year later, 1878, he read a paper before the American Philosophical Society. This paper, illustrated by many plates, was published by the society. Our home at Chickies, Pa., stood at the foot of a cliff of Potsdam sandstone (quartzite), fronting on the Susquehanna River. At the base of the cliff is an anticlinal axis, and in a cave—or retreat, as my father called it—so formed the treasures of aboriginal manufacture were found. In his paper the locality is thus described:

"A traveler by the railway which passes in front may observe a vaulted recess open to the light of day, where formerly the occupation of arrow-making was followed. It is about seven feet high in the middle of the arch in front, whence it slopes north, south and east to the ground, much as an oven declines in all directions from the mouth, the space occupied by the recess being about ten by fourteen feet in extent, and here most of the implements were found, but some from the earth a few feet beyond the opening have been included as pertaining to the general deposit, for a fragment of pottery occurring within the recesses would be matched by one or more pieces outside. The cavity is due to the falling away of stones, forming the anticlinal curve, several of which were removed in clearing the space, and, to prevent accident, one which seemed ready to fall was detached from the roof. No stalagmitic material was present. The place was adapted for the residence of savages. The base of the cliff at the river margin left a defensible passage-way; on the north the land spread into arable soil; a large spring about 170yds. north of the shelter offered good water, and near it was a trap (dolerite) boulder of the drift of several tons weight (from the Conewago Hills, ten miles to the north) with a depression adapted for grinding corn, perhaps in part artificial or deepened by use. Here then were shelter, defense, convenience, planting, hunting, boating, fishing in two streams, and a forest."

Prof. Haldeman's paper is divided into eleven short chapters and all the articles described are illustrated. He describes knives (stone implements which require a cutting edge), chisels, scrapers and borers. In chapter V. we come to arrowheads. To quote again: "Arrowheads seem, upon both continents, to be the most common of all definite stone implements. The Chickie's Retreat furnishes about four hundred entire or fragmentary examples, excluding mere spalls and counting the many worked fragments which belong to this type. The material used includes quartzite and white quartz, both minerals of the locality; limestone of the vicinity (rarely used), and minerals selected from the pebbles and fragments along the shore and bed of the Susquehanna, such as red jasper, yellow jasper, chert, trap, indurite (indurated clay) and siliceous shale hard enough to scratch glass. The numerous broken specimens and the abundance of chips suggest that the retreat was occupied by generations of arrow makers; and it might be expected that four hundred specimens from the same workshop would exhibit many stages of the manufacture, and plate five represents such an illustrative series." Most of the specimens indicate that the point was the first part finished and the basil notches were the last parts made. This is illustrated by specimens, the points of which are finished while an unremoved mass of the material remains at the base. Spear heads occupy the next chapter. "Except in size," he says, "there is little difference between spear heads and arrow heads, and there is probably no difference between the heads of spears, whether used for thrusting or throwing. Certain broad, triangular forms seem intended for fish spears, the barbs being sufficiently broad to hold in the soft muscle of fishes." Dr. Abbott (Stone Age, of New Jersey, Smithsonian Report for 1875) distinguishes between a lance and a spear, assigning to the spear head "a notched or stemmed base, or both, which features singularly or together characterize the spear head proper, which also are smaller as a class than lance heads, but too large to be of use if placed at the end of an arrow."

"As the arrow head passes into that of the spear," begins chapter VII., on hoes and diggers, "so when the form classed with spear heads is regarded as too large for this weapon, its function is, with probable reason, considered to be that of a hoe."

In Chapter 8 on sinkers, we are informed, "It has been customary to regard certain notched stones as net-sinkers, and at the Centennial Exposition at Philadelphia in 1876 there was a wide-meshed seine (I believe from North America) made of narrow thongs, the lower edge of which was weighted with such stones. Some of the larger examples of these stones may have been used as weights to the vines, with which streams were swept to drive the fish into weirs, or as anchors to long lines (out lines) set during the night, with attached shorter lines or links bearing the hooks."

"The Retreat furnished about fifty stones, mostly pebbles, varying in form and size, some marked, others unmarked, the latter of which, if found with river gravel, would not be entitled to mention here, but being placed by human hands in a human habitation, they are to be classified as implements." Most of the specimens were sandstone and bore marks of adaptation or use.

Chapter 10 is given to various articles, tomahawks of honor. "Parts of five examples of these, light perforated tomahawks (banner stones, scepter, or badges of authority) were found in the retreat." The parts of two pipes were dug up; one a pipestem of clay slightly burnt, the other a "taper steatite pipe, flat below, convex above." Shells and bones were discovered in various stages of decay, but few of the former, while the latter were more abundant. The hollow bones are split, according to the habit of modern savages who eat the marrow. The common deer bones were the most abundant.

About three hundred fragments of pottery were found within or outside the Retreat, "and in some cases a piece apparently thrown out when a vessel was broken, could be fitted to another found inside; the finest example was in four pieces, one from the inside and three from the earth outside."

The history of the Retreat, as shown by its contents, is the same as the account of Mr. Dulog's friend who saw the old Indian expert making his arrow head of obsidium. Their methods are the same, yet at least two thousand years have intervened between the manufacturers of the Chickis Retreat and the old Digger Indian who still lives at Alem.

VICTOR M. HALDEMAN.

THE SHAMAN.

[From "Our New Alaska."]

WHILE cruising in the Alaskan archipelago the voyager often discovers, on some lone islet or lowlying point projecting from a headland, what appears to be a miniature house, half hidden by a luxurious undergrowth. Sometimes it is whitewashed and sometimes it is painted in gaudy colors. Occasionally it has a little window in the side. As a rule it is remote from settlement of any kind, and affords the only suggestion of human occupation for miles. Only towering mountain peaks, pine-clad and snow-capped, and tortuous water channels intervene, and there is usually such an absence of animal life, owing to the physical formation of angular height and fathomless depths, that even the scream of a gull seldom disturbs the solitude.

The stranger wonders at the apparent preference for isolation for any purpose whatsoever; but, after having been duly informed, he learns to take it for granted whenever he sees them, that each of these diminutive tenements is the mortuary abode of some "Shaman" or Indian magician, whose supposed supernatural powers have not availed to avert the inevitable grip. Having completed the mortal period of his allotment for good or evil, whichever suits his individual caprice, he has been summarily shelved as it were, by those who care to have nothing more to do with him or his occult dealings. They have swathed his poor body in cerements of sail-cloth and mats, covered it with a dance blanket, and laid it away like a discarded bundle whose usefulness is done. There it will dry into a mummy, or molder into decay. Nevertheless, he has been scrupulously provided for by his credulous subjects, who have carefully placed beside him within his wooden domicile, all the properties and appurtenances of his craft—his magic charms, hideous masks, grotesque wooden rattles, fantastic toggery, and nameless implements, which it is believed will serve him in some new embodiment which he is expected to assume. Formerly these relics were held in superstitious awe by the natives, and even the burial site was shunned. But in these days of modern civilization and vandalism the graves are plundered of their contents, not only by ethnological students and visitors in search of curios, but by the natives themselves, whose cupidity has overcome the scruples of bygone days of abject barbarism.

The Shaman,* or medicine man, is an omnipresent living conundrum to his unsophisticated people. He is a mystery which they cannot comprehend, and a terror always, for while he is a handy sort of a personage to have in a community, and he is supposed to have power to heal the sick, he is, nevertheless, believed to be in league with the devil. The malign influence of his spells is a constant menace, and no one can tell when or upon whom it may fall. This is a hard reputation to have, but the Shaman promotes it. He is a self-constituted bugaboo, having duly qualified himself for the role by a course of trying ordeals by fire, water, famine and direst torture. It is probably his attested ability to survive infliction which in ordinary course would cause death, rather than absolute immunity, from any physical injury, which inspires his people with superstitious fear. At the same time he is himself in constant apprehension of some clandestine influence at work to counteract his own. If his incantations and mummeries fail of success, he charges the failure and its blame to whomever he chooses. Many an innocent life has expiated an alleged interference in days gone by. Happily, his supremacy is now at an end. His sway was incontinently cut short by Capt. Beardslee, in 1879, when he interposed to prevent the murder of a woman who had been accused by a vengeful medicine man of being a witch. A witch used to have no more show in Alaska than she did in the days of our disreputable Pilgrim forefathers.

It is the professional business of the Shaman to scare people and to keep them scared. It pays. Whenever he wants money, instead of "holding a man up," he shakes his rattle at him. One shake will impoverish an ordinary Siwash, two will clean him out. It is the same with bodily ailments. As a medical practitioner he despises the use of nostrums, and discards all physic. His method is to frighten disease away. When summoned in a case of sickness he rigs himself out in a garb that would scare a hobgoblin and increase the pallor of a ghost. An invalid must be in great extremity indeed when he will consent to send for a doctor. An appointment with a nightmare would not require half the nerve. The patient knows just what to expect. He has prepared himself to be frightened by a long course of mental enervation, and he feels that it is merely a toss-up which shall stand the infernal racket the longer, himself or the ailment. In fact if he should fail to be frightened at all, the enchantment is *kultus*—no good—and the doctor withdraws, a mortified and dtsgruntled Shaman.

Such dilemma is alarming, but the medicine man is prepared to wrestle with it. He at once dons a frightful headgear of mountain-goat horns, with a mask of hideous device; and down his naked spine a row of horns, jet black and polished, extends in abnormal development to the very base. Long pendants made of dried skunk skins and assorted intestines dangle from his head, armlets and anklets equally repulsive encircle his shriveled limbs, and his whole body glows with an ocher of green, yellow and red. Armed with a huge wooden rattle, fashioned in the form of a stork, with a demon carved on its back pulling out a man's tongue with its teeth or some other collateral symbol still more repulsive, and carrying a long mystic rod or wand in his hand, he advances into the room with a series of postures and jerks, which impressively emphasize his aggressiveness, overpowering the patient and leaving him limp and paralyzed with terror. If, however, the disease should prove recalcitrant, the Shaman seats himself on the earth in the center of the room with his back to the fire, and proceeds to beat the ground with his stick, shaking his rattle and singing with all his might. He seems in dead earnest, and, if there is anything in the logic of sympathy, the patient ought to get well instanter. But death too often plays the stronger hand, carrying off the victim and the malady together, much to the disgust of the doctor, who is very apt to make some outsider the scapegoat of his bad luck. Quite likely he marvels that man should die at all, and it must be even a greater surprise to him when he is called to shuffle off his own mortal coil; for a magician so capable to heal, and to forefend death, would be likely to suppose himself exempt from the common fate. But the inevitable end comes, and, in view of his peculiar relationship as middleman between mortality and the devil, it is little wonder that he is buried apart from his people, and that the site of his grave is shunned. In something of the strain sung of an abdicated monarch,

> He sleeps his last sleep, he has sprung his last rattle,
> No call can awake him to mischief again.

CHARLES HALLOCK.

*"Shaman" is the name applied to the sorcerer or magician among the Kalmuks and other tribes of Northern Asia, and the word, therefore, adds another evidence to confirm the belief that the Pacific coast tribes have an Asiatic origin.

WILD TURKEY DOMESTICATION.

Editor Forest and Stream:

I have two turkeys—a hen and a gobbler—which were hatched out of wild turkey eggs found in the woods, and far from any human residence or from any tame turkeys. They are now about two months old and doing nicely. Next spring I suppose the hen will lay a quantity of eggs, and if there be any among your readers who would like to infuse a little wild blood in their turkey stock, I will take pleasure in exchanging eggs with them—they giving me eggs of the White Holland and brown turkey for my wild ones, egg for egg. I have no other turkeys but these two, and none of my neighbors have any; so there need not be any doubt that the eggs will be of the genuine wild stock. Whether the tame stock would be improved by the mixture I cannot say; but certainly the wild turkeys are far more hardy and easy to rear than the tame stock.

I knew a party years ago who reared quite a flock of turkeys from wild turkey eggs found in the woods. Just after they were hatched, they broke and run like a blue streak, all seeking a hiding place. The old mother had a time of it gathering them about her again and to comfort them. They were then put with the mother in a close coop, with cracks too small for the little fellows to squeeze through, and there they were kept for several days, becoming at last tolerably tame. Then they were turned loose, staying about the premises with the other poultry and flourishing finely. Not one of them died or ever grew sick. They became very familiar, feeding out of the hand and walking boldly into the house as if they owned it. Still they always had a dash of wildness about them, which demonstrated itself in various ways. For instance, sometimes when a stranger came about they would take a sudden scare and dart for cover. Again, they would seek the tallest tree for a roosting place, going up to its topmost branches, while their tame cousins would be content to go only a few feet above the ground. Then they had an unconquerable disposition to wander. At last they would stay out at night, and finally they got to staying two or three nights at a time. When they got down to this sort of business, it was not long before their wild blood got the complete mastery of them. Finally every son-of-a-gun of them took to the woods and never returned. But this was years ago, in a portion of Texas which was then very thinly settled, and full of wild turkeys. Had they been in a thickly settled country, with no wild turkeys to tempt them, no doubt they would have staid at home. I noticed that these wild fellows kept quite to themselves, refusing the society of the tame turkeys, and always fighting them when they came about. They evidently looked upon the tame turkeys as scrubs and far inferior as a race to themselves. I believe that nearly all the domesticated turkeys of Western Texas are derived recently from the wild stock. They show this distinctly, particularly in their blue heads. N. A. T.

ABILENE, Texas, Sept. 22.

DOG-WOLF HYBRID.—Ottawa, Ont., Sept. 30.—*Editor Forest and Stream:* Mr. John Deslauriers, a well-known sportsman of this place, has just brought back from the West, where he has been on a shooting trip as far as Vancouver Island, a hybrid wolf, a bitch, half Gordon setter, half prairie wolf. She was bred by Mr. Bedson, of the Stony Mountain Penitentiary, widely known for his herd of domesticated buffaloes. She is six months old and is about twenty-four inches high at the shoulder, and is slightly built; is of a tawny yellow, plentifully sprinkled on the back with black hairs. Her coat is soft to the touch, but does not lie flat. The tail is very long and carried low, "sickle"-fashion. Her head looks just what it is—half wolf, half setter—and is carried high on a long neck. The ears are carried up straight, but are not sharp at the top, and look heavy. She is very playful and affectionate, just like a puppy. I had my Clumber, Johnny, with me when I went to see her. As soon as he caught sight of her he ran into the house and could not be induced to come out, although he is anything but a timid dog ordinarily. At last I dragged him out and within reach of the animal. She nearly went crazy with delight, squirming all round him, licking him, and trying to induce him to play with her. He stood, not moving a muscle, but not seeming to enjoy it by any means, and was very much delighted when I gave him leave to go. I will let you know how she gets on.—CLUMBER.

Camp-Fire Flickerings.

"That reminds me."

190.

LAST fall a party of us were out camping on Bruce's Bayou. One of the tents was occupied by Dr. V., Nat S., Lockie and Jack A. The tent was rather small and the large tick filled with straw took up the entire width and made rather close quarters. The party, excepting Jack A., were old campers, and persuaded Jack (who had come well supplied with buffalo robe and blankets) that the best plan for comfort would be to make one large bed, using the buffalo robe for a foundation and covering with the blankets. Jack acquiesced and stood looking on while Lockie and the Doctor made up a most inviting looking bed. Nat S., in the meantime, was quietly getting ready to turn in, and no sooner was the last of the blankets put in place than he had ensconced himself under one side of them, and giving them a scientific tuck, planted his 175lbs. of avoirdupois on the tuck. Lockie followed, and Doctor was not much behind him. Jack's share of the blankets looked decidedly scant, but he turned in saying nothing. After about half an hour of tugging and trying to get enough blanket to cover one side of him, he gave it up and apparently dropped asleep. The rest were certainly sound asleep, Nat S. and Lockie snoring a loud accompaniment to Jack's chattering teeth. Jack quietly got up, stepped outside the tent, and then pulling aside the tent flaps stuck his head in and called in a very loud whisper, "Lockie." "What's the matter, Jack, why don't you turn in?" answered Lockie. "Where's my gun?" excitedly asks Jack, apparently trying to find it in the corner of the tent. By this time the rest of the party are awake, and Doctor sleepily adds, "What do you want with a gun at this time of night?" "There's a coon in the big oak back of the tent," says Jack, making a desperate effort to get his gun from the case. They are all up now, rather scantily attired and barefooted, and all three rush to the oak tree (not noticing that Jack does not follow) and surround it. After some time spent in peering into the tree top, Lockie, through his chattering teeth, says, Ja-Ja-c-k, are you sure you saw a coon?" There is no reply, and Nat says, "Where the dickens is Jack?" And then they all begin to see something more than coon and silently make their way back to the tent to be greeted by Jack on their entrance with, "Turn in, boys, take your choice of sides, I'll take mine out of the middle this time." Very little is said. The old campers conclude Jack is not such a tenderfoot after all, and Jack smokes good cigars under a promise of secrecy, but the story was too good to keep, and thus it finds its way to FOREST AND STREAM. X.

GRAND HAVEN, Mich.

"NESSMUK'S" POEMS.

SOME time ago there came to the FOREST AND STREAM a manuscript volume of verse, written in the characteristic hand of "Nessmuk," and bound in limp buckskin from a deer that fell to his own little muzzleloading rifle. The manuscript gave evidence of having been much read by the author's friends; and it has been read and in parts re-read, here in the office, and frequently brought out for the entertainment of visitors when "Nessmuk's" name happened to come up. Those who are familiar with "Nessmuk's", contributions to the FOREST AND STREAM need not be told that many of his poems relate to the woods and the camp; but their range is more comprehensive than this. If some of his verses are attuned to the soughing of the night wind through the hemlocks, and some are musical with the gurgle of the mountain stream, in others is the rhythm of life and labor—the ring of anvil and lapstone, the buzz of loom and whirr of factory wheels, the city's rumble, the roll of drum and cannon's roar. And because between these buckskin covers we have found so much true poetry—humor, pathos, shrewd philosophy, and that which has to it the ring of manliness, we propose to put the poems into the permanent form they deserve, and give them wider circulation than ever a manuscript can have.

The poems, with a biographical sketch of "Nessmuk," will make a volume of something more than 120 pages. The book will be printed from type; the size of the edition will depend upon the number of subscriptions received, and the type will then be distributed. The price for copies subscribed for before publication will be $1. For remaining copies after publication the publishers reserve the right to advance the price. Subscriptions should be sent in on the blank form on page 218. Duplicate blanks will be sent upon application.

HUNTING IN THE HIMALAYAS.

Lights and Shades of an Indian Forester's Life.

XI.—CONTINUED.

CAMP BOKSAR, Lower Gurhwal, Sewaliks, East India.—Returning to camp from our pig-sticking expedition, G. declared his determination to go on to the Ganges in the evening, and gave orders for his camels to start at 3 o'clock. The man-eater was to be my chief solicitude; I was told to license any party of professional Shikarees to go after him, and G. gave me provisional authority to offer 500 rupees reward, undertaking to get sanction immediately for the advance. After breakfast I looked over my correspondence. Using the local forester as my moonshie or scribe, I passed orders on the vernacular correspondence, and had just finished when G. came in ready for the road. It was then half-past four, and ordering my pony to be saddled, I rode four miles along the road with him, and as the sun was then setting, I received his last parting instructions to bag the man-eater if possible, exchanged adieus and galloped homeward, reaching camp while it was still daylight.

I was planning measures of detection of dishonest subordinates over my after-dinner pipe, when the forester sent in his salaams, and being admitted, reported that the letter carrier from the Ganges had not yet turned up. My thoughts at once reverted to the man-eater, which, on the law of even chances, was the one missed by G. the previous day, and which, driven over the hill, had entered the forest about midway between my camp and the Ganges and only three or four miles from the road. "It is possible that G. Sahib took him back with him," said the forester, "to secure his own letters which were indistinguishable in the dusk of the evening; none of us are afraid that the man-eater has taken him, for although the beast has been three years in the forest and killed so many villagers and bamboo cutters, he never once touched a man with a government badge on him, and the rangers are daily in the forest alone and have no fear." The suggestion that G. may have taken him back to the Ganges was by no means improbable, and amounted almost to a certainty when, on inquiry, I learned that the letter bags were carried locked and that each forester kept a key. I tried to convince myself that this was the solution, but I was anxious, nevertheless, and gave orders for an early start in the morning.

I got away betimes, and skirting the road at a distance of a mile or two, struck the hill at about six miles, and skirted its base, which sloped off toward the Ganges. There was a general line of depression at the base of the hill, with a narrow strip of grass cover, from which I put up two or three pigs and some spotted hinds, but I saw no stag until within a few hundred yards of the road, when one sprang up and went straight away from me. I hit him and saw him wince, but he recovered himself and went off at a gallop for another fifty yards, and the elephant moving, I was unable to fire the second barrel immediately. As soon as the mahout had steadied him I saw the stag, which had stopped suddenly in his run, stand as if paralyzed, and taking a second shot I bowled him over. I had reloaded my rifle from which I fired the second shot, and was looking at the stag as we approached, when the elephant gave sign, and the same instant a savage growl not ten yards from me apprised me of a tiger crouching in the grass. I fired, the beast rose on his haunches, and I gave him the second barrel in the shoulder as he rolled over backward, when to my surprise I found that he had been lying in a bed matted with blood. I looked round and saw no victim, and as the tiger lay I saw no wounds save the two I had given her—one on the side of the neck the other in the shoulder. She—for it was a tigress, with a very handsomely marked and bright skin—appeared to have ceased struggling, and after having made the elephant examine her with trunk and foot, and satisfied ourselves that she was quite dead, we dismounted, and by means of ropes attached to her near legs turned her over, off side upward, and saw that her left side was matted with blood and a great hole in the flank, which I had no hesitation in crediting to G.'s express. As we turned her over a piece of excrement dropped from her, and taking it in my fingers and breaking it, found the pieces held together with a single hair. Crushing the mass add drawing the hair out carefully, it curled up in my hand, and declared itself beyond all question a human hair, although not from the head. Remembering the Gkoorka's tale, I examined the chest and shoulders, and soon found an old but healed scar, not between the chest and shoulders, as had been supposed, but right in the muscle of the shoulder. On closer examination we could feel a hard substance, evidently a battered bullet, under the skin at the very top of the shoulder.

The three of us would have been unable to load her, and as I was anxious to get her into camp for a leisurely examination of her internal economy, I was not sorry to hear voices on the road. Hailing the party to halt, we mounted the elephant and went down to the road, where we found a party of seven or eight fakirs, who freely proffered their aid on learning that the man-eater had been secured. There were a great many ejaculations at first sight followed by laughter, and then the sturdy rascals got hold of her and lifted her bodily to the elephant's haunches, where she was soon lashed securely, with the stay on top of her, and the howdah braced to its tightest, to maintain it against the heavy strain.

It must have been just dusk when G. passed the spot, I argued, and being probably uncertain whether he had hit the beast or not, had either spent little time in following her up, or had taken the wrong course. Query—Had he met the postman later and taken him back with him? We beat up the strip of grass thoroughly down to the road, about 200yds., and then sighting another cluump about 200yds. to our left, we advanced on it to find that it had already been thoroughly trampled down by elephants; we found some spots of dry blood, and were able to conclude that G. had followed up the tiger to this clump, and that the beast having passed through it, it was too dark to trace her further. Giving up the quest we were about to make for the road, when I caught sight of a few thin tufts of table grass which appeared to fringe a water course. Turning back the elephant we soon reached the spot, and there in a little water course, not 3ft. wide, lay the poor postman, face downward, the mail bag still round his neck, his blanket pants torn off and one of his thighs stripped bare of flesh. We could now unravel the whole story, the tigress had bagged him, carried him to the water course, and was busy tearing him when she heard G.'s elephant pass, or perhaps heard talking, and stole out to reconnoitre. One of the party had got a glimpse of her, and G. had fired, and going into the jungle had found the grass plat, and beaten it thoroughly without seeing the wounded beast steal off. Securing the letter bag, and leaving the poor fellow's body where it lay. we hurriod off to camp, to send out his caste brethren to perform the last offices for his remains.

And this bright-skinned lithe young tigress was the man-eater in defiance of all our theories that it was some decrepit old beast too inactive to seize deer, and too feeble to attack a boar or a buflalo.

Arrived in camp, I found a note from G. telling me that he had fired at, and pretty sure he had wounded, a tiger or panther, he hardly knew which, close to the road, and that it was too dark to get on the track, and as he could not spare another day he wished me to go back at once and follow the beast up if I got on the track. The man-eater, he added, was somewhere about that neighborhood, and he had not met the postman although he had kept the road and been on the lookout for him. I despatched a note to his camp at once, giving full particulars and suggesting that the Ghoorkas should get a hundred rupees and that the balance should go to the family of the poor postman. This has been since approved of. The poor fellow left two wives who get a hundred rupees each, and a young brother who secures the appointment, together with the two wives, to enable him to raise up seed to his brother according to the scriptures; the Ghoorka party get back their battered bullet and divide a hundred rupees between them.

The native officials were unanimously of opinion that the man-eater's fate was due entirely to his recklessness in attacking a government servant, and this opinion, has, I find, met general acceptance among all classes. For myself I cannot help feeling that if the beast had lived out the season, she would have added a zest which my budgets will now want. What sticks me as unaccountable is that she was a full grown animal and has already had cubs, which cubs if they lived must have been trained on human flesh, yet as far as can be ascertained, she had always hunted alone. In my conversation with G. the question of one or more man-eaters had been frequently mooted, and when we first heard of the kill in the Ganges valley, following so soon on the kill at the other end of the division, we again discussed the question, but finding the Ghoorka's bullet was evidence enough that our tiger was the one they fired at, some fifty miles off, and whether she had grown up cubs following in her course or not, she at any rate roamed over the whole division.

And what made her a man-eater? Accident perhaps—poor fellow came suddenly on her over a kill and being attacked in a moment of unguarded fierceness was found to be an easy prey and probably superior in flavor to either pork, beef or venison—a systematic lying in wait for the next victim, an easy capture, and her man-eating propensities were confirmed. The poor postman had been seized from behind and his neck broken so that he could scarcely have been conscious of his fate.

SKIKAREE.

MINNESOTA NOTES.

PILLSBURY, Minn., Sept. 30.—The sporting outlook has not been so bright for five years, though owing to the unusual coolness of the weather and prevailing high winds the sportsman finds some discomforts. The northern flight of ducks has already commenced; that is, the birds have come down from their northern breeding grounds to our lakes, sloughs, rice beds, and are tarrying for a while before continuing their journey southward. A good many of them will make their eternal tarry hereabouts. Not since the fall of '80 have such immense flocks been seen, nor such a large proportion of mallards. More brant are also seen than usual. Ruffed grouse are in great force, and already a little army of pot-hunters are scouring the woods. I have seen but a few gray and black squirrels as yet; but as the nut crop is great, good bags may be made later when the trees are bare of foliage. Land hunters and lumbermen report deer and bear sign plenty. Few localities can equal this for the lovers of rod and gun.

J. FRANK LOCKE.

SAUK CENTER, Sept. 29.—Prairie chickens are not so plenty hereabouts as they were formerly, owing to their being so shamefully slaughtered out of season. There are a lot of loafers (they handle the gun and think they are sportsmen) around here who do not care a particle for the law and really manage to escape its clutches. They go out "just for a ride" or "to train the dog a little" and kill off our poor little chicks before they are half grown and before other true sportsmen will think of shooting chickens. The prospect is fair for water fowl, especially ducks, but as yet the wild geese have not come down from the north in any great numbers.

A bountiful harvest has been raised in this part of the county, and there will be grand good shooting if the geese only come in sufficient numbers so we can almost keep our breechloaders "red hot" after them.

It is one of the best countries to sport in hereabouts, as the farmers are all very kind and obliging, and one can usually find out by them a splendid place to "dig a hole" and wait the pleasure of Sir Goose.

Wild rice is getting a start in a number of our lakes and marshes, and as the ducks dearly love this species of food, I think it is bound to increase our water fowl in these parts.

In my next I will give you a description of a fishing trip some time ago, to waters where fish can be found in great quantities.

DELL.

ABOLISH SPRING SHOOTING.—Greenport, Long Island, Sept. 26.—I think the FOREST AND STREAM is worthy of all praise for the excellent work it has inaugurated for the protection of song birds, and also for its earnest endeavors to prevent spring shooting. I have been out with the gun constantly for forty years, and have always thought it wrong to disturb the fowl and birds in their spring migrations; but it never occurred to the sportsmen to suppress the evil until the FOREST AND STREAM opened the war.—ISAAC MCLELLAN.

MARSH SHOOTING IN CAPE COD.

BUR-R-R-R! What an infernal noise that old alarm clock makes, and sure to break into the best dream and soundest slumber.

Up it is, however, for if a certain proverb is true that "the early bird catches the worm," even more so is it that the early sportsman takes the cream of marsh bird shooting.

The stars are still faintly shining through the morning mist as, after that best preparation for a day's work, a good hot breakfast, my friend C. and I, laden with decoys, guns and lunch, tramp over the barren hillsides of a sleepy Cape Cod town toward the boat landing, startling on our way an old upland plover almost too fat to fly, but much too wary and respectful of himself to be caught within gunshot.

The sail of our little sharpie is hoisted and soon we are running down the crooked channel of the bay, now and then hearing the soft whistle of a bunch of peep or ringnecks, or watching them while feeding on the pebbly shore as we glide silently along, and hardly is the sun well risen when we reach the meadows and prepare for business. C. noting the northerly wind concludes to try the mowed land to the south, expecting thereby to have first opportunity at any birds trading as they usually do up wind, and builds his stand on one of the open places in the marsh a mile or more away, while I prefer to try my fortune at a large shallow pond hole with open muddy edge, as better for all-around shooting. The night tide has washed the blind, but eelgrass is abundant, so it is soon repaired; the decoys are set out as naturally as possible, the plover in a bunch at the water's edge facing up wind with one a little apart from the rest, after regulation style, but the "summer" and "winter" yellowlegs scattered over the shallow portion of the pool wherever they may most easily attract the attention of any passing bird or flock, and then make myself as comfortable as possible, resting on the soft seaweed.

While thus occupied two men come up and take possession of stands to the north and east; and soon it is evident we are to have plenty of company, for surely there is another team toiling through the soft deep sand, laden with two others.

A faint whistle diverts all interest from these new comers, and instead centers our attention on a small bunch of "summers" rapidly approaching. These soon are circling in the air replying to our calls, and finally drop to the decoys at the most northerly stand where, just alighting, two fell dead; the other two, terror-stricken, dart on, again wheel to the next decoys, but go no further on their southern journey. Soon another flock of five come straggling along and scale downward, whistling sociably at sight of their supposed relations feeding in the pool.

Of these two "summers" fall to my right barrel, and one, a "winter," to the left; while the two survivors, not wheeling, make off and soon are out of sight and hearing.

The long wait following is not heeded, but interested, I watch the nimble movements of the peep and ringnecks running to and fro around the stand—often looking up inquisitively at me not more than four or five feet distant—feeding and almost incessantly bathing in the warm shallow water. A short note or squeal, and accepting our invitation a single grass bird, which has passed each of the northerly stands unseen, alights not ten feet distant, composedly smoothes his ruffled feathers a little and goes industriously to work seeking his breakfast.

Evidently, however, all is not satisfactory, for with another squeak he flirts up as he came, but departing drops lifeless into the hedge some 20yds. away. What! two more gunners? yes, and there is still another! Nine persons on this one piece of marsh alone and reports of the guns are heard of others also further down the shore. What wonder that each year birds are reported more and more scarce, and bunches fewer and smaller in size? The last comers prove to be boys who (fortunately for us) do not intend to waste their opportunities; but wish to cruise over the marsh that they may have all the shooting possible; and after inquiring what the show for birds may be, keep on down the shore, and soon are heard banging away at the peep; leaving us in quiet.

It seems to me that the small boy has never been rightly appreciated in shore bird shooting; he very seldom manages to secure many of the larger and more shy birds, is well satisfied to shoot some peep (perfectly happy to tramp all day for a few), and is a blessing when birds are scarce, being almost as good as a hawk for stirring up birds, which when so driven seem to decoy better than when merely changing feeding ground.

Soon another singling grassbird comes along, but making a bad miss I have to use a second cartridge, making amends a few minutes later on another single one. Two long hours are whiled away with lunch, pipe and a good nap, from which last the report of a gun arouses; and then the whistles are heard of three birds far away in the west. These will not decoy, but nevertheless flying past far up overhead one falls to the occupants of a westerly stand, and one with broken wing to one of those at the east; the first bird proving to be a jack curlew, the second a doebird, while the survivor, a blackbreast, completes a very unusual trio. Half an hour later a single chicken plover comes along, and then following a pair of redbreasts passing in a hurry comes from over the bay the attractive note of a blackbreast, and in company with it that of a winter yellowleg. Replying to our calls they circle once and again and with set wings drop down. Just alighting the plover takes alarm, but darting away a charge of shot overtakes him and he falls splashing in the pool, the winter, out of range, escaping without hurt. My friend C. now comes by on his way to the boat, and hardly is he well past the stand when a bunch of summers comes sailing along over the marsh from the south. These hear our call, turn, and in striking contrast to the shyness of our last visitors, with set wings confidingly drop to the decoys and alight in the shallow water.

A pretty sight it is to see the six birds scattered over the pool dipping over the water and arranging their plumage, and so unconscious of any danger that it seems a shame to disturb them. After some little time their toilets are completed and they make ready to leave, so choosing the only pair I make sure of them, but as the rest rise, too confident of another, make an inexcusable miss with my second barrel.

One heads away, the other three, bewildered, turn again to my call, and having hastily reloaded one drops to my right barrel, and crossing, both the others are cut down by my left. It is now too late to hope for more, so decoys are taken up, and after a tiresome walk through the sand reach the boat and soon we are drifting homeward with the tide, over the smooth water tinted by the setting sun, tired yet content.

C. brings back for his share of the spoils a doebird, two blackbreasts and one beetlehead plover, four summers and four grassbirds, while I count out one blackbreast and one chicken plover, a winter yellowleg and seven summers, and three grassbirds, also two bluewing teal pitched up on my way to the boat in the evening,

A rather poor showing for a hard day's work, you say? Well, perhaps it is as compared with sport expected only a few years since, but very fair for an ordinary day now. Be that as it may, however, both of us were satisfied, each enjoyed the day; what more can be asked for?

BOSTON.

MY FIRST BEAR HUNT.

IN the year 1862, while trapping with a friend on Richardson's Lake, in Northern Maine, after a very pleasant fall, during which we had explored every stream and pond for many miles around, setting traps wherever signs indicated any chance for fur, and the season being near its close, snow having begun to fall, we made a trip to the settlement of Magalloway, a distance of eight miles through the forests without a track on the way. In passing a large rock, some ten feet high, we surprised a Canadian lynx which was crouched upon the top ready to spring upon a rabbit or fox that might pass near by. He leaped down upon the opposite side and escaped without giving us a chance shot. Soon after we came upon the fresh track of a bear, and as I stood beside that noble track in the fresh snow, so soft and resplendent in the morning light, I felt a thrill pass over me such as I remember having experienced when, a small boy, from time to time I would venture to the edge of the forest after a light snow and allow my eyes to feast upon the track of a fox or rabbit. To stand for the first time beside the track of our most noble game will awaken every dormant feeling and create a strong desire to follow the trail and see the home of a bear, at least that was my feeling, so after arriving at the settlement I sought a man, Mr. Leavitt, who had had some experience with bears, and found him very willing to go.

Early the next morning we started. Upon coming to the river the ice was found too thin to bear us, so we got some boards which we pushed along one after the other and were enabled to cross. In due time we came to the track in about four inches of snow. It led due south toward Moose Mountain, and over a hardwood ridge which divides the waters of the Umbagog from those running into Richardson Lake. We had two dogs; one a good bear dog about half bull, the other a fine hound. When we crossed the ridge the dogs shot ahead like an arrow and routed several deer, which struck directly for Cranberry Bog Pond, which lies about a mile north of this ridge. They were soon out of hearing. The hound was never seen afterward. We suppose he broke into the pond or was killed by the deer. The other dog found his way to the settlement. We continued to follow the bear's track, which led us, after many turns, down into a low cedar swamp; and just as darkness began to close around us we came to an old logging road that leads to Lake Umbagog and called B. Carry. We decided to follow it to a camp at the foot of Richardson's Lake and camp for the night. Soon after we came to a trail crossing the road; we made out to see in the darkness that it was an enormous bear's track, the creature having but three feet and one stub, or as we afterward found, a fore foot gone except the ball. He stepped only about ten inches and must have made slow progress. Mr. Leavitt said he would have that bear at any rate, so we made our way to the camp, which we soon had aglow with a good fire; and after passing a comfortable night we took an early start for the trail.

We soon found that this old veteran was not so fine to follow as our young dandy bear of yesterday, for the latter chose the best walking ground, while this old fellow wallowed and crawled through the most inaccessible swamps, along the Lake shore to the marsh. No one can imagine what one has to encounter following a bear's trail unless he has once had a taste of the sport. We crawled through thickets of dead cedars and over old logs and rocks for miles, then we came to a great tract of burnt land where the pine trees lay across each other in some places ten to fifteen feet deep. We had some hard falls in crossing on these logs, but as everything bad has an end we came to better ground at last, and were soon surprised to see a great fine stub having rotten wood newly thrown out over the snow for many feet around. We felt that we had got our bear at last, but upon passing around the stump we saw that he had rejected it and left. With much disappointment we pulled on his track. He turned to the west and crossed the deers' trail near the pond. Many times since I have wished we had followed to the pond and seen what had occurred there to have caused the death of our noble hound, had we known that he was lost we should have done so. Our big bear soon crossed the small bear's track along the side of Moose Mountain; there we found where he had been eating mountain ash berries, having broken the trees down in many places, and at last he had made a bed upon a flat rock, but after resting a while he had taken his leave. We followed him to within two miles of the settlement, then as night came on we struck for home and came out soon after dark at a clearing. We were very tired; with clothes well worn out, and our courage not a little dampened.

After a good night's rest and plenty of food we started upon the morrow, took the track and followed it south to a ledgy hill, where bruin had tried for a den, but could not suit himself. Then he had plunged into a shaky bog and wallowed in sloughs so deep we felt sure he must get mired; but they will go through mud that would mire an alligator. At last, after an endless tramping backward and forward, he came to the Magalloway River and swam across. We set to work and made a raft. After breaking away the thin ice so we could launch it, we set sail. One stood upon the forward end with a pole to break the ice so that we could draw it along a narrow canal toward the other shore. The river here is deep and has but little current. We had the old bear dog again. In attempting to cross on the ice he broke through and came near drowning; his strength was so nearly exhausted by the breaking of ice and a long cold bath that we had to build a fire and rub him to revive his energies. We were soon again on the trail. After much the same experience, from hill to swamp and through all the bad places he could find, we stood at the close of day upon the shore of the Androscoggin River, and saw a newly frozen track from shore to shore where our game had gone across. As we stood there we held a council of war. I had had enough of it. I did not believe the bear would ever den; and so I thought it of little use to follow him further. Had I known what I have since learned, I should have felt sure of soon finding him snugly housed. Mr. Leavitt said probably he was just across the river, and that we could go down to Errold, cross there, and, after stopping over night, go up upon the other side and get our bear; but I was anxious to go to the lake to attend to my traps, so I left my companion to go to Errold, while I returned to Magalloway.

The remainder of this hunt I will relate as I got it from Mr. Levitt. After passing the night at Errold, he took with him a boy with a shotgun, he himself having an axe only, and proceeded to take up the trail on the opposite side of the river. He had gone only a very short distance when he saw the bear's head protruding from a hole in an old pine stub. The dog rushed up and snapped at him while he struck with the back of the axe at his head. The bear struck the dog upon the back and took him up on his paw, fastened by his claws to the skin and was about to take him in his mouth when a severe blow with the axe caused him to drop the dog and make an effort to escape. This he did by breaking through the backside of the stump. A heavy blow administered upon his rump caused the axe to rebound, the thick fur making a complete protection. The boy fired his gun to no effect, while the bear disappeared in thick cover. Mr. Leavitt sighed for my heavy repeating rifle, and took the road nine miles for home. When he reached home his courage and energies were well nigh exhausted, but upon relating his story to his brother-in-law, Mr. West, he was persuaded by him to go and try it again. So they started the next day with the dog, which had a large wound in his back. They followed the track into New Hampshire, up among the Diamond River Mountains; found lodgings at a lumberman's camp and started again the next morning. About noon the dog, being ahead, came up with the bear on the side of a hill, and while the dog and bear were engaged the men ran up and shot him in the side of the head with two balls in a little quill gun, which killed him at once. They found a coat of about 3in. of fat covering the whole body. They took the skin and fat and reached the lumber camp (where they had stayed the last night) at dark and returned the following morning for the meat, which proved a valuable addition to the supplies at the camp. All was left there except a fine piece which was awaiting my return when I arrived from the lake. The fat made nine gallons of oil.

I never have recovered from the disappointment that I felt when I learned how near I was to that bear when I turned back. Many times since I have remained firm when all others have given up. Just a thought of it will cause me to rally when otherwise my courage would falter. I have since followed several bears, but none so large as that one. It was found that all the toes of one forward foot had been taken off by a trap.

BRUIN.

HUNTING IN THE LONE STAR STATE.

CAMP LOWER CHEROKEE, San Saba County, Tex. —As I have been a reader of FOREST AND STREAM for some time, and am now in camp on a two weeks' hunt and fish, will attempt to give you a history of our trip from day to day.

On Tuesday, the 31st of August, we left Belton with one two-horse wagon and one two-horse truck loaded with tents, cots, blankets, cooking utensils, provisions, guns and dogs, for the waters of the Colorado and San Saba rivers. Our party consisted of Mr. M. Lusk, myself and a negro called Ben, as driver and cook. Ben is a true type of the genuine African, about 30 years old, full of superstition, fear and credulity. Our outfit was ample and complete.

As the game law was out on Sept. 1, we did not expect to shoot anything but squirrels until we arrived at this camp. The first day we drove twenty-five miles and camped at Soey's Gap. On the next day we camped on the banks of the beautiful Clear Cherokee Lake, which heads in Llano county, or near the line, from a large spring of pure water, and is supplied through its entire course by large, bold, lasting springs. It abounds in the finest catfish—blue and yellow, black bass and goggle-eyed perch. It has lakes or ponds from ¼ to 1 mile in length, 20 to 40yds. in width, and from 2 to 15ft. deep. We arrived here about sundown and at once prepared our supper. We had killed four squirrels on the way, and Ben dressed them nicely and made what he called a stew, squirrels cut up in six parts placed in a porcelain-lined pan. He stewed them awhile and then added potatoes cut up with onions and mixed freely with red pepper pods. What a dish it was to a hungry man and how we relished it, as we ate our supper on an improvised table placed over a cot, sitting under large pecan trees with our torch flaring in the south breeze, the young moon peeping through the trees, and the atmosphere as clear and pure as man could wish.

Our horses, after being fed, were staked out on mesquite grass some distance back from the creek. Mr. Lusk and myself placed our cots under a large pecan tree to protect us from the dew. Ben put his cot close by the hack and near the road, and was soon asleep. While we were talking about the trip further on, and discussing the character of the country ahead, which I knew perfectly well, I was telling Mr. L. there was a heavy cedar brake to pass through, which was full of wolves, panthers, Mexican hogs, chapparal cocks, quail, and almost everything else but bear. At this moment a wolf set up a howl on the opposite side of the creek, and was answered by another not far off, with which Ben woke up and remarked that some one lived across the creek and had a lot of dogs, as they were howling all around. When I explained that they were not dogs but wolves, he was at the camp-fire in a moment, and lay down there, calling the two dogs, Trusty and Shep, to lie down by him. We went to sleep, and about midnight I awoke, and got up and lighting my pipe, sat by the fire. I thought of the times, only 18 years ago, when I would not have dared to camp in this place with a fire burning, for the murderous Comanche Indians at that time made monthly visits, stole horses, murdered all the whites they could reach, and kept the people in constant alarm. On this spot in October, 1839,

Gen. Burleser, with a small force of Texans, overtook the remnant of the once powerful Cherokees, and had a severe bout with them, killing six Indians and capturing many prisoners—women and children—including the wife and children of the celebrated Cherokee Chief Bowles. This blow exterminated that once formidable tribe, and restored peace to the frontier for some time, until the Comanches and Apaches began to raid the frontier in 1864-5.

Camp Hot Spring, Sept. 1.—We broke camp yesterday some time after sun up, after killing five squirrels and one teal duck, which we had for breakfast. Ben was up early asking if them wolves had been around camp any more, and "he would just like to get a shot at one with a good rest on the wagon wheel, he would pay him back for 'sturbin' his slumbers." We arrived here about 4 P. M., pitched our tent and prepared supper. While Ben was washing potatoes, Mr. Lusk and I got out our rods and went to the lake, just below the spring, baited our hooks with live minnows, and in less than half an hour we had three yellow catfish, weighing about 1½lbs. each; two bass, weighing ¾lbs. each and one goggle-eye perch. We had fresh fish, quail and doves that we had killed on the road for dinner. We spent the balance of the evening in fishing and killing squirrels. The next day we spent looking over the country for deer. I mounted my horse and with a Sharps rifle rode to the foothills, some seven miles back, but could not get in range of deer, though there were several bunches of fine bucks always ahead or on my right or left in an open country. On the 2d several of our friends, all good hunters, came into camp to arrange for a deer hunt the next day. We concluded we would have a first-class dinner of our own getting up, so some went fishing, some shooting quail, and one of our party hunted bees. In an hour we had an abundance of fish and flesh, and our friend who was looking after his stray bees informed us that in coursing some bees that were working on button willow he had found a bee tree. We had an ax and it was not long until we were in possession of a quantity of beautiful clear honey. All the stockmen and farmers on the creeks and rivers here have bees, which do well. When Ben anounced dinner, five of us sat down to a meal that the most fastidious would enjoy. Fresh fish, fried quail, honey, biscuit, corn bread, potatoes, onions, fresh pepper pods and coffee. We ate dinner in a beautiful pecan grove, the trees loaded with fruit nearly ready to drop out, and within 15ft. of the celebrated Hot Spring, whose clear pure waters flow out of a fissure in the rocks and leap several feet to the earth.

The next morning Messrs. Lusk, H. S. Reeves, Lovel and James L. Kuykendall, Dr. Homner, myself and Ben started out early for a deer hunt on the north fork of the Cherokee, seven miles distant. We there divided in twos, Mr. Lusk and J. L. Kuykendall formed the extreme right, Lovel Kuykendall and Ben formed the center, and Mr. Reeves and myself the extreme left, with an interval of half a mile between each couple. The country is covered with scrub mesquite, live oak, sumac, shin oak and catsclaw. We hunted faithfully until 10 o'clock without seeing a deer, except that Mr. Lovel K. and Ben, when they returned, related that while on Round Mountain they saw some seven or eight bucks about three-quarters of a mile from them. "We dismounted," Mr. Lovel said, "and tied our horses behind a clump of live oak bushes. The ground in front of us was broken and covered here and there with sumac. We had crept to within some five hundred yards of the deer; some were standing up and the others were lying down; all of a sudden the entire band ran away as if pursued. I got up and could see nothing, when Ben said, 'Do you see that dod durned yaller dog up there? He has done gone and scared them deer off.' I looked in the direction Ben pointed and saw a large loba wolf trotting along and coming quartering toward me. I raised my rifle and waited until he was opposite and fired at about one hundred and seventy-five yards. I struck him just behind the shoulders. He dropped, and Ben remarked, 'That's what you get for running around the country; if you had stayed at home you would not be dar now where you is.'"

In the afternoon we killed a dozen or more of squirrels that were cutting off the pecans, and some quail as we returned to camp. The next day we started for a different place with the same crowd, augmented by the genial Dr. Homner. Messrs. Lusk, Reeves and Homner went to a point in a large pasture to wait until Lovel Kuykendall, myself and Ben should take a circuit several miles to the right. We had almost completed the circuit when I heard Ben say: "Look out, look out dar, there he goes!" Kuykendall pushed out to the right and headed off a large buck, which turned and ran with the wind and within 50yds. of Ben, who was still on his horse. Ben was pointing his gun toward where he had last seen the deer, and the horse having had some experience in the same kind of business, was rather uneasy; as Ben would point his gun one way the horse would turn the other way, while Ben was holding the gun in one hand and holding the horse with the other, his eyes during the excitement were shining like tin pans and were almost as large. He fired away over his horse's head, which was as soon turned to where his tail should have been. The ball struck a bush about one foot over the deer and went whistling over the hill. Ben started after the deer thinking he could overtake it. This ended our day's hunt.

The rest of our time was spent in fishing and hunting quail, which are exceedingly abundant in San Saba county. We spent several pleasant days, and on our return home after crossing the Colorado River, which was red with a heavy rust, caused by rain on the plains, we killed and carried home a large number of squirrels and quails, and arrived home on the 11th at 10 o'clock P. M., having driven forty-five miles the last day. J. B.

Belton, Texas.

Massachusetts.—The opening meeting of the season of the Massachusetts Fish and Game Protective Association was held at the Parker House, Wednesday, Sept. 22, about thirty members being present and President E. A. Samuels in the chair. The names of two new candidates were proposed. The evening was devoted to a general discussion on fish and game, more especially on the short lobster question. It was voted unanimously to support Deputy Fish Commissioner Shattuck in his prosecution of these cases, both morally and financially. During the evening a fine collation was served.

Robins, Meadow Larks and High-Holes cannot lawfully be killed at any time in New York.

AN OCTOBER OUTING.

I WAS reading back numbers of the Forest and Stream lately, when I came across this sentence in one of the articles, "It is not all of fishing to catch fish," and at once my thoughts turned backward to many a past and gone camp by shore and in the forest. To my recollection thus stimulated, each particular outing seemed fresh in mind as the day when it happened. As I thought of one in particular, I softly murmured to my sleeping dog, "Neither is it all of gunning to make a big bag, hey, old boy," and Jack opening one eye sleepily, nodded as much as to say, "I agree with you, pard." I have often thought I would write up that trip, and now I am going to do it.

To begin, it was my idea, no matter what John may say to the contrary, I was tired, business was dull, the woods, changed to bright orange and scarlet, seemed to say, "Come away from the dusty city, with its cares and perpetual din; come to me and rest." So I made up my mind that if I could only work John up to the proper pitch I would go. But I was crafty about it, for I knew that such a proposal fired point blank at him would call forth the usual excuses of business, etc. I lured him to dine with me, and when we were seated in my den, redolent of canoeing and the woods, I led the conversation gradually round to past experiences, and at last remarked, "John, I've an idea. Let's take a week along shore," and John slapped me on the back and exclaimed, "I'll go with you, Ned," and so it was settled.

Behold us then next morning collecting our traps and driving our respective households to the verge of madness by calls for camping duffle which had been stowed away for the winter. But it isn't real to us, we can't possibly make it seem so, that we are actually going out for a whole week. Now we are seated in the smoker, surrounded with guns, blankets, grub baskets, etc., bound for M. with a whole week ahead of us and business fading away in the distance behind. Jack, John's namesake, lay curled up at my feet, every now and then giving a knowing wink, as if he said, "There's fun ahead, I can almost scent a bird now."

Here we are at last at M., and how familiar everthing looks, the brown marshes stretching away to the north and south and yes, here's Jim with his team, ready to carry us to our quarters way down there in the marsh, where you see that creek like a silver thread. We throw in our traps, jump up on the first seat, and as the train pulls out with a parting whistle of "Good luck, boys," we trot gaily away at a pace of nearly six miles an hour. First turn to the left, along the sandy road, down this gentle slope, now out with you and let down these bars; so, and now we can see the house in the distance.

"Any birds on the marsh, Jim?"

"Waal, boys, not meny. Si' Ewell was out t'other day an' gut putty good mess, but they're scarcer 'n red ears at a huskin'."

Does this diminish our ardor? Not in the least; what do we care if we didn't even see a bird; isn't it enough to be out in this glorious air? I look at John's character face, behind his black brier, and he seems to agree with me.

Here we are at last in front of the little cottage which we always dignify with the name of "The Mansion;" out we jump, our duffle tumbled likewise and Jim drives off. Open goes the door and we stand in the dining-room, bedroom, reception-room combined, with its two bunks on one side, and the rusty stove and deal table on the other. Now to work; I am cook, John splitter of wood and fire maker in ordinary, Jack biggest loafer in the crowd. Soon a spiteful sizzling is heard and a gentle odor—no, one can't describe it; no banquet ever gave forth such an odor. The delicious fragrance floats out to the wood pile, and brings John in axe in hand. He pauses in the door and delivers himself thus: "Cook, if supper aint ready in fifteen minutes, your head shall grace The Mansion's walls and I will gnaw those marrowy bones of thine." With which he disappears, while cook, shaking with laughter, spreads the cloth, dishes up the savory viands, and roars sup-per in a voice calculated to alarm every bird on the marsh. Supper is dispatched by the light of a tallow dip, and now for a peaceful pipe out of doors before a blazing camp-fire. "Foolish to go out of doors when you've a house?" Well, perhaps so; but camping without that fire at night under the stars is to me like "bread without salt, good but insipid." John makes the fire (à la "Nessmuk"), while I stretch out my 5ft. 8in. before it, and am inclined to take a rosy view of life in general.

Reader, did you ever have a chum with whom an outing was one season of unalloyed contentment; in whose company the greatest discomforts were only stupendous jokes, but without whom there was always something lacking, no matter if the trout did bite well and the weather was all you could desire? That's John.

But here it is 11 P. M., and if we are to make any kind of a decent try for birds to-morrow it is high time for us to retire; so in we go. The alarm clock is wound, straw shaken up, door and window left wide open, and now—yes, then you are fast asleep. No turning and twisting, just one roll in the blanket and good night.

Then you dream you are out on the marsh, and here comes a flock of teal, 500 of them; you can connt them easily. You make ready to bag just 495 of them; but there is John, in the last stages of buck ague, both barrels cocked and blood in his eyes. "Well, let him have first go; hasn't he done the same by you many a time?" There he goes. Bang! whizz! biff! whang! Great Scott! Was that an earthquake or a cyclone? Only the alarm saying in large print, "Five o'clock, boys." Out we jump, wash in the creek, snatch a hasty breakfast and paddle down the creek to our stand; then out with decoys and lie down in our blind. 6:30 A. M.—No birds. 7 o'clock—Jack yawns, John follows suit. 8 A. M.—John takes a tramp and bags two wretched peep (cheers from the blind), comes back exultant, knows there are more coming. Hello! look at that big fellow coming straight over us. What is it? Never mind, bag him first and we'll name him afterward. Now he's right over us: wait till he's passed. Now! Bang go four barrels, but he don't pause, not much, he's used to it; just two feathers come floating down the wind, and he sails away with a "Good-bye, boys, some other time." (Dead silence in the blind.) Bad shooting? Of course; but if we measured our enjoyment by the birds we killed our trips would count zero.

After this we conclude to go back to the Mansion; we leave the boat and tramp back, hoping to get a shot at something on the way. Slowly we make our way along the creek, when suddenly there is a flutter of wings, a yell from John, and I turn just in time to see a large bird making off as fast as his wings can carry him. He don't go far though; the two guns roar and he concludes to stay with us. Great rejoicing. We execute a war dance round him that would do credit to a band of Pawnees, and now we go home jubilant for we have some game. "Only three birds," I seem to hear some crack shot mutter. Well, do you suppose we want the whole earth and all the birds on it? No, we are not of that sort, my sarcastic friend. We go back perfectly contented and prepare the birds for dinner. We don't know what the large bird is, but we are going to eat him from a sense of duty. Anything so unsportsmanlike, as killing game and leaving it to rot, is something we are incapable of even if we are poor shots. (Take that, my crack shot friend). But the bird eludes us. His revenge comes after death; don't he just smell though, after we have cleaned him. We soak him in many waters but the odor is still there. I tell John it is only the gamy flavor peculiar to denizens of marshy districts, but he doubts me and even mutters "chestnuts" under his breath. Finally we throw it away, for John says it is poison, and even Jack agrees with him after one sniff. Then we all feel better and content ourselves with bacon, griddle cakes, etc., which are good enough for any man.

In the afternoon we paddle down the creek, across the river, to the beach, where we spend the P. M. at full length on the beach, smoking innumerable pipes and fairly reveling in the salt sea air. We have the peeps for supper, almost a mouthful apiece, and are just lighting our camp-fire, when there comes a sudden hail from the marsh, and Jim appears, "Jest slipped down to see how we wus farin'," as he remarks. So down he sits on half of my blanket, fills his pipe, and after a pull or two inquires, "Waal, what luck?" Then we tell him about the "big bird," and ask him what it was. After various queries as to its head, plumage, etc., are answered, he delivers himself thus: "Mus' hev bin a coot. Though 'twas curus ye shot him in the mash. Mebbe he was kinder prospectin' roun'. They do smell almity strong. An' so ye couldn't eat 'im, hey," and he roars with laughter.

Next morning we are up bright and early and try the woods for partridge, but without success; so we give up after a while and tramp home. Is the day lost because we haven't bagged all the game we can carry? Not much. You don't know us. Many a time we have unjointed our rods and left the trout still jumping, because we had enough, and we would do the same with the birds, only—well, there is no danger of our ever getting a great many of them.

We devote the whole of the next day to a cruise down river, and although we take guns it is only for show; we have long since given up the birds. The breeze is northeast, strong and steady, so hoisting sail, for we have chartered Bradford's catboat for the day, we slip down river with its brown marshes on one side and the narrow spit that separates it from the sea on the other. Many years ago, before M. had settled down into its present torpor, an attempt was made to cut through this spit and thus afford an entrance for vessels. An opening was made, but the sea cooly filled up the gap, and to-day only an indentation remains of the New Cut, as the inhabitants still call it. Further down at White's Ferry, we pass what was once a favorite camping spot with us. This was a small hillock on the spit, on which grew a few dwarfed trees. It used to be a spot where one could find absolute peace. The broad ocean in front, behind the river, and on either hand the lonely beach; here I have passed many a pleasant day, alone or in company with John, with no sound but the lapping of the waves or the scream of the gull to mar our enjoyment. Now, however, a huge summer hotel rises on that very spot where our tent was pitched and the air is made hideous with the screams of fair bathers. Match-making mammas and young men of the cigarette fiend order now usurp our old camping ground and eye us when we pass up or down river with glances of distrust. To-day, however, they are far away, so we pass by in peace and soon see the broad ocean and feel just the first swell of its waves. That's far enough; we don't care about going outside with this wind and sea, so down with your helm; that's the caper, and now for a square beat back through the winding channel of North River. Camp is reached at 6 P. M. and after supper comes the long evening, the blazing fire and the jug of cider sent in by Jim. Heaven bless every wrinkle in his jolly old face.

Then comes that day which we always resolve solemnly never to think of until it is fairly on us. That day when the sun always shines brightest, the birds always sing loudest, and everything seems more beautiful to us, because, miserables that we are, the time has come to go. We rise heavy-hearted, get our plunder together, then sit down and wonder when we can come again and where the week has gone. A week, how it drags in the city, and how in camp the days fly. We load our baggage into the wagon and see it drive off, for we always walk to the station on the return trip; and as we pause for a last look at the "Manse," John pathetically remarks, "Well, Ned,

"Tis better to have camped a week,
Than never to have camped at all."

The train pulls up, our traps are tumbled aboard, "Good-bye, Jim, old man," "Good luck, boys, come again soon," and we settle ourselves for the homeward ride. Business cares come thronging upon us, but somehow we feel perfectly able to meet them now, yes, and vanquish them too.

Only once is the silence broken when John says, "Well, Neddy, we'll go again next summer," and I laconically responded, "You bet." Kanuck.

Utica, N. Y., Oct. 2.—Partridge shooting in central New York is very good this fall and many fine bags have been made by local sportsmen. Not long since a friend told me that he knew of the whereabouts of fourteen broods of partridges. Squirrels are also quite plentiful. I learned to-day that a friend in Trenton killed twelve gray squirrels and another two blacks in a half day's hunt. Woodcock have almost entirely disappeared from this part of the State, and few, if any, have been killed here this season.—Portsa.

Marlboro Club.—A club has been formed to lease the shooting privileges over a large tract of land at Marlboro Conn. The secretary is Mr. Fred N. Hall, of Brooklyn.

NOTES FROM PENNSYLVANIA.

WARREN, Pa., Oct. 3.—*Editor Forest and Stream:* There is not much to report in sporting matters along the Allegheny River in this neck of woods. We used to have deer in abundance, with now and then a bear, and small game without number. But the breech-loader and the pot-hunter who has no regard for the law have made game very scarce. A few woodcock and grouse are about all we get. The law of the last Legislature of Pennsylvania giving a bounty on foxes, wild cats, hawks, owls, etc., is doing good service. Grouse have not been as plenty in many years as this year, while the dry spring made the woodcock shooting fully up to the average of the last six years, though not up to former times.

We have many good fish in the Allegheny, and might have more if the law was enforced. Several years ago the Warren Sportsmen's Club got a supply of salmon and bass from the State hatchery for the river, and trout for restocking the smaller streams. They grew finely, but seines and spears and set line have left few for the rod and reel. For instance: A few weeks ago the Cornplanter Indians drew a brush seine at a place called Big Bend, eight or ten miles above Warren, under the mistaken notion that the law does not apply to the red man as well as the white. At least 1,000 spectators were present, many of them assisting in the unlawful work. In a single hour they took about 1,500lbs. of fish, many of them large and excellent for the table. Yet we have no fish warden, and this thing is likely to be repeated any day. If brush seines are not used, other seines and spears and night lines are common. Besides dynamite is often used by those who consider seining and spearing too slow for their way of playing the hog. So what can we expect but poor hunting and fishing? In this emergency our shooters of leisure and ample means seek their sport elsewhere. F. H. Rockwell, who keeps first-class dogs, and H. E. Brown, Esq., returned not long from a Minnesota hunt. A. D. Wood and M. Waters went for quail last season to Mississippi and will probably go again soon. When all else fails a few of our gunners try breaking clay-pigeons and blue rocks with about the average success, judging from the scores in the FOREST AND STREAM.

How entirely this sort of shooting has changed here even in the last ten years. Then the wild pigeons were thick every fall and spring. If a man was too lazy to hunt them in the woods, he could buy them for the trap and thus keep his gun from rusting. Now not a pigeon can be found in all the woods where they used to breed by the million. Truly, pigeon trap-shooting is already a thing of the past. In its place artificial targets bid fair to make more recreation than ever at the trap. This change divests trap-shooting of its cruel and repulsive features, while it may lack something of the interest attending live-bird shooting. If this sport could also be divested of its gambling features, it would be an improvement. But so long as professional trap-shooters follow up the tournaments, I suppose we shall see shooting for gain, as we see horse racing and boating for the money and not the sport there is, or ought to be, in such recreations.

What kind of guns we shall use for clay-pigeons is a question hardly settled. Five years ago the Bradford Shooting Club, which contained some of the best shots in the State, and held first-class tournaments, had hardly a gun smaller than 10-bore. Now half the best shots use the 12-bore, and many have 16-bores for game. This is a change in the right direction, and I look for the American shooter to imitate the English in discarding large bores entirely. There is little use of lugging ten pounds of pot metal about the bush when six pounds of fine damascus will do the business. The little gun may require more skill, but what do men go afield for except to enjoy the pleasure a skillful use of the gun always brings? Limit the gun to seven pounds, and the little man or the old man has an equal show with the giant when the result depends on a steady nerve and good eye instead of physical power. The assertion of the English gunmaker that a number of men shooting with light 12-bores would outshoot the same number using heavy 10-bores, was considered rash. But I look upon it as a possibility of the future among gunners and gunmakers in this country as well as England. Fine steel is better than pot-metal and scientific skill outgenerals physical force in the long run.

Our club lately lost one of its most ornamental, if not useful members in the death of Thos. H. De Silver, late of Hong Kong, China. He was not a superior shot, yet he probably spent more money in hunting and fishing than any other member. His guns and rods and accouterments generally were the best in use and were distributed among his special friends when it became apparent that he could use them no longer. PENN.

THE VIRGINIA CONVENTION.

RICHMOND, Va., Sept. 29.—*Editor Forest and Stream:* I do not know that there is much to tell you about our sportsman's meeting. It convenes pursuant to the call of which I inclose you a copy; and from responses received we will have 150 to 200 members present. We will have headquarters on our State Fair Grounds, and some pleasant shooting. We hope to have a good organization and do much toward improving our game protective laws. We also contemplate field trial features in connection with it. JOHN S. WISE.

The call reads as follows:

DEAR SIR.—Yielding to the request made from various sources that I should take the initiative in the endeavor to form "The Virginia Field Sports Association," I invite you to meet a number of our friends at my office, No. 27 Shafer's Building, Richmond, Va., at 10 o'clock A. M., on Thursday, the 21st day of October, 1886, that being the first day of the State Fair.

I trust you will be present, if possible, and if you cannot be present, in person, you will send me the inclosed authority to have you enrolled as a member. If, from the answers received to this, we are assured of the presence of a considerable number of brother sportsmen from a distance, and that our effort will meet with a proper response, I will go to work at once and make arrangements for a shooting match at the fair, and other amusements to make your visit attractive. I beg you to come, if possible, and unite with us in the formation of the association.

Almost every other State in the country has such an association; but ours, while needing the aid of associated effort to protect our game more than any State in the Union, is altogether without any such society.

I have hesitated long about assuming the responsibility of this call, because the task is laborious and thankless, at best; but some one must put the matter in motion, and I feel it to be a duty we owe that some step should be taken to protect and replenish our game supply before it is too late. It so happened that, from time to time, friends in different parts of the country have sent me copies of the constitution and by-laws of the various organizations of this kind, and I have preserved them. I believe I now have the printed plans of organization of nearly every such association in the country, and, when we meet, will take pleasure in laying them before the body for the selection of their best features in framing our own code.

I trust you will not dismiss this invitation lightly, on the score of some more important occupation or employment. It is true that we all have other employments to which, if this be brought in conflict with them, it must yield; but this is not a mere invitation to pastime. The proper steps to be taken to preserve our game and replenish it, is a question worthy of the earnest thought, the time and effort of every good citizen, however grave his nature or employment.

The general scope of our organization will be as follows: I. To protect, preserve and replenish the game of Virginia. II. To encourage and promote field sports in such a manner as, while having a due regard to the first object, they will be pursued so as to yield the greatest pleasure and furnish healthful, humane and scientific enjoyment. III. To gain the friendly co-operation of gentlemen in different sections of the State for these objects, whereby results can be reached, far beyond anything attainable through individual effort, however praiseworthy or earnest.

Under the first head much may be said:

1. Undoubtedly we can, conferring together, do much to devise, present and secure the passage of laws far superior to the haphazard legislation now on the statute books.

2. In the manner of replenishing game where, by the severity of the seasons, or other causes, it has been destroyed. For instance, last winter, in Georgia, I saw hundreds—nay, thousands—of quail, alive in coops, and for sale as low as $8 per 100. In the particular localities where I shoot, we needed no replenishing, and I did not have time to hunt up localities where they were needed. Yet there are sections of the State where they are almost absolutely destroyed. With such an organization as I propose, we will have reports from all sections, and as they become barren, they may be restocked at an expense so trifling as to be no burden upon an association of this sort, yet with a result gratifying beyond expression.

We may also try interesting experiments in introducing new species of game, and in putting back upon the large wastes in Tidewater the game which was originally there and driven from those sections where they were more closely cultivated.

Under the second head much may be done to make the association a source of interest and pleasure to the members. We can provide for the improvement in breeding and training our sporting animals, and incidentally find great sport in competitive trials. One who has been content with happy-go-lucky shooting, and thought more of the size of his bag than the way he filled it, little realizes how much more intense and how much more praiseworthy is the enjoyment of the sportsman whose interest is centered in the performance of his dog, and who subordinates the thirst for slaughter to an ambition to make his sporting companion a scientific workman. Our Virginia sportsmen, as a rule, have little idea of what advances have been made of late years among sportsmen in the science of hunting, or how much more pleasure is attainable in the way than in the rough-roll-and-tumble style of other days. It is to give them an insight into the "higher walks of art" in this matter of hunting—to introduce the scientific element in both the breeding and training of dogs, and thereby to increase the pleasure of using, as well as the intrinsic value of their stock—that this association is proposed. I need not repeat how much more effective is associated effort, than individual, to effect all this.

Hoping to receive assurance of your personal presence at the time named, I am, yours truly, JOHN S. WISE.

THREE FOXES AND A BIG BEAR.—Jefferson, White Mountains, N. H., Sept. 26.—Foxes are very plenty here this fall. The champion still-hunter of the State resides here, Nick Tuttle, a blacksmith, who takes a turn around the pastures near his house two or three times a week. One morning he returned with three red foxes before breakfast. He shot them all on a still-hunt. His method is when he sees a fox to wait until reynard is busy hunting mice; then make a few steps toward him; if the fox discovers him he will remain quiet and imitate the squeaking of a mouse, when the fox will trot within easy gunshot. Nick shoots a 12-bore breechloader, with 4drs. powder and 1oz. No. 8 shot. I have read with great interest the articles on breech and muzzle, and think the man behind the gun has something to do with the shooting. The following will illustrate my views: A few days ago a large black bear was seen to enter a small swamp within a mile of Littleton Village. Within two hours the swamp was surrounded by over $2,000 worth of repeating rifles, shotguns and revolvers. The bear broke cover and the ball opened. Over 100 rounds were fired at a distance of from 10 to 100yds. Bruin is still living and enjoying his usual good health. The boys are all sure they aimed at his heart. The next day Mr. Webster, a farmer who has a small clearing sowed to oats on the side of the mountain, saw there signs of bears. He has an old hand cannon, which was formerly a flint-lock and has been percussioned over. He ran a slug about ¾in. long and small enough to go down with a patch, putting in a handful of powder. Taking spare caps he started at dusk after bruin's scalp. Tired out with waiting he started home, and as he passed a corner of the oat field saw a movement in the tall grain. He drew up the old blunderbuss and fired. The recoil laid him flat on his back. One deep growl from the direction he fired, and all was still. After waiting a short time he lit a piece of birch bark and found a bear weighing over 400lbs., with his skull literally crushed. Chance shot you will say.—SPORTSMAN.

AN OLD QUESTION.—Ruffed grouse are reported scarce. I think hunting them with "treeing dogs" is slowly, but surely, working toward the destruction of this noble game bird. I would like to know if the readers of the FOREST AND STREAM consider this a sportsmanlike method of shooting. I think it leans strongly toward pot-hunting.—BLACK SPOT (Cumberland Co., Me.).

MARYLAND.—Elkton, Sept. 27.—The prospect for quail shooting in this section is better than for some years. There has been no good rail shooting yet, owing to low tides and the large growth of rushes and cat-tails on the marsh, from 30 to 40 birds being the best bag heard from so far.—E. S. G.

RECOIL.—*Editor Forest and Stream:* As to recoil in shotguns and rifles, what are the best means for controling its effects? Will some of your contributors kindly give their views and experience.—GRANGER.

OCTOBER DAYS AFIELD will reward most sportsmen with something worthy of record in the FOREST AND STREAM. We will be glad to have notes of field experiences this month and next.

A POUGHKEEPSIE MAN tried to club two fighting dogs apart. The gun missed the dogs, struck a tree, broke, exploded, and killed the man. Don't use a gun for a club.

PENNSYLVANIA DEER SEASON.—The open season for deer in Pennsylvania is Oct. 1-Dec. 31.

WE call attention to the new advertisement of Parker Bros., in another column, which gives an account of the very creditable performance of their guns at the second annual tournament of the Chamberlin Cartridge Co.

Sea and River Fishing.

IN RE "HOME OF THE BIG TROUT."

To the Printer:

Thou grimmest of all jesters, tell me, pray,
Why "peek 'gainst peek" last week you made me say?
I'll promise this—if o'er I visit thee,
Oh printer mild, it "Greek 'gainst Greek" will be;
And angler never fought a busier fray
Than you and I will—on that "arctic" day.

J. HARRINGTON KEENE.

NOTES OF CANADIAN ANGLING.

EXPECTATION is often the greater part of happiness. Is there a greater delight, when the wind roars in the chimney and snow covers the ground, than to sit in a comfortable easy chair, before a roaring fire, and to map out in detail a fishing trip for the summer? All former mishaps are forgotten; there is no thought of the many times flies were entangled in the most demoniacal fashion, large trout were lost, tips were broken, but we see in our mind's eye only the pleasing spectacle of enormous fish taking the fly in the most approved fashion and being landed in safety. When, therefore, last winter I saw Mr. J. U. Gregory's letters in FOREST AND STREAM describing the new fishing grounds in Canada, I lost no time to write to him for further information; and often after that, when to all outward appearances gravely engaged in thinking out some difficult legal question, my thoughts were really far away in the woods and rivers of Canada, and the question before my mind was whether bright or dark-colored flies would best answer my purposes.

Thank Heaven! there is an end even to winter, and one fine July morning found me in Quebec and sitting in front of Mr. Gregory in his comfortable office in the Department of Marine and Fisheries. Talk about the brotherhood of Free Masons! There is only one brotherhood in the world—that of anglers. The kindness of the reception I found, the interest with which this gentleman, notwithstanding his numerous official duties, entered into my plans, is something I will never forget. The fishing grounds he had written about (the lakes on the line of the Quebec & Lake John Road) had not turned out as well as he expected. But my mentor and guide provided better entertainment for me. He put me in charge of his nephew, a charming young man, who with his mother and sisters and one of their friends were summering at St. Raymond, a French village about forty miles up the line. This was to be my headquarters, and from there I could make excursions among the Laurentides and go up and down the St. Anne and connecting rivers.

St. Raymond is situated in the valley of the St. Anne. The scenery in the immediate vicinity, while not grand nor imposing, is pleasing and picturesque. The village is entirely and thoroughly French. Walking through its streets and talking with its people carried me back to the times long ago, when I used to take my vacation in some out of the way nook in the French provinces. It is this utter change in surroundings which gives such a charm to the stay in this quiet place. The boarding houses are fairly comfortable and very moderate in price, $12 to $15 a month is the ordinary price. Any number of short excursions can be made, and the boating on the river is good.

But I forget in describing the place, that I am writing for a paper devoted to the gentle art. So I forgot the first days I was in St. Raymond, that I had come there to fish. There were stronger attractions. Although an angler, I am still a man. I would have sorry opinion of any one under 70, who, when an opportunity was given to him, to enjoy the society of four charming girls, would rush off at once and go trout fishing. I tried to combine the two pleasures during my stay, and I believe I succeeded.

Now for the fishing. Whoever imagines in going to St. Raymond that he has simply to walk a few steps to fill his basket with two-pound trout, will be disappointed. The parish of St. Raymond is pretty well settled. There are farms in many places along the river. The Canadians are a very prolific race and all the urchins fish. That under those circumstances there is still such an enormous amount of trout, even in the immediate neighborhood of St. Raymond, is astonishing. Those satisfied with trout running from 6 to 8in., with occasionally one of a half pound or a pound, can gratify that ambition without sleeping one night out of the comfortable beds provided in his boarding house. Smaller trout can be taken by the thousand, but of course these do not count. Sometimes the excursions will lead him amid scenery equal to any to be found on this continent east of the Rockies. The drive to the Little Saguenay (the north branch of the St. Anne) especially is magnificent, and he will find there simple but excellent accommodations at Delaney's, and a perfect guide is Richard Stranahan. A Brooklyn artist, Mr. Grote, has built a house there, where he and his wife live during the summer, so that congenial company will not be lacking. All through this country there are many lakes, but I did not try them.

But the trip of all trips is to the Malcolm Pool and the falls of the St. Anne. The country there is perfectly wild and in five years only seven persons have fished it. [I begin my narrative, which may sound to some as a fish story, by asserting solemnly, as if I were in the presence of a notary, that I will tell the truth, the whole truth and nothing but the truth.]

Starting in the morning, a three hours' drive, part of which is through grand scenery, brought us at about 11 o'clock at St. Gabriel, locality called "Piguemouche." The guide and boat were soon secured, our provisions and tent (the guide furnished the latter) put aboard and away we started up stream for our four days' trip. The first day led us over ground I had fished before. The fishing was good, although the trout did not run very large, and a very short time was sufficient to secure our supper and breakfast. We struck our camping ground at 6 o'clock, and went to bed early, knowing that we had a heavy day's work before us. Two miles brought us, the next morning, to the foot of the rapids. For five or six miles the river is here a succession of rapids, or rather one continuous rapid. All the guide can do is to pole up the empty boat, and in many places even this is impossible, so that the boat has to be pushed up. I tried the former

but found it impossible, and for six hours I was engaged in the refreshing exercise of wading up stream. The forests came nearly all the time up to the water's edge, but occasionally they receded a little so there was some ground covered by high grass, along which it was possible to walk. But this was only exceptional, and it will be readily believed that it was with a sigh of relief that I greeted at half past one the little bark shelter at the head of the rapid. There had been a couple of showers during this promenade which wetted me through, and just at this moment the sluice gates of heaven opened again. I confess that I did not feel very enthusiastic over the trip when, huddled under the shelter, I endeavored to change my wet clothes. But soon the sun shone out brightly again and a good lunch with a cup of strong tea soon restored me to equanimity. The lunch consisted of a pound and a half trout I had taken just before coming to the rapid, and which I had proposed to keep as a trophy. It was with an incredulous sigh that I give him up to be butchered on the assurance of the guide that I would take so many trout bigger than this one that it was not worth while to keep such a sardine.

A hole above the rapid was one of the places where Vésinà, the guide, told me these monsters were to be found. When the sun was off the water we took to the boat and soon I was casting in the neighborhood of the promised land. My flies were a dark Montreal and yellow-drake, large, mounted as fluttering-flies. The rod was a 9oz. Holberton rod of "moib" wood. I took a few small trout, but as I cast over the hole there was a flash, an enormous fish jumped clear out of the water and comes down on the Montreal. An exciting struggle followed, and after ten minutes I had the pleasure of seeing in the boat a beautiful specimen of the *Salvelinus fontinalis*, weighing by my pocket scales 4¼lbs. I must add here that on returning to St. Raymond, a careful comparison of these scales which were out of order with other scales showed that 1lb. had to be added in order to get the correct weight.

After I had feasted my eyes sufficiently on my prize, I went on fishing and was rewarded by the capture of a second fish, weighing about 1lb. less.

I felt that I was warranted to rest on my laurels and no true sportsman needs to be told that I felt at peace with the world that night as I sat smoking my cigar and listened to the yarns told by my friend's guide.

The next day, after four hours poling up stream, we came to the Malcolm pool. The river suddenly widens out into a pool about 70yds. in diameter. The greater part is shallow, but about one-third part is quite deep. The number of trout in this hole is something fabulous. Almost every cast was followed by a rise and the greater number were trout of good sizes, running up to 2½lbs. We were interrupted by a terrible thunderstorm which compelled us to seek the shelter of the log hut which has been built here. But when at 8 o'clock the sun shone again and we ventured out to have another try, the sport was again fast and furious. In fact to some hypercritical persons it might have appeared too good. There was no necessity of casting fast after the biggest trout came up and near to the boat. In fact it happened once that while my guide was unhooking a big trout taken on the drop-fly another big fellow took the tail-fly, which was dangling over the water not 6in. from the boat, and broke it clear off.

Again roseate dreams came to us and in excellent spirit we set off for an ultimate object, the source of the St. Anne about four miles above the pool. Here traveling was again pretty rough and a good deal of wading had to be done. But after three hours labor, what a glorious spectacle. The mountains had gradually come nearer and nearer the river, rising up almost perpendicularly, their side clothed with dense forests. Suddenly a turn of the river showed us two immense granite walls, perfectly bare of all verdure. Between these for a hundred feet, the river flows like a torrent. Beyond that it widens out and forms a circular basin inclosed by mighty rocks. At the upper end of the basin is a small ledge about five feet high over which the water comes pouring down, and still further a second basin, into which a mighty waterfall came thundering down. In its solemn grandeur and utter solitude the spectacle is one of the most magnificent I ever saw.

We left our boat at the lower end of the gorge or cañon and scrambled up the mossy rocks to see the second fall. All around the scenery is grand. Beyond this it is impossible to pass unless a long detour is made. My guide, who had been there, told me of the numberless lakes to found in this region. He added, however, that the trout were small. This was the haunt of the monster trout. It was with some tremor that, standing on a rock in the middle of the channel, I cast my flies into the foam of an eddy, and slowly drew them against the current. Suddenly I saw a monster trout come up quietly, suck in the fly and go down. I struck, but too late. Another cast and I saw a fish swim against the current and go through the same performance. This time I struck in time and out he ran into the current, till nearly all my line was gone. Why should I describe what has so often been described before? Have we not all felt that sensation as if our lives, hopes and everything worth living for were at the end of that leader? Enough. I got him. Weighed, half a day after its death, by my scales, he weighed 4¼lbs., his length was a trifle over 24in., and he was a pure brook trout. He was taken with a Parmachene-bill. This was the end of my good luck. First I tempted a trout, which positively refused to take my fly. Then we went further into the basin and another giant broke my leader which had been cut and frayed in my fight with the large trout and which I had been imprudent enough not to test. As it grew later the trout refused to rise, so after taking with a worm a dozen ½lb. fish for supper and breakfast we went home to the Malcolm pool.

The next day was the one fixed upon for our return. Early in the morning we tried the pool again, but everything went wrong at first. The trout jumped freely enough but missed the fly. At last I hooked a large fish which ran all over the pond, scared away the rest, but at last was brought to the net. He weighed a trifle over 4lbs.

Back over the rapid, this time in the boat. The water was low, and it took us three hours to pass it, bumping over the stones all the time. Then over the old ground to the guide's house. At the very last moment, when I was casting my flies mechanically and was taking in the beauty of the scene around me, I struck a 2lb. trout which, however, after a short fight, got away. I hated to end my fishing with a miss, but there was no help for it. The day was far advanced, and I had to be back that evening to St. Raymond; and so, putting up my rod with a melancholy air, I ended my fishing for this year. The guide, who had a good horse, drove me back to St. Raymond.

I leave it to the reader to judge whether this is not excellent fishing. The trip took from Wednesday till Sunday. Altogether I did not fish more than twelve or fourteen hours, and in addition to taking enough to have trout three times a day, I brought home ten brook trout weighing 30lbs., four of which were of 4lbs. and over. I tried only the holes and deep places, but if time had allowed, I am sure that by wading down the rapid water a number of fair-sized trout might have been taken.

But good as the fishing was, it is not that fact which will always make me remember my stay at St. Raymond. There will come a time when the big trout has faded from my memory, when only a dim recollection will remain of the Malcolm pool, and the falls of the St. Anne. But when shall I cease to remember the pleasant drives and walks in St. Raymond, the Canadian folks songs, sung by fair Canadian girls, as we drove home in a hay-cart. And above all, how could I ever forget the famous day that we drove to the village in a cart drawn by frisky oxen, to have our tintypes taken. The adventures of that day cannot be described in cold prose. From the moment that the fair driver with a look of determination on her face took the rein in her hands to the end, when, after having smashed the whole concern through my stupidity, I led the captive oxen by the bridle back to the village to be photographed, notwithstanding the fates seemed to forbid it, the whole story is full of thrilling episodes, to which only a poet could do justice.

To any one of my readers who should follow my footsteps, I can only say if the fish are half as large and plentiful as I found them, you will be satisfied with the fishing. But if the girls you meet are one-tenth part as charming as those it was my good luck to find, you will be sure to join in the sentiment with which I end this account of my trip—*Vive la Canadienne.* TRANIE.

MUD AND PINE LAKES.

IT WAS the third day of last July when Charlie S., with his beaming, good-natured countenance, came into my office, and in a mysterious tone, as if it was some great secret he was about to impart and wished no one else to hear, said: "Let us go somewhere and celebrate the Fourth as suits us best, and escape the pandemonium which is sure to reign here to-morrow." This I knew meant "Let's go fishing," and my answer can easily be guessed, for is not this question, "Where shall we go?" the spontaneous result of such invitations? And so it was to answer this question that we must go and consult with Carnie, who always knows where to go, how to get there and what to take along. The matter was laid before him and a party of three was the immediate consequence, with only the one question "Where shall we go?" remaining unsettled. There was to be a celebration at Pine Lake, a big crowd at Park Lake, we could not be alone on the river; where should we go? "I have it!" said Carnie, "we will go to Mud Lake; I have heard they are catching some big ones there." A man who lives near the lake had told him a short time before about catching some "sockdolagers," among which was one black bass that weighed 8¼lbs. "Did you see the bass?" said Charlie, after listening to the enthusiastic recital. "No," replied Carnie, "but this man I have known for a long time, and he wouldn't tell me what wasn't so." It was settled then that we should go to Mud Lake; not that the bass story had any effect on Charlie and I, for Carnie liked to listen to big yarns (and tell them, too) and the efforts that were sometimes made in this direction would be deserving of the big fish hook. But at this lake we could be alone, and that was the one thing we desired above any other, unless it was the certainty of a "big string."

We were to be off at noon, and to get the tent, pond boat, fishing tackle and provisions together and loaded was no small job. Carnie was elected to the position of commissary a number of years ago, and, as he had filled the bill admirably, his term of office had not yet expired. What joys were in anticipation, what visions of black bass were before us as we bowled along over the dusty roads on that midsummer day! Each one in turn giving some reminiscence of past outings as they were vividly brought to mind by our expectations at the lake, or by the appearance now of some favorite woodcock cover, in passing by a famous snipe ground of former years, and, again, how the grouse were once so plentiful in yonder wood, where now a dog would be fortunate to find a hare on which to keep his nose in practice. Yes, happy were we as we smoked our pipes and spun yarns, and heeded not how soon we reached our destination. But here we are climbing the last hill before swooping down on this innocent little Mud Lake, that I am sure never harmed any one that it should be given such a name; in fact, one found it to be a misnomer, for mud was the very thing that was not in sight. Even the bottom, wherever it could be seen, was covered with weeds and grasses; but we would not change its name, no, for every locality must have its Mud Lake. There are no less than three in this county.

In order to get to a place to camp we were obliged to drive through an orchard; which extended to the tamaracks surrounding the lake. We were but a moment in laying our plans, which were that Carnie should take the boat and try the fishing, catching some for supper if possible, while Charlie and I were to unload the trunks, pitch the tent and make our camp comfortable for the night. The camp was soon in apple-pie order, and there being nothing more to do Charlie decided to rig up and try his luck with Carnie, leaving me to look after the camp, as this is my best hold, to flutter around and keep things tidy. As the mosquitoes were very thick and apparently also very hungry, I concluded to build a fire that would act as a smudge now and that would later furnish coals for cooking supper before filling my pipe for a smoke which was to be my only companion for an hour or so. Thinking to call the boys in I made my way down the narrow trail through the tamaracks, and as I emerged to their view I was greeted with, "Look! Look! See that fellow go, ain't he gamy, though?" Then the fish was landed and Charlie in the other end of the boat would go through the same rigmarole in landing a bluegill of less than a pound weight; they were biting as fast as the bait was dropped in and it must have been sport, but for those two old fishermen trying to make themselves believe that they were landing four-pounders; that was a pretty picture. "Boys," I called, rather softly, "hadn't you better come in?" "Yes, in a minute," came back the answer, and being satisfied with this I trudged back to camp, replenished the fire, refilled my pipe and stretched out on the blanket. It must have been half an hour since I was assured that my companions would be in "in a minute." I again made my way back to camp, only to return once more to insist on their coming ashore. This time they did not put me off, probably for the reason that it was getting so dark the fish had quit biting.

It must have been nearly ten o'clock when the cook announced supper, and although we experienced a feeling of goneness, it could not be said that we were hungry as we sat down to our supper of fish and bacon done to a turn, with fried potatoes, bread and coffee, which might under other circumstances have called fourth compliments for the cook. While cooking our supper Charlie had conceived of a brilliant plan to feed the horses. This he did by backing the platform wagon down on the level place by the tent, hitching one horse on each side and placing the feed between them, using the wagon box for a manger. Our intentions were to have put them out in the farmer's barn, but our plans had been somewhat upset. However, the horses were quiet and got along wonderfully well as long as the oats lasted, but on our lying down after this last effort they began stamping and shaking, which told us too plainly they were becoming restive. We had just talked the matter over and concluded to get up and find a better place for them, when snap, bang, came the wagon pole through the tent not three inches from the bean cultivator's head. One of the horses had got its foot through the spokes of one of the wheels, and in trying to extricate itself fell over, carrying the wagon forward with it. Rushing out of the tent we found that the horse had not broken its leg, and for this we were truly thankful, although it did seem as if the evil one were pursuing us. We soon had the horses securely tied at a distance from the tent, to trees that were not likely to be pulled over on us.

Morning came, as bright a morning as ever dawned for a July day; we were up and stirring early. Charlie and I left Carnie to get breakfast while we went out to try the fishing. Fishing in this little lake was merely a matter of how long the bait held out. There seemed to be an unlimited supply of bluegills, all so hungry that anything but a bare hook would be sure of a fish. There might have been other kinds of fish in the lake, if there was we should have had to caught a way through the bluegills to give the others a chance at the hooks. We ate a hearty meal and took an after-breakfast smoke before striking camp. On leaving that bright and pleasant spot on Mud Lake we turned the horses' heads toward Pine Lake. Here there was to be a celebration at the Pine Lake House, and country and city folk were gathering from all points of the compass and from far away, all bent on "one great jollification day." Thinking to be well away from the throng we pitched our tent nearly a mile from the hotel on the grassy bank of the lake, a lovely spot indeed to camp.

Our stay at Pine Lake for two days was very pleasant, but so much like all other outings that a minute relation of it might be tedious. There was, however, one rather amusing incident (except to the cook) which Charlie and I enjoyed very much. The teams had kept crowding upon us until the fence along the road and every tree and spot was occupied, in fact we were surrounded; we had brought all of the fish caught at Mud Lake with us except what had been eaten at the two meals, they were all cleaned ready for the frying-pan, and when at about high noon the fire was built for getting dinner, the throng that gathered around the camp-fire would have done justice to the first circus of the season. Everything went well until the fish began to brown, when up to the front crowds a farmer, an old acquaintance of Carnie's, and after making himself known, (and somewhat familiar with all) said, "Carnie, I haint tasted a fresh fish in five years, I wish you would just give me a little one." Of course Carnie gave it to him. He immediately retired amid the multitude of wistful eyes to a peacable place where he sat down to enjoy his fish. Then another old friend of Carnie's appeared, he wanted a fish; then another, and another, till every man and boy stood with hands outstretched waiting for the fish to brown; pan after pan was cooked and still they came, and some came back to get one for "a lady friend" who couldn't get in, till the fish were gone; it was 4 o'clock and our appetites had got to the singing pitch, but we had no fish for dinner that day. After all, we denied ourselves but litte, and it was a great pleasure to see how the fish were relished by those who had basketfuls of good things that could not touch the fish spot.

After our frugal meal of fried potatoes, bread and coffee (no bacon nor fish, thank you), we went out on the lake and soon had a fair string of bass and pickerel, which we cooked for our late supper; so that we were not long without fish.

In the morning Carnie rose early, and, taking his frog spear, started out to get some frogs to surprise us for breakfast. When he returned with a few small frogs and one very large one that looked like the great grandfather of all frogs, we were up and stirring, and all laid to and began getting breakfast. In dressing the frogs, as is our custom with all kinds of fish and game, we noted the contents of their stomachs, and were somewhat surprised to find in the large one's two turtles, one a mud turtle, partly digested, about the size of a silver dollar, and the other a snapping turtle, a little larger, and still alive and very lively. On being released from his prison he bowed his thanks and started along the sandy beach toward the setting sun. I mention this fact for the reason that, whenever we have told the story, the first question, generally asked in an incredulous manner, is, "What became of the turtle?" All that we know about him is that he "went West."

The remainder of the day was spent in lounging about camp and entertaining our friends, who had found us out. Next day we put in full time fishing, with fairly good success, till the last moment before our departure. Then our hearts saddened. We had just nicely got settled down and felt at home, when stern duty called us back to again enter the struggle for existence. But why go over the old, old story of breaking camp; the same feeling comes to us every time we turn our faces homeward after a pleasant outing, only to be shaken off and forgotten the moment our dear ones meet us on our return.

LANSING, Mich. RAVELSTONE.

LAKE GOGEBIC.

LAKE GOGEBIC, Mich., Sept. 28.—No section of country offers greater inducement to the tourist and pleasure seeker than is found in Northern Wisconsin and the Peninsula of Michigan. Here nature is still robed in all its virgin beauty. We see these grand forests of hard wood, the hundred romantic lakes as in the days when the brave Marquette first raised the emblem of Christianity on the shores of Lake Superior.

The famous Gogebic Lake is fifteen miles in length, and is surrounded by an unbroken wilderness. The high hills surrounding the lake are covered with a marvelous growth of hard maple. Gogebic has been aptly called the gem of the northland. Being 900ft. above Lake Superior, the air is invigorating and the climate all that can be desired. The facilities for fishing are of the best, guides can be obtained acquainted with all the waters of the section at very reasonable rates. Facilities for camping out in the immediate vicinity of the best fishing grounds are of the best.

This lake furnishes without exception the most remarkable black bass fishing in the country. The remarkable strings made here are almost beyond belief. We find that the bass average from 3 to 5lbs. Strings like the following are frequently made: July 5, 1875, one day's fishing by a party of Chicago gentlemen, 780 black bass caught in seven hours; weight of fish, 2lbs. to 5lbs. This is no fish story, but amply verified. The lake is the summer headquarters of several large fishing clubs. Trout fishing can be indulged in, the various brooks being alive with this gamy fish. In the forests surrounding the lake, game both large and small abounds in plenty. The angler and hunter here realize their most sanguine expectations. No other resort offering such captivating sport. The days pass too rapidly by. Persons visiting this section are sure to come again. There is a something in the surroundings and climate that draws us here. To the invalid this climate has a remarkably beneficial effect. Hay fever, catarrh and its kindred diseases are greatly benefited here, while those suffering from pulmonary troubles receive, as it were, new life by the bracing air. It is with regret we leave Gogebic and resume our wanderings northward. DR. J. W. CORNELIUS.

LONG ISLAND.—The fishing for sea bass along these eastern shores of the Sound has been remarkably poor this season. Last year that fishing was very good and during the preceding year it was tolerably successful, thrice more so than this year. We think here that the season for sea bass fishing is about ended, and now we may expect some sport with the blackfish, which have not appeared here yet. Our bait for them (the tautog of the East) has been fiddler crabs and clams, but we have lately discovered a new successful bait for them, namely, spider crabs, which we have ever esteemed to be worthless. The bunker fleet seems to have been rather a failure this season. Still there are many steamers here in hot pursuit of the menhaden schools. I have built a little shanty within stone's throw of the Sound, where I can observe the roll of the billows, notice the passing vessels and am ready at all times to launch my boat for fishing. I counted here on the 23d inst. no less than thirteen bunker steamers busy at work with their boats and seines (but with no great success) all within a space of a dozen miles, between Horton's Point and Orient Point. But the fish taken now are large and fat and make good oil; but I hear that the "scraps" are not in high demand.—I. MCLELLAN (Greenport, N. Y., Sept. 26).

ANGLERS' PRIVATE CATALOGUES.—*Editor Forest and Stream:* A gentleman with a large library of angling, fishcultural, and natural history works, published a large catalogue of them some five or six years ago, and favored me with a copy. Recently he has sent a supplement to it and I find his list of full titles to be of value in comparing my own collection with. As the title page says, "From the library of a practitioner of fifty years experience," his name is withheld. It occurs to me that such catalogues would be suitable for exchanges among the brothers of the angle, and they could be made as ornate as the publisher saw fit. My own angling library has become so large that I had proposed to index it in a manner to show where all allusions to a certain fish or subject can be found, a rather formidable undertaking, as it involves going through every chapter in each book, except in the case of a few volumes, the titles of which tell the whole story. But this index would remain in manuscript for personal use and I have decided to first print a catalogue, say of a hundred copies, which will be gladly exchanged with others who may have such publications. —F. M.

POACHING IN INDIANA.—Bloomfield, Ind., Sept. 1.—*Editor Forest and Stream:* This State is far behind in the matter of fish protection and propagation, and is consequently a good field for the seiner and dynamiter. Fish Commissioner Reed offers a reward of $5 to any one who will give information leading to the conviction of any person using dynamite or seines in White River or neighboring streams. This looks well, but the reward is entirely too small to induce men to complain of their neighbors, and it should be increased. It is time that Indiana had a vigorous board of fish commissioners and an ample appropriation for them to work with. Our streams need protection and stocking, but under the present system they get neither. All that has been done so far is to distribute a few carp which were sent by the U. S. Fish Commission and to offer the reward referred to above.—WHITE RIVER.

OYSTER LAWS OF NEW YORK.

UNDER the law allowing the Boards of Supervisors of the different counties of the State of New York to add more stringent provisions to the State laws protecting fish, game, etc., there has been a change made in the oyster law of the township of Brookhaven, Suffolk county. At the last meeting of the Board of Supervisors of the county the following was passed:

SECTION 1. It shall not be lawful for any person to sell, expose for sale, or have in his or her possession any oysters, spawn, or small oysters measuring over one thousand five hundred to the bushel, or oyster shells caught or taken from the public grounds within the water of the Great South Bay or Port Jefferson Bay, in the town of Brookhaven, but the same shall be returned to the water, in the place where they are caught or taken, and within ten minutes thereafter.

SEC. 2. It shall be lawful, notwithstanding the provisions of the foregoing section, for the Trustees of the said town of Brookhaven to give permits to catch, take, and carry away spawn, seed oysters, or shells, whenever, in their opinion, the condition of the oyster grounds will not be injured thereby; but in giving such permits they shall not discriminate against the residents of that portion of Islip formerly included in the Brookhaven patents.

SEC. 3. It shall not be lawful for any person to carry away, or to have on board any vessel, with intent to carry away from the waters of the Great South Bay, in the county of Suffolk, any oysters, spawn or small oysters, or oyster-shells, counting 1,500 to the bushel, caught or taken in said bay, except when the same have been taken in pursuance of permits granted by the Trustees of the town of Brookhaven, as provided by Section 2 of this act.

SEC. 4. Any person who shall violate any of the foregoing sections shall forfeit the penalty of $50 for each offense.

SEC. 5. Any person may, in his name, prosecute any offender for the violation of any law relating to shell fisheries in the waters of the Great South Bay, in Suffolk county, before any Justice of the Peace of the towns of Brookhaven, Islip or Babylon, in said county, for any penalty provided by such law for the benefit of himself and the Overseers of the Poor of the town in which the offense shall be committed, and, on a recovery, shall be entitled to retain one-half of such penalty, and the other half, after deducting the expenses of the prosecution, shall be paid by the trustees to the said overseers for the support of the poor of said town.

SEC. 6. Resolutions number 20, 21, 32, 35 and 36 are hereby repealed.

SEC. 7. This act shall take effect immediately.

PRICES OF FISH IN NEW YORK AND BERLIN.

WE have received from Haase & Co., of Central Market, Berlin, a wholesale price list of fish dated Sept. 4, 1886. For purposes of comparison we place the figures beside those furnished by Mr. E. G. Blackford, of Fulton Market, New York, for the same date, the prices in each case being the wholesale figures per pound for dead fish, except in the mackerel, which are given by the piece. Messrs. Haase & Co. say that owing to the extreme hot weather many fish were in bad condition and therefore prices were lower than usual. The prices for a single week in Berlin and New York do not give a perfect comparison of value as they average throughout the year, but still the list is of interest.

	Berlin.	New York.
Rhine salmon	$0.55 @ $0.58	....
Restigouche salmon	....	....
Baltic salmon	.25 @ .30	....
Columbia River salmon	....	.20

SMOKED FISH.

	Berlin.	New York.
Salmon	$0.72½@$0.75	$0.20

THE NEW HAMPSHIRE COMMISSION.

WE have the report of the Fish and Game Commissioners of New Hampshire for the year ending June, 1886. It opens with the report of E. B. Hodge, Superintendent of the hatcheries at Plymouth and Sunapee Lake. Five hundred thousand salmon eggs, partly from the Penobscot and partly from the Merrimack, were hatched and the fry planted in the head waters of the Pemigewasset.

There have been hatched and distributed from the Plymouth station in addition to the salmon: Brook trout, 273,000; landlocked salmon, 175,000; Lake Superior trout, 20,000; whitefish, 200,000. There are now about 10,000 brook trout from four inches in length to three pounds' weight in the breeding ponds at Plymouth, and a large increase of eggs may be expected in 1886. There will be for distribution in 1886 from the Plymouth and Sunapee Lake hatcheries:

Penobscot salmon	600,000
Brook trout	430,000
Landlocked salmon	130,000
Lake Superior trout	65,000
Whitefish	500,000
	1,725,000

The fishway at Amoskeag Falls has been improved by the erection of two wing dams on the west side of the river, which enlarges and deepens the pool near the mouth of the fishway; the center channel deepened by removing the rocks so that most of the water is concentrated into that channel. When there is a supply of water running over the dam, there is no difficulty in fish passing up the fishway. Additional facilities have been made at Plymouth and Sunapee hatcheries to provide for the increased number of eggs, and more room has been provided for breeding trout.

THE U. S. FISH COM. SCHOONER GRAMPUS.

Editor Forest and Stream:

In the midst of the discussion of yachting just now, and with the pride of a New England Yankee well to the front in consequence of Mayflower's successes; may we call attention to another type of vessel which has lately appeared upon the scene.

The schooner Grampus of the U. S. Fish Commision is our subject and a most excellent one too. Prof. Baird has for a long time felt the need of just such a vessel, and Capt. Jas. W. Collins of the Commission has proved himself the man to design and superintend the construction. The Grampus is a pilot-boat-bowed handsome schooner of not quite 84 tons carpenter's measurement. She is 90ft. over all, 22ft. 2in. wide, and draws 11ft. of water aft. These proportions make an able weatherly craft, and that the Grampus is such the writer can personally vouch for, having been one of the party on her recent cruise in search of tile fish.

Prof. Baird, with much appreciation of the designer, gave that gentleman the opportunity to embody in the Grampus lines more conducive to safety and stability than are possessed by the average "banker" at present. Speed has heretofore been the great idea, and consequently an equal regard for safety has been lost from sight. But a new era has begun, and already have deeper-bodied vessels made their appearance. Then too, straight stems or "pilot boat bows" are being adopted with equally satisfactory results. The Grampus is a fine specimen of a safe fishing schooner. Under sail she is smart. She works quickly and lies to as Capt. Collins says, "with her head under her wing like a duck," and it is true she does lie to splendidly. Her head sails are arranged sensibly with jib and forestaysail instead of one large jib.

The Grampus is furnished with Ostermoore's life-saving mattresses fore and aft. The forecastle is finished in ash and black walnut. There is a boiler and steam pump with steam hoisting apparatus for beam trawling and any heavy hoisting. Between the masts is placed a well in truncated form, with holes in the bottom through which the water supply is kept up. By this well it is hoped to be able to bring in alive various fishes and creatures of the mighty deep. On each side of this well pens for fish, ice, etc., are placed. The ice chest and steward's pantry are next to the forecastle on the port side. The next section below deck toward the stern is the laboratory. It is fitted with cases of glass jars, bottles, etc. for receiving alchoholic specimens, and on both starboard and port sides are zinc-lined counters with deadlights overhead, where the dredge specimens and all "critters" may be examined. For a vessel of the size the "bug-hunters'" show to work is very good indeed.

The cabin is very fine indeed (for a fisherman). It is about 15ft. square with two staterooms and two apartments curtained off from the rest of the cabin. These apartments have extension berths which are convenient. Under the cabin floor on the right a bath tub is found, and the balance of the space below is occupied by water tanks of some fifty barrels capacity. The cabin is finished in bird's eye maple and cherry, is white overhead and with a gilt bead around the upper sides for a border. The mess table is an extension and will seat seven. Neatness, common sense and a general ship-shape appearance at once strikes you. Let us offer our best wishes for the success and safety of the Grampus. May she bring in treasures that shall give joy to the hearts of Prof. Baird and the assistants of the U. S. Fish Commission, and to science at home and abroad. K. Y. C.

SALEM, Mass.

THE NEW YORK FISH COMMISSION.—We have received a copy of the fourteenth report of the New York Fish Commission. It is a biennial report for the years 1884-5, and bears the legend: "Transmitted to the Legislature May 10, 1886." It appears to be an improvement on former reports and we will review it later.

SCRATCH NO MORE.—This euphonious heading will be found at top of an advertisement in another column, and introduces a panacea for the bites of all insects, and also an article for poison, and as such will be appreciated by those who go into the woods.

The Kennel.

Address all communications to the Forest and Stream Pub. Co.

FIXTURES.

DOG SHOWS.

Oct. 5 to 9.—Annual Dog Show of the Danbury Agricultural Society. B. C. Lynes, Secretary, Danbury, Conn.

Oct. 13 and 14.—Third Annual Dog Show of the Stafford Kennel Club. R. S. Hicks, Secretary, Stafford Springs, Conn.

Oct. 19 to 22.—Fifth Annual Dog Show of the New Brunswick Kennel Club. H. W. Wilson, Secretary, St. Johns, N. B.

Dec. 1 to 8.—First Dog Show of the Inter-State Poultry and Pet Stock Association, Cairo, Ill. A. A. Cowdery, Secretary, Cobden, Ill.

Dec. 14 to 17.—Second Annual Dog Show of the Western Connecticut Poultry Association. Frank D. Hallett, Superintendent, Winsted, Conn. Entries close Dec. 4.

FIELD TRIALS.

Nov. 8.—Second Annual Field Trials of the Western Field Trials Association, at Abilene, Kan. R. C. Van Horn, Secretary, Kansas City, Mo.

Nov. 8.—Third Annual Field Trials of the Fisher's Island Club, at Fisher's Island, N. Y. Max Wenzel, Secretary, Hoboken, N. J.

Nov. 22.—Eighth Annual Field Trials of the Eastern Field Trials Club, at High Point, N. C. W. A. Coster, Secretary, Flatbush, Kings county, N. Y.

Dec. 6.—Eighth Annual Field Trials of the National Field Trials Club, at Grand Junction, Tenn.

Dec. 14.—Inaugural Field Trials of the Texas Field Trials Club. For members only. John F. Sharp, Secretary, Marshall, Tex.

A. K. R.—SPECIAL NOTICE.

THE AMERICAN KENNEL REGISTER, for the registration of pedigrees, etc, (with prize lists of all shows and trials), is published every month. Entries close on the 1st. Should be in early. Entry blanks sent on receipt of stamped and addressed envelope. Registration fee (50 cents) must accompany each entry. No entries inserted unless paid in advance. Yearly subscription $1.50. Address "American Kennel Register," P. O. Box 2832, New York. Number of entries already printed **4126.**

THE IRISH RED SETTER CLUB'S FIELD TRIALS.

THE second annual field trials of the Irish Red Setter Club held at Laggale, county Wicklow, Ireland, last month, were very successful Four events were on the card. Following are the entries and the result:

PUPPY STAKES.

Mr. J. J. Giltrap's Avendale *beat* Dr. McDermott's Rascal. (drawn).

Mr. R. J. Ll. Price's Dixie *beat* Mr T. O'Mara's Bess.

Mr. R. J. Ll. Price's Shanawaun *beat* Mr. L. F. Perrin's Cissie.

Dr. McDermott's Ricket, a *bye.*

Second Series.

Dixie beat Avendale.

Shanawaun beat Rickets.

Final.

Dixie and Shanawaun divided the stakes.

BRACE STAKES.

Mr. McGoff's Mac's Little Nell and Iveragh *beat* Mr. Perrin's Hector and Cissie.

Mr. Perrin's Cissie and Wee Kate *beat* Mr. C. J. Blackman's Ranger and Stella.

Mr. Perrin's Wee Kate and Hector *beat* Dr. McDermott's Rascal and Rickets.

Final.

Wee Kate and Hector *beat* Mac's Little Nell and Iveragh, and won the stakes.

ALL-AGED STAKES.

Mr. H. M. Wilson's Mountaineer *beat* Mr. L. F. Perrin's Hector.

Mr. McGoff's Iveragh *beat* Mr. W. Lipscomb's Dick Bragh.

Mr. McHenry's Carlos a *bye.* Mr. D'Arcy's Blanch (drawn).

Mr. McGoff's Mack's Little Nell *beat* Mr. Sullivan's Marquis.

Mr. R. J. Ll. Price's Dixie *beat* Mr. Blackham's Ranger.

Mr. W. G. Wybrant's Wave *beat* Mr. L. Perrin's Cissie.

Mr. R. J. Ll. Price's Shanawaun *beat* Dr. Gogarty's Sandy.

Second Series.

Mountaineer beat Carlos.

Dixie beat Iveragh.

Wave beat Shanawaun.

Mac's Little Nell a bye.

Third Series.

Mac's Little Nell beat Mountaineer.

Dixie beat Wave.

Final.

Dixie beat Mac's Little Nell, and won the stake.

OPEN BRACE STAKES (POINTERS AND SETTERS).

Mr. L. F. Perrin's Irish setters Wee Kate and Cissie.
Mr. J. McGoff's Irish setters Mac's Little Nell and Iveragh.
Mr. R. J. Ll. Price's pointers Little Ben and Bellona.
Dr. H. J. Gogarty's pointer Ida and Irish setter Sandy.
Mr. J. J. Giltrap's pointer Lord Graphic and Irish setter Avondale.
Mr. W. H. Lipscomb's Irish setter Dick Bragh and English setter Buck.
Mr. L. F. Perrin's Irish setters Wee Kate and Hector.

Result.

Little Ben and Bellona first, Lord Graphic and Avondale second.

THE MANITOBA FIELD TRIALS.

THE report of the first field trials of the Manitoba Field Trials Club, for which we made arrangements, was received too late for this issue. We give below a summary of the running. Mr. J. M. Avent, of Hickory Valley, Tenn., acted as judge. The trials were run on prairie chickens.

THE DERBY.

For pointers and setters whelped on or after Jan. 1, 1885. Silver cups, $50 and $25, to first and second, and silver whistle, $10, to third. There were five starters, all setters:

SWIFT, lemon and white dog, owned by H. Galt,
beat
PRINCE, black and tan dog, owned by W. W. Wellband.

DASH B., lemon and white dog, owned by Thos. Johnson,
beat
DARBY, white, black and tan dog, owned by F. Waterhouse.

ROCK, red Irish setter dog, owned by W. Cleverly, a *bye.*

Second Series.

Swift beat Rock.
Dash B. a bye.

Tie for First.

Dash B. beat Swift and won first prize.
Swift won second.
Prince beat Rock and won third.

ALL-AGED POINTER STAKES.

For all pointers, silver cup to first, silver collar to second. There were only two starters and the prizes and honors were equally divided between C. W. Armstrong's bitch Belle and J. Johnson's dog Bert.

ALL-AGED SETTER STAKES.

For all setters, silver cup to first and second, rug to third and silver flask to fourth. There were eight competitors drawn and run as follows:

SHOT, black and tan dog, owned by S. L. Bedson,
beat
ROCK, red Irish dog, owned by F. Sprado.

Q'APPELLE BELLE, black, white and tan bitch, owned by C. A. Boxer,
beat
BELLE, black, white and tan bitch, owned by Manitoba Kennel Club.

FANNIE M., orange and white bitch, owned by D. Smith,
beat
DASH B., orange and white dog, owned by Manitoba Kennel Club.

MANDAN, blue belton dog, owned by R. B. Morgan,
beat
DON, black, white and tan dog, owned by Dr. Ferguson.

Second Series.

Q'Appelle Belle beat Shot
Mandan beat Fannie M.

Tie for First.

Q'Appelle Belle beat Mandan and won first prize.
Mandan won second.
Fannie M. won third.
Belle and Dash B. divided fourth.

MASTIFF MEASUREMENTS.

Editor Forest and Stream:

Having just finished reading your impression of Sept. 23, may I be allowed to call some attention to remarks made by "S. T." in his notes on San Francisco show. "S. T.'s" notes on mastiffs are what especially amused me (being an amateur breeder). "S. T.," before he writes criticisms, should study the "History of the Mastiff," by M. B. Wynn. He would then be aware that the minimum standard allowed by the English Mastiff Club is 27in., and a mastiff that conforms to "S. T.'s" standard of 31 or 32in., though not exactly a rarity, still is hard to meet with, especially to get a dog of this height with symmetry and proportions accordingly great. Not having any knowledge of the dogs exhibited at San Francisco, I cannot judge of what they may have been. But I would point out to "S. T." that in breeding mastiffs for great size, it is hardly possible to get weight and strength in proportion. To support my statements I may mention that Lukey's Bruce I. stood 31in., weight 160lbs., 10lbs. under the standard weight for his size. His Nelson stood 33in. and only weighed 150lbs., being 32lbs. under standard weight. Now sir, I think the "fancy" is content with a dog 28, 30 or 32in. high if he has weight and limbs in proportion (that is, limbs that serve him). Dr. Perry's celebrated Hero II. stands 32in. and scales 180lbs., which is correct to the standard. My Baby stands 30in. and scales 175lbs. "S. T." says that he considers no dog up to standard standing less than 31 or 32in. and weighing less than 160lbs. But for a dog standing 31in. the weight should be 170lbs. with 10lbs. increase for every inch above. Could we breed a dog that would be active, symmetrical all over, muscular and not fall away behind, and get him 34in., weighing 200lbs., I think all mastiff breeders would be glad. But at present we must ask "S. T." to moderate his requirements to suit the age.

REGINALD J. ASTON.

ORLANDO KENNELS, Florida, Sept. 27.

THE STAFFORD DOG SHOW.—The third annual dog show of the Stafford Kennel Club will be held at Stafford Springs, Conn., Oct. 13 and 14. The show will be held in connection with the Stafford Agricultural Society. The club has applied for admission to the American Kennel Club, and the show will be held under its rules. Cash prizes of $5 or silver medal at option of exhibitor will be awarded in the champion classes to mastiffs, rough-coated St. Bernards, smooth-coated St. Bernards, Newfoundlands, greyhounds, deerhounds, foxhounds, bloodhounds, pointers, English setters, black and tan setters, Irish setters, water spaniels, cocker spaniels, beagles, dachshunde, fox-terriers, collies, bull-terriers, Irish terriers and pugs. The prizes in the open classes will be 50 per cent. of entrance money to first, 30 per cent. to second and 20 per cent. to third. The club will spare no pains to make the show worthy the support of exhibitors, and they hope to see full benches and a good attendance. Dr. George Walton, of Boston, will judge some of the classes. The other judges have not yet been selected. Entries close Oct. 9.

THE FOX-TERRIER STUD-DOG STAKES.—All who intend to subscribe to Stud-Dog Stakes of the American Fox-Terrier Club should bear in mind that the subscription will close on Nov. 1. We give below the circular of the club: "The Stud-Dog Stakes for 1887.—$2 each p. p., with a cup added by the president of the F. T. C. to a subscription of $10 each by owners of fox-terrier stud dogs, whose get alone shall be qualified to compete. The get in competition to consist of a brace, dog and bitch, whelped after Jan. 1, 1886, which may be the property of different owners. The winning brace to receive one-half of the stakes and one-half of the subscription, the cup and half of the subscription going to the subscribing owner of the brace's sire, one-quarter of the stakes to go to the second best brace, the remaining quarter reserved by the F. T. C. toward advertising and printing. The death of a subscriber not to disqualify the get of his stud dog, nor the death of the dog. Subscriptions to close on or before Nov. 1, 1886, entrance to the stake to close as hereafter to be announced. The stake to be competed for in the autumn of 1887, in New York. Six subscriptions to fill. Renewal.—Subscription to close Jan. 1, 1887. The stake to be competed for at the spring show of the W. K. C., New York, 1888, and to be published in the W. K. C. premium list, and entries to the stake to close with the regular entries for the W. K. C. show of 1888."

FOXES AND HOUNDS.—A correspondent writes from Southwestern Kentucky: Gus B. and the writer made our arrangements to tackle reynard for a few hours. After going to our place of meeting I found B. had gone with our nine dogs and left word for me to follow. So I mounted my horse and off I went, and in half an hour's ride I could hear the dogs in full cry. We ran him a circuit of several miles, seeing him often and he seemed to be enjoying the fun. He crossed branches and ran over the hills and through thickets and woods. After going six hours and fifteen minutes he went to earth within 400yds. of where he had been started. Our dogs are not considered fast runners, but we think they are good stayers and make excellent music. Three are from the kennels of the celebrated foxhunter Frank Clayton, of Marshalltown, Pa.—TOMY (Hopkinsville, Ky.).

A FOSTER MOTHER.—Ottawa, Sept. 29.—*Editor Forest and Stream:* I have just heard what appears to me to be an extraordinary occurrence. On Aug. 29, Capt. Viette's Clumber spaniel bitch Madge had a litter of pups. Her mother, old Joan, was lined at about the same time but proved barren. She, however, had a great deal of milk. She has completely taken possession of Madge's pups, and will not allow her to go near them. She feeds them and cares for them as if they were her own offspring. It was most fortunate that she did so, as Madge had very little milk.—CLUMBER.

THE ST. JOHN DOG SHOW.—St. John, N. B., Sept. 27. *Editor Forest and Stream:* Entries for our approaching bench show are now coming in quite rapidly, and from present indications I feel warranted in saying this will be the best show we have yet held. We have had over double the number of inquiries for premium lists we ever had. The entries will positively close on Oct. 9. There will be a large number of valuable special prizes offered.—H. W. WILSON.

ENTRIES FOR THE EASTERN FIELD TRIALS.—The entries for the All-Aged Stakes of the Eastern Field Trials Club number sixty-seven, with possibly more to come. For the All-Aged Setter Stake there are thirty-four, Pointer Stake thirty, with two pointers and one setter in the champion stake. We hope to be able to give full particulars next week.

BULL-TERRIER LOST.—A 7mos. white bull-terrier dog, uncropped, with faint dark spots on ears. Information leading to recovery rewarded. Address C. J. Peshall, Jersey City, N. J.

KENNEL NOTES.

Notes must be sent on prepared blanks, which are furnished free on receipt of stamped and addressed envelope. Sets of 200 of any one form, bound for retaining duplicates, are sent for 30 cents.

NAMES CLAIMED.

☞ **Notes must be sent on the Prepared Blanks.**

Glen Royal and Glen Rock, Jr. By E. W. Jester, St. George's, Del., for lemon belton and black and white English setter dogs, whelped Aug. 12, 1886, by Glen Rock (Druid—Princess Draco) out of Dashing Belle (Dashing Monarch—Blue Belle).

Glen Della, Glen Dare, Glen Countess and Glen Princess. By E.W. Jester, St. George's, Del., for one lemon belton and three black, white and tan English setter bitches, whelped Aug. 12, 1886, by Glen Rock out of Dashing Belle.

Buck Gladstone and Daisy Mac. By G. F. Clark, St. George's, Del., for black, white and tan English setter dog and blue belton bitch, whelped Aug. 9, 1886, by Rex Gladstone (A.K.R. 2168) out of Little Fraud (Druid's Boy, A.K.R. 2270—Victoria A.K.R. 1383).

Goodwood Rally, Goodwood Duke and Goodwood Ranger. By S. C. Graff, Pittsburgh, Pa., for black, white and tan beagle dogs, whelped July 17, 1886, by Goodwood Rattler (King Pat—May Bell) out of Goodwood Music (Flute—Victress).

Prince Belthus, Flirt and Mena II. By Warwick Kennels, Bridgeport, Conn., for English setters, one lemon and white dog and one black and white and one blue belton bitch, whelped July 30, 1886, by Belthus (Rock—Meg) out of Daisy (Dick—Rosa).

Roxy Vera. By C. A. Parker, Worcester, Mass., for liver and white pointer bitch, whelped July 17, 1883, by Pete, Jr. (Pete—Woodbridge Nellie) out of Dr. Shattuck's Roxy (Crow's Grant—Saxon's Nell).

Count, Jr. By Gordon Woodbury, New York, for white bull-terrier dog, whelped July 3, 1886, by Count (Marquis—Kit) out of Little Nell (Little Victor—Daisy).

Nemo. By T. R. Varick, Manchester, N. H., for white bull-terrier bitch, whelped July 3, 1886, by Count (Marquis—Kit) out of Little Nell (Little Victor—Daisy).

Racer II. By W. E. Deane, Somerset, Mass., for white, black and tan beagle dog, whelped May 14, 1885, by Racer (Rowett's Rally—Lill) out of Hattie (Racer—Dolly).

Little Mac. By W. E. Deane, Somerset, Mass., for white, black and tan beagle dog, whelped Feb. 17, 1886, by Rustler (Trump—Lady) out of Hattie (Racer—Dolly).

Bendor and Ormond. By E. Kessler, Staten Island, N. Y., for lemon and white and liver and white pointer dogs, whelped July 19, 1886, by Bracket (Graphic—Bloomo) out of Lucia (Croxteth—Belle).

Mark Boy, Market, Marksman, Markstone, Markwood and Mark Antony. By E. W. Jester, St. George's, Del., for lemon belton English setter dogs, whelped Aug. 27, 1886, by Gladstone's Mark (Gladstone—Bessie A.) out of Aunty Fuller (Glen Rock—Countess Flirt).

Max. By Miss M. Humphrey, Dedham, Mass., for black and tan Gordon setter dog, whelped Aug. 21, 1886, by Argus II. (Argus—Beauty) out of Jessica (Doan's Tom—Cremorne).

NAMES CHANGED.

Hattie to Jewell. White, black and tan beagle dog, whelped July 8, 1882 (Racer—Dolly), owned by W. E. Deane, Somerset, Mass.

Meteor's Maid to Nameless. Editor Forest and Stream: In your issue of Oct. 8, 1885, I claimed the name Meteor's Maid for white and liver pointer puppy, by Meteor out of Dee, whelped March 31, 1885. I am now informed by E. F. Stoddard that he claimed that name Aug. 9, 1884. Recognizing his claim as just, I surrender the name and claim in its stead Nameless.—ROYAL ROBINSON (Indianapolis, Ind., Sept. 29).

BRED.
